Socrates:: Would I be right, then, to make the same challenge about the individuals, assuming, first, that the person who is fit to judge them is someone who in thought can go down into a person’s character and examine it thoroughly, someone who doesn’t judge from outside, the way a child does, who is dazzled by the facade that tyrants adopt for the outside world to see, but is able to see right through that sort of thing? And, second, that he’s someone—since we'd all listen to him if he were—who is competent to judge, because he has lived in the same house with a tyrant and witnessed his behavior at home and his treatment of each member of his household when he is stripped of his theatrical facade, and has also seen how he behaves when in danger from the people? Shouldn’t we ask the person who has seen all that to tell us how the tyrant compares to the others in happiness and wretchedness?

Glaucon:: That’s also right.

Socrates:: Then do you want us to pretend that we are among those who can give such a judgment and that we have already met tyrannical people, so that we’ll have someone to answer our questions?

Glaucon:: I certainly do.

Socrates:: Come, then, and look at it this way for me: Bearing in mind the resemblance between the city and the man, look at each in turn and describe its condition.

Glaucon:: What kinds of things do you want me to describe?

Socrates:: First, speaking of the city, would you say that a tyrannical city is free or enslaved?

Glaucon:: It is as enslaved as it is possible to be.

Socrates:: Yet you see in it people who are masters and free.

Glaucon:: I do see a few like that, but the whole city, so to speak, and the most decent part of it are wretched, dishonored slaves.

Socrates:: Then, if man and city are alike, mustn't the same structure be in him too? And mustn't his soul be full of slavery and unfreedom, with the most decent parts enslaved and with a small part, the maddest and most vicious, as their master?

Glaucon:: It must.

Socrates:: What will you say about such a soul then? Is it free or slave?

Glaucon:: Slave, of course.

Socrates:: And isn't the enslaved and tyrannical city least likely to do what it wants?

Glaucon:: Certainly.

Socrates:: Then a tyrannical soul—I'm talking about the whole soul—will also be least likely to do what it wants and, forcibly driven by the stings of a dronish gadfly, will be full of disorder and regret.

Glaucon:: How could it be anything else?

Socrates:: Is a tyrannically ruled city rich or poor?

Glaucon:: Poor.

Socrates:: Then a tyrannical soul, too, must always be poor and unsatisfiable.

Glaucon:: That’s right.

Socrates:: What about fear? Aren’t a tyrannical city and man full of it?

Glaucon:: Absolutely.

Socrates:: And do you think that you’ll find more wailing, groaning, lamenting, and grieving in any other city?

Glaucon:: Certainly not.

Socrates:: Then, are such things more common in anyone besides a tyrannical man, who is maddened by his desires and erotic loves?

Glaucon:: How could they be?

Socrates:: It is in view of all these things, I suppose, and others like them, that you judged this to be the most wretched of cities.

Glaucon:: And wasn’t I right?

Socrates:: Of course you were. But what do you say about a tyrannical man, when you look at these same things?

Glaucon:: He’s by far the most wretched of all of them.

Socrates:: There you’re no longer right.

Glaucon:: How is that?

Socrates:: I don’t think that this man has yet reached the extreme of wretchedness.

Glaucon:: Then who has?

Socrates:: Perhaps you’ll agree that this next case is even more wretched.

Glaucon:: Which one?

Socrates:: The one who is tyrannical but doesn’t live a private life, because some misfortune provides him with the opportunity to become an actual tyrant.

Glaucon:: On the basis of what was said before, I assume that what you say is true.

Socrates:: Yes, but in matters of this sort, it isn't enough just to assume these things; one needs to investigate carefully the two men in question by means of argument, for the investigation concerns the most important thing, namely, the good life and the bad one.

Glaucon:: That's absolutely right.

Socrates:: Then consider whether I'm talking sense or not, for I think our investigation will be helped by the following examples.

Glaucon:: What are they?

Socrates:: We should look at all the wealthy private citizens in our cities who have many slaves, for, like a tyrant, they rule over many, although not over so many as he does.

Glaucon:: That's right.

Socrates:: And you know that they're secure and do not fear their slaves.

Glaucon:: What have they got to be afraid of?

Socrates:: Nothing. And do you know why?

Glaucon:: Yes. It's because the whole city is ready to defend each of its individual citizens.

Socrates:: You're right. But what if some god were to lift one of these men, his fifty or more slaves, and his wife and children out of the city and deposit him with his slaves and other property in a deserted place, where no free person could come to his assistance? How frightened would he be that he himself and his wife and children would be killed by the slaves?

Glaucon:: Very frightened indeed.

Socrates:: And wouldn't he be compelled to fawn on some of his own slaves, promise them lots of things, and free them, even though he didn't want to? And wouldn't he himself have become a panderer to slaves?

Glaucon:: He'd have to or else be killed.

Socrates:: What if the god were to settle many other neighbors around him, who wouldn't tolerate anyone to claim that he was the master of another and who would inflict the worst punishments on anyone they caught doing it?

Glaucon:: I suppose that he'd have even worse troubles, since he'd be surrounded by nothing but vigilant enemies.

Socrates:: And isn't this the kind of prison in which the tyrant is held—the one whose nature is such as we have described it, filled with fears and erotic loves of all kinds? Even though his soul is really greedy for it, he's the only one in the whole city who can't travel abroad or see the sights that other free people want to see. Instead, he lives like a woman, mostly confined to his own house, and envying any other citizen who happens to travel abroad and see something worthwhile.

Glaucon:: That's entirely so.

Socrates:: Then, isn't this harvest of evils a measure of the difference between a tyrannical man who is badly governed on the inside—whom you judged to be most wretched just now—and one who doesn't live a private life but is compelled by some chance to be a tyrant, who tries to rule others when he can't even control himself. He's just like an exhausted body without any self-control, which, instead of living privately, is compelled to compete and fight with other bodies all its life.

Glaucon:: That's exactly what he's like, Socrates, and what you say is absolutely true.

Socrates:: And so, Glaucon, isn’t this a completely wretched condition to be in, and doesn’t the reigning tyrant have an even harder life than the one you judged to be hardest?

Glaucon:: He certainly does.

Socrates:: In truth, then, and whatever some people may think, a real tyrant is really a slave, compelled to engage in the worst kind of fawning, slavery, and pandering to the worst kind of people. He’s so far from satisfying his desires in any way that it is clear—if one happens to know that one must study his whole soul—that he’s in the greatest need of most things and truly poor. And, if indeed his state is like that of the city he rules, then he’s full of fear, convulsions, and pains throughout his life. And it is like it, isn’t it?

Glaucon:: Of course it is.

Socrates:: And we’ll also attribute to the man what we mentioned before, namely, that he is inevitably envious, untrustworthy, unjust, friendless, impious, host and nurse to every kind of vice, and that his ruling makes him even more so. And because of all these, he is extremely unfortunate and goes on to make those near him like himself.

Glaucon:: No one with any understanding could possibly contradict you.

Socrates:: Come, then, and like the judge who makes the final decision, tell me who among the five—the king, the timocrat, the oligarch, the democrat, and the tyrant—is first in happiness, who second, and so on in order.

Glaucon:: That’s easy. I rank them in virtue and vice, in happiness and its opposite, in the order of their appearance, as I might judge choruses.

Socrates:: Shall we, then, hire a herald, or shall I myself announce that the son of Ariston has given as his verdict that the best, the most just, and the most happy is the most kingly, who rules like a king over himself, and that the worst, the most unjust, and the most wretched is the most tyrannical, who most tyrannizes himself and the city he rules?

Glaucon:: Let it be so announced.

Socrates:: And shall I add to the announcement that it holds, whether these things remain hidden from every god and human being or not?

Glaucon:: Add it.

Socrates:: Good. Then that is one of our proofs. And there' be a second, if you happen to think that there is anything in this.

Glaucon:: In what?

Socrates:: In the fact that the soul of each individual is divided into three parts, in just the way that a city is, for that's the reason I think that there is another proof.

Glaucon:: What is it?

Socrates:: This: it seems to me that there are three pleasures corresponding to the three parts of the soul, one peculiar to each part, and similarly with desires and kinds of rule.

Glaucon:: What do you mean?

Socrates:: The first, we say, is the part with which a person learns, and the second the part with which he gets angry. As for the third, we had no one special name for it, since it's multiform, so we named it after the biggest and strongest thing in it. Hence we called it the appetitive part, because of the intensity of its appetites for food, drink, sex, and all the things associated with them, but we also called it the money-loving part, because such appetites are most easily satisfied by means of money.

Glaucon:: And rightly so.

Socrates:: Then, if we said that its pleasure and love are for profit, wouldn’t that best determine its central feature for the purposes of our argument and insure that we are clear about what we mean when we speak of this part of the soul, and wouldn’t we be right to call it money-loving and profit-loving?

Glaucon:: That’s how it seems to me, at least.

Socrates:: What about the spirited part? Don’t we say that it is wholly dedicated to the pursuit of control, victory, and high repute?

Glaucon:: Certainly.

Socrates:: Then wouldn’t it be appropriate for us to call it victory-loving and honor-loving?

Glaucon:: It would be most appropriate.

Socrates:: Now, it is clear to everyone that the part with which we learn is always wholly straining to know where the truth lies and that, of the three parts, it cares least for money and reputation.

Glaucon:: By far the least.

Socrates:: Then wouldn’t it be appropriate for us to call it learning-loving and philosophical?

Glaucon:: Of course.

Socrates:: And doesn’t this part rule in some people’s souls, while one of the other parts—whichever it happens to be—rules in other people’s?

Glaucon:: That’s right.

Socrates:: And isn’t that the reason we say that there are three primary kinds of people: philosophic, victory-loving, and profit-loving?

Glaucon:: That’s it precisely.

Socrates:: And also three forms of pleasure, one assigned to each of them?

Glaucon:: Certainly.

Socrates:: And do you realize that, if you chose to ask three such people in turn to tell you which of their lives is most pleasant, each would give the highest praise to his own? Won’t a money-maker say that the pleasure of being honored and that of learning are worthless compared to that of making a profit, if he gets no money from them?

Glaucon:: He will.

Socrates:: What about an honor-lover? Doesn’t he think that the pleasure of making money is vulgar and that the pleasure of learning—except insofar as it brings him honor—is smoke and nonsense?

Glaucon:: He does.

Socrates:: And as for a philosopher, what do you suppose he thinks the other pleasures are worth compared to that of knowing where the truth lies and always being in some such pleasant condition while learning? Won’t he think that they are far behind? And won’t he call them really necessary, since he'd have no need for them if they weren’t necessary for life?

Glaucon:: He will: we can be sure of that.

Socrates:: Then, since there’s a dispute between the different forms of pleasure and between the lives themselves, not about which way of living is finer or more shameful or better or worse, but about which is more pleasant and less painful, how are we to know which of them is speaking most truly?

Glaucon:: Don’t ask me.

Socrates:: Look at it this way: How are we to judge things if we want to judge them well? Isn't it by experience, reason, and argument? Or could anyone have better criteria than these?

Glaucon:: How could he?

Socrates:: Consider, then: Which of the three men has most experience of the pleasures we mentioned? Does a profit-lover learn what the truth itself is like or acquire more experience of the pleasure of knowing it than a philosopher does of making a profit?

Glaucon:: There's a big difference between them. A philosopher has of necessity tasted the other pleasures since childhood, but it isn't necessary for a profit-lover to taste or experience the pleasure of learning the nature of the things that are and how sweet it is. Indeed, even if he were eager to taste it, he couldn't easily do so.

Socrates:: Then a philosopher is far superior to a profit-lover in his experience of both their pleasures.

Glaucon:: He certainly is.

Socrates:: What about an honor-lover? Has he more experience of the pleasure of knowing than a philosopher has of the pleasure of being honored?

Glaucon:: No, for honor comes to each of them, provided that he accomplishes his aim. A rich man is honored by many people, so is a courageous one and a wise one, but the pleasure of studying the things that are cannot be tasted by anyone except a philosopher.

Socrates:: Then, as far as experience goes, he is the finest judge of the three.

Glaucon:: By far.

Socrates:: And he alone has gained his experience in the company of reason.

Glaucon:: Of course.

Socrates:: Moreover, the instrument one must use to judge isn't the instrument of a profit-lover or an honor-lover but a philosopher.

Glaucon:: What instrument is that?

Socrates:: Arguments, for didn't we say that we must judge by means of them?

Glaucon:: Yes.

Socrates:: And argument is a philosopher's instrument most of all.

Glaucon:: Of course.

Socrates:: Now, if wealth and profit were the best means of judging things, the praise and blame of a profit-lover would necessarily be truest.

Glaucon:: That's right.

Socrates:: And if honor, victory, and courage were the best means, wouldn't it be the praise and blame of an honor-lover?

Glaucon:: Clearly.

Socrates:: But since the best means are experience, reason, and argument…

The praise of a wisdom-lover and argument-lover is necessarily truest.

Then, of the three pleasures, the most pleasant is that of the part of the soul with which we learn, and the one in whom that part rules has the most pleasant life.

Glaucon:: How could it be otherwise? A person with knowledge at least speaks with authority when he praises his own life.

Socrates:: To what life and to what pleasure does the judge give second place?

Glaucon:: Clearly, he gives it to those of a warrior and honor-lover, since they're closer to his own than those of a money-maker.

Socrates:: Then the life and pleasure of a profit-lover come last, it seems.

Glaucon:: Of course they do.

Socrates:: These, then, are two proofs in a row, and the just person has defeated the unjust one in both. The third is dedicated in Olympic fashion to Olympian Zeus the Savior. Observe then that, apart from those of a knowledgeable person, the other pleasures are neither entirely true nor pure but are like a shadow-painting, as I think I've heard some wise person say. And yet, if this were true, it would be the greatest and most decisive of the overthrows.

Glaucon:: It certainly would. But what exactly do you mean?

Socrates:: I'll find out, if I ask the questions, and you answer.

Glaucon:: Ask, then.

Socrates:: Tell me, don't we say that pain is the opposite of pleasure?

Glaucon:: Certainly.

Socrates:: And is there such a thing as feeling neither pleasure nor pain?

Glaucon:: There is.

Socrates:: Isn't it intermediate between these two, a sort of calm of the soul by comparison to them? Or don't you think of it that way?

Glaucon:: I do.

Socrates:: And do you recall what sick people say when they're ill?

Glaucon:: Which saying of theirs do you have in mind?

Socrates:: That nothing gives more pleasure than being healthy, but that they hadn't realized that it was most pleasant until they fell ill.

Glaucon:: I do recall that.

Socrates:: And haven't you also heard those who are in great pain say that nothing is more pleasant than the cessation of their suffering?

Glaucon:: I have.

Socrates:: And there are many similar circumstances, I suppose, in which you find people in pain praising, not enjoyment, but the absence of pain and relief from it as most pleasant.

Glaucon:: That may be because at such times a state of calm becomes pleasant enough to content them.

Socrates:: And when someone ceases to feel pleasure, this calm will be painful to him.

Glaucon:: Probably so.

Socrates:: Then the calm we described as being intermediate between pleasure and pain will sometimes be both.

Glaucon:: So it seems.

Socrates:: Now, is it possible for that which is neither to become both?

Glaucon:: Not in my view.

Socrates:: Moreover, the coming to be of either the pleasant or the painful in the soul is a sort of motion, isn't it?

Glaucon:: Yes.

Socrates:: And didn't what is neither painful nor pleasant come to light just now as a calm state, intermediate between them?

Glaucon:: Yes, it did.

Socrates:: Then, how can it be right to think that the absence of pain is pleasure or that the absence of pleasure is pain?

Glaucon:: There's no way it can be.

Socrates:: Then it isn't right. But when the calm is next to the painful it appears pleasant, and when it is next to the pleasant it appears painful. However, there is nothing sound in these appearances as far as the truth about pleasure is concerned, only some kind of magic.

Glaucon:: That's what the argument suggests, at any rate.

Socrates:: Take a look at the pleasures that don't come out of pains, so that you won't suppose in their case also that it is the nature of pleasure to be the cessation of pain or of pain to be the cessation of pleasure.

Glaucon:: Where am I to look? What pleasures do you mean?

Socrates:: The pleasures of smell are especially good examples to take note of, for they suddenly become very intense without being preceded by pain, and when they cease they leave no pain behind. But there are plenty of other examples as well.

Glaucon:: That's absolutely true.

Socrates:: Then let no one persuade us that pure pleasure is relief from pain or that pure pain is relief from pleasure.

Glaucon:: No, let's not.

Socrates:: However, most of the so-called pleasures that reach the soul through the body, as well as the most intense ones are of this form—they are some kind of relief from pain.

Glaucon:: Yes, they are.

Socrates:: And aren't the pleasures and pains of anticipation, which arise from the expectation of future pleasures or pains, also of this form?

Glaucon:: They are.

Socrates:: Do you know what kind of thing they are and what they most resemble?

Glaucon:: No, what is it?

Socrates:: Do you believe that there is an up, a down, and a middle in nature?

Glaucon:: I do.

Socrates:: And do you think that someone who was brought from down below to the middle would have any other belief than that he was moving upward? And if he stood in the middle and saw where he had come from, would he believe that he was anywhere other than the upper region, since he hasn't seen the one that is truly upper?

Glaucon:: By god, I don't see how he could think anything else.

Socrates:: And if he was brought back, wouldn't he suppose that he was being brought down? And wouldn't he be right?

Glaucon:: Of course.

Socrates:: Then wouldn't all this happen to him because he is inexperienced in what is really and truly up, down, and in the middle?

Glaucon:: Clearly.

Socrates:: Is it any surprise, then, if those who are inexperienced in the truth have unsound opinions about lots of other things as well, or that they are so disposed to pleasure, pain, and the intermediate state that, when they descend to the painful, they believe truly and are really in pain, but that, when they ascend from the painful to the intermediate state, they firmly believe that they have reached fulfillment and pleasure? They are inexperienced in pleasure and so are deceived when they compare pain to painlessness, just as they would be if they compared black to gray without having experienced white.

Glaucon:: No, by god, I wouldn’t be surprised. In fact, I'd be very surprised if it were any other way.

Adeimantus:: Think of it this way: Aren’t hunger, thirst, and the like some sort of empty states of the body?

Glaucon:: They are.

Socrates:: And aren’t ignorance and lack of sense empty states of the soul?

Glaucon:: Of course.

Socrates:: And wouldn’t someone who partakes of nourishment or strengthens his understanding be filled?

Glaucon:: Certainly.

Socrates:: Does the truer filling up fill you with that which is less or that which is more?

Glaucon:: Clearly, it’s with that which is more.

Socrates:: And which kinds partake more of pure being? Kinds of filling up such as filling up with bread or drink or delicacies or food in general? Or the kind of filling up that is with true belief, knowledge, understanding, and, in sum, with all of virtue? Judge it this way: That which is related to what is always the same, immortal, and true, is itself of that kind, and comes to be in something of that kind—this is more, don’t you think, than that which is related to what is never the same and mortal, is itself of that kind, and comes to be in something of that kind?

Glaucon:: That which is related to what is always the same is far more.

Socrates:: And does the being of what is always the same participate more in being than in knowledge?

Glaucon:: Not at all.

Socrates:: Or more than in truth?

Glaucon:: Not that either.

Socrates:: And if less in truth, then less in being also?

Glaucon:: Necessarily.

Socrates:: And isn't it generally true that the kinds of filling up that are concerned with the care of the body share less in truth and being than those concerned with the care of the soul?

Glaucon:: Yes, much less.

Socrates:: And don't you think that the same holds of the body in comparison to the soul?

Glaucon:: Certainly.

Socrates:: And isn't that which is more, and is filled with things that are more, really more filled than that which is less, and is filled with things that are less?

Glaucon:: Of course.

Socrates:: Therefore, if being filled with what is appropriate to our nature is pleasure, that which is more filled with things that are more enjoys more really and truly a more true pleasure, while that which partakes of things that are less is less truly and surely filled and partakes of a less trustworthy and less true pleasure.

Glaucon:: That's absolutely inevitable.

Socrates:: Therefore, those who have no experience of reason or virtue, but are always occupied with feasts and the like, are brought down and then back up to the middle, as it seems, and wander in this way throughout their lives, never reaching beyond this to what is truly higher up, never looking up at it or being brought up to it, and so they aren't filled with that which really is and never taste any stable or pure pleasure. Instead, they always look down at the ground like cattle, and, with their heads bent over the dinner table, they feed, fatten, and fornicate. To outdo others in these things, they kick and butt them with iron horns and hooves, killing each other, because their desires are insatiable. For the part that they're trying to fill is like a vessel full of holes, and neither it nor the things they are trying to fill it with are among the things that are.

Glaucon:: Socrates, you've exactly described the life of the majority of people, just like an oracle.

Socrates:: Then isn't it necessary for these people to live with pleasures that are mixed with pains, mere images and shadow-paintings of true pleasures? And doesn't the juxtaposition of these pleasures and pains make them appear intense, so that they give rise to mad erotic passions in the foolish, and are fought over in just the way that Stesichorus tells us the phantom of Helen was fought over at Troy by men ignorant of the truth?

Glaucon:: Something like that must be what happens.

Socrates:: And what about the spirited part? Mustn't similar things happen to someone who satisfies it? Doesn't his love of honor make him envious and his love of victory make him violent, so that he pursues the satisfaction of his anger and of his desires for honors and victories without calculation or understanding?

Glaucon:: Such things must happen to him as well.

Socrates:: Then can't we confidently assert that those desires of even the money-loving and honor-loving parts that follow knowledge and argument and pursue with their help those pleasures that reason approves will attain the truest pleasures possible for them, because they follow truth, and the ones that are most their own, if indeed what is best for each thing is most its own?

Glaucon:: And indeed it is best.

Socrates:: Therefore, when the entire soul follows the philosophic part, and there is no civil war in it, each part of it does its own work exclusively and is just, and in particular it enjoys its own pleasures, the best and truest pleasures possible for it.

Adeimantus:: Absolutely.

Socrates:: But when one of the other parts gains control, it won't be able to secure its own pleasure and will compel the other parts to pursue an alien and untrue pleasure.

Glaucon:: That's right.

Socrates:: And aren't the parts that are most distant from philosophy and reason the ones most likely to do this sort of compelling?

Glaucon:: They're much more likely.

Socrates:: And isn't whatever is most distant from reason also most distant from law and order?

Glaucon:: Clearly.

Socrates:: And didn't the erotic and tyrannical desires emerge as most distant from these things?

Glaucon:: By far.

Socrates:: And weren't the kingly and orderly ones least distant?

Glaucon:: Yes.

Socrates:: Then I suppose that a tyrant will be most distant from a pleasure that is both true and his own and that a king will be least distant.

Glaucon:: Necessarily.

Socrates:: So a tyrant will live most unpleasantly, and a king most pleasantly.

Glaucon:: Necessarily.

Socrates:: Do you know how much more unpleasant a tyrant's life is than a king's?

Glaucon:: I will if you tell me.

Socrates:: There are, it seems, three pleasures, one genuine and two illegitimate, and a tyrant is at the extreme end of the illegitimate ones, since he flees both law and reason and lives with a bodyguard of certain slavish pleasures. But it isn't easy, all the same, to say just how inferior he is to a king, except perhaps as follows. A tyrant is somehow third from an oligarch, for a democrat was between them.

Glaucon:: Yes.

Socrates:: Then, if what we said before is true, doesn't he live with an image of pleasure that is third from an oligarch's with respect to truth?

Glaucon:: He does.

Socrates:: Now, an oligarch, in turn, is third from a king, if we identify a king and an aristocrat.

Glaucon:: Yes, he's third.

Socrates:: So a tyrant is three times three times removed from true pleasure.

Glaucon:: Apparently so.

Socrates:: It seems then, on the basis of the magnitude of its number, that the image of tyrannical pleasure is a plane figure.

Glaucon:: Exactly.

Socrates:: But then it's clear that, by squaring and cubing it, we'll discover how far a tyrant's pleasure is from that of a king.

Glaucon:: It is clear to a mathematician, at any rate.

Socrates:: Then, turning it the other way around, if someone wants to say how far a king's pleasure is from a tyrant's, he'll find, if he completes the calculation, that a king lives seven hundred and twenty-nine times more pleasantly than a tyrant and that a tyrant is the same number of times more wretched.

Glaucon:: That's an amazing calculation of the difference between the pleasure and pain of the two men, the just and the unjust.

Socrates:: Yet it's a true one, and one appropriate to human lives, if indeed days, nights, months, and years are appropriate to them.

Glaucon:: And of course they are appropriate.

Socrates:: Then, if a good and just person's life is that much more pleasant than the life of a bad and unjust person, won't its grace, fineness, and virtue be incalculably greater?

Glaucon:: By god, it certainly will.

Socrates:: All right, then. Since we've reached this point in the argument, let's return to the first things we said, since they are what led us here. I think someone said at some point that injustice profits a completely unjust person who is believed to be just. Isn't that so?

Glaucon:: It certainly is.

Socrates:: Now, let's discuss this with him, since we've agreed on the respective powers that injustice and justice have.

Glaucon:: How?

Socrates:: By fashioning an image of the soul in words, so that the person who says this sort of thing will know what he is saying.

Glaucon:: What sort of image?

Socrates:: One like those creatures that legends tell us used to come into being in ancient times, such as the Chimera, Scylla, Cerberus, or any of the multitude of others in which many different kinds of things are said to have grown together naturally into one.

Glaucon:: Yes, the legends do tell us of such things.

Socrates:: Well, then, fashion a single kind of multicolored beast with a ring of many heads that it can grow and change at will—some from gentle, some from savage animals.

Glaucon:: That's work for a clever artist. However, since words are more malleable than wax and the like, consider it done.

Socrates:: Then fashion one other kind, that of a lion, and another of a human being. But make the first much the largest and the other second to it in size.

Glaucon:: That's easier—the sculpting is done.

Socrates:: Now join the three of them into one, so that that they somehow grow together naturally.

Glaucon:: They're joined.

Socrates:: Then, fashion around them the image of one of them, that of a human being so that anyone who sees only the outer covering and not what's inside will think it is a single creature, a human being.

Glaucon:: It's done.

Socrates:: Then, if someone maintains that injustice profits this human being and that doing just things brings no advantage, let's tell him that he is simply saying that it is beneficial for him, first, to feed the multiform beast well and make it strong, and also the lion and all that pertains to him; second, to starve and weaken the human being within, so that he is dragged along wherever either of the other two leads; and, third, to leave the parts to bite and kill one another rather than accustoming them to each other and making them friendly.

Glaucon:: Yes, that's absolutely what someone who praises injustice is saying.

Socrates:: But, on the other hand, wouldn't someone who maintains that just things are profitable be saying, first, that all our words and deeds should insure that the human being within this human being has the most control; second, that he should take care of the many-headed beast as a farmer does his animals, feeding and domesticating the gentle heads and preventing the savage ones from growing; and, third, that he should make the lion's nature his ally, care for the community of all his parts, and bring them up in such a way that they will be friends with each other and with himself?

Glaucon:: Yes, that's exactly what someone who praises justice is saying.

Socrates:: From every point of view, then, anyone who praises justice speaks truly, and anyone who praises injustice speaks falsely. Whether we look at the matter from the point of view of pleasure, good reputation, or advantage, a praiser of justice tells the truth, while one who condemns it has nothing sound to say and condemns without knowing what he is condemning.

Glaucon:: In my opinion, at least, he knows nothing about it.

Socrates:: Then let's persuade him gently—for he isn't wrong of his own will— by asking him these questions. Should we say that this is the original basis for the conventions about what is fine and what is shameful? Fine things are those that subordinate the beastlike parts of our nature to the human— or better, perhaps, to the divine; shameful ones are those that enslave the gentle to the savage? Will he agree or what?

Glaucon:: He will, if he takes my advice.

Socrates:: In light of this argument, can it profit anyone to acquire gold unjustly if, by doing so, he enslaves the best part of himself to the most vicious? If he got the gold by enslaving his son or daughter to savage and evil men, it wouldn't profit him, no matter how much gold he got. How, then, could he fail to be wretched if he pitilessly enslaves the most divine part of himself to the most godless and polluted one and accepts golden gifts in return for a more terrible destruction than Eriphyle's when she took the necklace in return for her husband's soul?

Glaucon:: A much more terrible one. I'll answer for him.

Socrates:: And don't you think that licentiousness has long been condemned for just these reasons, namely, that because of it, that terrible, large, and multiform beast is let loose more than it should be?

Glaucon:: Clearly.

Socrates:: And aren't stubbornness and irritability condemned because they inharmoniously increase and stretch the lion-like and snake-like part?

Glaucon:: Certainly.

Socrates:: And aren't luxury and softness condemned because the slackening and loosening of this same part produce cowardice in it?

Glaucon:: Of course.

Socrates:: And aren't flattery and slavishness condemned because they subject the spirited part to the mob-like beast, accustoming it from youth on to being insulted for the sake of the money needed to satisfy the beast’s insatiable appetites, so that it becomes an ape instead of a lion?

Glaucon:: They certainly are.

Socrates:: Why do you think that the condition of a manual worker is despised? Or is it for any other reason than that, when the best part is naturally weak in someone, it can’t rule the beasts within him but can only serve them and learn to flatter them?

Glaucon:: Probably so.

Socrates:: Therefore, to insure that someone like that is ruled by something similar to what rules the best person, we say that he ought to be the slave of that best person who has a divine ruler within himself. It isn’t to harm the slave that we say he must be ruled, which is what Thrasymachus thought to be true of all subjects, but because it is better for everyone to be ruled by divine reason, preferably within himself and his own, otherwise imposed from without, so that as far as possible all will be alike and friends, governed by the same thing.

Glaucon:: Yes, that’s right.

Socrates:: This is clearly the aim of the law, which is the ally of everyone. But it’s also our aim in ruling our children, we don’t allow them to be free until we establish a constitution in them, just as in a city, and—by fostering their best part with our own—equip them with a guardian and ruler similar to our own to take our place. Then, and only then, we set them free.

Glaucon:: Clearly so.

Socrates:: Then how can we maintain or argue, Glaucon, that injustice, licentiousness, and doing shameful things are profitable to anyone, since, even though he may acquire more money or other sort of power from them, they make him more vicious?

Glaucon:: There’s no way we can.

Socrates:: Or that to do injustice without being discovered and having to pay the penalty is profitable? Doesn’t the one who remains undiscovered become even more vicious, while the bestial part of the one who is discovered is calmed and tamed and his gentle part freed, so that his entire soul settles into its best nature, acquires moderation, justice, and reason, and attains a more valuable state than that of having a fine, strong, healthy body, since the soul itself is more valuable than the body?

Glaucon:: That’s absolutely certain.

Socrates:: Then won’t a person of understanding direct all his efforts to attaining that state of his soul? First, he’ll value the studies that produce it and despise the others.

Glaucon:: Clearly so.

Socrates:: Second, he won’t entrust the condition and nurture of his body to the irrational pleasure of the beast within or turn his life in that direction, but neither will he make health his aim or assign first place to being strong, healthy, and beautiful, unless he happens to acquire moderation as a result. Rather, it’s clear that he will always cultivate the harmony of his body for the sake of the consonance in his soul.

Glaucon:: He certainly will, if indeed he’s to be truly trained in music and poetry.

Socrates:: Will he also keep order and consonance in his acquisition of money, with that same end in view? Or, even though he isn’t dazzled by the size of the majority into accepting their idea of blessed happiness, will he increase his wealth without limit and so have unlimited evils?

Glaucon:: Not in my view.

Socrates:: Rather, he’ll look to the constitution within him and guard against disturbing anything in it, either by too much money or too little. And, in this way, he’ll direct both the increase and expenditure of his wealth, as far as he can.

Glaucon:: That’s exactly what he’ll do.

Socrates:: And he’ll look to the same thing where honors are concerned. He’ll willingly share in and taste those that he believes will make him better, but he’ll avoid any public or private honor that might overthrow the established condition of his soul.

Glaucon:: If that’s his chief concern, he won’t be willing to take part in politics.

Socrates:: Yes, by the dog, he certainly will, at least in his own kind of city. But he may not be willing to do so in his fatherland, unless some divine good luck chances to be his.

Glaucon:: I understand. You mean that he’ll be willing to take part in the politics of the city we were founding and describing, the one that exists in theory, for I don’t think it exists anywhere on earth.

Socrates:: But perhaps, there is a model of it in heaven, for anyone who wants to look at it and to make himself its citizen on the strength of what he sees. It makes no difference whether it is or ever will be somewhere, for he would take part in the practical affairs of that city and no other.

Glaucon:: Probably so.

## Book 10

Socrates:: Indeed, our city has many features that assure me that we were entirely right in founding it as we did, and, when I say this, I'm especially thinking of poetry.

Glaucon:: What about it in particular?

Socrates:: That we didn't admit any that is imitative. Now that we have distinguished the separate parts of the soul, it is even clearer, I think, that such poetry should be altogether excluded.

Glaucon:: What do you mean?

Socrates:: Between ourselves—for you won't denounce me to the tragic poets or any of the other imitative ones—all such poetry is likely to distort the thought of anyone who hears it, unless he has the knowledge of what it is really like, as a drug to counteract it.

Glaucon:: What exactly do you have in mind in saying this?

Socrates:: I'll tell you, even though the love and respect I've had for Homer since I was a child make me hesitate to speak, for he seems to have been the first teacher and leader of all these fine tragedians. All the same, no one is to be honored or valued more than the truth. So, as I say, it must be told.

Glaucon:: That's right.

Socrates:: Listen then, or, rather, answer.

Glaucon:: Ask and I will.

Socrates:: Could you tell me what imitation in general is? I don't entirely understand what sort of thing imitations are trying to be.

Glaucon:: Is it likely, then, that I'll understand?

Socrates:: That wouldn’t be so strange, for people with bad eyesight often see things before those whose eyesight is keener.

Glaucon:: That’s so, but even if something occurred to me, I wouldn’t be eager to talk about it in front of you. So I'd rather that you did the looking.

Socrates:: Do you want us to begin our examination, then, by adopting our usual procedure? As you know, we customarily hypothesize a single form in connection with each of the many things to which we apply the same name. Or don’t you understand?

Glaucon:: I do.

Socrates:: Then let’s now take any of the manys you like. For example, there are many beds and tables.

Glaucon:: Of course.

Socrates:: But there are only two forms of such furniture, one of the bed and one of the table.

Glaucon:: Yes.

Socrates:: And don’t we also customarily say that their makers look towards the appropriate form in making the beds or tables we use, and similarly in the other cases? Surely no craftsman makes the form itself. How could he?

Glaucon:: There’s no way he could.

Socrates:: Well, then, see what you'd call this craftsman?

Glaucon:: Which one?

Socrates:: The one who makes all the things that all the other kinds of craftsmen severally make.

Glaucon:: That’s a clever and wonderful fellow you’re talking about.

Socrates:: Wait a minute, and you’ll have even more reason to say that, for this same craftsman is able to make, not only all kinds of furniture, but all plants that grow from the earth, all animals (including himself), the earth itself, the heavens, the gods, all the things in the heavens and in Hades beneath the earth.

Glaucon:: He'd be amazingly clever!

Socrates:: You don’t believe me? Tell me, do you think that there’s no way any craftsman could make all these things, or that in one way he could and in another he couldn’t? Don’t you see that there is a way in which you yourself could make all of them?

Glaucon:: What way is that?

Socrates:: It isn’t hard: You could do it quickly and in lots of places, especially if you were willing to carry a mirror with you, for that’s the quickest way of all. With it you can quickly make the sun, the things in the heavens, the earth, yourself, the other animals, manufactured items, plants, and everything else mentioned just now.

Glaucon:: Yes, I could make them appear, but I couldn’t make the things themselves as they truly are.

Socrates:: Well put! You’ve extracted the point that’s crucial to the argument. I suppose that the painter too belongs to this class of makers, doesn’t he?

Glaucon:: Of course.

Socrates:: But I suppose you’ll say that he doesn’t truly make the things he makes. Yet, in a certain way, the painter does make a bed, doesn’t he?

Glaucon:: Yes, he makes the appearance of one.

Socrates:: What about the carpenter? Didn’t you just say that he doesn’t make the form—which is our term for the being of a bed—but only a bed?

Glaucon:: Yes, I did say that.

Socrates:: Now, if he doesn’t make the being of a bed, he isn’t making that which is, but something which is like that which is, but is not it. So, if someone were to say that the work of a carpenter or any other craftsman is completely that which is, wouldn’t he risk saying what isn’t true?

Glaucon:: That, at least, would be the opinion of those who busy themselves with arguments of this sort.

Socrates:: Then let’s not be surprised if the carpenter’s bed, too, turns out to be a somewhat dark affair in comparison to the true one.

Glaucon:: All right.

Socrates:: Then, do you want us to try to discover what an imitator is by reference to these same examples?

Glaucon:: I do, if you do.

Socrates:: We get, then, these three kinds of beds. The first is in nature a bed, and I suppose we'd say that a god makes it, or does someone else make it?

Glaucon:: No one else, I suppose.

Socrates:: The second is the work of a carpenter.

Glaucon:: Yes.

Socrates:: And the third is the one the painter makes. Isn’t that so?

Glaucon:: It is.

Socrates:: Then the painter, carpenter, and god correspond to three kinds of bed?

Glaucon:: Yes, three.

Socrates:: Now, the god, either because he didn’t want to or because it was necessary for him not to do so, didn’t make more than one bed in nature, but only one, the very one that is the being of a bed. Two or more of these have not been made by the god and never will be.

Glaucon:: Why is that?

Socrates:: Because, if he made only two, then again one would come to light whose form they in turn would both possess, and that would be the one that is the being of a bed and not the other two.

Glaucon:: That’s right.

Socrates:: The god knew this, I think, and wishing to be the real maker of the truly real bed and not just a maker of a bed, he made it to be one in nature.

Glaucon:: Probably so.

Socrates:: Do you want us to call him its natural maker or something like that?

Glaucon:: It would be right to do so, at any rate, since he is by nature the maker of this and everything else.

Socrates:: What about a carpenter? Isn’t he the maker of a bed?

Glaucon:: Yes.

Socrates:: And is a painter also a craftsman and maker of such things?

Glaucon:: Not at all.

Socrates:: Then what do you think he does do to a bed?

Glaucon:: He imitates it. He is an imitator of what the others make. That, in my view, is the most reasonable thing to call him.

Socrates:: All right. Then wouldn’t you call someone whose product is third from the natural one an imitator?

Glaucon:: I most certainly would.

Socrates:: Then this will also be true of a tragedian, if indeed he is an imitator. He is by nature third from the king and the truth, as are all other imitators.

Glaucon:: It looks that way.

Socrates:: We're agreed about imitators, then. Now, tell me this about a painter. Do you think he tries in each case to imitate the thing itself in nature or the works of craftsmen?

Glaucon:: The works of craftsmen.

Socrates:: As they are or as they appear? You must be clear about that.

Glaucon:: How do you mean?

Socrates:: Like this. If you look at a bed from the side or the front or from anywhere else is it a different bed each time? Or does it only appear different, without being at all different? And is that also the case with other things?

Glaucon:: That's the way it is—it appears different without being so.

Socrates:: Then consider this very point: What does painting do in each case? Does it imitate that which is as it is, or does it imitate that which appears as it appears? Is it an imitation of appearances or of truth?

Glaucon:: Of appearances.

Socrates:: Then imitation is far removed from the truth, for it touches only a small part of each thing and a part that is itself only an image. And that, it seems, is why it can produce everything. For example, we say that a painter can paint a cobbler, a carpenter, or any other craftsman, even though he knows nothing about these crafts. Nevertheless, if he is a good painter and displays his painting of a carpenter at a distance, he can deceive children and foolish people into thinking that it is truly a carpenter.

Glaucon:: Of course.

Socrates:: Then this, I suppose, is what we must bear in mind in all these cases. Hence, whenever someone tells us that he has met a person who knows all the crafts as well as all the other things that anyone else knows and that his knowledge of any subject is more exact than any of theirs is, we must assume that we’re talking to a simple-minded fellow who has apparently encountered some sort of magician or imitator and been deceived into thinking him omniscient and that the reason he has been deceived is that he himself can’t distinguish between knowledge, ignorance, and imitation.

Glaucon:: That’s absolutely true.

Socrates:: Then, we must consider tragedy and its leader, Homer. The reason is this: We hear some people say that poets know all crafts, all human affairs concerned with virtue and vice, and all about the gods as well. They say that if a good poet produces fine poetry, he must have knowledge of the things he writes about, or else he wouldn’t be able to produce it at all. Hence, we have to look to see whether those who tell us this have encountered these imitators and have been so deceived by them that they don’t realize that their works are at the third remove from that which is and are easily produced without knowledge of the truth (since they are only images, not things that are), or whether there is something in what these people say, and good poets really do have knowledge of the things most people think they write so well about.

Glaucon:: We certainly must look into it.

Socrates:: Do you think that someone who could make both the thing imitated and its image would allow himself to be serious about making images and put this at the forefront of his life as the best thing to do?

Glaucon:: No, I don’t.

Socrates:: I suppose that, if he truly had knowledge of the things he imitates, he'd be much more serious about actions than about imitations of them, would try to leave behind many fine deeds as memorials to himself, and would be more eager to be the subject of a eulogy than the author of one.

Glaucon:: I suppose so, for these things certainly aren't equally valuable or equally beneficial either.

Socrates:: Then let's not demand an account of any of these professions from Homer or the other poets. Let's not ask whether any of them is a doctor rather than an imitator of what doctors say, or whether any poet of the old or new school has made anyone healthy as Asclepius did, or whether he has left any students of medicine behind as Asclepius did his sons. And let's not ask them about the other crafts either. Let's pass over all that. But about the most important and most beautiful things of which Homer undertakes to speak—warfare, generalship, city government, and people's education—about these it is fair to question him, asking him this: "Homer, if you're not third from the truth about virtue, the sort of craftsman of images that we defined an imitator to be, but if you're even second and capable of knowing what ways of life make people better in private or in public, then tell us which cities are better governed because of you, as Sparta is because of Lycurgus, and as many others—big and small—are because of many other men? What city gives you credit for being a good lawgiver who benefited it, as Italy and Sicily do to Charondas, and as we do to Solon? Who gives such credit to you?" Will he be able to name one?

Glaucon:: I suppose not, for not even the Homeridae make that claim for him.

Socrates:: Well, then, is any war in Homer's time remembered that was won because of his generalship and advice?

Glaucon:: None.

Socrates:: Or, as befits a wise man, are many inventions and useful devices in the crafts or sciences attributed to Homer, as they are to Thales of Miletus and Anacharsis the Scythian?

Glaucon:: There’s nothing of that kind at all.

Socrates:: Then, if there’s nothing of a public nature, are we told that, when Homer was alive, he was a leader in the education of certain people who took pleasure in associating with him in private and that he passed on a Homeric way of life to those who came after him, just as Pythagoras did? Pythagoras is particularly loved for this, and even today his followers are conspicuous for what they call the Pythagorean way of life.

Glaucon:: Again, we’re told nothing of this kind about Homer. If the stories about him are true, Socrates, his companion, Creophylus, seems to have been an even more ridiculous example of education than his name suggests, for they tell us that while Homer was alive, Creophylus completely neglected him.

Socrates:: They do tell us that. But, Glaucon, if Homer had really been able to educate people and make them better, if he'd known about these things and not merely about how to imitate them, wouldn’t he have had many companions and been loved and honored by them? Protagoras of Abdera, Prodicus of Ceos, and a great many others are able to convince anyone who associates with them in private that he wouldn’t be able to manage his household or city unless they themselves supervise his education, and they are so intensely loved because of this wisdom of theirs that their disciples do everything but carry them around on their shoulders. So do you suppose that, if Homer had been able to benefit people and make them more virtuous, his companions would have allowed either him or Hesiod to wander around as rhapsodes? Instead, wouldn't they have clung tighter to them than to gold and compelled them to live with them in their homes, or, if they failed to persuade them to do so, wouldn't they have followed them wherever they went until they had received sufficient education?

Glaucon:: It seems to me, Socrates, that what you say is entirely true.

Socrates:: Then shall we conclude that all poetic imitators, beginning with Homer, imitate images of virtue and all the other things they write about and have no grasp of the truth? As we were saying just now, a painter, though he knows nothing about cobblery, can make what seems to be a cobbler to those who know as little about it as he does and who judge things by their colors and shapes.

Glaucon:: That's right.

Socrates:: And in the same way, I suppose we'll say that a poetic imitator uses words and phrases to paint colored pictures of each of the crafts. He himself knows nothing about them, but he imitates them in such a way that others, as ignorant as he, who judge by words, will think he speaks extremely well about cobblery or generalship or anything else whatever, provided—so great is the natural charm of these things—that he speaks with meter, rhythm, and harmony, for if you strip a poet's works of their musical colorings and take them by themselves, I think you know what they look like. You've surely seen them.

Glaucon:: I certainly have.

Socrates:: Don't they resemble the faces of young boys who are neither fine nor beautiful after the bloom of youth has left them?

Glaucon:: Absolutely.

Socrates:: Now, consider this. We say that a maker of an image—an imitator— knows nothing about that which is but only about its appearance. Isn't that so?

Glaucon:: Yes.

Socrates:: Then let's not leave the discussion of this point halfway, but examine it fully.

Glaucon:: Go ahead.

Socrates:: Don't we say that a painter paints reins and a mouth-bit?

Glaucon:: Yes.

Socrates:: And that a cobbler and a metal-worker makes them?

Glaucon:: Of course.

Socrates:: Then, does a painter know how the reins and mouth-bit have to be? Or is it the case that even a cobbler and metal-worker who make them don't know this, but only someone who knows how to use them, namely, a horseman?

Glaucon:: That's absolutely true.

Socrates:: And won't we say that the same holds for everything?

Glaucon:: What?

Socrates:: That for each thing there are these three crafts, one that uses it, one that makes it, and one that imitates it?

Glaucon:: Yes.

Socrates:: Then aren't the virtue or excellence, the beauty and correctness of each manufactured item, living creature, and action related to nothing but the use for which each is made or naturally adapted?

Glaucon:: They are.

Socrates:: It’s wholly necessary, therefore, that a user of each thing has most experience of it and that he tell a maker which of his products performs well or badly in actual use. A flute-player, for example, tells a flute-maker about the flutes that respond well in actual playing and prescribes what kind of flutes he is to make, while the maker follows his instructions.

Glaucon:: Of course.

Socrates:: Then doesn’t the one who knows give instructions about good and bad flutes, and doesn’t the other rely on him in making them?

Glaucon:: Yes.

Socrates:: Therefore, a maker—through associating with and having to listen to the one who knows—has right opinion about whether something he makes is fine or bad, but the one who knows is the user.

Glaucon:: That’s right.

Socrates:: Does an imitator have knowledge of whether the things he makes are fine or right through having made use of them, or does he have right opinion about them through having to consort with the one who knows and being told how he is to paint them?

Glaucon:: Neither.

Socrates:: Therefore an imitator has neither knowledge nor right opinion about whether the things he makes are fine or bad.

Glaucon:: Apparently not.

Socrates:: Then a poetic imitator is an accomplished fellow when it comes to wisdom about the subjects of his poetry!

Glaucon:: Hardly.

Socrates:: Nonetheless, he'll go on imitating, even though he doesn't know the good or bad qualities of anything, but what he'll imitate, it seems, is what appears fine or beautiful to the majority of people who know nothing.

Glaucon:: Of course.

Socrates:: It seems, then, that we're fairly well agreed that an imitator has no worthwhile knowledge of the things he imitates, that imitation is a kind of game and not something to be taken seriously, and that all the tragic poets, whether they write in iambics or hexameters, are as imitative as they could possibly be.

Glaucon:: That's right.

Socrates:: Then is this kind of imitation concerned with something that is third from the truth, or what?

Glaucon:: Yes, it is.

Socrates:: And on which of a person's parts does it exert its power?

Glaucon:: What do you mean?

Socrates:: This: Something looked at from close at hand doesn't seem to be the same size as it does when it is looked at from a distance.

Glaucon:: No, it doesn't.

Socrates:: And something looks crooked when seen in water and straight when seen out of it, while something else looks both concave and convex because our eyes are deceived by its colors, and every other similar sort of confusion is clearly present in our soul. And it is because they exploit this weakness in our nature that *trompe l'oeil* painting, conjuring, and other forms of trickery have powers that are little short of magical.

Glaucon:: That's true.

Socrates:: And don’t measuring, counting, and weighing give us most welcome assistance in these cases, so that we aren’t ruled by something’s looking bigger, smaller, more numerous, or heavier, but by calculation, measurement, or weighing?

Glaucon:: Of course.

Socrates:: And calculating, measuring, and weighing are the work of the rational part of the soul.

Glaucon:: They are.

Socrates:: But when this part has measured and has indicated that some things are larger or smaller or the same size as others, the opposite appears to it at the same time.

Glaucon:: Yes.

Socrates:: And didn’t we say that it is impossible for the same thing to believe opposites about the same thing at the same time?

Glaucon:: We did, and we were right to say it.

Socrates:: Then the part of the soul that forms a belief contrary to the measurements couldn’t be the same as the part that believes in accord with them.

Glaucon:: No, it couldn’t.

Socrates:: Now, the part that puts its trust in measurement and calculation is the best part of the soul.

Glaucon:: Of course.

Socrates:: Therefore, the part that opposes it is one of the inferior parts in us.

Glaucon:: Necessarily.

Socrates:: This, then, is what I wanted to get agreement about when I said that painting and imitation as a whole produce work that is far from the truth, namely, that imitation really consorts with a part of us that is far from reason, and the result of their being friends and companions is neither sound nor true.

Glaucon:: That's absolutely right.

Socrates:: Then imitation is an inferior thing that consorts with another inferior thing to produce an inferior offspring.

Glaucon:: So it seems.

Socrates:: Does this apply only to the imitations we see, or does it also apply to the ones we hear—the ones we call poetry?

Glaucon:: It probably applies to poetry as well.

Socrates:: However, we mustn't rely solely on a mere probability based on the analogy with painting; instead, we must go directly to the part of our thought with which poetic imitations consort and see whether it is inferior or something to be taken seriously.

Glaucon:: Yes, we must.

Socrates:: Then let's set about it as follows. We say that imitative poetry imitates human beings acting voluntarily or under compulsion, who believe that, as a result of these actions, they are doing either well or badly and who experience either pleasure or pain in all this. Does it imitate anything apart from this?

Glaucon:: Nothing.

Socrates:: Then is a person of one mind in all these circumstances? Or, just as he was at war with himself in matters of sight and held opposite beliefs about the same thing at the same time, does he also fight with himself and engage in civil war with himself in matters of action? But there is really no need for us to reach agreement on this question now, for I remember that we already came to an adequate conclusion about all these things in our earlier arguments, when we said that our soul is full of a myriad of such oppositions at the same time.

Glaucon:: And rightly so.

Socrates:: It was right, but I think we omitted some things then that we must now discuss.

Glaucon:: What are they?

Socrates:: We also mentioned somewhere before that, if a decent man happens to lose his son or some other prized possession, he'll bear it more easily than the other sorts of people.

Glaucon:: Certainly.

Socrates:: But now let's consider this. Will he not grieve at all, or, if that's impossible, will he be somehow measured in his response to pain?

Glaucon:: The latter is closer to the truth.

Socrates:: Now, tell me this about him: Will he fight his pain and put up more resistance to it when his equals can see him or when he's alone by himself in solitude?

Glaucon:: He'll fight it far more when he's being seen.

Socrates:: But when he's alone I suppose he'll venture to say and do lots of things that he'd be ashamed to be heard saying or seen doing.

Glaucon:: That's right.

Socrates:: And isn't it reason and law that tells him to resist his pain, while his experience of it tells him to give in?

Glaucon:: True.

Socrates:: And when there are two opposite inclinations in a person in relation to the same thing at the same time, we say that he must also have two parts.

Glaucon:: Of course.

Socrates:: Isn’t one part ready to obey the law wherever it leads him?

Glaucon:: How so?

Socrates:: The law says, doesn’t it, that it is best to keep as quiet as possible in misfortunes and not get excited about them? First, it isn’t clear whether such things will turn out to be good or bad in the end; second, it doesn’t make the future any better to take them hard; third, human affairs aren’t worth taking very seriously; and, finally, grief prevents the very thing we most need in such circumstances from coming into play as quickly as possible.

Glaucon:: What are you referring to?

Socrates:: Deliberation. We must accept what has happened as we would the fall of the dice, and then arrange our affairs in whatever way reason determines to be best. We mustn’t hug the hurt part and spend our time weeping and wailing like children when they trip. Instead, we should always accustom our souls to turn as quickly as possible to healing the disease and putting the disaster right, replacing lamentation with cure.

Glaucon:: That would be the best way to deal with misfortune, at any rate.

Socrates:: Accordingly, we say that it is the best part of us that is willing to follow this rational calculation.

Glaucon:: Clearly.

Socrates:: Then won’t we also say that the part that leads us to dwell on our misfortunes and to lamentation, and that can never get enough of these things, is irrational, idle, and a friend of cowardice?

Glaucon:: We certainly will.

Socrates:: Now, this excitable character admits of many multicolored imitations. But a rational and quiet character, which always remains pretty well the same, is neither easy to imitate nor easy to understand when imitated, especially not by a crowd consisting of all sorts of people gathered together at a theater festival, for the experience being imitated is alien to them.

Glaucon:: Absolutely.

Socrates:: Clearly, then, an imitative poet isn't by nature related to the part of the soul that rules in such a character, and, if he's to attain a good reputation with the majority of people, his cleverness isn't directed to pleasing it. Instead, he's related to the excitable and multicolored character, since it is easy to imitate.

Glaucon:: Clearly.

Socrates:: Therefore, we'd be right to take him and put him beside a painter as his counterpart. Like a painter, he produces work that is inferior with respect to truth and that appeals to a part of the soul that is similarly inferior rather than to the best part. So we were right not to admit him into a city that is to be well-governed, for he arouses, nourishes, and strengthens this part of the soul and so destroys the rational one, in just the way that someone destroys the better sort of citizens when he strengthens the vicious ones and surrenders the city to them. Similarly, we'll say that an imitative poet puts a bad constitution in the soul of each individual by making images that are far removed from the truth and by gratifying the irrational part, which cannot distinguish the large and the small but believes that the same things are large at one time and small at another.

Glaucon:: That's right.

Socrates:: However, we haven't yet brought the most serious charge against imitation, namely, that with a few rare exceptions it is able to corrupt even decent people, for that's surely an altogether terrible thing.

Glaucon:: It certainly is, if indeed it can do that.

Socrates:: Listen, then, and consider whether it can or not. When even the best of us hear Homer or some other tragedian imitating one of the heroes sorrowing and making a long lamenting speech or singing and beating his breast, you know that we enjoy it, give ourselves up to following it, sympathize with the hero, take his sufferings seriously, and praise as a good poet the one who affects us most in this way.

Glaucon:: Of course we do.

Socrates:: But when one of us suffers a private loss, you realize that the opposite happens. We pride ourselves if we are able to keep quiet and master our grief, for we think that this is the manly thing to do and that the behavior we praised before is womanish.

Glaucon:: I do realize that.

Socrates:: Then are we right to praise it? Is it right to look at someone behaving in a way that we would consider unworthy and shameful and to enjoy and praise it rather than being disgusted by it?

Glaucon:: No, by god, that doesn't seem reasonable.

Socrates:: No, at least not if you look at it in the following way.

Glaucon:: How?

Socrates:: If you reflect, first, that the part of the soul that is forcibly controlled in our private misfortunes and that hungers for the satisfaction of weeping and wailing, because it desires these things by nature, is the very part that receives satisfaction and enjoyment from poets, and, second, that the part of ourselves that is best by nature, since it hasn't been adequately educated either by reason or habit, relaxes its guard over the lamenting part when it is watching the sufferings of somebody else. The reason it does so is this: It thinks that there is no shame involved for it in praising and pitying another man who, in spite of his claim to goodness, grieves excessively. Indeed, it thinks that there is a definite gain involved in doing so, namely, pleasure. And it wouldn't want to be deprived of that by despising the whole poem. I suppose that only a few are able to figure out that enjoyment of other people's sufferings is necessarily transferred to our own and that the pitying part, if it is nourished and strengthened on the sufferings of others, won't be easily held in check when we ourselves suffer.

Glaucon:: That's very true.

Socrates:: And doesn't the same argument apply to what provokes laughter? If there are any jokes that you yourself would be ashamed to tell but that you very much enjoy hearing and don't detest as something evil in comic plays or in private, aren't you doing the same thing as in the case of what provokes pity? The part of you that wanted to tell the jokes and that was held back by your reason, for fear of being thought a buffoon, you then release, not realizing that, by making it strong in this way, you will be led into becoming a figure of fun where your own affairs are concerned.

Glaucon:: Yes, indeed.

Socrates:: And in the case of sex, anger, and all the desires, pleasures, and pains that we say accompany all our actions, poetic imitation has the very same effect on us. It nurtures and waters them and establishes them as rulers in us when they ought to wither and be ruled, for that way we'll become better and happier rather than worse and more wretched.

Glaucon:: I can't disagree with you.

Socrates:: And so, Glaucon, when you happen to meet those who praise Homer and say that he's the poet who educated Greece, that it's worth taking up his works in order to learn how to manage and educate people, and that one should arrange one's whole life in accordance with his teachings, you should welcome these people and treat them as friends, since they're as good as they're capable of being, and you should agree that Homer is the most poetic of the tragedians and the first among them. But you should also know that hymns to the gods and eulogies to good people are the only poetry we can admit into our city. If you admit the pleasure-giving Muse, whether in lyric or epic poetry, pleasure and pain will be kings in your city instead of law or the thing that everyone has always believed to be best, namely, reason.

Glaucon:: That's absolutely true.

Socrates:: Then let this be our defense—now that we've returned to the topic of poetry—that, in view of its nature, we had reason to banish it from the city earlier, for our argument compelled us to do so. But in case we are charged with a certain harshness and lack of sophistication, let's also tell poetry that there is an ancient quarrel between it and philosophy, which is evidenced by such expressions as "the dog yelping and shrieking at its master," "great in the empty eloquence of fools," "the mob of wise men that has mastered Zeus," and "the subtle thinkers, beggars all." Nonetheless, if the poetry that aims at pleasure and imitation has any argument to bring forward that proves it ought to have a place in a well-governed city, we at least would be glad to admit it, for we are well aware of the charm it exercises. But, be that as it may, to betray what one believes to be the truth is impious. What about you, Glaucon, don’t you feel the charm of the pleasure-giving Muse, especially when you study her through the eyes of Homer?

Glaucon:: Very much so.

Socrates:: Therefore, isn’t it just that such poetry should return from exile when it has successfully defended itself, whether in lyric or any other meter?

Glaucon:: Certainly.

Socrates:: Then we’ll allow its defenders, who aren’t poets themselves but lovers of poetry, to speak in prose on its behalf and to show that it not only gives pleasure but is beneficial both to constitutions and to human life. Indeed, we’ll listen to them graciously, for we'd certainly profit if poetry were shown to be not only pleasant but also beneficial.

Glaucon:: How could we fail to profit?

Socrates:: However, if such a defense isn’t made, we’ll behave like people who have fallen in love with someone but who force themselves to stay away from him, because they realize that their passion isn’t beneficial. In the same way, because the love of this sort of poetry has been implanted in us by the upbringing we have received under our fine constitutions, we are well disposed to any proof that it is the best and truest thing. But if it isn’t able to produce such a defense, then, whenever we listen to it, we’ll repeat the argument we have just now put forward like an incantation so as to preserve ourselves from slipping back into that childish passion for poetry which the majority of people have. And we’ll go on chanting that such poetry is not to be taken seriously or treated as a serious undertaking with some kind of hold on the truth, but that anyone who is anxious about the constitution within him must be careful when he hears it and must continue to believe what we have said about it.

Glaucon:: I completely agree.

Socrates:: Yes, for the struggle to be good rather than bad is important, Glaucon, much more important than people think. Therefore, we mustn't be tempted by honor, money, rule, or even poetry into neglecting justice and the rest of virtue.

Glaucon:: After what we've said, I agree with you, and so, I think, would anyone else.

Socrates:: And yet we haven't discussed the greatest rewards and prizes that have been proposed for virtue.

Glaucon:: They must be inconceivably great, if they're greater than those you've already mentioned.

Socrates:: Could anything really great come to pass in a short time? And isn't the time from childhood to old age short when compared to the whole of time?

Glaucon:: It's a mere nothing.

Socrates:: Well, do you think that an immortal thing should be seriously concerned with that short period rather than with the whole of time?

Glaucon:: I suppose not, but what exactly do you mean by this?

Socrates:: Haven't you realized that our soul is immortal and never destroyed? He looked at me with wonder and said:

Glaucon:: No, by god, I haven't. Are you really in a position to assert that?

Socrates:: I'd be wrong not to, and so would you, for it isn't difficult.

Glaucon:: It is for me, so I'd be glad to hear from you what’s not difficult about it.

Socrates:: Listen, then.

Glaucon:: Just speak, and I will.

Socrates:: Do you talk about good and bad?

Glaucon:: I do.

Socrates:: And do you think about them the same way I do?

Glaucon:: What way is that?

Socrates:: The bad is what destroys and corrupts, and the good is what preserves and benefits.

Glaucon:: I do.

Socrates:: And do you say that there is a good and a bad for everything? For example, ophthalmia for the eyes, sickness for the whole body, blight for grain, rot for wood, rust for iron or bronze. In other words, is there, as I say, a natural badness and sickness for pretty well everything?

Glaucon:: There is.

Socrates:: And when one of these attaches itself to something, doesn’t it make the thing in question bad, and in the end, doesn’t it disintegrate it and destroy it wholly?

Glaucon:: Of course.

Socrates:: Therefore, the evil that is natural to each thing and the bad that is peculiar to it destroy it. However, if they don’t destroy it, nothing else will, for the good would never destroy anything, nor would anything neither good nor bad.

Glaucon:: How could they?

Socrates:: Then, if we discover something that has an evil that makes it bad but isn’t able to disintegrate and destroy it, can’t we infer that it is naturally incapable of being destroyed?

Glaucon:: Probably so.

Socrates:: Well, what about the soul? Isn't there something that makes it bad?

Glaucon:: Certainly, all the things we were mentioning: Injustice, licentiousness, cowardice, and lack of learning.

Socrates:: Does any of these disintegrate and destroy the soul? Keep your wits about you, and let's not be deceived into thinking that, when an unjust and foolish person is caught, he has been destroyed by injustice, which is evil in a soul. Let's think about it this way instead: Just as the body is worn out, destroyed, and brought to the point where it is a body no longer by disease, which is evil in a body, so all the things we mentioned just now reach the point at which they cease to be what they are through their own peculiar evil, which attaches itself to them and is present in them. Isn't that so?

Glaucon:: Yes.

Socrates:: Then look at the soul in the same way. Do injustice and the other vices that exist in a soul—by their very presence in it and by attaching themselves to it—corrupt it and make it waste away until, having brought it to the point of death, they separate it from the body?

Glaucon:: That's not at all what they do.

Socrates:: But surely it's unreasonable to suppose that a thing is destroyed by the badness proper to something else when it is not destroyed by its own?

Glaucon:: That is unreasonable.

Socrates:: Keep in mind, Glaucon, that we don't think that a body is destroyed by the badness of food, whether it is staleness, rottenness, or anything else. But if the badness of the food happens to implant in the body an evil proper to a body, we'll say that the body was destroyed by its own evil, namely, disease. But, since the body is one thing and food another, we’ll never judge that the body is destroyed by the badness of food, unless it implants in it the body’s own natural and peculiar evil.

Glaucon:: That’s absolutely right.

Socrates:: By the same argument, if the body’s evil doesn’t cause an evil in the soul that is proper to the soul, we’ll never judge that the soul, in the absence of its own peculiar evil, is destroyed by the evil of something else. We'd never accept that anything is destroyed by an evil proper to something else.

Glaucon:: That’s also reasonable.

Socrates:: Then let’s either refute our argument and show that we were wrong, or, as long as it remains unrefuted, let’s never say that the soul is destroyed by a fever or any other disease or by killing either, for that matter, not even if the body is cut up into tiny pieces. We mustn’t say that the soul is even close to being destroyed by these things until someone shows us that these conditions of the body make the soul more unjust and more impious. When something has the evil proper to something else in it, but its own peculiar evil is absent, we won’t allow anyone to say that it is destroyed, no matter whether it is a soul or anything else whatever.

Glaucon:: And you may be sure that no one will ever prove that the souls of the dying are made more unjust by death.

Socrates:: But if anyone dares to come to grips with our argument, in order to avoid having to agree that our souls are immortal, and says that a dying man does become more vicious and unjust, we’ll reply that, if what he says is true, then injustice must be as deadly to unjust people as a disease, and those who catch it must die of it because of its own deadly nature, with the worst cases dying quickly and the less serious dying more slowly. As things now stand, however, it isn’t like that at all. Unjust people do indeed die of injustice, but at the hands of others who inflict the death penalty on them.

Glaucon:: By god, if injustice were actually fatal to those who contracted it, it wouldn’t seem so terrible, for it would be an escape from their troubles. But I rather think that it’s clearly the opposite, something that kills other people if it can, while, on top of making the unjust themselves lively, it even brings them out at night. Hence it’s very far from being deadly to its possessors.

Socrates:: You’re right, for if the soul’s own evil and badness isn’t enough to kill and destroy it, an evil appointed for the destruction of something else will hardly kill it. Indeed, it won’t kill anything at all except the very thing it is appointed to destroy.

Glaucon:: “Hardly” is right, or so it seems.

Socrates:: Now, if the soul isn’t destroyed by a single evil, whether its own or something else’s, then clearly it must always be. And if it always is, it is immortal.

Glaucon:: Necessarily so.

Socrates:: So be it. And if it is so, then you realize that there would always be the same souls, for they couldn’t be made fewer if none is destroyed, and they couldn’t be made more numerous either. If anything immortal is increased, you know that the increase would have to come from the mortal, and then everything would end up being immortal.

Glaucon:: That’s true.

Socrates:: Then we mustn’t think such a thing, for the argument doesn’t allow it, nor must we think that the soul in its truest nature is full of multicolored variety and unlikeness or that it differs with itself.

Glaucon:: What do you mean?

Socrates:: It isn't easy for anything composed of many parts to be immortal if it isn't put together in the finest way, yet this is how the soul now appeared to us.

Glaucon:: It probably isn't easy.

Socrates:: Yet our recent argument and others as well compel us to believe that the soul is immortal. But to see the soul as it is in truth, we must not study it as it is while it is maimed by its association with the body and other evils—which is what we were doing earlier—but as it is in its pure state, that's how we should study the soul, thoroughly and by means of logical reasoning. We'll then find that it is a much finer thing than we thought and that we can see justice and injustice as well as all the other things we've discussed far more clearly. What we've said about the soul is true of it as it appears at present. But the condition in which we've studied it is like that of the sea god Glaucus, whose primary nature can't easily be made out by those who catch glimpses of him. Some of the original parts have been broken off, others have been crushed, and his whole body has been maimed by the waves and by the shells, seaweeds, and stones that have attached themselves to him, so that he looks more like a wild animal than his natural self. The soul, too, is in a similar condition when we study it, beset by many evils. That, Glaucon, is why we have to look somewhere else in order to discover its true nature.

Glaucon:: To where?

Socrates:: To its philosophy, or love of wisdom. We must realize what it grasps and longs to have intercourse with, because it is akin to the divine and immortal and what always is, and we must realize what it would become if it followed this longing with its whole being, and if the resulting effort lifted it out of the sea in which it now dwells, and if the many stones and shells (those which have grown all over it in a wild, earthy, and stony profusion because it feasts at those so-called happy feastings on earth) were hammered off it. Then we'd see what its true nature is and be able to determine whether it has many parts or just one and whether or in what manner it is put together. But we've already given a decent account, I think, of what its condition is and what parts it has when it is immersed in human life.

Glaucon:: We certainly have.

Socrates:: And haven't we cleared away the various other objections to our argument without having to invoke the rewards and reputations of justice, as you said Homer and Hesiod did? And haven't we found that justice itself is the best thing for the soul itself, and that the soul—whether it has the ring of Gyges or even it together with the cap of Hades—should do just things?

Glaucon:: We have. That's absolutely true.

Socrates:: Then can there now be any objection, Glaucon, if in addition we return to justice and the rest of virtue both the kind and quantity of wages that they obtain for the soul from human beings and gods, whether in this life or the next?

Glaucon:: None whatever.

Socrates:: Then will you give me back what you borrowed from me during the discussion?

Glaucon:: What are you referring to in particular?

Socrates:: I granted your request that a just person should seem unjust and an unjust one just, for you said that, even if it would be impossible for these things to remain hidden from both gods and humans, still, this had to be granted for the sake of argument, so that justice itself could be judged in relation to injustice itself. Don’t you remember that?

Glaucon:: It would be wrong of me not to.

Socrates:: Well, then, since they’ve now been judged, I ask that the reputation justice in fact has among gods and humans be returned to it and that we agree that it does indeed have such a reputation and is entitled to carry off the prizes it gains for someone by making him seem just. It is already clear that it gives good things to anyone who is just and that it doesn’t deceive those who really possess it.

Glaucon:: That’s a fair request.

Socrates:: Then won’t you first grant that it doesn’t escape the notice of the gods at least as to which of the two is just and which isn’t?

Glaucon:: We will.

Socrates:: Then if neither of them escapes the gods’ notice, one would be loved by the gods and the other hated, as we agreed at the beginning.

Glaucon:: That’s right.

Socrates:: And won’t we also agree that everything that comes to someone who is loved by gods, insofar as it comes from the gods themselves, is the best possible, unless it is the inevitable punishment for some mistake he made in a former life?

Glaucon:: Certainly.

Socrates:: Then we must suppose that the same is true of a just person who falls into poverty or disease or some other apparent evil, namely, that this will end well for him, either during his lifetime or afterwards, for the gods never neglect anyone who eagerly wishes to become just and who makes himself as much like a god as a human can by adopting a virtuous way of life.

Glaucon:: It makes sense that such a person not be neglected by anyone who is like him.

Socrates:: And mustn't we suppose that the opposite is true of an unjust person?

Glaucon:: Definitely.

Socrates:: Then these are some of the prizes that a just person, but not an unjust one, receives from the gods.

Glaucon:: That's certainly my opinion.

Socrates:: What about from human beings? What does a just person get from them? Or, if we're to tell the truth, isn't this what happens? Aren't clever but unjust people like runners who run well for the first part of the course but not for the second? They leap away sharply at first, but they become ridiculous by the end and go off uncrowned, with their ears drooping on their shoulders like those of exhausted dogs, while true runners, on the other hand, get to the end, collect the prizes, and are crowned. And isn't it also generally true of just people that, towards the end of each course of action, association, or life, they enjoy a good reputation and collect the prizes from other human beings?

Glaucon:: Of course.

Socrates:: Then will you allow me to say all the things about them that you yourself said about unjust people? I'll say that it is just people who, when they're old enough, rule in their own cities (if they happen to want ruling office) and that it is they who marry whomever they want and give their children in marriage to whomever they want. Indeed, all the things that you said about unjust people I now say about just ones. As for unjust people, the majority of them, even if they escape detection when they're young, are caught by the end of the race and are ridiculed. And by the time they get old, they've become wretched, for they are insulted by foreigners and citizens, beaten with whips, and made to suffer those punishments, such as racking and burning, which you rightly described as crude. Imagine that I've said that they suffer all such things, and see whether you'll allow me to say it.

Glaucon:: Of course I will. What you say is right.

Socrates:: Then these are the prizes, wages, and gifts that a just person receives from gods and humans while he is alive and that are added to the good things that justice itself provides.

Glaucon:: Yes, and they're very fine and secure ones too.

Socrates:: Yet they're nothing in either number or size compared to those that await just and unjust people after death. And these things must also be heard, if both are to receive in full what they are owed by the argument.

Glaucon:: Then tell us about them, for there aren't many things that would be more pleasant to hear.

Socrates:: It isn't, however, a tale of Alcinous that I'll tell you but that of a brave Pamphylian man called Er, the son of Armenias, who once died in a war. When the rest of the dead were picked up ten days later, they were already putrefying, but when he was picked up, his corpse was still quite fresh. He was taken home, and preparations were made for his funeral. But on the twelfth day, when he was already laid on the funeral pyre, he revived and, having done so, told what he had seen in the world beyond. He said that, after his soul had left him, it travelled together with many others until they came to a marvelous place, where there were two adjacent openings in the earth, and opposite and above them two others in the heavens, and between them judges sat. These, having rendered their judgment, ordered the just to go upwards into the heavens through the door on the right, with signs of the judgment attached to their chests, and the unjust to travel downward through the opening on the left, with signs of all their deeds on their backs. When Er himself came forward, they told him that he was to be a messenger to human beings about the things that were there, and that he was to listen to and look at everything in the place. He said that he saw souls departing after judgment through one of the openings in the heavens and one in the earth, while through the other two souls were arriving. From the door in the earth souls came up covered with dust and dirt and from the door in the heavens souls came down pure. And the souls who were arriving all the time seemed to have been on long journeys, so that they went gladly to the meadow, like a crowd going to a festival, and camped there. Those who knew each other exchanged greetings, and those who come up from the earth asked those who came down from the heavens about the things there and were in turn questioned by them about the things below. And so they told their stories to one another, the former weeping as they recalled all they had suffered and seen on their journey below the earth, which lasted a thousand years, while the latter, who had come from heaven, told about how well they had fared and about the inconceivably fine and beautiful sights they had seen. There was much to tell, Glaucon, and it took a long time, but the main point was this: For each in turn of the unjust things they had done and for each in turn of the people they had wronged, they paid the penalty ten times over, once in every century of their journey. Since a century is roughly the length of a human life, this means that they paid a tenfold penalty for each injustice. If, for example, some of them had caused many deaths by betraying cities or armies and reducing them to slavery or by participating in other wrongdoing, they had to suffer ten times the pain they had caused to each individual. But if they had done good deeds and had become just and pious, they were rewarded according to the same scale. He said some other things about the stillborn and those who had lived for only a short time, but they're not worth recounting. And he also spoke of even greater rewards or penalties for piety or impiety towards gods or parents and for murder with one's own hands.

For example, he said he was there when someone asked another where the great Ardiaeus was. (This Ardiaeus was said to have been tyrant in some city in Pamphylia a thousand years before and to have killed his aged father and older brother and committed many other impious deeds as well.) And he said that the one who was asked responded: "He hasn't arrived here yet and never will, for this too was one of the terrible sights we saw. When we came near the opening on our way out, after all our sufferings were over, we suddenly saw him together with some others, pretty well all of whom were tyrants (although there were also some private individuals among them who had committed great crimes). They thought that they were ready to go up, but the opening wouldn't let them through, for it roared whenever one of these incurably wicked people or anyone else who hadn't paid a sufficient penalty tried to go up. And there were savage men, all fiery to look at, who were standing by, and when they heard the roar, they grabbed some of these criminals and led them away, but they bound the feet, hands, and head of Ardiaeus and the others, threw them down, and flayed them. Then they dragged them out of the way, lacerating them on thorn bushes, and telling every passer-by that they were to be thrown into Tartarus, and explaining why they were being treated in this way." And he said that of their many fears the greatest each one of them had was that the roar would be heard as he came up and that everyone was immensely relieved when silence greeted him. Such, then, were the penalties and punishments and the rewards corresponding to them.

Each group spent seven days in the meadow, and on the eighth they had to get up and go on a journey. On the fourth day of that journey, they came to a place where they could look down from above on a straight column of light that stretched over the whole of heaven and earth, more like a rainbow than anything else, but brighter and more pure. After another day, they came to the light itself, and there, in the middle of the light, they saw the extremities of its bonds stretching from the heavens, for the light binds the heavens like the cables girding a trireme and holds its entire revolution together. From the extremities hangs the spindle of Necessity, by means of which all the revolutions are turned. Its stem and hook are of adamant, whereas in its whorl adamant is mixed with other kinds of material. The nature of the whorl was this: Its shape was like that of an ordinary whorl, but, from what Er said, we must understand its structure as follows. It was as if one big whorl had been made hollow by being thoroughly scooped out, with another smaller whorl closely fitted into it, like nested boxes, and there was a third whorl inside the second, and so on, making eight whorls altogether, lying inside one another, with their rims appearing as circles from above, while from the back they formed one continuous whorl around the spindle, which was driven through the center of the eighth. The first or outside whorl had the widest circular rim; that of the sixth was second in width; the fourth was third; the eighth was fourth; the seventh was fifth; the fifth was sixth; the third was seventh; and the second was eighth. The rim of the largest was spangled; that of the seventh was brightest; that of the eighth took its color from the seventh's shining on it; the second and fifth were about equal in brightness, more yellow than the others; the third was the whitest in color; the fourth was rather red; and the sixth was second in whiteness. The whole spindle turned at the same speed, but, as it turned, the inner spheres gently revolved in a direction opposite to that of the whole. Of these inner spheres, the eighth was the fastest; second came the seventh, sixth, and fifth, all at the same speed; it seemed to them that the fourth was third in its speed of revolution; the fourth, third; and the second, fifth. The spindle itself turned on the lap of Necessity. And up above on each of the rims of the circles stood a Siren, who accompanied its revolution, uttering a single sound, one single note. And the concord of the eight notes produced a single harmony. And there were three other beings sitting at equal distances from one another, each on a throne. These were the Fates, the daughters of Necessity: Lachesis, Clotho, and Atropos. They were dressed in white, with garlands on their heads, and they sang to the music of the Sirens. Lachesis sang of the past, Clotho of the present, and Atropos of the future. With her right hand, Clotho touched the outer circumference of the spindle and helped it turn, but left off doing so from time to time; Atropos did the same to the inner ones; and Lachesis helped both motions in turn, one with one hand and one with the other.

When the souls arrived at the light, they had to go to Lachesis right away. There a Speaker arranged them in order, took from the lap of Lachesis a number of lots and a number of models of lives, mounted a high pulpit, and spoke to them: “Here is the message of Lachesis, the maiden daughter of Necessity: “Ephemeral souls, this is the beginning of another cycle that will end in death. Your daemon or guardian spirit will not be assigned to you by lot; you will choose him. The one who has the first lot will be the first to choose a life to which he will then be bound by necessity. Virtue knows no master; each will possess it to a greater or less degree, depending on whether he values or disdains it. The responsibility lies with the one who makes the choice; the god has none.'" When he had said this, the Speaker threw the lots among all of them, and each— with the exception of Er, who wasn't allowed to choose—picked up the one that fell next to him. And the lot made it clear to the one who picked it up where in the order he would get to make his choice. After that, the models of lives were placed on the ground before them. There were far more of them than there were souls present, and they were of all kinds, for the lives of animals were there, as well as all kinds of human lives. There were tyrannies among them, some of which lasted throughout life, while others ended halfway through in poverty, exile, and beggary. There were lives of famous men, some of whom were famous for the beauty of their appearance, others for their strength or athletic prowess, others still for their high birth and the virtue or excellence of their ancestors. And there were also lives of men who weren't famous for any of these things. And the same for lives of women. But the arrangement of the soul was not included in the model because the soul is inevitably altered by the different lives it chooses. But all the other things were there, mixed with each other and with wealth, poverty, sickness, health, and the states intermediate to them.

Now, it seems that it is here, Glaucon, that a human being faces the greatest danger of all. And because of this, each of us must neglect all other subjects and be most concerned to seek out and learn those that will enable him to distinguish the good life from the bad and always to make the best choice possible in every situation. He should think over all the things we have mentioned and how they jointly and severally determine what the virtuous life is like. That way he will know what the good and bad effects of beauty are when it is mixed with wealth, poverty, and a particular state of the soul. He will know the effects of high or low birth, private life or ruling office, physical strength or weakness, ease or difficulty in learning, and all the things that are either naturally part of the soul or are acquired, and he will know what they achieve when mixed with one another. And from all this he will be able, by considering the nature of the soul, to reason out which life is better and which worse and to choose accordingly, calling a life worse if it leads the soul to become more unjust, better if it leads the soul to become more just, and ignoring everything else: We have seen that this is the best way to choose, whether in life or death. Hence, we must go down to Hades holding with adamantine determination to the belief that this is so, lest we be dazzled there by wealth and other such evils, rush into a tyranny or some other similar course of action, do irreparable evils, and suffer even worse ones. And we must always know how to choose the mean in such lives and how to avoid either of the extremes, as far as possible, both in this life and in all those beyond it. This is the way that a human being becomes happiest.

Then our messenger from the other world reported that the Speaker spoke as follows: “There is a satisfactory life rather than a bad one available even for the one who comes last, provided that he chooses it rationally and lives it seriously. Therefore, let not the first be careless in his choice nor the last discouraged.”

He said that when the Speaker had told them this, the one who came up first chose the greatest tyranny. In his folly and greed he chose it without adequate examination and didn’t notice that, among other evils, he was fated to eat his own children as a part of it. When he examined at leisure, the life he had chosen, however, he beat his breast and bemoaned his choice. And, ignoring the warning of the Speaker, he blamed chance, daemons, or guardian spirits, and everything else for these evils but himself. He was one of those who had come down from heaven, having lived his previous life under an orderly constitution, where he had participated in virtue through habit and without philosophy. Broadly speaking, indeed, most of those who were caught out in this way were souls who had come down from heaven and who were untrained in suffering as a result. The majority of those who had come up from the earth, on the other hand, having suffered themselves and seen others suffer, were in no rush to make their choices. Because of this and because of the chance of the lottery, there was an interchange of goods and evils for most of the souls. However, if someone pursues philosophy in a sound manner when he comes to live here on earth and if the lottery doesn't make him one of the last to choose, then, given what Er has reported about the next world, it looks as though not only will he be happy here, but his journey from here to there and back again won't be along the rough underground path, but along the smooth heavenly one.

Er said that the way in which the souls chose their lives was a sight worth seeing, since it was pitiful, funny, and surprising to watch. For the most part, their choice depended upon the character of their former life. For example, he said that he saw the soul that had once belonged to Orpheus choosing a swan's life, because he hated the female sex because of his death at their hands, and so was unwilling to have a woman conceive and give birth to him. Er saw the soul of Thamyris choosing the life of a nightingale, a swan choosing to change over to a human life, and other musical animals doing the same thing. The twentieth soul chose the life of a lion. This was the soul of Ajax, son of Telamon. He avoided human life because he remembered the judgment about the armor. The next soul was that of Agamemnon, whose sufferings also had made him hate the human race, so he changed to the life of an eagle. Atalanta had been assigned a place near the middle, and when she saw great honors being given to a male athlete, she chose his life, unable to pass them by. After her, he saw the soul of Epeius, the son of Panopeus, taking on the nature of a craftswoman. And very close to last, he saw the soul of the ridiculous Thersites clothing itself as a monkey. Now, it chanced that the soul of Odysseus got to make its choice last of all, and since memory of its former sufferings had relieved its love of honor, it went around for a long time, looking for the life of a private individual who did his own work, and with difficulty it found one lying off somewhere neglected by the others. He chose it gladly and said that he'd have made the same choice even if he'd been first. Still other souls changed from animals into human beings, or from one kind of animal into another, with unjust people changing into wild animals, and just people into tame ones, and all sorts of mixtures occurred.

After all the souls had chosen their lives, they went forward to Lachesis in the same order in which they had made their choices, and she assigned to each the daemon it had chosen as guardian of its life and fulfiller of its choice. This daemon first led the soul under the hand of Clotho as it turned the revolving spindle to confirm the fate that the lottery and its own choice had given it. After receiving her touch, he led the soul to the spinning of Atropos, to make what had been spun irreversible. Then, without turning around, they went from there under the throne of Necessity and, when all of them had passed through, they travelled to the Plain of Forgetfulness in burning, choking, terrible heat, for it was empty of trees and earthly vegetation. And there, beside the River of Unheeding, whose water no vessel can hold, they camped, for night was coming on. All of them had to drink a certain measure of this water, but those who weren't saved by reason drank more than that, and as each of them drank, he forgot everything and went to sleep. But around midnight there was a clap of thunder and an earthquake, and they were suddenly carried away from there, this way and that, up to their births, like shooting stars. Er himself was forbidden to drink from the water. All the same, he didn't know how he had come back to his body, except that waking up suddenly he saw himself lying on the pyre at dawn.

And so, Glaucon, his story wasn't lost but preserved, and it would save us, if we were persuaded by it, for we would then make a good crossing of the River of Forgetfulness, and our souls wouldn't be defiled. But if we are persuaded by me, we'll believe that the soul is immortal and able to endure every evil and every good, and we'll always hold to the upward path, practicing justice with reason in every way. That way we'll be friends both to ourselves and to the gods while we remain here on earth and afterwards—like victors in the games who go around collecting their prizes—we'll receive our rewards. Hence, both in this life and on the thousand-year journey we've described, we'll do well and be happy.

# The Republic.

## BOOK I

Translated by Jowett 3rd ed.

PERSONS OF THE DIALOGUE

Socrates, *who is the narrator.* Cephalus.
Glaucon. Thrasymachus.
Adeimantus. Cleitophon.
Polemarchus.
*And others who are mute auditors.*

The scene is laid in the house of Cephalus at the Piraeus.

Socrates:: I went down yesterday to the Piraeus with Glaucon the son of Ariston, that I might offer up my prayers to the goddess; and also because I wanted to see in what manner they would celebrate the festival, which was a new thing. I was delighted with the procession of the inhabitants; but that of the Thracians was equally, if not more, beautiful. When we had finished our prayers and viewed the spectacle, we turned in the direction of the city; and at that instant Polemarchus the son of Cephalus chanced to catch sight of us from a distance as we were starting on our way home, and told his servant to run and bid us wait for him. The servant took hold of me by the cloak behind, and said:

Boy:: Polemarchus desires you to wait.

Socrates:: I turned round, and asked him where his master was.

Boy:: There he is, coming after you, if you will only wait.

Glaucon:: Certainly we will.

Socrates:: in a few minutes Polemarchus appeared, and with him Adeimantus, Glaucon’s brother, Niceratus the son of Nicias, and several others who had been at the procession.

Polemarchus:: I perceive, Socrates, that you and your companion are already on your way to the city.

Socrates:: You are not far wrong.

Polemarchus:: But do you see how many we are?

Socrates:: Of course.

Polemarchus:: And are you stronger than all these? for if not, you will have to remain where you are.

Socrates:: May there not be the alternative, that we may persuade you to let us go?

Polemarchus:: But can you persuade us, if we refuse to listen to you?

Glaucon:: Certainly not.

Polemarchus:: Then we are not going to listen; of that you may be assured.

Adeimantus:: Has no one told you of the torch-race on horseback in honour of the goddess which will take place in the evening?

Socrates:: With horses! That is a novelty. Will horsemen carry torches and pass them one to another during the race?

Polemarchus:: Yes, and not only so, but a festival will be celebrated at night, which you certainly ought to see. Let us rise soon after supper and see this festival; there will be a gathering of young men, and we will have a good talk. Stay then, and do not be perverse.

Glaucon:: I suppose, since you insist, that we must.

Socrates:: Very good.

Accordingly we went with Polemarchus to his house; and there we found his brothers Lysias and Euthydemus, and with them Thrasymachus the Chalcedonian, Charmantides the Paeanian, and Cleitophon the son of Aristonymus. There too was Cephalus the father of Polemarchus, whom I had not seen for a long time, and I thought him very much aged.

He was seated on a cushioned chair, and had a garland on his head, for he had been sacrificing in the court; and there were some other chairs in the room arranged in a semicircle, upon which we sat down by him. He saluted me eagerly, and then he said:—

Cephalus:: You don't come to see me, Socrates, as often as you ought: If I were still able to go and see you I would not ask you to come to me. But at my age I can hardly get to the city, and therefore you should come oftener to the Piraeus. For let me tell you, that the more the pleasures of the body fade away, the greater to me is the pleasure and charm of conversation. Do not then deny my request, but make our house your resort and keep company with these young men; we are old friends, and you will be quite at home with us.

Socrates:: There is nothing which for my part I like better, Cephalus, than conversing with aged men; for I regard them as travelers who have gone a journey which I too may have to go, and of whom I ought to enquire, whether the way is smooth and easy, or rugged and difficult. And this is a question which I should like to ask of you who have arrived at that time which the poets call the 'threshold of old age' —Is life harder towards the end, or what report do you give of it?

Cephalus:: I will tell you, Socrates, what my own feeling is. Men of my age flock together; we are birds of a feather, as the old proverb says; and at our meetings the tale of my acquaintance commonly is—I cannot eat, I cannot drink; the pleasures of youth and love are fled away: there was a good time once, but now that is gone, and life is no longer life. Some complain of the slights which are put upon them by relations, and they will tell you sadly of how many evils their old age is the cause. But to me, Socrates, these complainers seem to blame that which is not really in fault. For if old age were the cause, I too being old, and every other old man, would have felt as they do. But this is not my own experience, nor that of others whom I have known. How well I remember the aged poet Sophocles, when in answer to the question, How does love suit with age, Sophocles,— are you still the man you were? Peace, most gladly have I escaped the thing of which you speak; I feel as if I had escaped from a mad and furious master. His words have often occurred to my mind since, and they seem as good to me now as at the time when he uttered them. For certainly old age has a great sense of calm and freedom; when the passions relax their hold, then, as Sophocles says, we are freed from the grasp not of one mad master only, but of many. The truth is, Socrates, that these regrets, and also the complaints about relations, are to be attributed to the same cause, which is not old age, but men's characters and tempers; for he who is of a calm and happy nature will hardly feel the pressure of age, but to him who is of an opposite disposition youth and age are equally a burden.

Socrates:: I listened in admiration, and wanting to draw him out, that he might go on—Yes, Cephalus, but I rather suspect that people in general are not convinced by you when you speak thus; they think that old age sits lightly upon you, not because of your happy disposition, but because you are rich, and wealth is well known to be a great comforter.

Cephalus:: You are right, they are not convinced: and there is something in what they say; not, however, so much as they imagine. I might answer them as Themistocles answered the Seriphian who was abusing him and saying that he was famous, not for his own merits but because he was an Athenian: 'If you had been a native of my country or I of yours, neither of us would have been famous.' And to those who are not rich and are impatient of old age, the same reply may be made; for to the good poor man old age cannot be a light burden, nor can a bad rich man ever have peace with himself.

Socrates:: May I ask, Cephalus, whether your fortune was for the most part inherited or acquired by you?

Cephalus:: Acquired! Socrates; do you want to know how much I acquired? In the art of making money I have been midway between my father and grandfather: for my grandfather, whose name I bear, doubled and trebled the value of his patrimony, that which he inherited being much what I possess now; but my father Lysanias reduced the property below what it is at present: and I shall be satisfied if I leave to these my sons not less but a little more than I received.

Socrates:: That was why I asked you the question, because I see that you are indifferent about money, which is a characteristic rather of those who have inherited their fortunes than of those who have acquired them; the makers of fortunes have a second love of money as a creation of their own, resembling the affection of authors for their own poems, or of parents for their children, besides that natural love of it for the sake of use and profit which is common to them and all men. And hence they are very bad company, for they can talk about nothing but the praises of wealth.

Cephalus:: That is true.

Socrates:: Yes, that is very true, but may I ask another question?—What do you consider to be the greatest blessing which you have reaped from your wealth?

Cephalus:: One, of which I could not expect easily to convince others. For let me tell you, Socrates, that when a man thinks himself to be near death, fears and cares enter into his mind which he never had before; the tales of a world below and the punishment which is exacted there of deeds done here were once a laughing matter to him, but now he is tormented with the thought that they may be true: either from the weakness of age, or because he is now drawing nearer to that other place, he has a clearer view of these things; suspicions and alarms crowd thickly upon him, and he begins to reflect and consider what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings. But to him who is conscious of no sin, sweet hope, as Pindar charmingly says, is the kind nurse of his age:

> 'Hope,' he says, 'cherishes the soul of him who lives in justice and holiness, and is the nurse of his age and the companion of his journey;—hope which is mightiest to sway the restless soul of man.'

How admirable are his words! And the great blessing of riches, I do not say to every man, but to a good man, is, that he has had no occasion to deceive or to defraud others, either intentionally or unintentionally; and when he departs to the world below he is not in any apprehension about offerings due to the gods or debts which he owes to men. Now to this peace of mind the possession of wealth greatly contributes; and therefore I say, that, setting one thing against another, of the many advantages which wealth has to give, to a man of sense this is in my opinion the greatest.

Socrates:: Well said, Cephalus, but as concerning justice, what is it?—to speak the truth and to pay your debts—no more than this? And even to this are there not exceptions? Suppose that a friend when in his right mind has deposited arms with me and he asks for them when he is not in his right mind, ought I to give them back to him? No one would say that I ought or that I should be right in doing so, any more than they would say that I ought always to speak the truth to one who is in his condition.

Cephalus:: You are quite right.

Socrates:: But then, speaking the truth and paying your debts is not a correct definition of justice.

Polemarchus:: Quite correct, Socrates, if Simonides is to be believed.

Cephalus:: I fear, that I must go now, for I have to look after the sacrifices, and I hand over the argument to Polemarchus and the company.

Socrates:: Is not Polemarchus your heir?

Cephalus:: To be sure.

Socrates:: He went away laughing to the sacrifices.

Tell me then, O thou heir of the argument, what did Simonides say, and according to you truly say, about justice?

Polemarchus:: He said that the re-payment of a debt is just, and in saying so he appears to me to be right.

Socrates:: I should be sorry to doubt the word of such a wise and inspired man, but his meaning, though probably clear to you, is the reverse of clear to me. For he certainly does not mean, as we were just now saying, that I ought to return a deposit of arms or of anything else to one who asks for it when he is not in his right senses; and yet a deposit cannot be denied to be a debt.

Polemarchus:: True.

Socrates:: Then when the person who asks me is not in his right mind I am by no means to make the return?

Polemarchus:: Certainly not.

Socrates:: When Simonides said that the repayment of a debt was justice, he did not mean to include that case?

Polemarchus:: Certainly not; for he thinks that a friend ought always to do good to a friend and never evil.

Socrates:: You mean that the return of a deposit of gold which is to the injury of the receiver, if the two parties are friends, is not the repayment of a debt,—that is what you would imagine him to say?

Polemarchus:: Yes.

Socrates:: And are enemies also to receive what we owe to them?

Polemarchus:: To be sure, they are to receive what we owe them, and an enemy, as I take it, owes to an enemy that which is due or proper to him—that is to say, evil.

Socrates:: Simonides, then, after the manner of poets, would seem to have spoken darkly of the nature of justice; for he really meant to say that justice is the giving to each man what is proper to him, and this he termed a debt.

Polemarchus:: That must have been his meaning.

Socrates:: By heaven! and if we asked him what due or proper thing is given by medicine, and to whom, what answer do you think that he would make to us?

Polemarchus:: He would surely reply that medicine gives drugs and meat and drink to human bodies.

Socrates:: And what due or proper thing is given by cookery, and to what?

Polemarchus:: Seasoning to food.

Socrates:: And what is that which justice gives, and to whom?

Polemarchus:: If, Socrates, we are to be guided at all by the analogy of the preceding instances, then justice is the art which gives good to friends and evil to enemies.

Socrates:: That is his meaning then?

Polemarchus:: I think so.

Socrates:: And who is best able to do good to his friends and evil to his enemies in time of sickness?

Polemarchus:: The physician.

Socrates:: Or when they are on a voyage, amid the perils of the sea?

Polemarchus:: The pilot.

Socrates:: And in what sort of actions or with a view to what result is the just man most able to do harm to his enemy and good to his friend?

Polemarchus:: In going to war against the one and in making alliances with the other.

Socrates:: But when a man is well, my dear Polemarchus, there is no need of a physician?

Polemarchus:: No.

Socrates:: And he who is not on a voyage has no need of a pilot?

Polemarchus:: No.

Socrates:: Then in time of peace justice will be of no use?

Polemarchus:: I am very far from thinking so.

Socrates:: You think that justice may be of use in peace as well as in war?

Polemarchus:: Yes.

Socrates:: Like husbandry for the acquisition of corn?

Polemarchus:: Yes.

Socrates:: Or like shoemaking for the acquisition of shoes,—that is what you mean?

Polemarchus:: Yes.

Socrates:: And what similar use or power of acquisition has justice in time of peace?

Polemarchus:: In contracts, Socrates, justice is of use.

Socrates:: And by contracts you mean partnerships?

Polemarchus:: Exactly.

Socrates:: But is the just man or the skilful player a more useful and better partner at a game of draughts?

Polemarchus:: The skilful player.

Socrates:: And in the laying of bricks and stones is the just man a more useful or better partner than the builder?

Polemarchus:: Quite the reverse.

Socrates:: Then in what sort of partnership is the just man a better partner than the harp-player, as in playing the harp the harp-player is certainly a better partner than the just man?

Polemarchus:: In a money partnership.

Socrates:: Yes, Polemarchus, but surely not in the use of money; for you do not want a just man to be your counselor in the purchase or sale of a horse; a man who is knowing about horses would be better for that, would he not?

Polemarchus:: Certainly.

Socrates:: And when you want to buy a ship, the shipwright or the pilot would be better?

Polemarchus:: True.

Socrates:: Then what is that joint use of silver or gold in which the just man is to be preferred?

Polemarchus:: When you want a deposit to be kept safely.

Socrates:: You mean when money is not wanted, but allowed to lie?

Polemarchus:: Precisely.

Socrates:: That is to say, justice is useful when money is useless?

Polemarchus:: That is the inference.

Socrates:: And when you want to keep a pruning-hook safe, then justice is useful to the individual and to the state; but when you want to use it, then the art of the vine-dresser?

Polemarchus:: Clearly.

Socrates:: And when you want to keep a shield or a lyre, and not to use them, you would say that justice is useful; but when you want to use them, then the art of the soldier or of the musician?

Polemarchus:: Certainly.

Socrates:: And so of all other things;—justice is useful when they are useless, and useless when they are useful?

Polemarchus:: That is the inference.

Socrates:: Then justice is not good for much. But let us consider this further point: Is not he who can best strike a blow in a boxing match or in any kind of fighting best able to ward off a blow?

Polemarchus:: Certainly.

Socrates:: And he who is most skilful in preventing or escaping from a disease is best able to create one?

Polemarchus:: True?

Socrates:: And he is the best guard of a camp who is best able to steal a march upon the enemy?

Polemarchus:: Certainly.

Socrates:: Then he who is a good keeper of anything is also a good thief?

Polemarchus:: That, I suppose, is to be inferred.

Socrates:: Then if the just man is good at keeping money, he is good at stealing it.

Polemarchus:: That is implied in the argument.

Socrates:: Then after all the just man has turned out to be a thief. And this is a lesson which I suspect you must have learnt out of Homer; for he, speaking of Autolycus, the maternal grandfather of Odysseus, who is a favorite of his, affirms that

> He was excellent above all men in theft and perjury.

And so, you and Homer and Simonides are agreed that justice is an art of theft; to be practiced however 'for the good of friends and for the harm of enemies'—that was what you were saying?

Polemarchus:: No, certainly not that, though I do not now know what I did say; but I still stand by the latter words.

Socrates:: Well, there is another question: By friends and enemies do we mean those who are so really, or only in seeming?

Polemarchus:: Surely, a man may be expected to love those whom he thinks good, and to hate those whom he thinks evil.

Socrates:: Yes, but do not persons often err about good and evil: many who are not good seem to be so, and conversely?

Polemarchus:: That is true.

Socrates:: Then to them the good will be enemies and the evil will be their friends?

Polemarchus:: True.

Socrates:: And in that case they will be right in doing good to the evil and evil to the good?

Polemarchus:: Clearly.

Socrates:: But the good are just and would not do an injustice?

Polemarchus:: True.

Socrates:: Then according to your argument it is just to injure those who do no wrong?

Polemarchus:: Nay, Socrates; the doctrine is immoral.

Socrates:: Then I suppose that we ought to do good to the just and harm to the unjust?

Polemarchus:: I like that better.

Socrates:: But see the consequence:—Many a man who is ignorant of human nature has friends who are bad friends, and in that case he ought to do harm to them; and he has good enemies whom he ought to benefit; but, if so, we shall be saying the very opposite of that which we affirmed to be the meaning of Simonides.

Polemarchus:: Very true, and I think that we had better correct an error into which we seem to have fallen in the use of the words 'friend' and 'enemy.'

Socrates:: What was the error, Polemarchus?

Polemarchus:: We assumed that he is a friend who seems to be or who is thought good.

Socrates:: And how is the error to be corrected?

Polemarchus:: We should rather say that he is a friend who is, as well as seems, good; and that he who seems only, and is not good, only seems to be and is not a friend; and of an enemy the same may be said.

Socrates:: You would argue that the good are our friends and the bad our enemies?

Polemarchus:: Yes.

Socrates:: And instead of saying simply as we did at first, that it is just to do good to our friends and harm to our enemies, we should further say: It is just to do good to our friends when they are good and harm to our enemies when they are evil?

Polemarchus:: Yes, that appears to me to be the truth.

Socrates:: But ought the just to injure any one at all?

Polemarchus:: Undoubtedly he ought to injure those who are both wicked and his enemies.

Socrates:: When horses are injured, are they improved or deteriorated.

Polemarchus:: The latter.

Socrates:: Deteriorated, that is to say, in the good qualities of horses, not of dogs?

Polemarchus:: Yes, of horses.

Socrates:: And dogs are deteriorated in the good qualities of dogs, and not of horses?

Polemarchus:: Of course.

Socrates:: And will not men who are injured be deteriorated in that which is the proper virtue of man?

Polemarchus:: Certainly.

Socrates:: And that human virtue is justice?

Polemarchus:: To be sure.

Socrates:: Then men who are injured are of necessity made unjust?

Polemarchus:: That is the result.

Socrates:: But can the musician by his art make men unmusical?

Polemarchus:: Certainly not.

Socrates:: Or the horseman by his art make them bad horsemen?

Polemarchus:: Impossible.

Socrates:: And can the just by justice make men unjust, or speaking generally, can the good by virtue make them bad?

Polemarchus:: Assuredly not.

Socrates:: Any more than heat can produce cold?

Polemarchus:: It cannot.

Socrates:: Or drought moisture?

Polemarchus:: Clearly not.

Socrates:: Nor can the good harm any one?

Polemarchus:: Impossible.

Socrates:: And the just is the good?

Polemarchus:: Certainly.

Socrates:: Then to injure a friend or any one else is not the act of a just man, but of the opposite, who is the unjust?

Polemarchus:: I think that what you say is quite true, Socrates.

Socrates:: Then if a man says that justice consists in the repayment of debts, and that good is the debt which a just man owes to his friends, and evil the debt which he owes to his enemies,—to say this is not wise; for it is not true, if, as has been clearly shown, the injuring of another can be in no case just.

Polemarchus:: I agree with you.

Socrates:: Then you and I are prepared to take up arms against any one who attributes such a saying to Simonides or Bias or Pittacus, or any other wise man or seer?

Polemarchus:: I am quite ready to do battle at your side.

Socrates:: Shall I tell you whose I believe the saying to be?

Polemarchus:: Whose?

Socrates:: I believe that Periander or Perdiccas or Xerxes or Ismenias the Theban, or some other rich and mighty man, who had a great opinion of his own power, was the first to say that justice is ‘doing good to your friends and harm to your enemies.’

Polemarchus:: Most true.

Socrates:: Yes, but if this definition of justice also breaks down, what other can be offered?

Several times in the course of the discussion Thrasymachus had made an attempt to get the argument into his own hands, and had been put down by the rest of the company, who wanted to hear the end. But when Polemarchus and I had done speaking and there was a pause, he could no longer hold his peace; and, gathering himself up, he came at us like a wild beast, seeking to devour us. We were quite panic-stricken at the sight of him.

He roared out to the whole company:

Thrasymachus:: What folly, Socrates, has taken possession of you all? And why, sillybillies, do you knock under to one another? I say that if you want really to know what justice is, you should not only ask but answer, and you should not seek honour to yourself from the refutation of an opponent, but have your own answer; for there is many a one who can ask and cannot answer. And now I will not have you say that justice is duty or advantage or profit or gain or interest, for this sort of nonsense will not do for me; I must have clearness and accuracy.

Socrates:: I was panic-stricken at his words, and could not look at him without trembling. Indeed I believe that if I had not fixed my eye upon him, I should have been struck dumb: but when I saw his fury rising, I looked at him first, and was therefore able to reply to him. Thrasymachus, with a quiver, don't be hard upon us. Polemarchus and I may have been guilty of a little mistake in the argument, but I can assure you that the error was not intentional. If we were seeking for a piece of gold, you would not imagine that we were 'knocking under to one another' and so losing our chance of finding it. And why, when we are seeking for justice, a thing more precious than many pieces of gold, do you say that we are weakly yielding to one another and not doing our utmost to get at the truth? Nay, my good friend, we are most willing and anxious to do so, but the fact is that we cannot. And if so, you people who know all things should pity us and not be angry with us.

Thrasymachus, with a bitter laugh replied;

Thrasymachus:: How characteristic of Socrates!—that's your ironical style! Did I not foresee—have I not already told you, that whatever he was asked he would refuse to answer, and try irony or any other shuffle, in order that he might avoid answering?

Socrates:: You are a philosopher, Thrasymachus, and well know that if you ask a person what numbers make up twelve, taking care to prohibit him whom you ask from answering twice six, or three times four, or six times two, or four times three, ‘for this sort of nonsense will not do for me’—then obviously, if that is your way of putting the question, no one can answer you. But suppose that he were to retort, ‘Thrasymachus, what do you mean? If one of these numbers which you interdict be the true answer to the question, am I falsely to say some other number which is not the right one?—is that your meaning?’—How would you answer him?

Thrasymachus:: Just as if the two cases were at all alike!

Socrates:: Why should they not be? and even if they are not, but only appear to be so to the person who is asked, ought he not to say what he thinks, whether you and I forbid him or not?

Thrasymachus:: I presume then that you are going to make one of the interdicted answers?

Socrates:: I dare say that I may, notwithstanding the danger, if upon reflection I approve of any of them.

Thrasymachus:: But what if I give you an answer about justice other and better, than any of these? What do you deserve to have done to you?

Socrates:: Done to me!—as becomes the ignorant, I must learn from the wise—that is what I deserve to have done to me.

Thrasymachus:: What, and no payment! a pleasant notion!

Socrates:: I will pay when I have the money.

Glaucon:: But you have, Socrates. and you, Thrasymachus, need be under no anxiety about money, for we will all make a contribution for Socrates.

Thrasymachus:: Yes, and then Socrates will do as he always does—refuse to answer himself, but take and pull to pieces the answer of some one else.

Socrates:: Why, my good friend, how can any one answer who knows, and says that he knows, just nothing; and who, even if he has some faint notions of his own, is told by a man of authority not to utter them? The natural thing is, that the speaker should be some one like yourself who professes to know and can tell what he knows. Will you then kindly answer, for the edification of the company and of myself?

Glaucon and the rest of the company joined in my request, and Thrasymachus, as any one might see, was in reality eager to speak; for he thought that he had an excellent answer, and would distinguish himself. But at first he affected to insist on my answering; at length he consented to begin.

Thrasymachus:: Behold, the wisdom of Socrates; he refuses to teach himself, and goes about learning of others, to whom he never even says Thank you.

Socrates:: That I learn of others, is quite true; but that I am ungrateful I wholly deny. Money I have none, and therefore I pay in praise, which is all I have; and how ready I am to praise any one who appears to me to speak well you will very soon find out when you answer; for I expect that you will answer well.

Thrasymachus:: Listen, then, I proclaim that justice is nothing else than the interest of the stronger. And now why do you not praise me? But of course you won’t.

Socrates:: Let me first understand you. Justice, as you say, is the interest of the stronger. What, Thrasymachus, is the meaning of this? You cannot mean to say that because Polydamas, the pancratiast, is stronger than we are, and finds the eating of beef conducive to his bodily strength, that to eat beef is therefore equally for our good who are weaker than he is, and right and just for us?

Thrasymachus:: That's abominable of you, Socrates; you take the words in the sense which is most damaging to the argument.

Socrates:: Not at all, my good sir, I am trying to understand them; and I wish that you would be a little clearer.

Thrasymachus:: Well, have you never heard that forms of government differ; there are tyrannies, and there are democracies, and there are aristocracies?

Socrates:: Yes, I know.

Thrasymachus:: And the government is the ruling power in each state?

Socrates:: Certainly.

Thrasymachus:: And the different forms of government make laws democratical, aristocratical, tyrannical, with a view to their several interests; and these laws, which are made by them for their own interests, are the justice which they deliver to their subjects, and him who transgresses them they punish as a breaker of the law, and unjust. And that is what I mean when I say that in all states there is the same principle of justice, which is the interest of the government; and as the government must be supposed to have power, the only reasonable conclusion is, that everywhere there is one principle of justice, which is the interest of the stronger.

Socrates:: Now I understand you, and whether you are right or not I will try to discover. But let me remark, that in defining justice you have yourself used the word 'interest' which you forbade me to use. It is true, however, that in your definition the words 'of the stronger' are added.

Thrasymachus:: A small addition, you must allow.

Socrates:: Great or small, never mind about that: we must first enquire whether what you are saying is the truth. Now we are both agreed that justice is interest of some sort, but you go on to say ‘of the stronger’; about this addition I am not so sure, and must therefore consider further.

Thrasymachus:: Proceed.

Socrates:: I will; and first tell me, Do you admit that it is just for subjects to obey their rulers?

Thrasymachus:: I do.

Socrates:: But are the rulers of states absolutely infallible, or are they sometimes liable to err?

Thrasymachus:: To be sure, they are liable to err.

Socrates:: Then in making their laws they may sometimes make them rightly, and sometimes not?

Thrasymachus:: True.

Socrates:: When they make them rightly, they make them agreeably to their interest; when they are mistaken, contrary to their interest; you admit that?

Thrasymachus:: Yes.

Socrates:: And the laws which they make must be obeyed by their subjects,—and that is what you call justice?

Thrasymachus:: Doubtless.

Socrates:: Then justice, according to your argument, is not only obedience to the interest of the stronger but the reverse?

Thrasymachus:: What is that you are saying?

Socrates:: I am only repeating what you are saying, I believe. But let us consider: Have we not admitted that the rulers may be mistaken about their own interest in what they command, and also that to obey them is justice? Has not that been admitted?

Thrasymachus:: Yes.

Socrates:: Then you must also have acknowledged justice not to be for the interest of the stronger, when the rulers unintentionally command things to be done which are to their own injury. For if, as you say, justice is the obedience which the subject renders to their commands, in that case, O wisest of men, is there any escape from the conclusion that the weaker are commanded to do, not what is for the interest, but what is for the injury of the stronger?

Polemarchus:: Nothing can be clearer, Socrates.

Clitophon:: Yes, if you are allowed to be his witness.

Polemarchus:: But there is no need of any witness, for Thrasymachus himself acknowledges that rulers may sometimes command what is not for their own interest, and that for subjects to obey them is justice.

Clitophon:: Yes, Polemarchus,—Thrasymachus said that for subjects to do what was commanded by their rulers is just.

Polemarchus:: Yes, Cleitophon, but he also said that justice is the interest of the stronger, and, while admitting both these propositions, he further acknowledged that the stronger may command the weaker who are his subjects to do what is not for his own interest; whence follows that justice is the injury quite as much as the interest of the stronger.

Clitophon:: But. he meant by the interest of the stronger what the stronger thought to be his interest,—this was what the weaker had to do; and this was affirmed by him to be justice.

Polemarchus:: Those were not his words.

Socrates:: Never mind, if he now says that they are, let us accept his statement. Tell me, Thrasymachus, did you mean by justice what the stronger thought to be his interest, whether really so or not?

Thrasymachus:: Certainly not. Do you suppose that I call him who is mistaken the stronger at the time when he is mistaken?

Socrates:: Yes, my impression was that you did so, when you admitted that the ruler was not infallible but might be sometimes mistaken.

Thrasymachus:: You argue like an informer, Socrates. Do you mean, for example, that he who is mistaken about the sick is a physician in that he is mistaken? or that he who errs in arithmetic or grammar is an arithmetician or grammarian at the time when he is making the mistake, in respect of the mistake? True, we say that the physician or arithmetician or grammarian has made a mistake, but this is only a way of speaking; for the fact is that neither the grammarian nor any other person of skill ever makes a mistake in so far as he is what his name implies; they none of them err unless their skill fails them, and then they cease to be skilled artists. No artist or sage or ruler errs at the time when he is what his name implies; though he is commonly said to err, and I adopted the common mode of speaking. But to be perfectly accurate, since you are such a lover of accuracy, we should say that the ruler, in so far as he is a ruler, is unerring, and, being unerring, always commands that which is for his own interest; and the subject is required to execute his commands; and therefore, as I said at first and now repeat, justice is the interest of the stronger.

Socrates:: Indeed, Thrasymachus, and do I really appear to you to argue like an informer?

Thrasymachus:: Certainly.

Socrates:: And do you suppose that I ask these questions with any design of injuring you in the argument?

Thrasymachus:: Nay, ‘suppose’ is not the word—I know it; but you will be found out, and by sheer force of argument you will never prevail.

Socrates:: I shall not make the attempt, my dear man; but to avoid any misunderstanding occurring between us in future, let me ask, in what sense do you speak of a ruler or stronger whose interest, as you were saying, he being the superior, it is just that the inferior should execute—is he a ruler in the popular or in the strict sense of the term?

Thrasymachus:: In the strictest of all senses. And now cheat and play the informer if you can; I ask no quarter at your hands. But you never will be able, never.

Socrates:: And do you imagine, that I am such a madman as to try and cheat Thrasymachus? I might as well shave a lion.

Thrasymachus:: Why, you made the attempt a minute ago, and you failed.

Socrates:: Enough, of these civilities. It will be better that I should ask you a question: Is the physician, taken in that strict sense of which you are speaking, a healer of the sick or a maker of money? And remember that I am now speaking of the true physician.

Thrasymachus:: A healer of the sick.

Socrates:: And the pilot—that is to say, the true pilot—is he a captain of sailors or a mere sailor?

Thrasymachus:: A captain of sailors.

Socrates:: The circumstance that he sails in the ship is not to be taken into account; neither is he to be called a sailor; the name pilot by which he is distinguished has nothing to do with sailing, but is significant of his skill and of his authority over the sailors.

Thrasymachus:: Very true.

Socrates:: Now, every art has an interest?

Thrasymachus:: Certainly.

Socrates:: For which the art has to consider and provide?

Thrasymachus:: Yes, that is the aim of art.

Socrates:: And the interest of any art is the perfection of it—this and nothing else?

Thrasymachus:: What do you mean?

Socrates:: I mean what I may illustrate negatively by the example of the body. Suppose you were to ask me whether the body is self-sufficing or has wants, I should reply: Certainly the body has wants; for the body may be ill and require to be cured, and has therefore interests to which the art of medicine ministers; and this is the origin and intention of medicine, as you will acknowledge. Am I not right?

Thrasymachus:: Quite right.

Socrates:: But is the art of medicine or any other art faulty or deficient in any quality in the same way that the eye may be deficient in sight or the ear fail of hearing, and therefore requires another art to provide for the interests of seeing and hearing—has art in itself, I say, any similar liability to fault or defect, and does every art require another supplementary art to provide for its interests, and that another and another without end? Or have the arts to look only after their own interests? Or have they no need either of themselves or of another?—having no faults or defects, they have no need to correct them, either by the exercise of their own art or of any other; they have only to consider the interest of their subject-matter. For every art remains pure and faultless while remaining true—that is to say, while perfect and unimpaired. Take the words in your precise sense, and tell me whether I am not right.

Thrasymachus:: Yes, clearly.

Socrates:: Then medicine does not consider the interest of medicine, but the interest of the body?

Thrasymachus:: True.

Socrates:: Nor does the art of horsemanship consider the interests of the art of horsemanship, but the interests of the horse; neither do any other arts care for themselves, for they have no needs; they care only for that which is the subject of their art?

Thrasymachus:: True.

Socrates:: But surely, Thrasymachus, the arts are the superiors and rulers of their own subjects?

To this he assented with a good deal of reluctance.

Then, no science or art considers or enjoins the interest of the stronger or superior, but only the interest of the subject and weaker?

He made an attempt to contest this proposition also, but finally acquiesced.

Then, I continued, no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker; that has been admitted?

Thrasymachus:: Yes.

Socrates:: And the pilot likewise, in the strict sense of the term, is a ruler of sailors and not a mere sailor?

Thrasymachus:: That has been admitted.

Socrates:: And such a pilot and ruler will provide and prescribe for the interest of the sailor who is under him, and not for his own or the ruler's interest?

He gave a reluctant

Thrasymachus:: 'Yes.'

Socrates:: Then, Thrasymachus, there is no one in any rule who, in so far as he is a ruler, considers or enjoins what is for his own interest, but always what is for the interest of his subject or suitable to his art; to that he looks, and that alone he considers in everything which he says and does. When we had got to this point in the argument, and every one saw that the definition of justice had been completely upset, Thrasymachus, instead of replying to me, said:

Thrasymachus:: Tell me, Socrates, have you got a nurse?

Socrates:: Why do you ask such a question, when you ought rather to be answering?

Thrasymachus:: Because she leaves you to snivel, and never wipes your nose: she has not even taught you to know the shepherd from the sheep.

Socrates:: What makes you say that?

Thrasymachus:: Because you fancy that the shepherd or neatherds fattens or tends the sheep or oxen with a view to their own good and not to the good of himself or his master; and you further imagine that the rulers of states, if they are true rulers, never think of their subjects as sheep, and that they are not studying their own advantage day and night. Oh, no; and so entirely astray are you in your ideas about the just and unjust as not even to know that justice and the just are in reality another's good; that is to say, the interest of the ruler and stronger, and the loss of the subject and servant; and injustice the opposite; for the unjust is lord over the truly simple and just: he is the stronger, and his subjects do what is for his interest, and minister to his happiness, which is very far from being their own. Consider further, most foolish Socrates, that the just is always a loser in comparison with the unjust. First of all, in private contracts: wherever the unjust is the partner of the just you will find that, when the partnership is dissolved, the unjust man has always more and the just less. Secondly, in their dealings with the State: when there is an income-tax, the just man will pay more and the unjust less on the same amount of income; and when there is anything to be received the one gains nothing and the other much. Observe also what happens when they take an office; there is the just man neglecting his affairs and perhaps suffering other losses, and getting nothing out of the public, because he is just; moreover he is hated by his friends and acquaintance for refusing to serve them in unlawful ways. But all this is reversed in the case of the unjust man. I am speaking, as before, of injustice on a large scale in which the advantage of the unjust is most apparent; and my meaning will be most clearly seen if we turn to that highest form of injustice in which the criminal is the happiest of men, and the sufferers or those who refuse to do injustice are the most miserable—that is to say tyranny, which by fraud and force takes away the property of others, not little by little but wholesale; comprehending in one, things sacred as well as profane, private and public; for which acts of wrong, if he were detected perpetrating any one of them singly, he would be punished and incur great disgrace—they who do such wrong in particular cases are called robbers of temples, and man-stealers and burglars and swindlers and thieves. But when a man besides taking away the money of the citizens has made slaves of them, then, instead of these names of reproach, he is termed happy and blessed, not only by the citizens but by all who hear of his having achieved the consummation of injustice. For mankind censure injustice, fearing that they may be the victims of it and not because they shrink from committing it. And thus, as I have shown, Socrates, injustice, when on a sufficient scale, has more strength and freedom and mastery than justice; and, as I said at first, justice is the interest of the stronger, whereas injustice is a man's own profit and interest.

Socrates:: Thrasymachus, when he had thus spoken, having, like a bath-man, deluged our ears with his words, had a mind to go away. But the company would not let him; they insisted that he should remain and defend his position; and I myself added my own humble request that he would not leave us.

Thrasymachus, excellent man, how suggestive are your remarks! And are you going to run away before you have fairly taught or learned whether they are true or not? Is the attempt to determine the way of man's life so small a matter in your eyes—to determine how life may be passed by each one of us to the greatest advantage?

Thrasymachus:: And do I differ from you, as to the importance of the enquiry?

Socrates:: You appear rather, to have no care or thought about us, Thrasymachus—whether we live better or worse from not knowing what you say you know, is to you a matter of indifference. Prithee, friend, do not keep your knowledge to yourself; we are a large party; and any benefit which you confer upon us will be amply rewarded. For my own part I openly declare that I am not convinced, and that I do not believe injustice to be more gainful than justice, even if uncontrolled and allowed to have free play. For, granting that there may be an unjust man who is able to commit injustice either by fraud or force, still this does not convince me of the superior advantage of injustice, and there may be others who are in the same predicament with myself. Perhaps we may be wrong; if so, you in your wisdom should convince us that we are mistaken in preferring justice to injustice.

Thrasymachus:: And how am I to convince you, if you are not already convinced by what I have just said; what more can I do for you? Would you have me put the proof bodily into your souls?

Socrates:: Heaven forbid! I said; I would only ask you to be consistent; or, if you change, change openly and let there be no deception. For I must remark, Thrasymachus, if you will recall what was previously said, that although you began by defining the true physician in an exact sense, you did not observe a like exactness when speaking of the shepherd; you thought that the shepherd as a shepherd tends the sheep not with a view to their own good, but like a mere diner or banqueter with a view to the pleasures of the table; or, again, as a trader for sale in the market, and not as a shepherd. Yet surely the art of the shepherd is concerned only with the good of his subjects; he has only to provide the best for them, since the perfection of the art is already ensured whenever all the requirements of it are satisfied. And that was what I was saying just now about the ruler. I conceived that the art of the ruler, considered as ruler, whether in a state or in private life, could only regard the good of his flock or subjects; whereas you seem to think that the rulers in states, that is to say, the true rulers, like being in authority.

Thrasymachus:: Think! Nay, I am sure of it.

Socrates:: Then why in the case of lesser offices do men never take them willingly without payment, unless under the idea that they govern for the advantage not of themselves but of others? Let me ask you a question: Are not the several arts different, by reason of their each having a separate function? And, my dear illustrious friend, do say what you think, that we may make a little progress.

Thrasymachus:: Yes, that is the difference.

Socrates:: And each art gives us a particular good and not merely a general one—medicine, for example, gives us health; navigation, safety at sea, and so on?

Thrasymachus:: Yes.

Socrates:: And the art of payment has the special function of giving pay: but we do not confuse this with other arts, any more than the art of the pilot is to be confused with the art of medicine, because the health of the pilot may be improved by a sea voyage. You would not be inclined to say, would you, that navigation is the art of medicine, at least if we are to adopt your exact use of language?

Thrasymachus:: Certainly not.

Socrates:: Or because a man is in good health when he receives pay you would not say that the art of payment is medicine?

Thrasymachus:: I should not.

Socrates:: Nor would you say that medicine is the art of receiving pay because a man takes fees when he is engaged in healing?

Thrasymachus:: Certainly not.

Socrates:: And we have admitted, that the good of each art is specially confined to the art?

Thrasymachus:: Yes.

Socrates:: Then, if there be any good which all artists have in common, that is to be attributed to something of which they all have the common use?

Thrasymachus:: True.

Socrates:: And when the artist is benefited by receiving pay the advantage is gained by an additional use of the art of pay, which is not the art professed by him?

He gave a reluctant assent to this.

Then the pay is not derived by the several artists from their respective arts. But the truth is, that while the art of medicine gives health, and the art of the builder builds a house, another art attends them which is the art of pay. The various arts may be doing their own business and benefiting that over which they preside, but would the artist receive any benefit from his art unless he were paid as well?

Thrasymachus:: I suppose not.

Socrates:: But does he therefore confer no benefit when he works for nothing?

Thrasymachus:: Certainly, he confers a benefit.

Socrates:: Then now, Thrasymachus, there is no longer any doubt that neither arts nor governments provide for their own interests; but, as we were before saying, they rule and provide for the interests of their subjects who are the weaker and not the stronger—to their good they attend and not to the good of the superior. And this is the reason, my dear Thrasymachus, why, as I was just now saying, no one is willing to govern; because no one likes to take in hand the reformation of evils which are not his concern without remuneration. For, in the execution of his work, and in giving his orders to another, the true artist does not regard his own interest, but always that of his subjects; and therefore in order that rulers may be willing to rule, they must be paid in one of three modes of payment, money, or honour, or a penalty for refusing.

Glaucon:: What do you mean, Socrates? The first two modes of payment are intelligible enough, but what the penalty is I do not understand, or how a penalty can be a payment.

Socrates:: You mean that you do not understand the nature of this payment which to the best men is the great inducement to rule? Of course you know that ambition and avarice are held to be, as indeed they are, a disgrace?

Glaucon:: Very true.

Socrates:: And for this reason, money and honour have no attraction for them; good men do not wish to be openly demanding payment for governing and so to get the name of hirelings, nor by secretly helping themselves out of the public revenues to get the name of thieves. And not being ambitious they do not care about honour. Wherefore necessity must be laid upon them, and they must be induced to serve from the fear of punishment. And this, as I imagine, is the reason why the forwardness to take office, instead of waiting to be compelled, has been deemed dishonorable. Now the worst part of the punishment is that he who refuses to rule is liable to be ruled by one who is worse than himself. And the fear of this, as I conceive, induces the good to take office, not because they would, but because they cannot help—not under the idea that they are going to have any benefit or enjoyment themselves, but as a necessity, and because they are not able to commit the task of ruling to any one who is better than themselves, or indeed as good. For there is reason to think that if a city were composed entirely of good men, then to avoid office would be as much an object of contention as to obtain office is at present; then we should have plain proof that the true ruler is not meant by nature to regard his own interest, but that of his subjects; and every one who knew this would choose rather to receive a benefit from another than to have the trouble of conferring one. So far am I from agreeing with Thrasymachus that justice is the interest of the stronger. This latter question need not be further discussed at present; but when Thrasymachus says that the life of the unjust is more advantageous than that of the just, his new statement appears to me to be of a far more serious character. Which of us has spoken truly? And which sort of life, Glaucon, do you prefer?

Glaucon:: I for my part deem the life of the just to be the more advantageous.

Socrates:: Did you hear all the advantages of the unjust which Thrasymachus was rehearsing?

Glaucon:: Yes, I heard him, but he has not convinced me.

Socrates:: Then shall we try to find some way of convincing him, if we can, that he is saying what is not true?

Glaucon:: Most certainly.

Socrates:: If, he makes a set speech and we make another recounting all the advantages of being just, and he answers and we rejoin, there must be a numbering and measuring of the goods which are claimed on either side, and in the end we shall want judges to decide; but if we proceed in our enquiry as we lately did, by making admissions to one another, we shall unite the offices of judge and advocate in our own persons.

Glaucon:: Very good.

Socrates:: And which method do I understand you to prefer?

Glaucon:: That which you propose.

Socrates:: Well, then, Thrasymachus, suppose you begin at the beginning and answer me. You say that perfect injustice is more gainful than perfect justice?

Thrasymachus:: Yes, that is what I say, and I have given you my reasons.

Socrates:: And what is your view about them? Would you call one of them virtue and the other vice?

Thrasymachus:: Certainly.

Socrates:: I suppose that you would call justice virtue and injustice vice?

Thrasymachus:: What a charming notion! So likely too, seeing that I affirm injustice to be profitable and justice not.

Socrates:: What else then would you say?

Thrasymachus:: The opposite.

Socrates:: And would you call justice vice?

Thrasymachus:: No, I would rather say sublime simplicity.

Socrates:: Then would you call injustice malignity?

Thrasymachus:: No; I would rather say discretion.

Socrates:: And do the unjust appear to you to be wise and good?

Thrasymachus:: Yes, at any rate those of them who are able to be perfectly unjust, and who have the power of subduing states and nations; but perhaps you imagine me to be talking of cutpurses. Even this profession if undetected has advantages, though they are not to be compared with those of which I was just now speaking.

Socrates:: I do not think that I misapprehend your meaning, Thrasymachus, but still I cannot hear without amazement that you class injustice with wisdom and virtue, and justice with the opposite.

Thrasymachus:: Certainly, I do so class them.

Socrates:: Now, you are on more substantial and almost unanswerable ground; for if the injustice which you were maintaining to be profitable had been admitted by you as by others to be vice and deformity, an answer might have been given to you on received principles; but now I perceive that you will call injustice honorable and strong, and to the unjust you will attribute all the qualities which were attributed by us before to the just, seeing that you do not hesitate to rank injustice with wisdom and virtue.

Thrasymachus:: You have guessed most infallibly.

Socrates:: Then I certainly ought not to shrink from going through with the argument so long as I have reason to think that you, Thrasymachus, are speaking your real mind; for I do believe that you are now in earnest and are not amusing yourself at our expense.

Thrasymachus:: I may be in earnest or not, but what is that to you?—to refute the argument is your business.

Socrates:: Very true, that is what I have to do: But will you be so good as answer yet one more question? Does the just man try to gain any advantage over the just?

Thrasymachus:: Far otherwise; if he did he would not be the simple amusing creature which he is.

Socrates:: And would he try to go beyond just action?

Thrasymachus:: He would not.

Socrates:: And how would he regard the attempt to gain an advantage over the unjust; would that be considered by him as just or unjust?

Thrasymachus:: He would think it just, and would try to gain the advantage; but he would not be able.

Socrates:: Whether he would or would not be able, is not to the point. My question is only whether the just man, while refusing to have more than another just man, would wish and claim to have more than the unjust?

Thrasymachus:: Yes, he would.

Socrates:: And what of the unjust—does he claim to have more than the just man and to do more than is just?

Thrasymachus:: Of course, for he claims to have more than all men.

Socrates:: And the unjust man will strive and struggle to obtain more than the unjust man or action, in order that he may have more than all?

Thrasymachus:: True.

Socrates:: We may put the matter thus,—the just does not desire more than his like but more than his unlike, whereas the unjust desires more than both his like and his unlike?

Thrasymachus:: Nothing, can be better than that statement.

Socrates:: And the unjust is good and wise, and the just is neither?

Thrasymachus:: Good again.

Socrates:: And is not the unjust like the wise and good and the just unlike them?

Thrasymachus:: Of course, he who is of a certain nature, is like those who are of a certain nature; he who is not, not.

Socrates:: Each of them, is such as his like is?

Thrasymachus:: Certainly.

Socrates:: Very good, Thrasymachus, and now to take the case of the arts: you would admit that one man is a musician and another not a musician?

Thrasymachus:: Yes.

Socrates:: And which is wise and which is foolish?

Thrasymachus:: Clearly the musician is wise, and he who is not a musician is foolish.

Socrates:: And he is good in as far as he is wise, and bad in as far as he is foolish?

Thrasymachus:: Yes.

Socrates:: And you would say the same sort of thing of the physician?

Thrasymachus:: Yes.

Socrates:: And do you think, my excellent friend, that a musician when he adjusts the lyre would desire or claim to exceed or go beyond a musician in the tightening and loosening the strings?

Thrasymachus:: I do not think that he would.

Socrates:: But he would claim to exceed the non-musician?

Thrasymachus:: Of course.

Socrates:: And what would you say of the physician? In prescribing meats and drinks would he wish to go beyond another physician or beyond the practice of medicine?

Thrasymachus:: He would not.

Socrates:: But he would wish to go beyond the non-physician?

Thrasymachus:: Yes.

Socrates:: And about knowledge and ignorance in general; see whether you think that any man who has knowledge ever would wish to have the choice of saying or doing more than another man who has knowledge. Would he not rather say or do the same as his like in the same case?

Thrasymachus:: That, I suppose, can hardly be denied.

Socrates:: And what of the ignorant? would he not desire to have more than either the knowing or the ignorant?

Thrasymachus:: I dare say.

Socrates:: And the knowing is wise?

Thrasymachus:: Yes.

Socrates:: And the wise is good?

Thrasymachus:: True.

Socrates:: Then the wise and good will not desire to gain more than his like, but more than his unlike and opposite?

Thrasymachus:: I suppose so.

Socrates:: Whereas the bad and ignorant will desire to gain more than both?

Thrasymachus:: Yes.

Socrates:: But did we not say, Thrasymachus, that the unjust goes beyond both his like and unlike? Were not these your words?

Thrasymachus:: They were.

Socrates:: And you also said that the just will not go beyond his like but his unlike?

Thrasymachus:: Yes.

Socrates:: Then the just is like the wise and good, and the unjust like the evil and ignorant?

Thrasymachus:: That is the inference.

Socrates:: And each of them is such as his like is?

Thrasymachus:: That was admitted.

Socrates:: Then the just has turned out to be wise and good and the unjust evil and ignorant.

Thrasymachus made all these admissions, not fluently, as I repeat them, but with extreme reluctance; it was a hot summer's day, and the perspiration poured from him in torrents; and then I saw what I had never seen before, Thrasymachus blushing. As we were now agreed that justice was virtue and wisdom, and injustice vice and ignorance, I proceeded to another point:

Well, Thrasymachus, that matter is now settled; but were we not also saying that injustice had strength; do you remember?

Thrasymachus:: Yes, I remember, but do not suppose that I approve of what you are saying or have no answer; if however I were to answer, you would be quite certain to accuse me of haranguing; therefore either permit me to have my say out, or if you would rather ask, do so, and I will answer 'Very good,' as they say to story-telling old women, and will nod 'Yes' and 'No.'

Socrates:: Certainly not, if contrary to your real opinion.

Thrasymachus:: Yes, I will, to please you, since you will not let me speak. What else would you have?

Socrates:: Nothing in the world, and if you are so disposed I will ask and you shall answer.

Thrasymachus:: Proceed.

Socrates:: Then I will repeat the question which I asked before, in order that our examination of the relative nature of justice and injustice may be carried on regularly. A statement was made that injustice is stronger and more powerful than justice, but now justice, having been identified with wisdom and virtue, is easily shown to be stronger than injustice, if injustice is ignorance; this can no longer be questioned by any one. But I want to view the matter, Thrasymachus, in a different way: You would not deny that a state may be unjust and may be unjustly attempting to enslave other states, or may have already enslaved them, and may be holding many of them in subjection?

Thrasymachus:: True, and I will add that the best and most perfectly unjust state will be most likely to do so.

Socrates:: I know, that such was your position; but what I would further consider is, whether this power which is possessed by the superior state can exist or be exercised without justice or only with justice.

Thrasymachus:: If you are right in your view, and justice is wisdom, then only with justice; but if I am right, then without justice.

Socrates:: I am delighted, Thrasymachus, to see you not only nodding assent and dissent, but making answers which are quite excellent.

Thrasymachus:: That is out of civility to you.

Socrates:: You are very kind, and would you have the goodness also to inform me, whether you think that a state, or an army, or a band of robbers and thieves, or any other gang of evil-doers could act at all if they injured one another?

Thrasymachus:: No indeed, they could not.

Socrates:: But if they abstained from injuring one another, then they might act together better?

Thrasymachus:: Yes.

Socrates:: And this is because injustice creates divisions and hatreds and fighting, and justice imparts harmony and friendship; is not that true, Thrasymachus?

Thrasymachus:: I agree, because I do not wish to quarrel with you.

Socrates:: How good of you, but I should like to know also whether injustice, having this tendency to arouse hatred, wherever existing, among slaves or among freemen, will not make them hate one another and set them at variance and render them incapable of common action?

Thrasymachus:: Certainly.

Socrates:: And even if injustice be found in two only, will they not quarrel and fight, and become enemies to one another and to the just?

Thrasymachus:: They will.

Socrates:: And suppose injustice abiding in a single person, would your wisdom say that she loses or that she retains her natural power?

Thrasymachus:: Let us assume that she retains her power.

Socrates:: Yet is not the power which injustice exercises of such a nature that wherever she takes up her abode, whether in a city, in an army, in a family, or in any other body, that body is, to begin with, rendered incapable of united action by reason of sedition and distraction; and does it not become its own enemy and at variance with all that opposes it, and with the just? Is not this the case?

Thrasymachus:: Yes, certainly.

Socrates:: And is not injustice equally fatal when existing in a single person; in the first place rendering him incapable of action because he is not at unity with himself, and in the second place making him an enemy to himself and the just? Is not that true, Thrasymachus?

Thrasymachus:: Yes.

Socrates:: And O my friend, surely the gods are just?

Thrasymachus:: Granted that they are.

Socrates:: But if so, the unjust will be the enemy of the gods, and the just will be their friend?

Thrasymachus:: Feast away in triumph, and take your fill of the argument; I will not oppose you, lest I should displease the company.

Socrates:: Well then, proceed with your answers, and let me have the remainder of my repast. For we have already shown that the just are clearly wiser and better and abler than the unjust, and that the unjust are incapable of common action; nay more, that to speak as we did of men who are evil acting at any time vigorously together, is not strictly true, for if they had been perfectly evil, they would have laid hands upon one another; but it is evident that there must have been some remnant of justice in them, which enabled them to combine; if there had not been they would have injured one another as well as their victims; they were but half-villains in their enterprises; for had they been whole villains, and utterly unjust, they would have been utterly incapable of action. That, as I believe, is the truth of the matter, and not what you said at first. But whether the just have a better and happier life than the unjust is a further question which we also proposed to consider. I think that they have, and for the reasons which I have given; but still I should like to examine further, for no light matter is at stake, nothing less than the rule of human life.

Thrasymachus:: Proceed.

Socrates:: I will proceed by asking a question: Would you not say that a horse has some end?

Thrasymachus:: I should.

Socrates:: And the end or use of a horse or of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

Thrasymachus:: I do not understand.

Socrates:: Let me explain: Can you see, except with the eye?

Thrasymachus:: Certainly not.

Socrates:: Or hear, except with the ear?

Thrasymachus:: No.

Socrates:: These then may be truly said to be the ends of these organs?

Thrasymachus:: They may.

Socrates:: But you can cut off a vine-branch with a dagger or with a chisel, and in many other ways?

Thrasymachus:: Of course.

Socrates:: And yet not so well as with a pruning-hook made for the purpose?

Thrasymachus:: True.

Socrates:: May we not say that this is the end of a pruning-hook?

Thrasymachus:: We may.

Socrates:: Then now I think you will have no difficulty in understanding my meaning when I asked the question whether the end of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

Thrasymachus:: I understand your meaning, and assent.

Socrates:: And that to which an end is appointed has also an excellence? Need I ask again whether the eye has an end?

Thrasymachus:: It has.

Socrates:: And has not the eye an excellence?

Thrasymachus:: Yes.

Socrates:: And the ear has an end and an excellence also?

Thrasymachus:: True.

Socrates:: And the same is true of all other things; they have each of them an end and a special excellence?

Thrasymachus:: That is so.

Socrates:: Well, and can the eyes fulfill their end if they are wanting in their own proper excellence and have a defect instead?

Thrasymachus:: How can they, if they are blind and cannot see?

Socrates:: You mean to say, if they have lost their proper excellence, which is sight; but I have not arrived at that point yet. I would rather ask the question more generally, and only enquire whether the things which fulfill their ends fulfill them by their own proper excellence, and fail of fulfilling them by their own defect?

Thrasymachus:: Certainly.

Socrates:: I might say the same of the ears; when deprived of their own proper excellence they cannot fulfill their end?

Thrasymachus:: True.

Socrates:: And the same observation will apply to all other things?

Thrasymachus:: I agree.

Socrates:: Well; and has not the soul an end which nothing else can fulfill? for example, to superintend and command and deliberate and the like. Are not these functions proper to the soul, and can they rightly be assigned to any other?

Thrasymachus:: To no other.

Socrates:: And is not life to be reckoned among the ends of the soul?

Thrasymachus:: Assuredly.

Socrates:: And has not the soul an excellence also?

Thrasymachus:: Yes.

Socrates:: And can she or can she not fulfill her own ends when deprived of that excellence?

Thrasymachus:: She cannot.

Socrates:: Then an evil soul must necessarily be an evil ruler and superintendent, and the good soul a good ruler?

Thrasymachus:: Yes, necessarily.

Socrates:: And we have admitted that justice is the excellence of the soul, and injustice the defect of the soul?

Thrasymachus:: That has been admitted.

Socrates:: Then the just soul and the just man will live well, and the unjust man will live ill?

Thrasymachus:: That is what your argument proves.

Socrates:: And he who lives well is blessed and happy, and he who lives ill the reverse of happy?

Thrasymachus:: Certainly.

Socrates:: Then the just is happy, and the unjust miserable?

Thrasymachus:: So be it.

Socrates:: But happiness and not misery is profitable.

Thrasymachus:: Of course.

Socrates:: Then, my blessed Thrasymachus, injustice can never be more profitable than justice.

Thrasymachus:: Let this, Socrates, be your entertainment at the Bendidea.

Socrates:: For which I am indebted to you, now that you have grown gentle towards me and have left off scolding. Nevertheless, I have not been well entertained; but that was my own fault and not yours. As an epicure snatches a taste of every dish which is successively brought to table, he not having allowed himself time to enjoy the one before, so have I gone from one subject to another without having discovered what I sought at first, the nature of justice. I left that enquiry and turned away to consider whether justice is virtue and wisdom or evil and folly; and when there arose a further question about the comparative advantages of justice and injustice, I could not refrain from passing on to that. And the result of the whole discussion has been that I know nothing at all. For I know not what justice is, and therefore I am not likely to know whether it is or is not a virtue, nor can I say whether the just man is happy or unhappy.

## BOOK II.

Socrates:: With these words I was thinking that I had made an end of the discussion; but the end, in truth, proved to be only a beginning. For Glaucon, who is always the most pugnacious of men, was dissatisfied at Thrasymachus' retirement; he wanted to have the battle out. So he said to me:

Glaucon:: Socrates, do you wish really to persuade us, or only to seem to have persuaded us, that to be just is always better than to be unjust?

Socrates:: I should wish really to persuade you, if I could.

Glaucon:: Then you certainly have not succeeded. Let me ask you now:—How would you arrange goods—are there not some which we welcome for their own sakes, and independently of their consequences, as, for example, harmless pleasures and enjoyments, which delight us at the time, although nothing follows from them?

Socrates:: I agree in thinking that there is such a class.

Glaucon:: Is there not also a second class of goods, such as knowledge, sight, health, which are desirable not only in themselves, but also for their results?

Socrates:: Certainly.

Glaucon:: And would you not recognize a third class, such as gymnastic, and the care of the sick, and the physician's art; also the various ways of money-making—these do us good but we regard them as disagreeable; and no one would choose them for their own sakes, but only for the sake of some reward or result which flows from them?

Socrates:: There is, this third class also. But why do you ask?

Glaucon:: Because I want to know in which of the three classes you would place justice?

Socrates:: In the highest class,—among those goods which he who would be happy desires both for their own sake and for the sake of their results.

Glaucon:: Then the many are of another mind; they think that justice is to be reckoned in the troublesome class, among goods which are to be pursued for the sake of rewards and of reputation, but in themselves are disagreeable and rather to be avoided.

Socrates:: I know, that this is their manner of thinking, and that this was the thesis which Thrasymachus was maintaining just now, when he censured justice and praised injustice. But I am too stupid to be convinced by him.

Glaucon:: I wish, that you would hear me as well as him, and then I shall see whether you and I agree. For Thrasymachus seems to me, like a snake, to have been charmed by your voice sooner than he ought to have been; but to my mind the nature of justice and injustice have not yet been made clear. Setting aside their rewards and results, I want to know what they are in themselves, and how they inwardly work in the soul. If you please, then, I will revive the argument of Thrasymachus. And first I will speak of the nature and origin of justice according to the common view of them. Secondly, I will show that all men who practice justice do so against their will, of necessity, but not as a good. And thirdly, I will argue that there is reason in this view, for the life of the unjust is after all better far than the life of the just—if what they say is true, Socrates, since I myself am not of their opinion. But still I acknowledge that I am perplexed when I hear the voices of Thrasymachus and myriads of others dinning in my ears;

and, on the other hand, I have never yet heard the superiority of justice to injustice maintained by any one in a satisfactory way. I want to hear justice praised in respect of itself; then I shall be satisfied, and you are the person from whom I think that I am most likely to hear this; and therefore I will praise the unjust life to the utmost of my power, and my manner of speaking will indicate the manner in which I desire to hear you too praising justice and censuring injustice. Will you say whether you approve of my proposal?

Socrates:: Indeed I do; nor can I imagine any theme about which a man of sense would oftener wish to converse.

Glaucon:: I am delighted, to hear you say so, and shall begin by speaking, as I proposed, of the nature and origin of justice.

They say that to do injustice is, by nature, good; to suffer injustice, evil; but that the evil is greater than the good. And so when men have both done and suffered injustice and have had experience of both, not being able to avoid the one and obtain the other, they think that they had better agree among themselves to have neither; hence there arise laws and mutual covenants; and that which is ordained by law is termed by them lawful and just. This they affirm to be the origin and nature of justice;—it is a mean or compromise, between the best of all, which is to do injustice and not be punished, and the worst of all, which is to suffer injustice without the power of retaliation; and justice, being at a middle point between the two, is tolerated not as a good, but as the lesser evil, and honored by reason of the inability of men to do injustice. For no man who is worthy to be called a man would ever submit to such an agreement if he were able to resist; he would be mad if he did. Such is the received account, Socrates, of the nature and origin of justice.

Now that those who practice justice do so involuntarily and because they have not the power to be unjust will best appear if we imagine something of this kind: having given both to the just and the unjust power to do what they will, let us watch and see whither desire will lead them; then we shall discover in the very act the just and unjust man to be proceeding along the same road, following their interest, which all natures deem to be their good, and are only diverted into the path of justice by the force of law. The liberty which we are supposing may be most completely given to them in the form of such a power as is said to have been possessed by Gyges, the ancestor of Croesus the Lydian. According to the tradition, Gyges was a shepherd in the service of the king of Lydia; there was a great storm, and an earthquake made an opening in the earth at the place where he was feeding his flock. Amazed at the sight, he descended into the opening, where, among other marvels, he beheld a hollow brazen horse, having doors, at which he stooping and looking in saw a dead body of stature, as appeared to him, more than human, and having nothing on but a gold ring; this he took from the finger of the dead and rescinded. Now the shepherds met together, according to custom, that they might send their monthly report about the flocks to the king; into their assembly he came having the ring on his finger, and as he was sitting among them he chanced to turn the cullet of the ring inside his hand, when instantly he became invisible to the rest of the company and they began to speak of him as if he were no longer present. He was astonished at this, and again touching the ring he turned the cullet outwards and reappeared; he made several trials of the ring, and always with the same result—when he turned the cullet inwards he became invisible, when outwards he reappeared. Whereupon he contrived to be chosen one of the messengers who were sent to the court; where as soon as he arrived he seduced the queen, and with her help conspired against the king and slew him, and took the kingdom. Suppose now that there were two such magic rings, and the just put on one of them, and the unjust the other; no man can be imagined to be of such an iron nature that he would stand fast in justice. No man would keep his hands off what was not his own when he could safely take what he liked out of the market, or go into houses and lie with any one at his pleasure, or kill or release from prison whom he would, and in all respects be like a God among men. Then the actions of the just would be as the actions of the unjust; they would both come at last to the same point. And this we may truly affirm to be a great proof that a man is just, not willingly or because he thinks that justice is any good to him individually, but of necessity, for wherever any one thinks that he can safely be unjust, there he is unjust. For all men believe in their hearts that injustice is far more profitable to the individual than justice, and he who argues as I have been supposing, will say that they are right. If you could imagine any one obtaining this power of becoming invisible, and never doing any wrong or touching what was another's, he would be thought by the lookers-on to be a most wretched idiot, although they would praise him to one another's faces, and keep up appearances with one another from a fear that they too might suffer injustice. Enough of this.

Now, if we are to form a real judgment of the life of the just and unjust, we must isolate them; there is no other way; and how is the isolation to be effected? I answer: Let the unjust man be entirely unjust, and the just man entirely just; nothing is to be taken away from either of them, and both are to be perfectly furnished for the work of their respective lives. First, let the unjust be like other distinguished masters of craft; like the skilful pilot or physician, who knows intuitively his own powers and keeps within their limits, and who, if he fails at any point, is able to recover himself. So let the unjust make his unjust attempts in the right way, and lie hidden if he means to be great in his injustice: (he who is found out is nobody:) for the highest reach of injustice is, to be deemed just when you are not. Therefore I say that in the perfectly unjust man we must assume the most perfect injustice; there is to be no deduction, but we must allow him, while doing the most unjust acts, to have acquired the greatest reputation for justice. If he have taken a false step he must be able to recover himself; he must be one who can speak with effect, if any of his deeds come to light, and who can force his way where force is required by his courage and strength, and command of money and friends. And at his side let us place the just man in his nobleness and simplicity, wishing, as Aeschylus says, to be and not to seem good. There must be no seeming, for if he seem to be just he will be honored and rewarded, and then we shall not know whether he is just for the sake of justice or for the sake of honors and rewards; therefore, let him be clothed in justice only, and have no other covering; and he must be imagined in a state of life the opposite of the former. Let him be the best of men, and let him be thought the worst; then he will have been put to the proof; and we shall see whether he will be affected by the fear of infamy and its consequences. And let him continue thus to the hour of death; being just and seeming to be unjust. When both have readied the uttermost extreme, the one of justice and the other of injustice, let judgment be given which of them is the happier of the two.

Socrates:: Heavens! my dear Glaucon, how energetically you polish them up for the decision, first one and then the other, as if they were two statues.

Glaucon:: I do my best. And now that we know what they are like there is no difficulty in tracing out the sort of life which awaits either of them. This I will proceed to describe; but as you may think the description a little too coarse, I ask you to suppose, Socrates, that the words which follow are not mine.—Let me put them into the mouths of the eulogists of injustice: They will tell you that the just man who is thought unjust will be scourged, racked, bound—will have his eyes burnt out; and, at last, after suffering every kind of evil, he will be impaled: Then he will understand that he ought to seem only, and not to be, just; the words of Aeschylus may be more truly spoken of the unjust than of the just. For the unjust is pursuing a reality; he does not live with a view to appearances—he wants to be really unjust and not to seem only:—

> 'His mind has a soil deep and fertile,
> Out of which spring his prudent counsels.'

In the first place, he is thought just, and therefore bears rule in the city; he can marry whom he will, and give in marriage to whom he will; also he can trade and deal where he likes, and always to his own advantage, because he has no misgivings about injustice; and at every contest, whether in public or private, he gets the better of his antagonists, and gains at their expense, and is rich, and out of his gains he can benefit his friends, and harm his enemies; moreover, he can offer sacrifices, and dedicate gifts to the gods abundantly and magnificently, and can honour the gods or any man whom he wants to honour in a far better style than the just, and therefore he is likely to be dearer than they are to the gods. And thus, Socrates, gods and men are said to unite in making the life of the unjust better than the life of the just.

Socrates:: I was going to say something in answer to Glaucon, when Adeimantus, his brother, interposed:

Adeimantus:: Socrates, you do not suppose that there is nothing more to be urged?

Socrates:: Why, what else is there?

Adeimantus:: The strongest point of all has not been even mentioned.

Socrates:: Well, then, according to the proverb, ‘Let brother help brother’—if he fails in any part do you assist him; although I must confess that Glaucon has already said quite enough to lay me in the dust, and take from me the power of helping justice.

Adeimantus:: Nonsense. But let me add something more: There is another side to Glaucon’s argument about the praise and censure of justice and injustice, which is equally required in order to bring out what I believe to be his meaning. Parents and tutors are always telling their sons and their wards that they are to be just; but why? not for the sake of justice, but for the sake of character and reputation; in the hope of obtaining for him who is reputed just some of those offices, marriages, and the like which Glaucon has enumerated among the advantages accruing to the unjust from the reputation of justice. More, however, is made of appearances by this class of persons than by the others; for they throw in the good opinion of the gods, and will tell you of a shower of benefits which the heavens, as they say, rain upon the pious; and this accords with the testimony of the noble Hesiod and Homer, the first of whom says, that the gods make the oaks of the just—

> ‘To bear acorns at their summit, and bees in the middle;

> And the sheep are bowed down with the weight of their fleeces’.

and many other blessings of a like kind are provided for them. And Homer has a very similar strain; for he speaks of one whose fame is—

> ‘As the fame of some blameless king who, like a god,
> Maintains justice; to whom the black earth brings forth
> Wheat and barley, whose trees are bowed with fruit,
> And his sheep never fail to bear, and the sea gives him fish.’

Still grander are the gifts of heaven which Musaeus and his son vouchsafe to the just; they take them down into the world below, where they have the saints lying on couches at a feast, everlastingly drunk, crowned with garlands; their idea seems to be that an immortality of drunkenness is the highest meed of virtue. Some extend their rewards yet further; the posterity, as they say, of the faithful and just shall survive to the third and fourth generation. This is the style in which they praise justice. But about the wicked there is another strain; they bury them in a slough in Hades, and make them carry water in a sieve; also while they are yet living they bring them to infamy, and inflict upon them the punishments which Glaucon described as the portion of the just who are reputed to be unjust; nothing else does their invention supply. Such is their manner of praising the one and censuring the other.

Once more, Socrates, I will ask you to consider another way of speaking about justice and injustice, which is not confined to the poets, but is found in prose writers. The universal voice of mankind is always declaring that justice and virtue are honorable, but grievous and toilsome; and that the pleasures of vice and injustice are easy of attainment, and are only censured by law and opinion. They say also that honesty is for the most part less profitable than dishonesty; and they are quite ready to call wicked men happy, and to honour them both in public and private when they are rich or in any other way influential, while they despise and overlook those who may be weak and poor, even though acknowledging them to be better than the others. But most extraordinary of all is their mode of speaking about virtue and the gods: they say that the gods apportion calamity and misery to many good men, and good and happiness to the wicked. And mendicant prophets go to rich men's doors and persuade them that they have a power committed to them by the gods of making an atonement for a man's own or his ancestor's sins by sacrifices or charms, with rejoicings and feasts; and they promise to harm an enemy, whether just or unjust, at a small cost; with magic arts and incantations binding heaven, as they say, to execute their will. And the poets are the authorities to whom they appeal, now smoothing the path of vice with the words of Hesiod:—

> 'Vice may be had in abundance without trouble; the way is smooth and her dwelling-place is near. But before virtue the gods have set toil,'

and a tedious and uphill road: then citing Homer as a witness that the gods may be influenced by men; for he also says:—

> 'The gods, too, may be turned from their purpose; and men pray to them and avert their wrath by sacrifices and soothing entreaties, and by libations and the odor of fat, when they have sinned and transgressed.'

And they produce a host of books written by Musaeus and Orpheus, who were children of the Moon and the Muses—that is what they say—according to which they perform their ritual, and persuade not only individuals, but whole cities, that expiations and atonements for sin may be made by sacrifices and amusements which fill a vacant hour, and are equally at the service of the living and the dead; the latter sort they call mysteries, and they redeem us from the pains of hell, but if we neglect them no one knows what awaits us.

Socrates:: He proceeded:

Adeimantus:: And now when the young hear all this said about virtue and vice, and the way in which gods and men regard them, how are their minds likely to be affected, my dear Socrates,—those of them, I mean, who are quick-witted, and, like bees on the wing, light on every flower, and from all that they hear are prone to draw conclusions as to what manner of persons they should be and in what way they should walk if they would make the best of life? Probably the youth will say to himself in the words of Pindar—

> 'Can I by justice or by crooked ways of deceit ascend a loftier tower which may be a fortress to me all my days?'

For what men say is that, if I am really just and am not also thought just, profit there is none, but the pain and loss on the other hand are unmistakable. But if, though unjust, I acquire the reputation of justice, a heavenly life is promised to me. Since then, as philosophers prove, appearance tyrannizes over truth and is lord of happiness, to appearance I must devote myself. I will describe around me a picture and shadow of virtue to be the vestibule and exterior of my house; behind I will trail the subtle and crafty fox, as Archilochus, greatest of sages, recommends. But I hear some one exclaiming that the concealment of wickedness is often difficult; to which I answer, Nothing great is easy. Nevertheless, the argument indicates this, if we would be happy, to be the path along which we should proceed. With a view to concealment we will establish secret brotherhoods and political clubs. And there are professors of rhetoric who teach the art of persuading courts and assemblies; and so, partly by persuasion and partly by force, I shall make unlawful gains and not be punished. Still I hear a voice saying that the gods cannot be deceived, neither can they be compelled. But what if there are no gods? or, suppose them to have no care of human things—why in either case should we mind about concealment? And even if there are gods, and they do care about us, yet we know of them only from tradition and the genealogies of the poets; and these are the very persons who say that they may be influenced and turned by 'sacrifices and soothing entreaties and by offerings.' Let us be consistent then, and believe both or neither. If the poets speak truly, why then we had better be unjust, and offer of the fruits of injustice; for if we are just, although we may escape the vengeance of heaven, we shall lose the gains of injustice; but, if we are unjust, we shall keep the gains, and by our sinning and praying, and praying and sinning, the gods will be propitiated, and we shall not be punished. 'But there is a world below in which either we or our posterity will suffer for our unjust deeds.' Yes, my friend, will be the reflection, but there are mysteries and atoning deities, and these have great power. That is what mighty cities declare; and the children of the gods, who were their poets and prophets, bear a like testimony.

On what principle, then, shall we any longer choose justice rather than the worst injustice? when, if we only unite the latter with a deceitful regard to appearances, we shall fare to our mind both with gods and men, in life and after death, as the most numerous and the highest authorities tell us. Knowing all this, Socrates, how can a man who has any superiority of mind or person or rank or wealth, be willing to honour justice; or indeed to refrain from laughing when he hears justice praised? And even if there should be some one who is able to disprove the truth of my words, and who is satisfied that justice is best, still he is not angry with the unjust, but is very ready to forgive them, because he also knows that men are not just of their own free will; unless, peradventure, there be some one whom the divinity within him may have inspired with a hatred of injustice, or who has attained knowledge of the truth—but no other man. He only blames injustice who, owing to cowardice or age or some weakness, has not the power of being unjust. And this is proved by the fact that when he obtains the power, he immediately becomes unjust as far as he can be.

The cause of all this, Socrates, was indicated by us at the beginning of the argument, when my brother, and I told you how astonished we were to find that of all the professing panegyrists of justice—beginning with the ancient heroes of whom any memorial has been preserved to us, and ending with the men of our own time—no one has ever blamed injustice or praised justice except with a view to the glories, honors, and benefits which flow from them. No one has ever adequately described either in verse or prose the true essential nature of either of them abiding in the soul, and invisible to any human or divine eye; or shown that of all the things of a man's soul which he has within him, justice is the greatest good, and injustice the greatest evil. Had this been the universal strain, had you sought to persuade us of this from our youth upwards, we should not have been on the watch to keep one another from doing wrong, but every one would have been his own watchman, because afraid, if he did wrong, of harboring in himself the greatest of evils. I dare say that Thrasymachus and others would seriously hold the language which I have been merely repeating, and words even stronger than these about justice and injustice, grossly, as I conceive, perverting their true nature. But I speak in this vehement manner, as I must frankly confess to you, because I want to hear from you the opposite side; and I would ask you to show not only the superiority which justice has over injustice, but what effect they have on the possessor of them which makes the one to be a good and the other an evil to him. And please, as Glaucon requested of you, to exclude reputations; for unless you take away from each of them his true reputation and add on the false, we shall say that you do not praise justice, but the appearance of it; we shall think that you are only exhorting us to keep injustice dark, and that you really agree with Thrasymachus in thinking that justice is another's good and the interest of the stronger, and that injustice is a man's own profit and interest, though injurious to the weaker. Now as you have admitted that justice is one of that highest class of goods which are desired indeed for their results, but in a far greater degree for their own sakes—like sight or hearing or knowledge or health, or any other real and natural and not merely conventional good—I would ask you in your praise of justice to regard one point only: I mean the essential good and evil which justice and injustice work in the possessors of them. Let others praise justice and censure injustice, magnifying the rewards and honors of the one and abusing the other; that is a manner of arguing which, coming from them, I am ready to tolerate, but from you who have spent your whole life in the consideration of this question, unless I hear the contrary from your own lips, I expect something better. And therefore, I say, not only prove to us that justice is better than injustice, but show what they either of them do to the possessor of them, which makes the one to be a good and the other an evil, whether seen or unseen by gods and men.

Socrates:: I had always admired the genius of Glaucon and Adeimantus, but on hearing these words I was quite delighted, and said: Sons of an illustrious father, that was not a bad beginning of the Elegiac verses which the admirer of Glaucon made in honour of you after you had distinguished yourselves at the battle of Megara:—

> ‘Sons of Ariston,’ he sang, ‘divine offspring of an
> illustrious hero’

The epithet is very appropriate, for there is something truly divine in being able to argue as you have done for the superiority of injustice, and remaining unconvinced by your own arguments. And I do believe that you are not convinced—this I infer from your general character, for had I judged only from your speeches I should have mistrusted you. But now, the greater my confidence in you, the greater is my difficulty in knowing what to say. For I am in a strait between two; on the one hand I feel that I am unequal to the task; and my inability is brought home to me by the fact that you were not satisfied with the answer which I made to Thrasymachus, proving, as I thought, the superiority which justice has over injustice. And yet I cannot refuse to help, while breath and speech remain to me; I am afraid that there would be an impiety in being present when justice is evil spoken of and not lifting up a hand in her defense. And therefore I had best give such help as I can.

Glaucon and the rest entreated me by all means not to let the question drop, but to proceed in the investigation. They wanted to arrive at the truth, first, about the nature of justice and injustice, and secondly, about their relative advantages. I told them, what I really thought, that the enquiry would be of a serious nature, and would require very good eyes. Seeing then, that we are no great wits, I think that we had better adopt a method which I may illustrate thus; suppose that a short-sighted person had been asked by some one to read small letters from a distance; and it occurred to some one else that they might be found in another place which was larger and in which the letters were larger—if they were the same and he could read the larger letters first, and then proceed to the lesser—this would have been thought a rare piece of good fortune.

Adeimantus:: Very true, but how does the illustration apply to our enquiry?

Socrates:: I will tell you, justice, which is the subject of our enquiry, is, as you know, sometimes spoken of as the virtue of an individual, and sometimes as the virtue of a State.

Adeimantus:: True.

Socrates:: And is not a State larger than an individual?

Adeimantus:: It is.

Socrates:: Then in the larger the quantity of justice is likely to be larger and more easily discernible. I propose therefore that we enquire into the nature of justice and injustice, first as they appear in the State, and secondly in the individual, proceeding from the greater to the lesser and comparing them.

Adeimantus:: That, is an excellent proposal.

Socrates:: And if we imagine the State in process of creation, we shall see the justice and injustice of the State in process of creation also.

Adeimantus:: I dare say.

Socrates:: When the State is completed there may be a hope that the object of our search will be more easily discovered.

Adeimantus:: Yes, far more easily.

Socrates:: But ought we to attempt to construct one? for to do so, as I am inclined to think, will be a very serious task. Reflect therefore.

Adeimantus:: I have reflected, and am anxious that you should proceed.

Socrates:: A State, arises, as I conceive, out of the needs of mankind; no one is self-sufficing, but all of us have many wants. Can any other origin of a State be imagined?

Adeimantus:: There can be no other.

Socrates:: Then, as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and another for another; and when these partners and helpers are gathered together in one habitation the body of inhabitants is termed a State.

Adeimantus:: True.

Socrates:: And they exchange with one another, and one gives, and another receives, under the idea that the exchange will be for their good.

Adeimantus:: Very true.

Socrates:: Then, let us begin and create in idea a State; and yet the true creator is necessity, who is the mother of our invention.

Adeimantus:: Of course.

Socrates:: Now the first and greatest of necessities is food, which is the condition of life and existence.

Adeimantus:: Certainly.

Socrates:: The second is a dwelling, and the third clothing and the like.

Adeimantus:: True.

Socrates:: And now let us see how our city will be able to supply this great demand: We may suppose that one man is a husbandman, another a builder, some one else a weaver—shall we add to them a shoemaker, or perhaps some other purveyor to our bodily wants?

Adeimantus:: Quite right.

Socrates:: The barest notion of a State must include four or five men.

Adeimantus:: Clearly.

Socrates:: And how will they proceed? Will each bring the result of his labors into a common stock?—the individual husbandman, for example, producing for four, and laboring four times as long and as much as he need in the provision of food with which he supplies others as well as himself; or will he have nothing to do with others and not be at the trouble of producing for them, but provide for himself alone a fourth of the food in a fourth of the time, and in the remaining three fourths of his time be employed in making a house or a coat or a pair of shoes, having no partnership with others, but supplying himself all his own wants?

Adeimantus thought that he should aim at producing food only and not at producing everything.

Socrates:: Probably, that would be the better way; and when I hear you say this, I am myself reminded that we are not all alike; there are diversities of natures among us which are adapted to different occupations.

Adeimantus:: Very true.

Socrates:: And will you have a work better done when the workman has many occupations, or when he has only one?

Adeimantus:: When he has only one.

Socrates:: Further, there can be no doubt that a work is spoilt when not done at the right time?

Adeimantus:: No doubt.

Socrates:: For business is not disposed to wait until the doer of the business is at leisure; but the doer must follow up what he is doing, and make the business his first object.

Adeimantus:: He must.

Socrates:: And if so, we must infer that all things are produced more plentifully and easily and of a better quality when one man does one thing which is natural to him and does it at the right time, and leaves other things.

Adeimantus:: Undoubtedly.

Socrates:: Then more than four citizens will be required; for the husbandman will not make his own plough or mattock, or other implements of agriculture, if they are to be good for anything. Neither will the builder make his tools—and he too needs many; and in like manner the weaver and shoemaker.

Adeimantus:: True.

Socrates:: Then carpenters, and smiths, and many other artisans, will be sharers in our little State, which is already beginning to grow?

Adeimantus:: True.

Socrates:: Yet even if we add neatherds, shepherds, and other herdsmen, in order that our husbandmen may have oxen to plough with, and builders as well as husbandmen may have draught cattle, and curriers and weavers fleeces and hides,—still our State will not be very large.

Adeimantus:: That is true; yet neither will it be a very small State which contains all these.

Socrates:: Then, again, there is the situation of the city—to find a place where nothing need be imported is well-nigh impossible.

Adeimantus:: Impossible.

Socrates:: Then there must be another class of citizens who will bring the required supply from another city?

Adeimantus:: There must.

Socrates:: But if the trader goes empty-handed, having nothing which they require who would supply his need, he will come back empty-handed.

Adeimantus:: That is certain.

Socrates:: And therefore what they produce at home must be not only enough for themselves, but such both in quantity and quality as to accommodate those from whom their wants are supplied.

Adeimantus:: Very true.

Socrates:: Then more husbandmen and more artisans will be required?

Adeimantus:: They will.

Socrates:: Not to mention the importers and exporters, who are called merchants?

Adeimantus:: Yes.

Socrates:: Then we shall want merchants?

Adeimantus:: We shall.

Socrates:: And if merchandise is to be carried over the sea, skilful sailors will also be needed, and in considerable numbers?

Adeimantus:: Yes, in considerable numbers.

Socrates:: Then, again, within the city, how will they exchange their productions? To secure such an exchange was, as you will remember, one of our principal objects when we formed them into a society and constituted a State.

Adeimantus:: Clearly they will buy and sell.

Socrates:: Then they will need a market-place, and a money-token for purposes of exchange.

Adeimantus:: Certainly.

Socrates:: Suppose now that a husbandman, or an artisan, brings some production to market, and he comes at a time when there is no one to exchange with him,—is he to leave his calling and sit idle in the market-place?

Adeimantus:: Not at all; he will find people there who, seeing the want, undertake the office of salesmen. In well-ordered states they are commonly those who are the weakest in bodily strength, and therefore of little use for any other purpose; their duty is to be in the market, and to give money in exchange for goods to those who desire to sell and to take money from those who desire to buy.

Socrates:: This want, then, creates a class of retail-traders in our State. Is not 'retailer' the term which is applied to those who sit in the market-place engaged in buying and selling, while those who wander from one city to another are called merchants?

Adeimantus:: Yes.

Socrates:: And there is another class of servants, who are intellectually hardly on the level of companionship; still they have plenty of bodily strength for labor, which accordingly they sell, and are called, if I do not mistake, hirelings, hire being the name which is given to the price of their labor.

Adeimantus:: True.

Socrates:: Then hirelings will help to make up our population?

Adeimantus:: Yes.

Socrates:: And now, Adeimantus, is our State matured and perfected?

Adeimantus:: I think so.

Socrates:: Where, then, is justice, and where is injustice, and in what part of the State did they spring up?

Adeimantus:: Probably in the dealings of these citizens with one another. I cannot imagine that they are more likely to be found any where else.

Socrates:: I dare say that you are right in your suggestion, we had better think the matter out, and not shrink from the enquiry. Let us then consider, first of all, what will be their way of life, now that we have thus established them. Will they not produce corn, and wine, and clothes, and shoes, and build houses for themselves? And when they are housed, they will work, in summer, commonly, stripped and barefoot, but in winter substantially clothed and shod. They will feed on barley-meal and flour of wheat, baking and kneading them, making noble cakes and loaves; these they will serve up on a mat of reeds or on clean leaves, themselves reclining the while upon beds strewn with yew or myrtle And they and their children will feast, drinking of the wine which they have made, wearing garlands on their heads, and hymning the praises of the gods, in happy converse with one another. And they will take care that their families do not exceed their means; having an eye to poverty or war.

Glaucon, interposing, said;

Glaucon:: But, you have not given them a relish to their meal.

Socrates:: True, I had forgotten; of course they must have a relish—salt, and olives, and cheese, and they will boil roots and herbs such as country people prepare; for a dessert we shall give them figs, and peas, and beans; and they will roast myrtle-berries and acorns at the fire, drinking in moderation. And with such a diet they may be expected to live in peace and health to a good old age, and bequeath a similar life to their children after them.

Glaucon:: Yes, Socrates, and if you were providing for a city of pigs, how else would you feed the beasts?

Socrates:: But what would you have, Glaucon?

Glaucon:: Why, you should give them the ordinary conveniences of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern style.

Socrates:: Yes, now I understand: the question which you would have me consider is, not only how a State, but how a luxurious State is created; and possibly there is no harm in this, for in such a State we shall be more likely to see how justice and injustice originate. In my opinion the true and healthy constitution of the State is the one which I have described. But if you wish also to see a State at fever-heat. I have no objection. For I suspect that many will not be satisfied with the simpler way of life. They will be for adding sofas, and tables, and other furniture; also dainties, and perfumes, and incense, and courtesans, and cakes, all these not of one sort only, but in every variety; we must go beyond the necessaries of which I was at first speaking, such as houses, and clothes, and shoes: the arts of the painter and the embroiderer will have to be set in motion, and gold and ivory and all sorts of materials must be procured.

Glaucon:: True.

Socrates:: Then we must enlarge our borders; for the original healthy State is no longer sufficient. Now will the city have to fill and swell with a multitude of callings which are not required by any natural want; such as the whole tribe of hunters and actors, of whom one large class have to do with forms and colors; another will be the votaries of music—poets and their attendant train of rhapsodists, players, dancers, contractors; also makers of divers kinds of articles, including women's dresses. And we shall want more servants. Will not tutors be also in request, and nurses wet and dry, tire-women and barbers, as well as confectioners and cooks; and swineherds, too, who were not needed and therefore had no place in the former edition of our State, but are needed now? They must not be forgotten: and there will be animals of many other kinds, if people eat them.

Glaucon:: Certainly.

Socrates:: And living in this way we shall have much greater need of physicians than before?

Glaucon:: Much greater.

Socrates:: And the country which was enough to support the original inhabitants will be too small now, and not enough?

Glaucon:: Quite true.

Socrates:: Then a slice of our neighbors' land will be wanted by us for pasture and tillage, and they will want a slice of ours, if, like ourselves, they exceed the limit of necessity, and give themselves up to the unlimited accumulation of wealth?

Glaucon:: That, Socrates, will be inevitable.

Socrates:: And so we shall go to war, Glaucon. Shall we not?

Glaucon:: Most certainly.

Socrates:: Then, without determining as yet whether war does good or harm, thus much we may affirm, that now we have discovered war to be derived from causes which are also the causes of almost all the evils in States, private as well as public.

Glaucon:: Undoubtedly.

Socrates:: And our State must once more enlarge; and this time the enlargement will be nothing short of a whole army, which will have to go out and fight with the invaders for all that we have, as well as for the things and persons whom we were describing above.

Glaucon:: Why? are they not capable of defending themselves?

Socrates:: No, not if we were right in the principle which was acknowledged by all of us when we were framing the State: the principle, as you will remember, was that one man cannot practice many arts with success.

Glaucon:: Very true.

Socrates:: But is not war an art?

Glaucon:: Certainly.

Socrates:: And an art requiring as much attention as shoemaking?

Glaucon:: Quite true.

Socrates:: And the shoemaker was not allowed by us to be a husbandman, or a weaver, or a builder—in order that we might have our shoes well made; but to him and to every other worker was assigned one work for which he was by nature fitted, and at that he was to continue working all his life long and at no other; he was not to let opportunities slip, and then he would become a good workman. Now nothing can be more important than that the work of a soldier should be well done. But is war an art so easily acquired that a man may be a warrior who is also a husbandman, or shoemaker, or other artisan; although no one in the world would be a good dice or draught player who merely took up the game as a recreation, and had not from his earliest years devoted himself to this and nothing else? No tools will make a man a skilled workman, or master of defense, nor be of any use to him who has not learned how to handle them, and has never bestowed any attention upon them. How then will he who takes up a shield or other implement of war become a good fighter all in a day, whether with heavy-armed or any other kind of troops?

Glaucon:: Yes, the tools which would teach men their own use would be beyond price.

Socrates:: And the higher the duties of the guardian, the more time, and skill, and art, and application will be needed by him?

Glaucon:: No doubt.

Socrates:: Will he not also require natural aptitude for his calling?

Glaucon:: Certainly.

Socrates:: Then it will be our duty to select, if we can, natures which are fitted for the task of guarding the city?

Glaucon:: It will.

Socrates:: And the selection will be no easy matter, but we must be brave and do our best.

Glaucon:: We must.

Socrates:: Is not the noble youth very like a well-bred dog in respect of guarding and watching?

Glaucon:: What do you mean?

Socrates:: I mean that both of them ought to be quick to see, and swift to overtake the enemy when they see him; and strong too if, when they have caught him, they have to fight with him.

Glaucon:: All these qualities, will certainly be required by them.

Socrates:: Well, and your guardian must be brave if he is to fight well?

Glaucon:: Certainly.

Socrates:: And is he likely to be brave who has no spirit, whether horse or dog or any other animal? Have you never observed how invincible and unconquerable is spirit and how the presence of it makes the soul of any creature to be absolutely fearless and indomitable?

Glaucon:: I have.

Socrates:: Then now we have a clear notion of the bodily qualities which are required in the guardian.

Glaucon:: True.

Socrates:: And also of the mental ones; his soul is to be full of spirit?

Glaucon:: Yes.

Socrates:: But are not these spirited natures apt to be savage with one another, and with everybody else?

Glaucon:: A difficulty by no means easy to overcome.

Socrates:: Whereas, they ought to be dangerous to their enemies, and gentle to their friends; if not, they will destroy themselves without waiting for their enemies to destroy them.

Glaucon:: True.

Socrates:: What is to be done then? how shall we find a gentle nature which has also a great spirit, for the one is the contradiction of the other?

Glaucon:: True.

Socrates:: He will not be a good guardian who is wanting in either of these two qualities; and yet the combination of them appears to be impossible; and hence we must infer that to be a good guardian is impossible.

Glaucon:: I am afraid that what you say is true.

Socrates:: Here feeling perplexed I began to think over what had preceded.—My friend, no wonder that we are in a perplexity; for we have lost sight of the image which we had before us.

Glaucon:: What do you mean?

Socrates:: I mean to say that there do exist natures gifted with those opposite qualities.

Glaucon:: And where do you find them?

Socrates:: Many animals, furnish examples of them; our friend the dog is a very good one: you know that well-bred dogs are perfectly gentle to their familiars and acquaintances, and the reverse to strangers.

Glaucon:: Yes, I know.

Socrates:: Then there is nothing impossible or out of the order of nature in our finding a guardian who has a similar combination of qualities?

Glaucon:: Certainly not.

Socrates:: Would not he who is fitted to be a guardian, besides the spirited nature, need to have the qualities of a philosopher?

Glaucon:: I do not apprehend your meaning.

Socrates:: The trait of which I am speaking, may be also seen in the dog, and is remarkable in the animal.

Glaucon:: What trait?

Socrates:: Why, a dog, whenever he sees a stranger, is angry; when an acquaintance, he welcomes him, although the one has never done him any harm, nor the other any good. Did this never strike you as curious?

Glaucon:: The matter never struck me before; but I quite recognize the truth of your remark.

Socrates:: And surely this instinct of the dog is very charming;—your dog is a true philosopher.

Glaucon:: Why?

Socrates:: Why, because he distinguishes the face of a friend and of an enemy only by the criterion of knowing and not knowing. And must not an animal be a lover of learning who determines what he likes and dislikes by the test of knowledge and ignorance?

Glaucon:: Most assuredly.

Socrates:: And is not the love of learning the love of wisdom, which is philosophy?

Glaucon:: They are the same.

Socrates:: And may we not say confidently of man also, that he who is likely to be gentle to his friends and acquaintances, must by nature be a lover of wisdom and knowledge?

Glaucon:: That we may safely affirm.

Socrates:: Then he who is to be a really good and noble guardian of the State will require to unite in himself philosophy and spirit and swiftness and strength?

Glaucon:: Undoubtedly.

Socrates:: Then we have found the desired natures; and now that we have found them, how are they to be reared and educated? Is not this an enquiry which may be expected to throw light on the greater enquiry which is our final end—How do justice and injustice grow up in States? for we do not want either to omit what is to the point or to draw out the argument to an inconvenient length.

Adeimantus thought that the enquiry would be of great service to us.

Then, my dear friend, the task must not be given up, even if somewhat long.

Adeimantus:: Certainly not.

Socrates:: Come then, and let us pass a leisure hour in story-telling, and our story shall be the education of our heroes.

Adeimantus:: By all means.

Socrates:: And what shall be their education? Can we find a better than the traditional sort?—and this has two divisions, gymnastic for the body, and music for the soul.

Adeimantus:: True.

Socrates:: Shall we begin education with music, and go on to gymnastic afterwards?

Adeimantus:: By all means.

Socrates:: And when you speak of music, do you include literature or not?

Adeimantus:: I do.

Socrates:: And literature may be either true or false?

Adeimantus:: Yes.

Socrates:: And the young should be trained in both kinds, and we begin with the false?

Adeimantus:: I do not understand your meaning.

Socrates:: You know, that we begin by telling children stories which, though not wholly destitute of truth, are in the main fictitious; and these stories are told them when they are not of an age to learn gymnastics.

Adeimantus:: Very true.

Socrates:: That was my meaning when I said that we must teach music before gymnastics.

Adeimantus:: Quite right.

Socrates:: You know also that the beginning is the most important part of any work, especially in the case of a young and tender thing; for that is the time at which the character is being formed and the desired impression is more readily taken.

Adeimantus:: Quite true.

Socrates:: And shall we just carelessly allow children to hear any casual tales which may be devised by casual persons, and to receive into their minds ideas for the most part the very opposite of those which we should wish them to have when they are grown up?

Adeimantus:: We cannot.

Socrates:: Then the first thing will be to establish a censorship of the writers of fiction, and let the censors receive any tale of fiction which is good, and reject the bad; and we will desire mothers and nurses to tell their children the authorized ones only. Let them fashion the mind with such tales, even more fondly than they mould the body with their hands; but most of those which are now in use must be discarded.

Adeimantus:: Of what tales are you speaking?

Socrates:: You may find a model of the lesser in the greater, for they are necessarily of the same type, and there is the same spirit in both of them.

Adeimantus:: Very likely, but I do not as yet know what you would term the greater.

Socrates:: Those, which are narrated by Homer and Hesiod, and the rest of the poets, who have ever been the great storytellers of mankind.

Adeimantus:: But which stories do you mean, and what fault do you find with them?

Socrates:: A fault which is most serious, the fault of telling a lie, and, what is more, a bad lie.

Adeimantus:: But when is this fault committed?

Socrates:: Whenever an erroneous representation is made of the nature of gods and heroes,—as when a painter paints a portrait not having the shadow of a likeness to the original.

Adeimantus:: Yes, that sort of thing is certainly very blamable; but what are the stories which you mean?

Socrates:: First of all, there was that greatest of all lies in high places, which the poet told about Uranus, and which was a bad lie too,—I mean what Hesiod says that Uranus did, and how Cronus retaliated on him. The doings of Cronus, and the sufferings which in turn his son inflicted upon him, even if they were true, ought certainly not to be lightly told to young and thoughtless persons; if possible, they had better be buried in silence. But if there is an absolute necessity for their mention, a chosen few might hear them in a mystery, and they should sacrifice not a common [Eleusinian] pig, but some huge and unprocurable victim; and then the number of the hearers will be very few indeed.

Adeimantus:: Why, yes, those stories are extremely objectionable.

Socrates:: Yes, Adeimantus, they are stories not to be repeated in our State; the young man should not be told that in committing the worst of crimes he is far from doing anything outrageous; and that even if he chastises his father when he does wrong, in whatever manner, he will only be following the example of the first and greatest among the gods.

Adeimantus:: I entirely agree with you, in my opinion those stories are quite unfit to be repeated.

Socrates:: Neither, if we mean our future guardians to regard the habit of quarrelling among themselves as of all things the basest, should any word be said to them of the wars in heaven, and of the plots and fightings of the gods against one another, for they are not true. No, we shall never mention the battles of the giants, or let them be embroidered on garments; and we shall be silent about the innumerable other quarrels of gods and heroes with their friends and relatives. If they would only believe us we would tell them that quarrelling is unholy, and that never up to this time has there been any quarrel between citizens; this is what old men and old women should begin by telling children; and when they grow up, the poets also should be told to compose for them in a similar spirit. But the narrative of Hephaestus binding Herè his mother, or how on another occasion Zeus sent him flying for taking her part when she was being beaten, and all the battles of the gods in Homer—these tales must not be admitted into our State, whether they are supposed to have an allegorical meaning or not. For a young person cannot judge what is allegorical and what is literal; anything that he receives into his mind at that age is likely to become indelible and unalterable; and therefore it is most important that the tales which the young first hear should be models of virtuous thoughts.

Adeimantus:: There you are right, but if any one asks where are such models to be found and of what tales are you speaking—how shall we answer him?

Socrates:: You and I, Adeimantus, at this moment are not poets, but founders of a State: now the founders of a State ought to know the general forms in which poets should cast their tales, and the limits which must be observed by them, but to make the tales is not their business.

Adeimantus:: Very true, but what are these forms of theology which you mean?

Socrates:: Something of this kind,—God is always to be represented as he truly is, whatever be the sort of poetry, epic, lyric or tragic, in which the representation is given.

Adeimantus:: Right.

Socrates:: And is he not truly good? and must he not be represented as such?

Adeimantus:: Certainly.

Socrates:: And no good thing is hurtful?

Adeimantus:: No, indeed.

Socrates:: And that which is not hurtful hurts not?

Adeimantus:: Certainly not.

Socrates:: And that which hurts not does no evil?

Adeimantus:: No.

Socrates:: And can that which does no evil be a cause of evil?

Adeimantus:: Impossible.

Socrates:: And the good is advantageous?

Adeimantus:: Yes.

Socrates:: And therefore the cause of well-being?

Adeimantus:: Yes.

Socrates:: It follows therefore that the good is not the cause of all things, but of the good only?

Adeimantus:: Assuredly.

Socrates:: Then God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men. For few are the goods of human life, and many are the evils, and the good is to be attributed to God alone; of the evils the causes are to be sought elsewhere, and not in him.

Adeimantus:: That appears to me to be most true.

Socrates:: Then we must not listen to Homer or to any other poet who is guilty of the folly of saying that two casks

> 'Lie at the threshold of Zeus, full of lots, one of good, the other of evil lots,'

and that he to whom Zeus gives a mixture of the two;

> 'Sometimes meets with evil fortune, at other times with good;'

but that he to whom is given the cup of unmingled ill;

> 'Him wild hunger drives o'er the beauteous earth.'

And again—

> 'Zeus, who is the dispenser of good and evil to us.'

And if any one asserts that the violation of oaths and treaties, which was really the work of Pandarus, was brought about by Athene and Zeus, or that the strife and contention of the gods was instigated by Themis and Zeus, he shall not have our approval; neither will we allow our young men to hear the words of Aeschylus, that

> 'God plants guilt among men when he desires utterly to destroy a house.'

And if a poet writes of the sufferings of Niobe—the subject of the tragedy in which these iambic verses occur—or of the house of Pelops, or of the Trojan war or on any similar theme, either we must not permit him to say that these are the works of God, or if they are of God, he must devise some explanation of them such as we are seeking: he must say that God did what was just and right, and they were the better for being punished; but that those who are punished are miserable, and that God is the author of their misery—the poet is not to be permitted to say; though he may say that the wicked are miserable because they require to be punished, and are benefited by receiving punishment from God; but that God being good is the author of evil to any one is to be strenuously denied, and not to be said or sung or heard in verse or prose by any one whether old or young in any well-ordered commonwealth. Such a fiction is suicidal, ruinous, impious.

Adeimantus:: I agree with you, and am ready to give my assent to the law.

Socrates:: Let this then be one of our rules and principles concerning the gods, to which our poets and reciters will be expected to conform,—that God is not the author of all things, but of good only.

Adeimantus:: That will do.

Socrates:: And what do you think of a second principle? Shall I ask you whether God is a magician, and of a nature to appear insidiously now in one shape, and now in another—sometimes himself changing and passing into many forms, sometimes deceiving us with the semblance of such transformations; or is he one and the same immutably fixed in his own proper image?

Adeimantus:: I cannot answer you, without more thought.

Socrates:: Well, but if we suppose a change in anything, that change must be effected either by the thing itself, or by some other thing?

Adeimantus:: Most certainly.

Socrates:: And things which are at their best are also least liable to be altered or discomposed; for example, when healthiest and strongest, the human frame is least liable to be affected by meats and drinks, and the plant which is in the fullest vigor also suffers least from winds or the heat of the sun or any similar causes.

Adeimantus:: Of course.

Socrates:: And will not the bravest and wisest soul be least confused or deranged by any external influence?

Adeimantus:: True.

Socrates:: And the same principle, as I should suppose, applies to all composite things—furniture, houses, garments: when good and well made, they are least altered by time and circumstances.

Adeimantus:: Very true.

Socrates:: Then everything which is good, whether made by art or nature, or both, is least liable to suffer change from without?

Adeimantus:: True.

Socrates:: But surely God and the things of God are in every way perfect?

Adeimantus:: Of course they are.

Socrates:: Then he can hardly be compelled by external influence to take many shapes?

Adeimantus:: He cannot.

Socrates:: But may he not change and transform himself?

Adeimantus:: Clearly, that must be the case if he is changed at all.

Socrates:: And will he then change himself for the better and fairer, or for the worse and more unsightly?

Adeimantus:: If he change at all he can only change for the worse, for we cannot suppose him to be deficient either in virtue or beauty.

Socrates:: Very true, Adeimantus; but then, would any one, whether God or man, desire to make himself worse?

Adeimantus:: Impossible.

Socrates:: Then it is impossible that God should ever be willing to change; being, as is supposed, the fairest and best that is conceivable, every God remains absolutely and for ever in his own form.

Adeimantus:: That necessarily follows, in my judgment.

Socrates:: Then, my dear friend, let none of the poets tell us that

> 'The gods, taking the disguise of strangers from other lands, walk up and down cities in all sorts of forms;'

and let no one slander Proteus and Thetis, neither let any one, either in tragedy or in any other kind of poetry, introduce Herè disguised in the likeness of a priestess asking an alms

> 'For the life-giving daughters of Inachus the river of Argos;'

—let us have no more lies of that sort. Neither must we have mothers under the influence of the poets scaring their children with a bad version of these myths—telling how certain gods, as they say, 'Go about by night in the likeness of so many strangers and in divers forms;' but let them take heed lest they make cowards of their children, and at the same time speak blasphemy against the gods.

Adeimantus:: Heaven forbid.

Socrates:: But although the gods are themselves unchangeable, still by witchcraft and deception they may make us think that they appear in various forms?

Adeimantus:: Perhaps.

Socrates:: Well, but can you imagine that God will be willing to lie, whether in word or deed, or to put forth a phantom of himself?

Adeimantus:: I cannot say.

Socrates:: Do you not know, that the true lie, if such an expression may be allowed, is hated of gods and men?

Adeimantus:: What do you mean?

Socrates:: I mean that no one is willingly deceived in that which is the truest and highest part of himself, or about the truest and highest matters; there, above all, he is most afraid of a lie having possession of him.

Adeimantus:: Still, I do not comprehend you.

Socrates:: The reason is, that you attribute some profound meaning to my words; but I am only saying that deception, or being deceived or uninformed about the highest realities in the highest part of themselves, which is the soul, and in that part of them to have and to hold the lie, is what mankind least like;—that, I say, is what they utterly detest.

Adeimantus:: There is nothing more hateful to them.

Socrates:: And, as I was just now remarking, this ignorance in the soul of him who is deceived may be called the true lie; for the lie in words is only a kind of imitation and shadowy image of a previous affection of the soul, not pure unadulterated falsehood. Am I not right?

Adeimantus:: Perfectly right.

Socrates:: The true lie is hated not only by the gods, but also by men?

Adeimantus:: Yes.

Socrates:: Whereas the lie in words is in certain cases useful and not hateful; in dealing with enemies—that would be an instance; or again, when those whom we call our friends in a fit of madness or illusion are going to do some harm, then it is useful and is a sort of medicine or preventive; also in the tales of mythology, of which we were just now speaking—because we do not know the truth about ancient times, we make falsehood as much like truth as we can, and so turn it to account.

Adeimantus:: Very true.

Socrates:: But can any of these reasons apply to God? Can we suppose that he is ignorant of antiquity, and therefore has recourse to invention?

Adeimantus:: That would be ridiculous.

Socrates:: Then the lying poet has no place in our idea of God?

Adeimantus:: I should say not.

Socrates:: Or perhaps he may tell a lie because he is afraid of enemies?

Adeimantus:: That is inconceivable.

Socrates:: But he may have friends who are senseless or mad?

Adeimantus:: But no mad or senseless person can be a friend of God.

Socrates:: Then no motive can be imagined why God should lie?

Adeimantus:: None whatever.

Socrates:: Then the superhuman and divine is absolutely incapable of falsehood?

Adeimantus:: Yes.

Socrates:: Then is God perfectly simple and true both in word and deed; he changes not; he deceives not, either by sign or word, by dream or waking vision.

Adeimantus:: Your thoughts, are the reflection of my own.

Socrates:: You agree with me then, that this is the second type or form in which we should write and speak about divine things. The gods are not magicians who transform themselves, neither do they deceive mankind in any way.

Adeimantus:: I grant that.

Socrates:: Then, although we are admirers of Homer, we do not admire the lying dream which Zeus sends to Agamemnon; neither will we praise the verses of Aeschylus in which Thetis says that Apollo at her nuptials

> ‘Was celebrating in song her fair progeny whose days were to be long, and to know no sickness. And when he had spoken of my lot as in all things blessed of heaven he raised a note of triumph and cheered my soul. And I thought that the word of Phoebus, being divine and full of prophecy, would not fail. And now he himself who uttered the strain, he who was present at the banquet, and who said this—he it is who has slain my son.’

These are the kind of sentiments about the gods which will arouse our anger; and he who utters them shall be refused a chorus; neither shall we allow teachers to make use of them in the instruction of the young, meaning, as we do, that our guardians, as far as men can be, should be true worshippers of the gods and like them.

Adeimantus:: I entirely agree, in these principles, and promise to make them my laws.

## BOOK III.

Socrates:: Such then, are our principles of theology—some tales are to be told, and others are not to be told to our disciples from their youth upwards, if we mean them to honour the gods and their parents, and to value friendship with one another.

Adeimantus:: Yes; and I think that our principles are right.

Socrates:: But if they are to be courageous, must they not learn other lessons besides these, and lessons of such a kind as will take away the fear of death? Can any man be courageous who has the fear of death in him?

Adeimantus:: Certainly not.

Socrates:: And can he be fearless of death, or will he choose death in battle rather than defeat and slavery, who believes the world below to be real and terrible?

Adeimantus:: Impossible.

Socrates:: Then we must assume a control over the narrators of this class of tales as well as over the others, and beg them not simply to revile, but rather to commend the world below, intimating to them that their descriptions are untrue, and will do harm to our future warriors.

Adeimantus:: That will be our duty.

Socrates:: Then, we shall have to obliterate many obnoxious passages, beginning with the verses;

> 'I would rather be a serf on the land of a poor and portionless man than rule over all the dead who have come to naught.'

We must also expunge the verse, which tells us how Pluto feared;

> 'Lest the mansions grim and squalid which the gods abhor should be seen both of mortals and immortals.'

And again:—

> ‘O heavens! verily in the house of Hades there is soul and ghostly form but no mind at all!’

Again of Tiresias:—

> [‘To him even after death did Persephone grant mind,] that he alone should be wise; but the other souls are flitting shades.’

Again:—

> ‘The soul flying from the limbs had gone to Hades, lamenting her fate, leaving manhood and youth.’

Again:—

> ‘And the soul, with shrilling cry, passed like smoke beneath the earth.’

And,—

> ‘As bats in hollow of mystic cavern, whenever any of them has dropped out of the string and falls from the rock, fly shrilling and cling to one another, so did they with shrilling cry hold together as they moved.’

And we must beg Homer and the other poets not to be angry if we strike out these and similar passages, not because they are unpoetical, or unattractive to the popular ear, but because the greater the poetical charm of them, the less are they meet for the ears of boys and men who are meant to be free, and who should fear slavery more than death.

Adeimantus:: Undoubtedly.

Socrates:: Also we shall have to reject all the terrible and appalling names which describe the world below—Cocytus and Styx, ghosts under the earth, and sapless shades, and any similar words of which the very mention causes a shudder to pass through the inmost soul of him who hears them. I do not say that these horrible stories may not have a use of some kind; but there is a danger that the nerves of our guardians may be rendered too excitable and effeminate by them.

Adeimantus:: There is a real danger.

Socrates:: Then we must have no more of them.

Adeimantus:: True.

Socrates:: Another and a nobler strain must be composed and sung by us.

Adeimantus:: Clearly.

Socrates:: And shall we proceed to get rid of the weepings and wailings of famous men?

Adeimantus:: They will go with the rest.

Socrates:: But shall we be right in getting rid of them? Reflect: our principle is that the good man will not consider death terrible to any other good man who is his comrade.

Adeimantus:: Yes; that is our principle.

Socrates:: And therefore he will not sorrow for his departed friend as though he had suffered anything terrible?

Adeimantus:: He will not.

Socrates:: Such an one, as we further maintain, is sufficient for himself and his own happiness, and therefore is least in need of other men.

Adeimantus:: True.

Socrates:: And for this reason the loss of a son or brother, or the deprivation of fortune, is to him of all men least terrible.

Adeimantus:: Assuredly.

Socrates:: And therefore he will be least likely to lament, and will bear with the greatest equanimity any misfortune of this sort which may befall him.

Adeimantus:: Yes, he will feel such a misfortune far less than another.

Socrates:: Then we shall be right in getting rid of the lamentations of famous men, and making them over to women (and not even to women who are good for anything), or to men of a baser sort, that those who are being educated by us to be the defenders of their country may scorn to do the like.

Adeimantus:: That will be very right.

Socrates:: Then we will once more entreat Homer and the other poets not to depict Achilles, who is the son of a goddess, first lying on his side, then on his back, and then on his face; then starting up and sailing in a frenzy along the shores of the barren sea; now taking the sooty ashes in both his hands and pouring them over his head, or weeping and wailing in the various modes which Homer has delineated. Nor should he describe Priam the kinsman of the gods as praying and beseeching;

> 'Rolling in the dirt, calling each man loudly by his name.'

Still more earnestly will we beg of him at all events not to introduce the gods lamenting and saying;

> 'Alas! my misery! Alas! that I bore the bravest to my sorrow.'

But if he must introduce the gods, at any rate let him not dare so completely to misrepresent the greatest of the gods, as to make him say—

> 'O heavens! with my eyes verily I behold a dear friend of mine chased round and round the city, and my heart is sorrowful.'

Or again:—

> 'Woe is me that I am fated to have Sarpedon, dearest of men to me, subdued at the hands of Patroclus the son of Menoetius.'

For if, my sweet Adeimantus, our youth seriously listen to such unworthy representations of the gods, instead of laughing at them as they ought, hardly will any of them deem that he himself, being but a man, can be dishonored by similar actions; neither will he rebuke any inclination which may arise in his mind to say and do the like. And instead of having any shame or self-control, he will be always whining and lamenting on slight occasions.

Adeimantus:: Yes, that is most true.

Socrates:: Yes, but that surely is what ought not to be, as the argument has just proved to us; and by that proof we must abide until it is disproved by a better.

Adeimantus:: It ought not to be.

Socrates:: Neither ought our guardians to be given to laughter. For a fit of laughter which has been indulged to excess almost always produces a violent reaction.

Adeimantus:: So I believe.

Socrates:: Then persons of worth, even if only mortal men, must not be represented as overcome by laughter, and still less must such a representation of the gods be allowed.

Adeimantus:: Still less of the gods, as you say.

Socrates:: Then we shall not suffer such an expression to be used about the gods as that of Homer when he describes how

> 'Inextinguishable laughter arose among the blessed gods,
> when they saw Hephaestus bustling about the mansion.'

Socrates:: On your views, we must not admit them.

Adeimantus:: On my views, if you like to father them on me; that we must not admit them is certain.

Socrates:: Again, truth should be highly valued; if, as we were saying, a lie is useless to the gods, and useful only as a medicine to men, then the use of such medicines should be restricted to physicians; private individuals have no business with them.

Adeimantus:: Clearly not.

Socrates:: Then if any one at all is to have the privilege of lying, the rulers of the State should be the persons; and they, in their dealings either with enemies or with their own citizens, may be allowed to lie for the public good. But nobody else should meddle with anything of the kind; and although the rulers have this privilege, for a private man to lie to them in return is to be deemed a more heinous fault than for the patient or the pupil of a gymnasium not to speak the truth about his own bodily illnesses to the physician or to the trainer, or for a sailor not to tell the captain what is happening about the ship and the rest of the crew, and how things are going with himself or his fellow sailors.

Adeimantus:: Most true.

Socrates:: If, then, the ruler catches anybody beside himself lying in the State;

> 'Any of the craftsmen, whether he be priest or
> physician or carpenter.'

he will punish him for introducing a practice which is equally subversive and destructive of ship or State.

Adeimantus:: Most certainly, if our idea of the State is ever carried out.

Socrates:: In the next place our youth must be temperate?

Adeimantus:: Certainly.

Socrates:: Are not the chief elements of temperance, speaking generally, obedience to commanders and self-control in sensual pleasures?

Adeimantus:: True.

Socrates:: Then we shall approve such language as that of Diomede in Homer;

> 'Friend, sit still and obey my word,'

and the verses which follow;

> 'The Greeks marched breathing prowess,
> ... in silent awe of their leaders,'

and other sentiments of the same kind.

We shall.

Socrates:: What of this line;

> 'O heavy with wine, who hast the eyes of a dog and the heart of a stag,'

and of the words which follow? Would you say that these, or any similar impertinences which private individuals are supposed to address to their rulers, whether in verse or prose, are well or ill spoken?

Adeimantus:: They are ill spoken.

Socrates:: They may very possibly afford some amusement, but they do not conduce to temperance. And therefore they are likely to do harm to our young men—you would agree with me there?

Adeimantus:: Yes.

Socrates:: And then, again, to make the wisest of men say that nothing in his opinion is more glorious than

> 'When the tables are full of bread and meat, and the cup-bearer carries round wine which he draws from the bowl and pours into the cups;'

is it fit or conducive to temperance for a young man to hear such words? Or the verse

> 'The saddest of fates is to die and meet destiny from hunger'?

What would you say again to the tale of Zeus, who, while other gods and men were asleep and he the only person awake, lay devising plans, but forgot them all in a moment through his lust, and was so completely overcome at the sight of Herè that he would not even go into the hut, but wanted to lie with her on the ground, declaring that he had never been in such a state of rapture before, even when they first met one another

> ‘Without the knowledge of their parents;’

or that other tale of how Hephaestus, because of similar goings on, cast a chain around Ares and Aphrodite?

Adeimantus:: Indeed, I am strongly of opinion that they ought not to hear that sort of thing.

Socrates:: But any deeds of endurance which are done or told by famous men, these they ought to see and hear; as, for example, what is said in the verses;

> ‘He smote his breast, and thus reproached his heart,
> Endure, my heart; far worse hast thou endured!’

Certainly.

Socrates:: In the next place, we must not let them be receivers of gifts or lovers of money.

Certainly not.

Socrates:: Neither must we sing to them of

> ‘Gifts persuading gods, and persuading reverend kings.’

Neither is Phoenix, the tutor of Achilles, to be approved or deemed to have given his pupil good counsel when he told him that he should take the gifts of the Greeks and assist them; but that without a gift he should not lay aside his anger. Neither will we believe or acknowledge Achilles himself to have been such a lover of money that he took Agamemnon’s gifts, or that when he had received payment he restored the dead body of Hector, but that without payment he was unwilling to do so.

Adeimantus:: Undoubtedly, these are not sentiments which can be approved.

Socrates:: Loving Homer as I do, I hardly like to say that in attributing these feelings to Achilles, or in believing that they are truly attributed to him, he is guilty of downright impiety. As little can I believe the narrative of his insolence to Apollo, where he says;

> 'Thou hast wronged me, O far-darter, most abominable of deities.
> Verily I would be even with thee, if I had only the power;'

or his insubordination to the river-god, on whose divinity he is ready to lay hands; or his offering to the dead Patroclus of his own hair, which had been previously dedicated to the other river-god Spercheius, and that he actually performed this vow; or that he dragged Hector round the tomb of Patroclus, and slaughtered the captives at the pyre; of all this I cannot believe that he was guilty, any more than I can allow our citizens to believe that he, the wise Cheiron's pupil, the son of a goddess and of Peleus who was the gentlest of men and third in descent from Zeus, was so disordered in his wits as to be at one time the slave of two seemingly inconsistent passions, meanness, not untainted by avarice, combined with overweening contempt of gods and men.

Adeimantus:: You are quite right.

Socrates:: And let us equally refuse to believe, or allow to be repeated, the tale of Theseus son of Poseidon, or of Peirithous son of Zeus, going forth as they did to perpetrate a horrid rape; or of any other hero or son of a god daring to do such impious and dreadful things as they falsely ascribe to them in our day: and let us further compel the poets to declare either that these acts were not done by them, or that they were not the sons of gods;—both in the same breath they shall not be permitted to affirm. We will not have them trying to persuade our youth that the gods are the authors of evil, and that heroes are no better than men—sentiments which, as we were saying, are neither pious nor true, for we have already proved that evil cannot come from the gods.

Adeimantus:: Assuredly not.

Socrates:: And further they are likely to have a bad effect on those who hear them; for everybody will begin to excuse his own vices when he is convinced that similar wickednesses are always being perpetrated by—

> 'The kindred of the gods, the relatives of Zeus, whose ancestral altar, the altar of Zeus, is aloft in air on the peak of Ida'

and who have

> 'the blood of deities yet flowing in their veins.'

And therefore let us put an end to such tales, lest they engender laxity of morals among the young.

Adeimantus:: By all means.

Socrates:: But now that we are determining what classes of subjects are or are not to be spoken of, let us see whether any have been omitted by us. The manner in which gods and demigods and heroes and the world below should be treated has been already laid down.

Adeimantus:: Very true.

Socrates:: And what shall we say about men? That is clearly the remaining portion of our subject.

Adeimantus:: Clearly so.

Socrates:: But we are not in a condition to answer this question at present, my friend.

Adeimantus:: Why not?

Socrates:: Because, if I am not mistaken, we shall have to say that about men poets and story-tellers are guilty of making the gravest misstatements when they tell us that wicked men are often happy, and the good miserable; and that injustice is profitable when undetected, but that justice is a man's own loss and another's gain—these things we shall forbid them to utter, and command them to sing and say the opposite.

Adeimantus:: To be sure we shall.

Socrates:: But if you admit that I am right in this, then I shall maintain that you have implied the principle for which we have been all along contending.

Adeimantus:: I grant the truth of your inference.

Socrates:: That such things are or are not to be said about men is a question which we cannot determine until we have discovered what justice is, and how naturally advantageous to the possessor, whether he seem to be just or not.

Adeimantus:: Most true.

Socrates:: Enough of the subjects of poetry: let us now speak of the style; and when this has been considered, both matter and manner will have been completely treated.

Adeimantus:: I do not understand what you mean.

Socrates:: Then I must make you understand; and perhaps I may be more intelligible if I put the matter in this way. You are aware, I suppose, that all mythology and poetry is a narration of events, either past, present, or to come?

Adeimantus:: Certainly.

Socrates:: And narration may be either simple narration, or imitation, or a union of the two?

Adeimantus:: That again, I do not quite understand.

Socrates:: I fear that I must be a ridiculous teacher when I have so much difficulty in making myself apprehended. Like a bad speaker, therefore, I will not take the whole of the subject, but will break a piece off in illustration of my meaning. You know the first lines of the Iliad, in which the poet says that Chryses prayed Agamemnon to release his daughter, and that Agamemnon flew into a passion with him; whereupon Chryses, failing of his object, invoked the anger of the God against the Achaeans. Now as far as these lines;

> 'And he prayed all the Greeks, but especially the two
> sons of Atreus, the chiefs of the people,'

the poet is speaking in his own person; he never leads us to suppose that he is any one else. But in what follows he takes the person of Chryses, and then he does all that he can to make us believe that the speaker is not Homer, but the aged priest himself. And in this double form he has cast the entire narrative of the events which occurred at Troy and in Ithaca and throughout the Odyssey.

Adeimantus:: Yes.

Socrates:: And a narrative it remains both in the speeches which the poet recites from time to time and in the intermediate passages?

Adeimantus:: Quite true.

Socrates:: But when the poet speaks in the person of another, may we not say that he assimilates his style to that of the person who, as he informs you, is going to speak?

Adeimantus:: Certainly.

Socrates:: And this assimilation of himself to another, either by the use of voice or gesture, is the imitation of the person whose character he assumes?

Adeimantus:: Of course.

Socrates:: Then in this case the narrative of the poet may be said to proceed by way of imitation?

Adeimantus:: Very true.

Socrates:: Or, if the poet everywhere appears and never conceals himself, then again the imitation is dropped, and his poetry becomes simple narration. However, in order that I may make my meaning quite clear, and that you may no more say, 'I don't understand,' I will show how the change might be effected. If Homer had said, 'The priest came, having his daughter's ransom in his hands, supplicating the Achaeans, and above all the kings;' and then if, instead of speaking in the person of Chryses, he had continued in his own person, the words would have been, not imitation, but simple narration. The passage would have run as follows (I am no poet, and therefore I drop the meter), 'The priest came and prayed the gods on behalf of the Greeks that they might capture Troy and return safely home, but begged that they would give him back his daughter, and take the ransom which he brought, and respect the God. Thus he spoke, and the other Greeks revered the priest and assented. But Agamemnon was wroth, and bade him depart and not come again, lest the staff and chaplets of the God should be of no avail to him—the daughter of Chryses should not be released, he said—she should grow old with him in Argos. And then he told him to go away and not to provoke him, if he intended to get home unscathed. And the old man went away in fear and silence, and, when he had left the camp, he called upon Apollo by his many names, reminding him of everything which he had done pleasing to him, whether in building his temples, or in offering sacrifice, and praying that his good deeds might be returned to him, and that the Achaeans might expiate his tears by the arrows of the god,’—and so on. In this way the whole becomes simple narrative.

Adeimantus:: I understand.

Socrates:: Or you may suppose the opposite case—that the intermediate passages are omitted, and the dialogue only left.

Adeimantus:: That also, I understand; you mean, for example, as in tragedy.

Socrates:: You have conceived my meaning perfectly; and if I mistake not, what you failed to apprehend before is now made clear to you, that poetry and mythology are, in some cases, wholly imitative—instances of this are supplied by tragedy and comedy; there is likewise the opposite style, in which the poet is the only speaker—of this the dithyramb affords the best example; and the combination of both is found in epic, and in several other styles of poetry. Do I take you with me?

Adeimantus:: Yes, I see now what you meant.

Socrates:: I will ask you to remember also what I began by saying, that we had done with the subject and might proceed to the style.

Adeimantus:: Yes, I remember.

Socrates:: In saying this, I intended to imply that we must come to an understanding about the mimetic art,—whether the poets, in narrating their stories, are to be allowed by us to imitate, and if so, whether in whole or in part, and if the latter, in what parts; or should all imitation be prohibited?

Adeimantus:: You mean, I suspect, to ask whether tragedy and comedy shall be admitted into our State?

Socrates:: Yes, but there may be more than this in question: I really do not know as yet, but whither the argument may blow, thither we go.

Adeimantus:: And go we will.

Socrates:: Then, Adeimantus, let me ask you whether our guardians ought to be imitators; or rather, has not this question been decided by the rule already laid down that one man can only do one thing well, and not many; and that if he attempt many, he will altogether fail of gaining much reputation in any?

Adeimantus:: Certainly.

Socrates:: And this is equally true of imitation; no one man can imitate many things as well as he would imitate a single one?

Adeimantus:: He cannot.

Socrates:: Then the same person will hardly be able to play a serious part in life, and at the same time to be an imitator and imitate many other parts as well; for even when two species of imitation are nearly allied, the same persons cannot succeed in both, as, for example, the writers of tragedy and comedy—did you not just now call them imitations?

Adeimantus:: Yes, I did; and you are right in thinking that the same persons cannot succeed in both.

Socrates:: Any more than they can be rhapsodists and actors at once?

Adeimantus:: True.

Socrates:: Neither are comic and tragic actors the same; yet all these things are but imitations.

Adeimantus:: They are so.

Socrates:: And human nature, Adeimantus, appears to have been coined into yet smaller pieces, and to be as incapable of imitating many things well, as of performing well the actions of which the imitations are copies.

Adeimantus:: Quite true.

Socrates:: If then we adhere to our original notion and bear in mind that our guardians, setting aside every other business, are to dedicate themselves wholly to the maintenance of freedom in the State, making this their craft, and engaging in no work which does not bear on this end, they ought not to practice or imitate anything else; if they imitate at all, they should imitate from youth upward only those characters which are suitable to their profession—the courageous, temperate, holy, free, and the like; but they should not depict or be skilful at imitating any kind of illiberality or baseness, lest from imitation they should come to be what they imitate. Did you never observe how imitations, beginning in early youth and continuing far into life, at length grow into habits and become a second nature, affecting body, voice, and mind?

Adeimantus:: Yes, certainly.

Socrates:: Then, we will not allow those for whom we profess a care and of whom we say that they ought to be good men, to imitate a woman, whether young or old, quarrelling with her husband, or striving and vaunting against the gods in conceit of her happiness, or when she is in affliction, or sorrow, or weeping; and certainly not one who is in sickness, love, or labor.

Adeimantus:: Very right.

Socrates:: Neither must they represent slaves, male or female, performing the offices of slaves?

Adeimantus:: They must not.

Socrates:: And surely not bad men, whether cowards or any others, who do the reverse of what we have just been prescribing, who scold or mock or revile one another in drink or out of drink, or who in any other manner sin against themselves and their neighbors in word or deed, as the manner of such is. Neither should they be trained to imitate the action or speech of men or women who are mad or bad; for madness, like vice, is to be known but not to be practiced or imitated.

Adeimantus:: Very true.

Socrates:: Neither may they imitate smiths or other artificers, or oarsmen, or boatswains, or the like?

Adeimantus:: How can they, when they are not allowed to apply their minds to the callings of any of these?

Socrates:: Nor may they imitate the neighing of horses, the bellowing of bulls, the murmur of rivers and roll of the ocean, thunder, and all that sort of thing?

Adeimantus:: Nay, if madness be forbidden, neither may they copy the behavior of madmen.

Socrates:: You mean, if I understand you aright, that there is one sort of narrative style which may be employed by a truly good man when he has anything to say, and that another sort will be used by a man of an opposite character and education.

Adeimantus:: And which are these two sorts?

Socrates:: Suppose, I answered, that a just and good man in the course of a narration comes on some saying or action of another good man,—I should imagine that he will like to personate him, and will not be ashamed of this sort of imitation: he will be most ready to play the part of the good man when he is acting firmly and wisely; in a less degree when he is overtaken by illness or love or drink, or has met with any other disaster. But when he comes to a character which is unworthy of him, he will not make a study of that; he will disdain such a person, and will assume his likeness, if at all, for a moment only when he is performing some good action; at other times he will be ashamed to play a part which he has never practiced, nor will he like to fashion and frame himself after the baser models; he feels the employment of such an art, unless in jest, to be beneath him, and his mind revolts at it.

Adeimantus:: So I should expect.

Socrates:: Then he will adopt a mode of narration such as we have illustrated out of Homer, that is to say, his style will be both imitative and narrative; but there will be very little of the former, and a great deal of the latter. Do you agree?

Adeimantus:: Certainly, that is the model which such a speaker must necessarily take.

Socrates:: But there is another sort of character who will narrate anything, and, the worse he is, the more unscrupulous he will be; nothing will be too bad for him: and he will be ready to imitate anything, not as a joke, but in right good earnest, and before a large company. As I was just now saying, he will attempt to represent the roll of thunder, the noise of wind and hail, or the creaking of wheels, and pulleys, and the various sounds of flutes, pipes, trumpets, and all sorts of instruments: he will bark like a dog, bleat like a sheep, or crow like a cock; his entire art will consist in imitation of voice and gesture, and there will be very little narration.

Adeimantus:: That, will be his mode of speaking.

Socrates:: These, then, are the two kinds of style?

Adeimantus:: Yes.

Socrates:: And you would agree with me in saying that one of them is simple and has but slight changes; and if the harmony and rhythm are also chosen for their simplicity, the result is that the speaker, if he speaks correctly, is always pretty much the same in style, and he will keep within the limits of a single harmony (for the changes are not great), and in like manner he will make use of nearly the same rhythm?

Adeimantus:: That is quite true.

Socrates:: Whereas the other requires all sorts of harmonies and all sorts of rhythms, if the music and the style are to correspond, because the style has all sorts of changes.

Adeimantus:: That is also perfectly true.

Socrates:: And do not the two styles, or the mixture of the two, comprehend all poetry, and every form of expression in words? No one can say anything except in one or other of them or in both together.

Adeimantus:: They include all.

Socrates:: And shall we receive into our State all the three styles, or one only of the two unmixed styles? or would you include the mixed?

Adeimantus:: I should prefer only to admit the pure imitator of virtue.

Socrates:: Yes, Adeimantus; but the mixed style is also very charming: and indeed the pantomimic, which is the opposite of the one chosen by you, is the most popular style with children and their attendants, and with the world in general.

Adeimantus:: I do not deny it.

Socrates:: But I suppose you would argue that such a style is unsuitable to our State, in which human nature is not twofold or manifold, for one man plays one part only?

Adeimantus:: Yes; quite unsuitable.

Socrates:: And this is the reason why in our State, and in our State only, we shall find a shoemaker to be a shoemaker and not a pilot also, and a husbandman to be a husbandman and not a dicast also, and a soldier a soldier and not a trader also, and the same throughout?

Adeimantus:: True.

Socrates:: And therefore when any one of these pantomimic gentlemen, who are so clever that they can imitate anything, comes to us, and makes a proposal to exhibit himself and his poetry, we will fall down and worship him as a sweet and holy and wonderful being; but we must also inform him that in our State such as he are not permitted to exist; the law will not allow them. And so when we have anointed him with myrrh, and set a garland of wool upon his head, we shall send him away to another city. For we mean to employ for our souls' health the rougher and severer poet or story-teller, who will imitate the style of the virtuous only, and will follow those models which we prescribed at first when we began the education of our soldiers.

Adeimantus:: We certainly will, if we have the power.

Socrates:: Then now, my friend, that part of music or literary education which relates to the story or myth may be considered to be finished; for the matter and manner have both been discussed.

Adeimantus:: I think so too.

Socrates:: Next in order will follow melody and song.

Adeimantus:: That is obvious.

Socrates:: Every one can see already what we ought to say about them, if we are to be consistent with ourselves.

Glaucon, laughing, said;

Glaucon:: I fear that the word 'every one' hardly includes me, for I cannot at the moment say what they should be; though I may guess.

Socrates:: At any rate you can tell that a song or ode has three parts—the words, the melody, and the rhythm; that degree of knowledge I may presuppose?

Glaucon:: Yes, so much as that you may.

Socrates:: And as for the words, there will surely be no difference between words which are and which are not set to music; both will conform to the same laws, and these have been already determined by us?

Glaucon:: Yes.

Socrates:: And the melody and rhythm will depend upon the words?

Glaucon:: Certainly.

Socrates:: We were saying, when we spoke of the subject-matter, that we had no need of lamentation and strains of sorrow?

Glaucon:: True.

Socrates:: And which are the harmonies expressive of sorrow? You are musical, and can tell me.

Glaucon:: The harmonies which you mean are the mixed or tenor Lydian, and the full-toned or bass Lydian, and such like.

Socrates:: These then, must be banished; even to women who have a character to maintain they are of no use, and much less to men.

Glaucon:: Certainly.

Socrates:: In the next place, drunkenness and softness and indolence are utterly unbecoming the character of our guardians.

Glaucon:: Utterly unbecoming.

Socrates:: And which are the soft or drinking harmonies?

Glaucon:: The Ionian, and the Lydian; they are termed ‘relaxed.’

Socrates:: Well, and are these of any military use?

Glaucon:: Quite the reverse, and if so the Dorian and the Phrygian are the only ones which you have left.

Socrates:: Of the harmonies I know nothing, but I want to have one warlike, to sound the note or accent which a brave man utters in the hour of danger and stern resolve, or when his cause is failing, and he is going to wounds or death or is overtaken by some other evil, and at every such crisis meets the blows of fortune with firm step and a determination to endure; and another to be used by him in times of peace and freedom of action, when there is no pressure of necessity, and he is seeking to persuade God by prayer, or man by instruction and admonition, or on the other hand, when he is expressing his willingness to yield to persuasion or entreaty or admonition, and which represents him when by prudent conduct he has attained his end, not carried away by his success, but acting moderately and wisely under the circumstances, and acquiescing in the event. These two harmonies I ask you to leave; the strain of necessity and the strain of freedom, the strain of the unfortunate and the strain of the fortunate, the strain of courage, and the strain of temperance; these, I say, leave.

Glaucon:: And these, are the Dorian and Phrygian harmonies of which I was just now speaking.

Socrates:: Then, if these and these only are to be used in our songs and melodies, we shall not want multiplicity of notes or a panharmonic scale?

Glaucon:: I suppose not.

Socrates:: Then we shall not maintain the artificers of lyres with three corners and complex scales, or the makers of any other many-stringed curiously-harmonized instruments?

Glaucon:: Certainly not.

Socrates:: But what do you say to flute-makers and flute-players? Would you admit them into our State when you reflect that in this composite use of harmony the flute is worse than all the stringed instruments put together; even the panharmonic music is only an imitation of the flute?

Glaucon:: Clearly not.

Socrates:: There remain then only the lyre and the harp for use in the city, and the shepherds may have a pipe in the country.

Glaucon:: That is surely the conclusion to be drawn from the argument.

Socrates:: The preferring of Apollo and his instruments to Marsyas and his instruments is not at all strange.

Glaucon:: Not at all.

Socrates:: And so, by the dog of Egypt, we have been unconsciously purging the State, which not long ago we termed luxurious.

Glaucon:: And we have done wisely.

Socrates:: Then let us now finish the purgation. Next in order to harmonies, rhythms will naturally follow, and they should be subject to the same rules, for we ought not to seek out complex systems of meter, or meters of every kind, but rather to discover what rhythms are the expressions of a courageous and harmonious life; and when we have found them, we shall adapt the foot and the melody to words having a like spirit, not the words to the foot and melody. To say what these rhythms are will be your duty—

you must teach me them, as you have already taught me the harmonies.

Glaucon:: But, indeed, I cannot tell you. I only know that there are some three principles of rhythm out of which metrical systems are framed, just as in sounds there are four notes out of which all the harmonies are composed; that is an observation which I have made. But of what sort of lives they are severally the imitations I am unable to say.

Socrates:: Then, we must take Damon into our counsels; and he will tell us what rhythms are expressive of meanness, or insolence, or fury, or other unworthiness, and what are to be reserved for the expression of opposite feelings. And I think that I have an indistinct recollection of his mentioning a complex Cretic rhythm; also a dactylic or heroic, and he arranged them in some manner which I do not quite understand, making the rhythms equal in the rise and fall of the foot, long and short alternating; and, unless I am mistaken, he spoke of an iambic as well as of a trochaic rhythm, and assigned to them short and long quantities. Also in some cases he appeared to praise or censure the movement of the foot quite as much as the rhythm; or perhaps a combination of the two; for I am not certain what he meant. These matters, however, as I was saying, had better be referred to Damon himself, for the analysis of the subject would be difficult, you know?

Glaucon:: Rather so, I should say.

Socrates:: But there is no difficulty in seeing that grace or the absence of grace is an effect of good or bad rhythm.

Glaucon:: None at all.

Socrates:: And also that good and bad rhythm naturally assimilate to a good and bad style; and that harmony and discord in like manner follow style; for our principle is that rhythm and harmony are regulated by the words, and not the words by them.

Glaucon:: Just so, they should follow the words.

Socrates:: And will not the words and the character of the style depend on the temper of the soul?

Glaucon:: Yes.

Socrates:: And everything else on the style?

Glaucon:: Yes.

Socrates:: Then beauty of style and harmony and grace and good rhythm depend on simplicity,—I mean the true simplicity of a rightly and nobly ordered mind and character, not that other simplicity which is only an euphemism for folly?

Glaucon:: Very true.

Socrates:: And if our youth are to do their work in life, must they not make these graces and harmonies their perpetual aim?

Glaucon:: They must.

Socrates:: And surely the art of the painter and every other creative and constructive art are full of them,—weaving, embroidery, architecture, and every kind of manufacture; also nature, animal and vegetable,—in all of them there is grace or the absence of grace. And ugliness and discord and inharmonious motion are nearly allied to ill words and ill nature, as grace and harmony are the twin sisters of goodness and virtue and bear their likeness.

Glaucon:: That is quite true.

Socrates:: But shall our superintendence go no further, and are the poets only to be required by us to express the image of the good in their works, on pain, if they do anything else, of expulsion from our State? Or is the same control to be extended to other artists, and are they also to be prohibited from exhibiting the opposite forms of vice and intemperance and meanness and indecency in sculpture and building and the other creative arts; and is he who cannot conform to this rule of ours to be prevented from practicing his art in our State, lest the taste of our citizens be corrupted by him? We would not have our guardians grow up amid images of moral deformity, as in some noxious pasture, and there browse and feed upon many a baneful herb and flower day by day, little by little, until they silently gather a festering mass of corruption in their own soul. Let our artists rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear, like a health-giving breeze from a purer region, and insensibly draw the soul from earliest years into likeness and sympathy with the beauty of reason.

Glaucon:: There can be no nobler training than that.

Socrates:: And therefore, Glaucon, musical training is a more potent instrument than any other, because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten, imparting grace, and making the soul of him who is rightly educated graceful, or of him who is ill-educated ungraceful; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature, and with a true taste, while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognize and salute the friend with whom his education has made him long familiar.

Glaucon:: Yes, I quite agree with you in thinking that our youth should be trained in music and on the grounds which you mention.

Socrates:: Just as in learning to read, we were satisfied when we knew the letters of the alphabet, which are very few, in all their recurring sizes and combinations; not slighting them as unimportant whether they occupy a space large or small, but everywhere eager to make them out; and not thinking ourselves perfect in the art of reading until we recognize them wherever they are found:

Glaucon:: True—

Socrates:: Or, as we recognize the reflection of letters in the water, or in a mirror, only when we know the letters themselves; the same art and study giving us the knowledge of both:

Glaucon:: Exactly—

Socrates:: Even so, as I maintain, neither we nor our guardians, whom we have to educate, can ever become musical until we and they know the essential forms of temperance, courage, liberality, magnificence, and their kindred, as well as the contrary forms, in all their combinations, and can recognize them and their images wherever they are found, not slighting them either in small things or great, but believing them all to be within the sphere of one art and study.

Glaucon:: Most assuredly.

Socrates:: And when a beautiful soul harmonizes with a beautiful form, and the two are cast in one mould, that will be the fairest of sights to him who has an eye to see it?

Glaucon:: The fairest indeed.

Socrates:: And the fairest is also the loveliest?

Glaucon:: That may be assumed.

Socrates:: And the man who has the spirit of harmony will be most in love with the loveliest; but he will not love him who is of an inharmonious soul?

Glaucon:: That is true, if the deficiency be in his soul; but if there be any merely bodily defect in another he will be patient of it, and will love all the same.

Socrates:: I perceive, that you have or have had experiences of this sort, and I agree. But let me ask you another question: Has excess of pleasure any affinity to temperance?

Glaucon:: How can that be? pleasure deprives a man of the use of his faculties quite as much as pain.

Socrates:: Or any affinity to virtue in general?

Glaucon:: None whatever.

Socrates:: Any affinity to wantonness and intemperance?

Glaucon:: Yes, the greatest.

Socrates:: And is there any greater or keener pleasure than that of sensual love?

Glaucon:: No, nor a madder.

Socrates:: Whereas true love is a love of beauty and order—temperate and harmonious?

Glaucon:: Quite true.

Socrates:: Then no intemperance or madness should be allowed to approach true love?

Glaucon:: Certainly not.

Socrates:: Then mad or intemperate pleasure must never be allowed to come near the lover and his beloved; neither of them can have any part in it if their love is of the right sort?

Glaucon:: No, indeed, Socrates, it must never come near them.

Socrates:: Then I suppose that in the city which we are founding you would make a law to the effect that a friend should use no other familiarity to his love than a father would use to his son, and then only for a noble purpose, and he must first have the other's consent; and this rule is to limit him in all his intercourse, and he is never to be seen going further, or, if he exceeds, he is to be deemed guilty of coarseness and bad taste.

Glaucon:: I quite agree.

Socrates:: Thus much of music, which makes a fair ending; for what should be the end of music if not the love of beauty?

Glaucon:: I agree.

Socrates:: After music comes gymnastic, in which our youth are next to be trained.

Glaucon:: Certainly.

Socrates:: Gymnastic as well as music should begin in early years; the training in it should be careful and should continue through life. Now my belief is,—and this is a matter upon which I should like to have your opinion in confirmation of my own, but my own belief is,—not that the good body by any bodily excellence improves the soul, but, on the contrary, that the good soul, by her own excellence, improves the body as far as this may be possible. What do you say?

Glaucon:: Yes, I agree.

Socrates:: Then, to the mind when adequately trained, we shall be right in handing over the more particular care of the body; and in order to avoid prolixity we will now only give the general outlines of the subject.

Glaucon:: Very good.

Socrates:: That they must abstain from intoxication has been already remarked by us; for of all persons a guardian should be the last to get drunk and not know where in the world he is.

Glaucon:: Yes, that a guardian should require another guardian to take care of him is ridiculous indeed.

Socrates:: But next, what shall we say of their food; for the men are in training for the great contest of all—are they not?

Glaucon:: Yes.

Socrates:: And will the habit of body of our ordinary athletes be suited to them?

Glaucon:: Why not?

Socrates:: I am afraid, that a habit of body such as they have is but a sleepy sort of thing, and rather perilous to health. Do you not observe that these athletes sleep away their lives, and are liable to most dangerous illnesses if they depart, in ever so slight a degree, from their customary regimen?

Glaucon:: Yes, I do.

Socrates:: Then, a finer sort of training will be required for our warrior athletes, who are to be like wakeful dogs, and to see and hear with the utmost keenness; amid the many changes of water and also of food, of summer heat and winter cold, which they will have to endure when on a campaign, they must not be liable to break down in health.

Glaucon:: That is my view.

Socrates:: The really excellent gymnastic is twin sister of that simple music which we were just now describing.

Glaucon:: How so?

Socrates:: Why, I conceive that there is a gymnastic which, like our music, is simple and good; and especially the military gymnastic.

Glaucon:: What do you mean?

Socrates:: My meaning may be learned from Homer; he, you know, feeds his heroes at their feasts, when they are campaigning, on soldiers' fare; they have no fish, although they are on the shores of the Hellespont, and they are not allowed boiled meats but only roast, which is the food most convenient for soldiers, requiring only that they should light a fire, and not involving the trouble of carrying about pots and pans.

Glaucon:: True.

Socrates:: And I can hardly be mistaken in saying that sweet sauces are nowhere mentioned in Homer. In proscribing them, however, he is not singular; all professional athletes are well aware that a man who is to be in good condition should take nothing of the kind.

Glaucon:: Yes, and knowing this, they are quite right in not taking them.

Socrates:: Then you would not approve of Syracusan dinners, and the refinements of Sicilian cookery?

Glaucon:: I think not.

Socrates:: Nor, if a man is to be in condition, would you allow him to have a Corinthian girl as his fair friend?

Glaucon:: Certainly not.

Socrates:: Neither would you approve of the delicacies, as they are thought, of Athenian confectionary?

Glaucon:: Certainly not.

Socrates:: All such feeding and living may be rightly compared by us to melody and song composed in the panharmonic style, and in all the rhythms.

Glaucon:: Exactly.

Socrates:: There complexity engendered license, and here disease; whereas simplicity in music was the parent of temperance in the soul; and simplicity in gymnastic of health in the body.

Glaucon:: Most true.

Socrates:: But when intemperance and diseases multiply in a State, halls of justice and medicine are always being opened; and the arts of the doctor and the lawyer give themselves airs, finding how keen is the interest which not only the slaves but the freemen of a city take about them.

Glaucon:: Of course.

Socrates:: And yet what greater proof can there be of a bad and disgraceful state of education than this, that not only artisans and the meaner sort of people need the skill of first-rate physicians and judges, but also those who would profess to have had a liberal education? Is it not disgraceful, and a great sign of the want of good-breeding, that a man should have to go abroad for his law and physic because he has none of his own at home, and must therefore surrender himself into the hands of other men whom he makes lords and judges over him?

Glaucon:: Of all things, the most disgraceful.

Socrates:: Would you say ‘most’ when you consider that there is a further stage of the evil in which a man is not only a life-long litigant, passing all his days in the courts, either as plaintiff or defendant, but is actually led by his bad taste to pride himself on his litigiousness; he imagines that he is a master in dishonesty; able to take every crooked turn, and wriggle into and out of every hole, bending like a withy and getting out of the way of justice: and all for what?—in order to gain small points not worth mentioning, he not knowing that so to order his life as to be able to do without a napping judge is a far higher and nobler sort of thing. Is not that still more disgraceful?

Glaucon:: Yes, that is still more disgraceful.

Socrates:: Well, and to require the help of medicine, not when a wound has to be cured, or on occasion of an epidemic, but just because, by indolence and a habit of life such as we have been describing, men fill themselves with waters and winds, as if their bodies were a marsh, compelling the ingenious sons of Asclepius to find more names for diseases, such as flatulence and catarrh; is not this, too, a disgrace?

Glaucon:: Yes, they do certainly give very strange and newfangled names to diseases.

Socrates:: Yes, and I do not believe that there were any such diseases in the days of Asclepius; and this I infer from the circumstance that the hero Eurypylus, after he has been wounded in Homer, drinks a posset of Pramnian wine well besprinkled with barley-meal and grated cheese, which are certainly inflammatory, and yet the sons of Asclepius who were at the Trojan war do not blame the damsel who gives him the drink, or rebuke Patroclus, who is treating his case.

Glaucon:: Well, that was surely an extraordinary drink to be given to a person in his condition.

Socrates:: Not so extraordinary, if you bear in mind that in former days, as is commonly said, before the time of Herodicus, the guild of Asclepius did not practice our present system of medicine, which may be said to educate diseases. But Herodicus, being a trainer, and himself of a sickly constitution, by a combination of training and doctoring found out a way of torturing first and chiefly himself, and secondly the rest of the world.

Glaucon:: How was that?

Socrates:: By the invention of lingering death; for he had a mortal disease which he perpetually tended, and as recovery was out of the question, he passed his entire life as a valetudinarian; he could do nothing but attend upon himself, and he was in constant torment whenever he departed in anything from his usual regimen, and so dying hard, by the help of science he struggled on to old age.

Glaucon:: A rare reward of his skill!

Socrates:: Yes, a reward which a man might fairly expect who never understood that, if Asclepius did not instruct his descendants in valetudinarian arts, the omission arose, not from ignorance or inexperience of such a branch of medicine, but because he knew that in all well-ordered states every individual has an occupation to which he must attend, and has therefore no leisure to spend in continually being ill. This we remark in the case of the artisan, but, ludicrously enough, do not apply the same rule to people of the richer sort.

Glaucon:: How do you mean?

Socrates:: I mean this: When a carpenter is ill he asks the physician for a rough and ready cure; an emetic or a purge or a cautery or the knife,—these are his remedies. And if some one prescribes for him a course of dietetics, and tells him that he must swathe and swaddle his head, and all that sort of thing, he replies at once that he has no time to be ill, and that he sees no good in a life which is spent in nursing his disease to the neglect of his customary employment; and therefore bidding good-bye to this sort of physician, he resumes his ordinary habits, and either gets well and lives and does his business, or, if his constitution fails, he dies and has no more trouble.

Glaucon:: Yes, and a man in his condition of life ought to use the art of medicine thus far only.

Socrates:: Has he not, an occupation; and what profit would there be in his life if he were deprived of his occupation?

Glaucon:: Quite true.

Socrates:: But with the rich man this is otherwise; of him we do not say that he has any specially appointed work which he must perform, if he would live.

Glaucon:: He is generally supposed to have nothing to do.

Socrates:: Then you never heard of the saying of Phocylides, that as soon as a man has a livelihood he should practice virtue?

Glaucon:: Nay, I think that he had better begin somewhat sooner.

Socrates:: Let us not have a dispute with him about this, but rather ask ourselves: Is the practice of virtue obligatory on the rich man, or can he live without it? And if obligatory on him, then let us raise a further question, whether this dieting of disorders, which is an impediment to the application of the mind in carpentering and the mechanical arts, does not equally stand in the way of the sentiment of Phocylides?

Glaucon:: Of that, there can be no doubt; such excessive care of the body, when carried beyond the rules of gymnastic, is most inimical to the practice of virtue.

Socrates:: Yes, indeed, and equally incompatible with the management of a house, an army, or an office of state; and, what is most important of all, irreconcilable with any kind of study or thought or self-reflection—there is a constant suspicion that headache and giddiness are to be ascribed to philosophy, and hence all practicing or making trial of virtue in the higher sense is absolutely stopped; for a man is always fancying that he is being made ill, and is in constant anxiety about the state of his body.

Glaucon:: Yes, likely enough.

Socrates:: And therefore our politic Asclepius may be supposed to have exhibited the power of his art only to persons who, being generally of healthy constitution and habits of life, had a definite ailment; such as these he cured by purges and operations, and bade them live as usual, herein consulting the interests of the State; but bodies which disease had penetrated through and through he would not have attempted to cure by gradual processes of evacuation and infusion: he did not want to lengthen out good-for-nothing lives, or to have weak fathers begetting weaker sons "if a man was not able to live in the ordinary way he had no business to cure him; for such a cure would have been of no use either to himself, or to the State.

Glaucon:: Then, you regard Asclepius as a statesman.

Socrates:: Clearly; and his character is further illustrated by his sons.

> Note that they were heroes in the days of old and practiced the medicines of which I am speaking at the siege of Troy: You will remember how, when Pandarus wounded Menelaus, they
>
> Socrates:: ‘Sucked the blood out of the wound, and sprinkled soothing remedies,’

but they never prescribed what the patient was afterwards to eat or drink in the case of Menelaus, any more than in the case of Eurypylus; the remedies, as they conceived, were enough to heal any man who before he was wounded was healthy and regular in his habits; and even though he did happen to drink a posset of Pramnian wine, he might get well all the same. But they would have nothing to do with unhealthy and intemperate subjects, whose lives were of no use either to themselves or others; the art of medicine was not designed for their good, and though they were as rich as Midas, the sons of Asclepius would have declined to attend them.

Glaucon:: They were very acute persons, those sons of Asclepius.

Socrates:: Naturally so. Nevertheless, the tragedians and Pindar disobeying our behests, although they acknowledge that Asclepius was the son of Apollo, say also that he was bribed into healing a rich man who was at the point of death, and for this reason he was struck by lightning. But we, in accordance with the principle already affirmed by us, will not believe them when they tell us both;—if he was the son of a god, we maintain that he was not avaricious; or, if he was avaricious, he was not the son of a god.

Glaucon:: All that, Socrates, is excellent; but I should like to put a question to you: Ought there not to be good physicians in a State, and are not the best those who have treated the greatest number of constitutions good and bad? and are not the best judges in like manner those who are acquainted with all sorts of moral natures?

Socrates:: Yes, I too would have good judges and good physicians. But do you know whom I think good?

Glaucon:: Will you tell me?

Socrates:: I will, if I can. Let me however note that in the same question you join two things which are not the same.

Glaucon:: How so?

Socrates:: Why, you join physicians and judges. Now the most skilful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons. For the body, as I conceive, is not the instrument with which they cure the body; in that case we could not allow them ever to be or to have been sickly; but they cure the body with the mind, and the mind which has become and is sick can cure nothing.

Glaucon:: That is very true.

Socrates:: But with the judge it is otherwise; since he governs mind by mind; he ought not therefore to have been trained among vicious minds, and to have associated with them from youth upwards, and to have gone through the whole calendar of crime, only in order that he may quickly infer the crimes of others as he might their bodily diseases from his own self-consciousness; the honorable mind which is to form a healthy judgment should have had no experience or contamination of evil habits when young. And this is the reason why in youth good men often appear to be simple, and are easily practiced upon by the dishonest, because they have no examples of what evil is in their own souls.

Glaucon:: Yes, they are far too apt to be deceived.

Socrates:: Therefore, the judge should not be young; he should have learned to know evil, not from his own soul, but from late and long observation of the nature of evil in others: knowledge should be his guide, not personal experience.

Glaucon:: Yes, that is the ideal of a judge.

Socrates:: Yes, and he will be a good man (which is my answer to your question); for he is good who has a good soul. But the cunning and suspicious nature of which we spoke,—he who has committed many crimes, and fancies himself to be a master in wickedness, when he is amongst his fellows, is wonderful in the precautions which he takes, because he judges of them by himself: but when he gets into the company of men of virtue, who have the experience of age, he appears to be a fool again, owing to his unseasonable suspicions; he cannot recognize an honest man, because he has no pattern of honesty in himself; at the same time, as the bad are more numerous than the good, and he meets with them oftener, he thinks himself, and is by others thought to be, rather wise than foolish.

Glaucon:: Most true.

Socrates:: Then the good and wise judge whom we are seeking is not this man, but the other; for vice cannot know virtue too, but a virtuous nature, educated by time, will acquire a knowledge both of virtue and vice: the virtuous, and not the vicious man has wisdom—in my opinion.

Glaucon:: And in mine also.

Socrates:: This is the sort of medicine, and this is the sort of law, which you will sanction in your state. They will minister to better natures, giving health both of soul and of body; but those who are diseased in their bodies they will leave to die, and the corrupt and incurable souls they will put an end to themselves.

Glaucon:: That is clearly the best thing both for the patients and for the State.

Socrates:: And thus our youth, having been educated only in that simple music which, as we said, inspires temperance, will be reluctant to go to law.

Glaucon:: Clearly.

Socrates:: And the musician, who, keeping to the same track, is content to practice the simple gymnastic, will have nothing to do with medicine unless in some extreme case.

Glaucon:: That I quite believe.

Socrates:: The very exercises and toils which he undergoes are intended to stimulate the spirited element of his nature, and not to increase his strength; he will not, like common athletes, use exercise and regimen to develop his muscles.

Glaucon:: Very right.

Socrates:: Neither are the two arts of music and gymnastic really designed, as is often supposed, the one for the training of the soul, the other for the training of the body.

Glaucon:: What then is the real object of them?

Socrates:: I believe, that the teachers of both have in view chiefly the improvement of the soul.

Glaucon:: How can that be?

Socrates:: Did you never observe, the effect on the mind itself of exclusive devotion to gymnastic, or the opposite effect of an exclusive devotion to music?

Glaucon:: In what way shown?

Socrates:: The one producing a temper of hardness and ferocity, the other of softness and effeminacy.

Glaucon:: Yes, I am quite aware that the mere athlete becomes too much of a savage, and that the mere musician is melted and softened beyond what is good for him.

Socrates:: Yet surely, this ferocity only comes from spirit, which, if rightly educated, would give courage, but, if too much intensified, is liable to become hard and brutal.

Glaucon:: That I quite think.

Socrates:: On the other hand the philosopher will have the quality of gentleness. And this also, when too much indulged, will turn to softness, but, if educated rightly, will be gentle and moderate.

Glaucon:: True.

Socrates:: And in our opinion the guardians ought to have both these qualities?

Glaucon:: Assuredly.

Socrates:: And both should be in harmony?

Glaucon:: Beyond question.

Socrates:: And the harmonious soul is both temperate and courageous?

Glaucon:: Yes.

Socrates:: And the inharmonious is cowardly and boorish?

Glaucon:: Very true.

Socrates:: And, when a man allows music to play upon him and to pour into his soul through the funnel of his ears those sweet and soft and melancholy airs of which we were just now speaking, and his whole life is passed in warbling and the delights of song; in the first stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But, if he carries on the softening and soothing process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut out the sinews of his soul; and he becomes a feeble warrior.

Glaucon:: Very true.

Socrates:: If the element of spirit is naturally weak in him the change is speedily accomplished, but if he have a good deal, then the power of music weakening the spirit renders him excitable;—on the least provocation he flames up at once, and is speedily extinguished; instead of having spirit he grows irritable and passionate and is quite impracticable.

Glaucon:: Exactly.

Socrates:: And so in gymnastics, if a man takes violent exercise and is a great feeder, and the reverse of a great student of music and philosophy, at first the high condition of his body fills him with pride and spirit, and he becomes twice the man that he was.

Glaucon:: Certainly.

Socrates:: And what happens? if he do nothing else, and holds no converse with the Muses, does not even that intelligence which there may be in him, having no taste of any sort of learning or enquiry or thought or culture, grow feeble and dull and blind, his mind never waking up or receiving nourishment, and his senses not being purged of their mists?

Glaucon:: True.

Socrates:: And he ends by becoming a hater of philosophy, uncivilized, never using the weapon of persuasion,—he is like a wild beast, all violence and fierceness, and knows no other way of dealing; and he lives in all ignorance and evil conditions, and has no sense of propriety and grace.

Glaucon:: That is quite true.

Socrates:: And as there are two principles of human nature, one the spirited and the other the philosophical, some God, as I should say, has given mankind two arts answering to them (and only indirectly to the soul and body), in order that these two principles (like the strings of an instrument) may be relaxed or drawn tighter until they are duly harmonized.

Glaucon:: That appears to be the intention.

Socrates:: And he who mingles music with gymnastic in the fairest proportions, and best attempers them to the soul, may be rightly called the true musician and harmonist in a far higher sense than the tuner of the strings.

Glaucon:: You are quite right, Socrates.

Socrates:: And such a presiding genius will be always required in our State if the government is to last.

Glaucon:: Yes, he will be absolutely necessary.

Socrates:: Such, then, are our principles of nurture and education: Where would be the use of going into further details about the dances of our citizens, or about their hunting and coursing, their gymnastic and equestrian contests? For these all follow the general principle, and having found that, we shall have no difficulty in discovering them.

Glaucon:: I dare say that there will be no difficulty.

Socrates:: Very good, then what is the next question? Must we not ask who are to be rulers and who subjects?

Glaucon:: Certainly.

Socrates:: There can be no doubt that the elder must rule the younger.

Glaucon:: Clearly.

Socrates:: And that the best of these must rule.

Glaucon:: That is also clear.

Socrates:: Now, are not the best husbandmen those who are most devoted to husbandry?

Glaucon:: Yes.

Socrates:: And as we are to have the best of guardians for our city, must they not be those who have most the character of guardians?

Glaucon:: Yes.

Socrates:: And to this end they ought to be wise and efficient, and to have a special care of the State?

Glaucon:: True.

Socrates:: And a man will be most likely to care about that which he loves?

Glaucon:: To be sure.

Socrates:: And he will be most likely to love that which he regards as having the same interests with himself, and that of which the good or evil fortune is supposed by him at any time most to affect his own?

Glaucon:: Very true.

Socrates:: Then there must be a selection. Let us note among the guardians those who in their whole life show the greatest eagerness to do what is for the good of their country, and the greatest repugnance to do what is against her interests.

Glaucon:: Those are the right men.

Socrates:: And they will have to be watched at every age, in order that we may see whether they preserve their resolution, and never, under the influence either of force or enchantment, forget or cast off their sense of duty to the State.

Glaucon:: How cast off?

Socrates:: I will explain to you. A resolution may go out of a man's mind either with his will or against his will; with his will when he gets rid of a falsehood and learns better, against his will whenever he is deprived of a truth.

Glaucon:: I understand, the willing loss of a resolution; the meaning of the unwilling I have yet to learn.

Socrates:: Why, do you not see that men are unwillingly deprived of good, and willingly of evil? Is not to have lost the truth an evil, and to possess the truth a good? and you would agree that to conceive things as they are is to possess the truth?

Glaucon:: Yes, I agree with you in thinking that mankind are deprived of truth against their will.

Socrates:: And is not this involuntary deprivation caused either by theft, or force, or enchantment?

Glaucon:: Still, I do not understand you.

Socrates:: I fear that I must have been talking darkly, like the tragedians. I only mean that some men are changed by persuasion and that others forget; argument steals away the hearts of one class, and time of the other; and this I call theft. Now you understand me?

Glaucon:: Yes.

Socrates:: Those again who are forced, are those whom the violence of some pain or grief compels to change their opinion.

Glaucon:: I understand, and you are quite right.

Socrates:: And you would also acknowledge that the enchanted are those who change their minds either under the softer influence of pleasure, or the sterner influence of fear?

Glaucon:: Yes, everything that deceives may be said to enchant.

Socrates:: Therefore, as I was just now saying, we must enquire who are the best guardians of their own conviction that what they think the interest of the State is to be the rule of their lives. We must watch them from their youth upwards, and make them perform actions in which they are most likely to forget or to be deceived, and he who remembers and is not deceived is to be selected, and he who fails in the trial is to be rejected. That will be the way?

Glaucon:: Yes.

Socrates:: And there should also be toils and pains and conflicts prescribed for them, in which they will be made to give further proof of the same qualities.

Glaucon:: Very right.

Socrates:: And then, we must try them with enchantments—that is the third sort of test—and see what will be their behavior: like those who take colts amid noise and tumult to see if they are of a timid nature, so must we take our youth amid terrors of some kind, and again pass them into pleasures, and prove them more thoroughly than gold is proved in the furnace, that we may discover whether they are armed against all enchantments, and of a noble bearing always, good guardians of themselves and of the music which they have learned, and retaining under all circumstances a rhythmical and harmonious nature, such as will be most serviceable to the individual and to the State. And he who at every age, as boy and youth and in mature life, has come out of the trial victorious and pure, shall be appointed a ruler and guardian of the State; he shall be honored in life and death, and shall receive sepulture and other memorials of honour, the greatest that we have to give. But him who fails, we must reject. I am inclined to think that this is the sort of way in which our rulers and guardians should be chosen and appointed. I speak generally, and not with any pretension to exactness.

Glaucon:: And, speaking generally, I agree with you.

Socrates:: And perhaps the word ‘guardian’ in the fullest sense ought to be applied to this higher class only who preserve us against foreign enemies and maintain peace among our citizens at home, that the one may not have the will, or the others the power, to harm us. The young men whom we before called guardians may be more properly designated auxiliaries and supporters of the principles of the rulers.

Glaucon:: I agree with you.

Socrates:: How then may we devise one of those needful falsehoods of which we lately spoke—just one royal lie which may deceive the rulers, if that be possible, and at any rate the rest of the city?

Glaucon:: What sort of lie?

Socrates:: Nothing new, only an old Phoenician tale of what has often occurred before now in other places, (as the poets say, and have made the world believe,) though not in our time, and I do not know whether such an event could ever happen again, or could now even be made probable, if it did.

Glaucon:: How your words seem to hesitate on your lips!

Socrates:: You will not wonder, at my hesitation when you have heard.

Glaucon:: Speak, and fear not.

Socrates:: Well then, I will speak, although I really know not how to look you in the face, or in what words to utter the audacious fiction, which I propose to communicate gradually, first to the rulers, then to the soldiers, and lastly to the people. They are to be told that their youth was a dream, and the education and training which they received from us, an appearance only; in reality during all that time they were being formed and fed in the womb of the earth, where they themselves and their arms and appurtenances were manufactured; when they were completed, the earth, their mother, sent them up; and so, their country being their mother and also their nurse, they are bound to advise for her good, and to defend her against attacks, and her citizens they are to regard as children of the earth and their own brothers.

Glaucon:: You had good reason, to be ashamed of the lie which you were going to tell.

Socrates:: True, but there is more coming; I have only told you half. Citizens, we shall say to them in our tale, you are brothers, yet God has framed you differently. Some of you have the power of command, and in the composition of these he has mingled gold, wherefore also they have the greatest honour; others he has made of silver, to be auxiliaries; others again who are to be husbandmen and craftsmen he has composed of brass and iron; and the species will generally be preserved in the children. But as all are of the same original stock, a golden parent will sometimes have a silver son, or a silver parent a golden son. And God proclaims as a first principle to the rulers, and above all else, that there is nothing which they should so anxiously guard, or of which they are to be such good guardians, as of the purity of the race. They should observe what elements mingle in their offspring; for if the son of a golden or silver parent has an admixture of brass and iron, then nature orders a transposition of ranks, and the eye of the ruler must not be pitiful towards the child because he has to descend in the scale and become a husbandman or artisan, just as there may be sons of artisans who having an admixture of gold or silver in them are raised to honour, and become guardians or auxiliaries. For an oracle says that when a man of brass or iron guards the State, it will be destroyed. Such is the tale; is there any possibility of making our citizens believe in it?

Glaucon:: Not in the present generation, there is no way of accomplishing this; but their sons may be made to believe in the tale, and their sons’ sons, and posterity after them.

Socrates:: I see the difficulty, yet the fostering of such a belief will make them care more for the city and for one another. Enough, however, of the fiction, which may now fly abroad upon the wings of rumor, while we arm our earth-born heroes, and lead them forth under the command of their rulers. Let them look round and select a spot whence they can best suppress insurrection, if any prove refractory within, and also defend themselves against enemies, who like wolves may come down on the fold from without; there let them encamp, and when they have encamped, let them sacrifice to the proper Gods and prepare their dwellings.

Glaucon:: Just so.

Socrates:: And their dwellings must be such as will shield them against the cold of winter and the heat of summer.

Glaucon:: I suppose that you mean houses.

Socrates:: Yes, but they must be the houses of soldiers, and not of shop-keepers.

Glaucon:: What is the difference?

Socrates:: That I will endeavor to explain. To keep watch-dogs, who, from want of discipline or hunger, or some evil habit or other, would turn upon the sheep and worry them, and behave not like dogs but wolves, would be a foul and monstrous thing in a shepherd?

Glaucon:: Truly monstrous.

Socrates:: And therefore every care must be taken that our auxiliaries, being stronger than our citizens, may not grow to be too much for them and become savage tyrants instead of friends and allies?

Glaucon:: Yes, great care should be taken.

Socrates:: And would not a really good education furnish the best safeguard?

Glaucon:: But they are well-educated already.

Socrates:: I cannot be so confident, my dear Glaucon, I am much more certain that they ought to be, and that true education, whatever that may be, will have the greatest tendency to civilize and humanize them in their relations to one another, and to those who are under their protection.

Glaucon:: Very true.

Socrates:: And not only their education, but their habitations, and all that belongs to them, should be such as will neither impair their virtue as guardians, nor tempt them to prey upon the other citizens. Any man of sense must acknowledge that.

Glaucon:: He must.

Socrates:: Then now let us consider what will be their way of life, if they are to realize our idea of them. In the first place, none of them should have any property of his own beyond what is absolutely necessary; neither should they have a private house or store closed against any one who has a mind to enter; their provisions should be only such as are required by trained warriors, who are men of temperance and courage; they should agree to receive from the citizens a fixed rate of pay, enough to meet the expenses of the year and no more; and they will go to mess and live together like soldiers in a camp. Gold and silver we will tell them that they have from God; the diviner metal is within them, and they have therefore no need of the dross which is current among men, and ought not to pollute the divine by any such earthly admixture; for that commoner metal has been the source of many unholy deeds, but their own is undefiled. And they alone of all the citizens may not touch or handle silver or gold, or be under the same roof with them, or wear them, or drink from them. And this will be their salvation, and they will be the saviors of the State. But should they ever acquire homes or lands or moneys of their own, they will become housekeepers and husbandmen instead of guardians, enemies and tyrants instead of allies of the other citizens; hating and being hated, plotting and being plotted against, they will pass their whole life in much greater terror of internal than of external enemies, and the hour of ruin, both to themselves and to the rest of the State, will be at hand. For all which reasons may we not say that thus shall our State be ordered, and that these shall be the regulations appointed by us for our guardians concerning their houses and all other matters?

Glaucon:: Yes.

## BOOK IV.

Socrates:: Here Adeimantus interposed a question:

Adeimantus:: How would you answer, Socrates, if a person were to say that you are making these people miserable, and that they are the cause of their own unhappiness; the city in fact belongs to them, but they are none the better for it; whereas other men acquire lands, and build large and handsome houses, and have everything handsome about them, offering sacrifices to the gods on their own account, and practicing hospitality; moreover, as you were saying just now, they have gold and silver, and all that is usual among the favorites of fortune; but our poor citizens are no better than mercenaries who are quartered in the city and are always mounting guard?

Socrates:: Yes, and you may add that they are only fed, and not paid in addition to their food, like other men; and therefore they cannot, if they would, take a journey of pleasure; they have no money to spend on a mistress or any other luxurious fancy, which, as the world goes, is thought to be happiness; and many other accusations of the same nature might be added.

Adeimantus:: But, let us suppose all this to be included in the charge.

Socrates:: You mean to ask, what will be our answer?

Adeimantus:: Yes.

Socrates:: If we proceed along the old path, my belief, is that we shall find the answer. And our answer will be that, even as they are, our guardians may very likely be the happiest of men; but that our aim in founding the State was not the disproportionate happiness of any one class, but the greatest happiness of the whole; we thought that in a State which is ordered with a view to the good of the whole we should be most likely to find justice, and in the ill-ordered State injustice: and, having found them, we might then decide which of the two is the happier. At present, I take it, we are fashioning the happy State, not piecemeal, or with a view of making a few happy citizens, but as a whole; and by-and-by we will proceed to view the opposite kind of State. Suppose that we were painting a statue, and some one came up to us and said, Why do you not put the most beautiful colors on the most beautiful parts of the body—the eyes ought to be purple, but you have made them black—to him we might fairly answer, Sir, you would not surely have us beautify the eyes to such a degree that they are no longer eyes; consider rather whether, by giving this and the other features their due proportion, we make the whole beautiful. And so I say to you, do not compel us to assign to the guardians a sort of happiness which will make them anything but guardians; for we too can clothe our husbandmen in royal apparel, and set crowns of gold on their heads, and bid them till the ground as much as they like, and no more. Our potters also might be allowed to repose on couches, and feast by the fireside, passing round the wine-cup, while their wheel is conveniently at hand, and working at pottery only as much as they like; in this way we might make every class happy—and then, as you imagine, the whole State would be happy. But do not put this idea into our heads; for, if we listen to you, the husbandman will be no longer a husbandman, the potter will cease to be a potter, and no one will have the character of any distinct class in the State. Now this is not of much consequence where the corruption of society, and pretension to be what you are not, is confined to cobblers; but when the guardians of the laws and of the government are only seeming and not real guardians, then see how they turn the State upside down;

and on the other hand they alone have the power of giving order and happiness to the State. We mean our guardians to be true saviors and not the destroyers of the State, whereas our opponent is thinking of peasants at a festival, who are enjoying a life of revelry, not of citizens who are doing their duty to the State. But, if so, we mean different things, and he is speaking of something which is not a State. And therefore we must consider whether in appointing our guardians we would look to their greatest happiness individually, or whether this principle of happiness does not rather reside in the State as a whole. But if the latter be the truth, then the guardians and auxiliaries, and all others equally with them, must be compelled or induced to do their own work in the best way. And thus the whole State will grow up in a noble order, and the several classes will receive the proportion of happiness which nature assigns to them.

Adeimantus:: I think that you are quite right.

Socrates:: I wonder whether you will agree with another remark which occurs to me.

Adeimantus:: What may that be?

Socrates:: There seem to be two causes of the deterioration of the arts.

Adeimantus:: What are they?

Socrates:: Wealth, and poverty.

Adeimantus:: How do they act?

Socrates:: The process is as follows: When a potter becomes rich, will he, think you, any longer take the same pains with his art?

Adeimantus:: Certainly not.

Socrates:: He will grow more and more indolent and careless?

Adeimantus:: Very true.

Socrates:: And the result will be that he becomes a worse potter?

Adeimantus:: Yes; he greatly deteriorates.

Socrates:: But, on the other hand, if he has no money, and cannot provide himself with tools or instruments, he will not work equally well himself, nor will he teach his sons or apprentices to work equally well.

Adeimantus:: Certainly not.

Socrates:: Then, under the influence either of poverty or of wealth, workmen and their work are equally liable to degenerate?

Adeimantus:: That is evident.

Socrates:: Here, then, is a discovery of new evils, against which the guardians will have to watch, or they will creep into the city unobserved.

Adeimantus:: What evils?

Socrates:: Wealth, and poverty; the one is the parent of luxury and indolence, and the other of meanness and viciousness, and both of discontent.

Adeimantus:: That is very true, but still I should like to know, Socrates, how our city will be able to go to war, especially against an enemy who is rich and powerful, if deprived of the sinews of war.

Socrates:: There would certainly be a difficulty, in going to war with one such enemy; but there is no difficulty where there are two of them.

Adeimantus:: How so?

Socrates:: In the first place, if we have to fight, our side will be trained warriors fighting against an army of rich men.

Adeimantus:: That is true.

Socrates:: And do you not suppose, Adeimantus, that a single boxer who was perfect in his art would easily be a match for two stout and well-to-do gentlemen who were not boxers?

Adeimantus:: Hardly, if they came upon him at once.

Socrates:: What, not, if he were able to run away and then turn and strike at the one who first came up? And supposing he were to do this several times under the heat of a scorching sun, might he not, being an expert, overturn more than one stout personage?

Adeimantus:: Certainly, there would be nothing wonderful in that.

Socrates:: And yet rich men probably have a greater superiority in the science and practice of boxing than they have in military qualities.

Adeimantus:: Likely enough.

Socrates:: Then we may assume that our athletes will be able to fight with two or three times their own number?

Adeimantus:: I agree with you, for I think you right.

Socrates:: And suppose that, before engaging, our citizens send an embassy to one of the two cities, telling them what is the truth: Silver and gold we neither have nor are permitted to have, but you may; do you therefore come and help us in war, and take the spoils of the other city: Who, on hearing these words, would choose to fight against lean wiry dogs, rather than, with the dogs on their side, against fat and tender sheep?

Adeimantus:: That is not likely; and yet there might be a danger to the poor State if the wealth of many States were to be gathered into one.

Socrates:: But how simple of you to use the term State at all of any but our own!

Adeimantus:: Why so?

Socrates:: You ought to speak of other States in the plural number; not one of them is a city, but many cities, as they say in the game. For indeed any city, however small, is in fact divided into two, one the city of the poor, the other of the rich; these are at war with one another; and in either there are many smaller divisions, and you would be altogether beside the mark if you treated them all as a single State. But if you deal with them as many, and give the wealth or power or persons of the one to the others, you will always have a great many friends and not many enemies. And your State, while the wise order which has now been prescribed continues to prevail in her, will be the greatest of States, I do not mean to say in reputation or appearance, but in deed and truth, though she number not more than a thousand defenders. A single State which is her equal you will hardly find, either among Hellenes or barbarians, though many that appear to be as great and many times greater.

Adeimantus:: That is most true.

Socrates:: And what, will be the best limit for our rulers to fix when they are considering the size of the State and the amount of territory which they are to include, and beyond which they will not go?

Adeimantus:: What limit would you propose?

Socrates:: I would allow the State to increase so far as is consistent with unity; that, I think, is the proper limit.

Adeimantus:: Very good.

Socrates:: Here then, is another order which will have to be conveyed to our guardians: Let our city be accounted neither large nor small, but one and self-sufficing.

Adeimantus:: And surely, this is not a very severe order which we impose upon them.

Socrates:: And the other, of which we were speaking before is lighter still,—I mean the duty of degrading the offspring of the guardians when inferior, and of elevating into the rank of guardians the offspring of the lower classes, when naturally superior. The intention was, that, in the case of the citizens generally, each individual should be put to the use for which nature intended him, one to one work, and then every man would do his own business, and be one and not many; and so the whole city would be one and not many.

Adeimantus:: Yes, that is not so difficult.

Socrates:: The regulations which we are prescribing, my good Adeimantus, are not, as might be supposed, a number of great principles, but trifles all, if care be taken, as the saying is, of the one great thing,—a thing, however, which I would rather call, not, great, but sufficient for our purpose.

Adeimantus:: What may that be?

Socrates:: Education, and nurture: If our citizens are well educated, and grow into sensible men, they will easily see their way through all these, as well as other matters which I omit; such, for example, as marriage, the possession of women and the procreation of children, which will all follow the general principle that friends have all things in common, as the proverb says.

Adeimantus:: That will be the best way of settling them.

Socrates:: Also, the State, if once started well, moves with accumulating force like a wheel. For good nurture and education implant good constitutions, and these good constitutions taking root in a good education improve more and more, and this improvement affects the breed in man as in other animals.

Adeimantus:: Very possibly.

Socrates:: Then to sum up: This is the point to which, above all, the attention of our rulers should be directed,—that music and gymnastic be preserved in their original form, and no innovation made. They must do their utmost to maintain them intact. And when any one says that mankind most regard

'The newest song which the singers have,'

they will be afraid that he may be praising, not new songs, but a new kind of song; and this ought not to be praised, or conceived to be the meaning of the poet; for any musical innovation is full of danger to the whole State, and ought to be prohibited. So Damon tells me, and I can quite believe him;—he says that when modes of music change, the fundamental laws of the State always change with them.

Adeimantus:: Yes, and you may add my suffrage to Damon's and your own.

Socrates:: Then, our guardians must lay the foundations of their fortress in music?

Adeimantus:: Yes, the lawlessness of which you speak too easily steals in.

Socrates:: Yes, in the form of amusement; and at first sight it appears harmless.

Adeimantus:: Why, yes, and there is no harm; were it not that little by little this spirit of license, finding a home, imperceptibly penetrates into manners and customs; whence, issuing with greater force, it invades contracts between man and man, and from contracts goes on to laws and constitutions, in utter recklessness, ending at last, Socrates, by an overthrow of all rights, private as well as public.

Socrates:: Is that true?

Adeimantus:: That is my belief.

Socrates:: Then, as I was saying, our youth should be trained from the first in a stricter system, for if amusements become lawless, and the youths themselves become lawless, they can never grow up into well-conducted and virtuous citizens.

Adeimantus:: Very true.

Socrates:: And when they have made a good beginning in play, and by the help of music have gained the habit of good order, then this habit of order, in a manner how unlike the lawless play of the others! will accompany them in all their actions and be a principle of growth to them, and if there be any fallen places in the State will raise them up again.

Adeimantus:: Very true.

Socrates:: Thus educated, they will invent for themselves any lesser rules which their predecessors have altogether neglected.

Adeimantus:: What do you mean?

Socrates:: I mean such things as these:—when the young are to be silent before their elders; how they are to show respect to them by standing and making them sit; what honour is due to parents; what garments or shoes are to be worn; the mode of dressing the hair; deportment and manners in general. You would agree with me?

Adeimantus:: Yes.

Socrates:: But there is, I think, small wisdom in legislating about such matters,—I doubt if it is ever done; nor are any precise written enactments about them likely to be lasting.

Adeimantus:: Impossible.

Socrates:: It would seem, Adeimantus, that the direction in which education starts a man, will determine his future life. Does not like always attract like?

Adeimantus:: To be sure.

Socrates:: Until some one rare and grand result is reached which may be good, and may be the reverse of good?

Adeimantus:: That is not to be denied.

Socrates:: And for this reason, I shall not attempt to legislate further about them.

Adeimantus:: Naturally enough.

Socrates:: Well, and about the business of the agora, and the ordinary dealings between man and man, or again about agreements with artisans; about insult and injury, or the commencement of actions, and the appointment of juries, what would you say? there may also arise questions about any impositions and exactions of market and harbor dues which may be required, and in general about the regulations of markets, police, harbors, and the like. But, oh heavens! shall we condescend to legislate on any of these particulars?

Adeimantus:: I think, that there is no need to impose laws about them on good men; what regulations are necessary they will find out soon enough for themselves.

Socrates:: Yes, my friend, if God will only preserve to them the laws which we have given them.

Adeimantus:: And without divine help, they will go on for ever making and mending their laws and their lives in the hope of attaining perfection.

Socrates:: You would compare them, to those invalids who, having no self-restraint, will not leave off their habits of intemperance?

Adeimantus:: Exactly.

Socrates:: Yes, and what a delightful life they lead! they are always doctoring and increasing and complicating their disorders, and always fancying that they will be cured by any nostrum which anybody advises them to try.

Adeimantus:: Such cases are very common, with invalids of this sort.

Socrates:: Yes, and the charming thing is that they deem him their worst enemy who tells them the truth, which is simply that, unless they give up eating and drinking and wenching and idling, neither drug nor cautery nor spell nor amulet nor any other remedy will avail.

Adeimantus:: Charming! I see nothing charming in going into a passion with a man who tells you what is right.

Socrates:: These gentlemen, do not seem to be in your good graces.

Adeimantus:: Assuredly not.

Socrates:: Nor would you praise the behavior of States which act like the men whom I was just now describing. For are there not ill-ordered States in which the citizens are forbidden under pain of death to alter the constitution; and yet he who most sweetly courts those who live under this regime and indulges them and fawns upon them and is skilful in anticipating and gratifying their humors is held to be a great and good statesman—do not these States resemble the persons whom I was describing?

Adeimantus:: Yes, the States are as bad as the men; and I am very far from praising them.

Socrates:: But do you not admire, the coolness and dexterity of these ready ministers of political corruption?

Adeimantus:: Yes, I do; but not of all of them, for there are some whom the applause of the multitude has deluded into the belief that they are really statesmen, and these are not much to be admired.

Socrates:: What do you mean? you should have more feeling for them. When a man cannot measure, and a great many others who cannot measure declare that he is four cubits high, can he help believing what they say?

Adeimantus:: Nay, certainly not in that case.

Socrates:: Well, then, do not be angry with them; for are they not as good as a play, trying their hand at paltry reforms such as I was describing; they are always fancying that by legislation they will make an end of frauds in contracts, and the other rascalities which I was mentioning, not knowing that they are in reality cutting off the heads of a hydra?

Adeimantus:: Yes, that is just what they are doing.

Socrates:: I conceive, that the true legislator will not trouble himself with this class of enactments whether concerning laws or the constitution either in an ill-ordered or in a well-ordered State; for in the former they are quite useless, and in the latter there will be no difficulty in devising them; and many of them will naturally flow out of our previous regulations.

Adeimantus:: What, then, is still remaining to us of the work of legislation?

Socrates:: Nothing to us, but to Apollo, the god of Delphi, there remains the ordering of the greatest and noblest and chiefest things of all.

Adeimantus:: Which are they?

Socrates:: The institution of temples and sacrifices, and the entire service of gods, demigods, and heroes; also the ordering of the repositories of the dead, and the rites which have to be observed by him who would propitiate the inhabitants of the world below. These are matters of which we are ignorant ourselves, and as founders of a city we should be unwise in trusting them to any interpreter but our ancestral deity. He is the god who sits in the centre, on the navel of the earth, and he is the interpreter of religion to all mankind.

Adeimantus:: You are right, and we will do as you propose.

Socrates:: But where, amid all this, is justice? son of Ariston, tell me where. Now that our city has been made habitable, light a candle and search, and get your brother and Polemarchus and the rest of our friends to help, and let us see where in it we can discover justice and where injustice, and in what they differ from one another, and which of them the man who would be happy should have for his portion, whether seen or unseen by gods and men.

Glaucon:: Nonsense. did you not promise to search yourself, saying that for you not to help justice in her need would be an impiety?

Socrates:: I do not deny that I said so; and as you remind me, I will be as good as my word; but you must join.

Glaucon:: We will.

Socrates:: Well, then, I hope to make the discovery in this way: I mean to begin with the assumption that our State, if rightly ordered, is perfect.

Glaucon:: That is most certain.

Socrates:: And being perfect, is therefore wise and valiant and temperate and just.

Glaucon:: That is likewise clear.

Socrates:: And whichever of these qualities we find in the State, the one which is not found will be the residue?

Glaucon:: Very good.

Socrates:: If there were four things, and we were searching for one of them, wherever it might be, the one sought for might be known to us from the first, and there would be no further trouble; or we might know the other three first, and then the fourth would clearly be the one left.

Glaucon:: Very true.

Socrates:: And is not a similar method to be pursued about the virtues, which are also four in number?

Glaucon:: Clearly.

Socrates:: First among the virtues found in the State, wisdom comes into view, and in this I detect a certain peculiarity.

Glaucon:: What is that?

Socrates:: The State which we have been describing is said to be wise as being good in counsel?

Glaucon:: Very true.

Socrates:: And good counsel is clearly a kind of knowledge, for not by ignorance, but by knowledge, do men counsel well?

Glaucon:: Clearly.

Socrates:: And the kinds of knowledge in a State are many and diverse?

Glaucon:: Of course.

Socrates:: There is the knowledge of the carpenter; but is that the sort of knowledge which gives a city the title of wise and good in counsel?

Glaucon:: Certainly not; that would only give a city the reputation of skill in carpentering.

Socrates:: Then a city is not to be called wise because possessing a knowledge which counsels for the best about wooden implements?

Glaucon:: Certainly not.

Socrates:: Nor by reason of a knowledge which advises about brazen pots, nor as possessing any other similar knowledge?

Glaucon:: Not by reason of any of them.

Socrates:: Nor yet by reason of a knowledge which cultivates the earth; that would give the city the name of agricultural?

Glaucon:: Yes.

Socrates:: Well, and is there any knowledge in our recently-founded State among any of the citizens which advises, not about any particular thing in the State, but about the whole, and considers how a State can best deal with itself and with other States?

Glaucon:: There certainly is.

Socrates:: And what is this knowledge, and among whom is it found?

Glaucon:: It is the knowledge of the guardians, and is found among those whom we were just now describing as perfect guardians.

Socrates:: And what is the name which the city derives from the possession of this sort of knowledge?

Glaucon:: The name of good in counsel and truly wise.

Socrates:: And will there be in our city more of these true guardians or more smiths?

Glaucon:: Socrates: The smiths, will be far more numerous.

Socrates:: Will not the guardians be the smallest of all the classes who receive a name from the profession of some kind of knowledge?

Glaucon:: Much the smallest.

Socrates:: And so by reason of the smallest part or class, and of the knowledge which resides in this presiding and ruling part of itself, the whole State, being thus constituted according to nature, will be wise; and this, which has the only knowledge worthy to be called wisdom, has been ordained by nature to be of all classes the least.

Glaucon:: Most true.

Socrates:: Thus, then, the nature and place in the State of one of the four virtues has somehow or other been discovered.

Glaucon:: And, in my humble opinion, very satisfactorily discovered.

Socrates:: Again, there is no difficulty in seeing the nature of courage, and in what part that quality resides which gives the name of courageous to the State.

Glaucon:: How do you mean?

Socrates:: Why, every one who calls any State courageous or cowardly, will be thinking of the part which fights and goes out to war on the State's behalf.

Glaucon:: No one, would ever think of any other.

Socrates:: The rest of the citizens may be courageous or may be cowardly, but their courage or cowardice will not, as I conceive, have the effect of making the city either the one or the other.

Glaucon:: Certainly not.

Socrates:: The city will be courageous in virtue of a portion of herself which preserves under all circumstances that opinion about the nature of things to be feared and not to be feared in which our legislator educated them; and this is what you term courage.

Glaucon:: I should like to hear what you are saying once more, for I do not think that I perfectly understand you.

Socrates:: I mean that courage is a kind of salvation.

Glaucon:: Salvation of what?

Socrates:: Of the opinion respecting things to be feared, what they are and of what nature, which the law implants through education; and I mean by the words 'under all circumstances' to intimate that in pleasure or in pain, or under the influence of desire or fear, a man preserves, and does not lose this opinion. Shall I give you an illustration?

Glaucon:: If you please.

Socrates:: You know, that dyers, when they want to dye wool for making the true sea-purple, begin by selecting their white color first; this they prepare and dress with much care and pains, in order that the white ground may take the purple hue in full perfection. The dyeing then proceeds; and whatever is dyed in this manner becomes a fast color, and no washing either with lyes or without them can take away the bloom. But, when the ground has not been duly prepared, you will have noticed how poor is the look either of purple or of any other color.

Glaucon:: Yes, I know that they have a washed-out and ridiculous appearance.

Socrates:: Then now, you will understand what our object was in selecting our soldiers, and educating them in music and gymnastic; we were contriving influences which would prepare them to take the dye of the laws in perfection, and the color of their opinion about dangers and of every other opinion was to be indelibly fixed by their nurture and training, not to be washed away by such potent lyes as pleasure—mightier agent far in washing the soul than any soda or lye; or by sorrow, fear, and desire, the mightiest of all other solvents. And this sort of universal saving power of true opinion in conformity with law about real and false dangers I call and maintain to be courage, unless you disagree.

Glaucon:: But I agree, for I suppose that you mean to exclude mere uninstructed courage, such as that of a wild beast or of a slave—this, in your opinion, is not the courage which the law ordains, and ought to have another name.

Socrates:: Most certainly.

Glaucon:: Then I may infer courage to be such as you describe?

Socrates:: Why, yes, you may, and if you add the words ‘of a citizen’ you will not be far wrong;—hereafter, if you like, we will carry the examination further, but at present we are seeking not for courage but justice; and for the purpose of our enquiry we have said enough.

Glaucon:: You are right.

Socrates:: Two virtues remain to be discovered in the State—first, temperance, and then justice which is the end of our search.

Glaucon:: Very true.

Socrates:: Now, can we find justice without troubling ourselves about temperance?

Glaucon:: I do not know how that can be accomplished, nor do I desire that justice should be brought to light and temperance lost sight of; and therefore I wish that you would do me the favor of considering temperance first.

Socrates:: Certainly, I should not be justified in refusing your request.

Glaucon:: Then consider.

Socrates:: Yes, I will; and as far as I can at present see, the virtue of temperance has more of the nature of harmony and symphony than the preceding.

Glaucon:: How so?

Socrates:: Temperance, is the ordering or controlling of certain pleasures and desires; this is curiously enough implied in the saying of ‘a man being his own master;’ and other traces of the same notion may be found in language.

Glaucon:: No doubt.

Socrates:: There is something ridiculous in the expression ‘master of himself;’ for the master is also the servant and the servant the master; and in all these modes of speaking the same person is denoted.

Glaucon:: Certainly.

Socrates:: The meaning is, I believe, that in the human soul there is a better and also a worse principle; and when the better has the worse under control, then a man is said to be master of himself; and this is a term of praise: but when, owing to evil education or association, the better principle, which is also the smaller, is overwhelmed by the greater mass of the worse—in this case he is blamed and is called the slave of self and unprincipled.

Glaucon:: Yes, there is reason in that.

Socrates:: And now, look at our newly-created State, and there you will find one of these two conditions realized; for the State, as you will acknowledge, may be justly called master of itself, if the words ‘temperance’ and ‘self-mastery’ truly express the rule of the better part over the worse.

Glaucon:: Yes, I see that what you say is true.

Socrates:: Let me further note that the manifold and complex pleasures and desires and pains are generally found in children and women and servants, and in the freemen so called who are of the lowest and more numerous class.

Glaucon:: Certainly.

Socrates:: Whereas the simple and moderate desires which follow reason, and are under the guidance of mind and true opinion, are to be found only in a few, and those the best born and best educated.

Glaucon:: Very true.

Socrates:: These two, as you may perceive, have a place in our State; and the meaner desires of the many are held down by the virtuous desires and wisdom of the few.

Glaucon:: That I perceive.

Socrates:: Then if there be any city which may be described as master of its own pleasures and desires, and master of itself, ours may claim such a designation?

Glaucon:: Certainly.

Socrates:: It may also be called temperate, and for the same reasons?

Glaucon:: Yes.

Socrates:: And if there be any State in which rulers and subjects will be agreed as to the question who are to rule, that again will be our State?

Glaucon:: Undoubtedly.

Socrates:: And the citizens being thus agreed among themselves, in which class will temperance be found—in the rulers or in the subjects?

Glaucon:: In both, as I should imagine.

Socrates:: Do you observe that we were not far wrong in our guess that temperance was a sort of harmony?

Glaucon:: Why so?

Socrates:: Why, because temperance is unlike courage and wisdom, each of which resides in a part only, the one making the State wise and the other valiant; not so temperance, which extends to the whole, and runs through all the notes of the scale, and produces a harmony of the weaker and the stronger and the middle class, whether you suppose them to be stronger or weaker in wisdom or power or numbers or wealth, or anything else. Most truly then may we deem temperance to be the agreement of the naturally superior and inferior, as to the right to rule of either, both in states and individuals.

Glaucon:: I entirely agree with you.

Socrates:: And so, we may consider three out of the four virtues to have been discovered in our State. The last of those qualities which make a state virtuous must be justice, if we only knew what that was.

Glaucon:: The inference is obvious.

Socrates:: The time then has arrived, Glaucon, when, like huntsmen, we should surround the cover, and look sharp that justice does not steal away, and pass out of sight and escape us; for beyond a doubt she is somewhere in this country: watch therefore and strive to catch a sight of her, and if you see her first, let me know.

Glaucon:: Would that I could! but you should regard me rather as a follower who has just eyes enough to see what you show him—that is about as much as I am good for.

Socrates:: Offer up a prayer with me and follow.

Glaucon:: I will, but you must show me the way.

Socrates:: Here is no path, and the wood is dark and perplexing; still we must push on.

Glaucon:: Let us push on.

Socrates:: Here I saw something: Halloo!, I begin to perceive a track, and I believe that the quarry will not escape.

Glaucon:: Good news.

Socrates:: Truly, we are stupid fellows.

Glaucon:: Why so?

Socrates:: Why, my good sir, at the beginning of our enquiry, ages ago, there was justice tumbling out at our feet, and we never saw her; nothing could be more ridiculous. Like people who go about looking for what they have in their hands—that was the way with us—we looked not at what we were seeking, but at what was far off in the distance; and therefore, I suppose, we missed her.

Glaucon:: What do you mean?

Socrates:: I mean to say that in reality for a long time past we have been talking of justice, and have failed to recognize her.

Glaucon:: I grow impatient at the length of your exordium.

Socrates:: Well then, tell me, whether I am right or not: You remember the original principle which we were always laying down at the foundation of the State, that one man should practice one thing only, the thing to which his nature was best adapted;—now justice is this principle or a part of it.

Glaucon:: Yes, we often said that one man should do one thing only.

Socrates:: Further, we affirmed that justice was doing one's own business, and not being a busybody; we said so again and again, and many others have said the same to us.

Glaucon:: Yes, we said so.

Socrates:: Then to do one's own business in a certain way may be assumed to be justice. Can you tell me whence I derive this inference?

Glaucon:: I cannot, but I should like to be told.

Socrates:: Because I think that this is the only virtue which remains in the State when the other virtues of temperance and courage and wisdom are abstracted; and, that this is the ultimate cause and condition of the existence of all of them, and while remaining in them is also their preservative; and we were saying that if the three were discovered by us, justice would be the fourth or remaining one.

Glaucon:: That follows of necessity.

Socrates:: If we are asked to determine which of these four qualities by its presence contributes most to the excellence of the State, whether the agreement of rulers and subjects, or the preservation in the soldiers of the opinion which the law ordains about the true nature of dangers, or wisdom and watchfulness in the rulers, or whether this other which I am mentioning, and which is found in children and women, slave and freeman, artisan, ruler, subject,—the quality, I mean, of every one doing his own work, and not being a busybody, would claim the palm—the question is not so easily answered.

Glaucon:: Certainly, there would be a difficulty in saying which.

Socrates:: Then the power of each individual in the State to do his own work appears to compete with the other political virtues, wisdom, temperance, courage.

Glaucon:: Yes.

Socrates:: And the virtue which enters into this competition is justice?

Glaucon:: Exactly.

Socrates:: Let us look at the question from another point of view: Are not the rulers in a State those to whom you would entrust the office of determining suits at law?

Glaucon:: Certainly.

Socrates:: And are suits decided on any other ground but that a man may neither take what is another's, nor be deprived of what is his own?

Glaucon:: Yes; that is their principle.

Socrates:: Which is a just principle?

Glaucon:: Yes.

Socrates:: Then on this view also justice will be admitted to be the having and doing what is a man's own, and belongs to him?

Glaucon:: Very true.

Socrates:: Think, now, and say whether you agree with me or not. Suppose a carpenter to be doing the business of a cobbler, or a cobbler of a carpenter; and suppose them to exchange their implements or their duties, or the same person to be doing the work of both, or whatever be the change; do you think that any great harm would result to the State?

Glaucon:: Not much.

Socrates:: But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted, and either to take the implements or the duties of the other; or when one man is trader, legislator, and warrior all in one, then I think you will agree with me in saying that this interchange and this meddling of one with another is the ruin of the State.

Glaucon:: Most true.

Socrates:: Seeing then, that there are three distinct classes, any meddling of one with another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Glaucon:: Precisely.

Socrates:: And the greatest degree of evil-doing to one's own city would be termed by you injustice?

Glaucon:: Certainly.

Socrates:: This then is injustice; and on the other hand when the trader, the auxiliary, and the guardian each do their own business, that is justice, and will make the city just.

Glaucon:: I agree with you.

Socrates:: We will not, be over-positive as yet; but if, on trial, this conception of justice be verified in the individual as well as in the State, there will be no longer any room for doubt; if it be not verified, we must have a fresh enquiry. First let us complete the old investigation, which we began, as you remember, under the impression that, if we could previously examine justice on the larger scale, there would be less difficulty in discerning her in the individual. That larger example appeared to be the State, and accordingly we constructed as good a one as we could, knowing well that in the good State justice would be found. Let the discovery which we made be now applied to the individual—if they agree, we shall be satisfied; or, if there be a difference in the individual, we will come back to the State and have another trial of the theory. The friction of the two when rubbed together may possibly strike a light in which justice will shine forth, and the vision which is then revealed we will fix in our souls.

Glaucon:: That will be in regular course; let us do as you say.

Socrates:: When two things, a greater and less, are called by the same name, are they like or unlike in so far as they are called the same?

Glaucon:: Like.

Socrates:: The just man then, if we regard the idea of justice only, will be like the just State?

Glaucon:: He will.

Socrates:: And a State was thought by us to be just when the three classes in the State severally did their own business; and also thought to be temperate and valiant and wise by reason of certain other affections and qualities of these same classes?

Glaucon:: True.

Socrates:: And so of the individual; we may assume that he has the same three principles in his own soul which are found in the State; and he may be rightly described in the same terms, because he is affected in the same manner?

Glaucon:: Certainly.

Socrates:: Once more then, O my friend, we have alighted upon an easy question—whether the soul has these three principles or not?

Glaucon:: An easy question! Nay, rather, Socrates, the proverb holds that hard is the good.

Socrates:: Very true, and I do not think that the method which we are employing is at all adequate to the accurate solution of this question; the true method is another and a longer one. Still we may arrive at a solution not below the level of the previous enquiry.

Glaucon:: May we not be satisfied with that?—under the circumstances, I am quite content.

Socrates:: I too, shall be extremely well satisfied.

Glaucon:: Then faint not in pursuing the speculation.

Socrates:: Must we not acknowledge, that in each of us there are the same principles and habits which there are in the State; and that from the individual they pass into the State?—how else can they come there? Take the quality of passion or spirit;—it would be ridiculous to imagine that this quality, when found in States, is not derived from the individuals who are supposed to possess it, e.g. the Thracians, Scythians, and in general the northern nations; and the same may be said of the love of knowledge, which is the special characteristic of our part of the world, or of the love of money, which may, with equal truth, be attributed to the Phoenicians and Egyptians.

Glaucon:: Exactly so.

Socrates:: There is no difficulty in understanding this.

Glaucon:: None whatever.

Socrates:: But the question is not quite so easy when we proceed to ask whether these principles are three or one; whether, that is to say, we learn with one part of our nature, are angry with another, and with a third part desire the satisfaction of our natural appetites; or whether the whole soul comes into play in each sort of action—to determine that is the difficulty.

Glaucon:: Yes, there lies the difficulty.

Socrates:: Then let us now try and determine whether they are the same or different.

Glaucon:: How can we?

Socrates:: The same thing clearly cannot act or be acted upon in the same part or in relation to the same thing at the same time, in contrary ways; and therefore whenever this contradiction occurs in things apparently the same, we know that they are really not the same, but different.

Glaucon:: Good.

Socrates:: For example, can the same thing be at rest and in motion at the same time in the same part?

Glaucon:: Impossible.

Socrates:: Still, let us have a more precise statement of terms, lest we should hereafter fall out by the way. Imagine the case of a man who is standing and also moving his hands and his head, and suppose a person to say that one and the same person is in motion and at rest at the same moment—to such a mode of speech we should object, and should rather say that one part of him is in motion while another is at rest.

Glaucon:: Very true.

Socrates:: And suppose the objector to refine still further, and to draw the nice distinction that not only parts of tops, but whole tops, when they spin round with their pegs fixed on the spot, are at rest and in motion at the same time (and he may say the same of anything which revolves in the same spot), his objection would not be admitted by us, because in such cases things are not at rest and in motion in the same parts of themselves; we should rather say that they have both an axis and a circumference; and that the axis stands still, for there is no deviation from the perpendicular; and that the circumference goes round. But if, while revolving, the axis inclines either to the right or left, forwards or backwards, then in no point of view can they be at rest.

Glaucon:: That is the correct mode of describing them.

Socrates:: Then none of these objections will confuse us, or incline us to believe that the same thing at the same time, in the same part or in relation to the same thing, can act or be acted upon in contrary ways.

Glaucon:: Certainly not, according to my way of thinking.

Socrates:: Yet, that we may not be compelled to examine all such objections, and prove at length that they are untrue, let us assume their absurdity, and go forward on the understanding that hereafter, if this assumption turn out to be untrue, all the consequences which follow shall be withdrawn.

Glaucon:: Yes, that will be the best way.

Socrates:: Well, would you not allow that assent and dissent, desire and aversion, attraction and repulsion, are all of them opposites, whether they are regarded as active or passive (for that makes no difference in the fact of their opposition)?

Glaucon:: Yes, they are opposites.

Socrates:: Well, and hunger and thirst, and the desires in general, and again willing and wishing,—all these you would refer to the classes already mentioned. You would say—would you not?—that the soul of him who desires is seeking after the object of his desire; or that he is drawing to himself the thing which he wishes to possess: or again, when a person wants anything to be given him, his mind, longing for the realization of his desire, intimates his wish to have it by a nod of assent, as if he had been asked a question?

Glaucon:: Very true.

Socrates:: And what would you say of unwillingness and dislike and the absence of desire; should not these be referred to the opposite class of repulsion and rejection?

Glaucon:: Certainly.

Socrates:: Admitting this to be true of desire generally, let us suppose a particular class of desires, and out of these we will select hunger and thirst, as they are termed, which are the most obvious of them?

Glaucon:: Let us take that class.

Socrates:: The object of one is food, and of the other drink?

Glaucon:: Yes.

Socrates:: And here comes the point: is not thirst the desire which the soul has of drink, and of drink only; not of drink qualified by anything else; for example, warm or cold, or much or little, or, in a word, drink of any particular sort: but if the thirst be accompanied by heat, then the desire is of cold drink; or, if accompanied by cold, then of warm drink; or, if the thirst be excessive, then the drink which is desired will be excessive; or, if not great, the quantity of drink will also be small: but thirst pure and simple will desire drink pure and simple, which is the natural satisfaction of thirst, as food is of hunger?

Glaucon:: Yes, the simple desire is, as you say, in every case of the simple object, and the qualified desire of the qualified object.

Socrates:: But here a confusion may arise; and I should wish to guard against an opponent starting up and saying that no man desires drink only, but good drink, or food only, but good food; for good is the universal object of desire, and thirst being a desire, will necessarily be thirst after good drink; and the same is true of every other desire.

Glaucon:: Yes, the opponent might have something to say.

Socrates:: Nevertheless I should still maintain, that of relatives some have a quality attached to either term of the relation; others are simple and have their correlatives simple.

Glaucon:: I do not know what you mean.

Socrates:: Well, you know of course that the greater is relative to the less?

Glaucon:: Certainly.

Socrates:: And the much greater to the much less?

Glaucon:: Yes.

Socrates:: And the sometime greater to the sometime less, and the greater that is to be to the less that is to be?

Glaucon:: Certainly.

Socrates:: And so of more and less, and of other correlative terms, such as the double and the half, or again, the heavier and the lighter, the swifter and the slower; and of hot and cold, and of any other relatives;—is not this true of all of them?

Glaucon:: Yes.

Socrates:: And does not the same principle hold in the sciences? The object of science is knowledge (assuming that to be the true definition), but the object of a particular science is a particular kind of knowledge; I mean, for example, that the science of house-building is a kind of knowledge which is defined and distinguished from other kinds and is therefore termed architecture.

Glaucon:: Certainly.

Socrates:: Because it has a particular quality which no other has?

Glaucon:: Yes.

Socrates:: And it has this particular quality because it has an object of a particular kind; and this is true of the other arts and sciences?

Glaucon:: Yes.

Socrates:: Now, then, if I have made myself clear, you will understand my original meaning in what I said about relatives. My meaning was, that if one term of a relation is taken alone, the other is taken alone; if one term is qualified, the other is also qualified. I do not mean to say that relatives may not be disparate, or that the science of health is healthy, or of disease necessarily diseased, or that the sciences of good and evil are therefore good and evil; but only that, when the term science is no longer used absolutely, but has a qualified object which in this case is the nature of health and disease, it becomes defined, and is hence called not merely science, but the science of medicine.

Glaucon:: I quite understand, and I think as you do.

Socrates:: Would you not say that thirst is one of these essentially relative terms, having clearly a relation—

Glaucon:: Yes, thirst is relative to drink.

Socrates:: And a certain kind of thirst is relative to a certain kind of drink; but thirst taken alone is neither of much nor little, nor of good nor bad, nor of any particular kind of drink, but of drink only?

Glaucon:: Certainly.

Socrates:: Then the soul of the thirsty one, in so far as he is thirsty, desires only drink; for this he yearns and tries to obtain it?

Glaucon:: That is plain. ‘

Socrates:: And if you suppose something which pulls a thirsty soul away from drink, that must be different from the thirsty principle which draws him like a beast to drink; for, as we were saying, the same thing cannot at the same time with the same part of itself act in contrary ways about the same.

Glaucon:: Impossible.

Socrates:: No more than you can say that the hands of the archer push and pull the bow at the same time, but what you say is that one hand pushes and the other pulls.

Glaucon:: Exactly so.

Socrates:: And might a man be thirsty, and yet unwilling to drink?

Glaucon:: Yes, it constantly happens.

Socrates:: And in such a case what is one to say? Would you not say that there was something in the soul bidding a man to drink, and something else forbidding him, which is other and stronger than the principle which bids him?

Glaucon:: I should say so.

Socrates:: And the forbidding principle is derived from reason, and that which bids and attracts proceeds from passion and disease?

Glaucon:: Clearly.

Socrates:: Then we may fairly assume that they are two, and that they differ from one another; the one with which a man reasons, we may call the rational principle of the soul, the other, with which he loves and hungers and thirsts and feels the flutterings of any other desire, may be termed the irrational or appetitive, the ally of sundry pleasures and satisfactions?

Glaucon:: Yes, we may fairly assume them to be different.

Socrates:: Then let us finally determine that there are two principles existing in the soul. And what of passion, or spirit? Is it a third, or akin to one of the preceding?

Glaucon:: I should be inclined to say—akin to desire.

Socrates:: Well, there is a story which I remember to have heard, and in which I put faith. The story is, that Leontius, the son of Aglaion, coming up one day from the Piraeus, under the north wall on the outside, observed some dead bodies lying on the ground at the place of execution. He felt a desire to see them, and also a dread and abhorrence of them; for a time he struggled and covered his eyes, but at length the desire got the better of him; and forcing them open, he ran up to the dead bodies, saying, Look, ye wretches, take your fill of the fair sight.

Glaucon:: I have heard the story myself.

Socrates:: The moral of the tale is, that anger at times goes to war with desire, as though they were two distinct things.

Glaucon:: Yes; that is the meaning.

Socrates:: And are there not many other cases in which we observe that when a man's desires violently prevail over his reason, he reviles himself, and is angry at the violence within him, and that in this struggle, which is like the struggle of factions in a State, his spirit is on the side of his reason;—but for the passionate or spirited element to take part with the desires when reason decides that she should not be opposed, is a sort of thing which I believe that you never observed occurring in yourself, nor, as I should imagine, in any one else?

Glaucon:: Certainly not.

Socrates:: Suppose that a man thinks he has done a wrong to another, the nobler he is the less able is he to feel indignant at any suffering, such as hunger, or cold, or any other pain which the injured person may inflict upon him—these he deems to be just, and, as I say, his anger refuses to be excited by them.

Glaucon:: True.

Socrates:: But when he thinks that he is the sufferer of the wrong, then he boils and chafes, and is on the side of what he believes to be justice; and because he suffers hunger or cold or other pain he is only the more determined to persevere and conquer. His noble spirit will not be quelled until he either slays or is slain; or until he hears the voice of the shepherd, that is, reason, bidding his dog bark no more.

Glaucon:: The illustration is perfect, and in our State, as we were saying, the auxiliaries were to be dogs, and to hear the voice of the rulers, who are their shepherds.

Socrates:: I perceive, that you quite understand me; there is, however, a further point which I wish you to consider.

Glaucon:: What point?

Socrates:: You remember that passion or spirit appeared at first sight to be a kind of desire, but now we should say quite the contrary; for in the conflict of the soul spirit is arrayed on the side of the rational principle.

Glaucon:: Most assuredly.

Socrates:: But a further question arises: Is passion different from reason also, or only a kind of reason; in which latter case, instead of three principles in the soul, there will only be two, the rational and the concupiscent; or rather, as the State was composed of three classes, traders, auxiliaries, counselors, so may there not be in the individual soul a third element which is passion or spirit, and when not corrupted by bad education is the natural auxiliary of reason?

Glaucon:: Yes, there must be a third.

Socrates:: Yes, if passion, which has already been shown to be different from desire, turn out also to be different from reason.

Glaucon:: But that is easily proved:—We may observe even in young children that they are full of spirit almost as soon as they are born, whereas some of them never seem to attain to the use of reason, and most of them late enough.

Socrates:: Excellent, and you may see passion equally in brute animals, which is a further proof of the truth of what you are saying. And we may once more appeal to the words of Homer, which have been already quoted by us;

> 'He smote his breast, and thus rebuked his soul;'

for in this verse Homer has clearly supposed the power which reasons about the better and worse to be different from the unreasoning anger which is rebuked by it.

Glaucon:: Very true.

Socrates:: And so, after much tossing, we have reached land, and are fairly agreed that the same principles which exist in the State exist also in the individual, and that they are three in number.

Glaucon:: Exactly.

Socrates:: Must we not then infer that the individual is wise in the same way, and in virtue of the same quality which makes the State wise?

Glaucon:: Certainly.

Socrates:: Also that the same quality which constitutes courage in the State constitutes courage in the individual, and that both the State and the individual bear the same relation to all the other virtues?

Glaucon:: Assuredly.

Socrates:: And the individual will be acknowledged by us to be just in the same way in which the State is just?

Glaucon:: That follows of course.

Socrates:: We cannot but remember that the justice of the State consisted in each of the three classes doing the work of its own class?

Glaucon:: We are not very likely to have forgotten.

Socrates:: We must recollect that the individual in whom the several qualities of his nature do their own work will be just, and will do his own work?

Glaucon:: Yes, we must remember that too.

Socrates:: And ought not the rational principle, which is wise, and has the care of the whole soul, to rule, and the passionate or spirited principle to be the subject and ally?

Glaucon:: Certainly.

Socrates:: And, as we were saying, the united influence of music and gymnastic will bring them into accord, nerving and sustaining the reason with noble words and lessons, and moderating and soothing and civilizing the wildness of passion by harmony and rhythm?

Glaucon:: Quite true.

Socrates:: And these two, thus nurtured and educated, and having learned truly to know their own functions, will rule over the concupiscent, which in each of us is the largest part of the soul and by nature most insatiable of gain; over this they will keep guard, lest, waxing great and strong with the fullness of bodily pleasures, as they are termed, the concupiscent soul, no longer confined to her own sphere, should attempt to enslave and rule those who are not her natural-born subjects, and overturn the whole life of man?

Glaucon:: Very true.

Socrates:: Both together will they not be the best defenders of the whole soul and the whole body against attacks from without; the one counseling, and the other fighting under his leader, and courageously executing his commands and counsels?

Glaucon:: True.

Socrates:: And he is to be deemed courageous whose spirit retains in pleasure and in pain the commands of reason about what he ought or ought not to fear?

Glaucon:: Right.

Socrates:: And him we call wise who has in him that little part which rules, and which proclaims these commands; that part too being supposed to have a knowledge of what is for the interest of each of the three parts and of the whole?

Glaucon:: Assuredly.

Socrates:: And would you not say that he is temperate who has these same elements in friendly harmony, in whom the one ruling principle of reason, and the two subject ones of spirit and desire are equally agreed that reason ought to rule, and do not rebel?

Glaucon:: Certainly, that is the true account of temperance whether in the State or individual.

Socrates:: And surely, we have explained again and again how and by virtue of what quality a man will be just.

Glaucon:: That is very certain.

Socrates:: And is justice dimmer in the individual, and is her form different, or is she the same which we found her to be in the State?

Glaucon:: There is no difference in my opinion.

Socrates:: Because, if any doubt is still lingering in our minds, a few commonplace instances will satisfy us of the truth of what I am saying.

Glaucon:: What sort of instances do you mean?

Socrates:: If the case is put to us, must we not admit that the just State, or the man who is trained in the principles of such a State, will be less likely than the unjust to make away with a deposit of gold or silver? Would any one deny this?

Glaucon:: No one.

Socrates:: Will the just man or citizen ever be guilty of sacrilege or theft, or treachery either to his friends or to his country?

Glaucon:: Never.

Socrates:: Neither will he ever break faith where there have been oaths or agreements?

Glaucon:: Impossible.

Socrates:: No one will be less likely to commit adultery, or to dishonor his father and mother, or to fail in his religious duties?

Glaucon:: No one.

Socrates:: And the reason is that each part of him is doing its own business, whether in ruling or being ruled?

Glaucon:: Exactly so.

Socrates:: Are you satisfied then that the quality which makes such men and such states is justice, or do you hope to discover some other?

Glaucon:: Not I, indeed.

Socrates:: Then our dream has been realized; and the suspicion which we entertained at the beginning of our work of construction, that some divine power must have conducted us to a primary form of justice, has now been verified?

Glaucon:: Yes, certainly.

Socrates:: And the division of labor which required the carpenter and the shoemaker and the rest of the citizens to be doing each his own business, and not another's, was a shadow of justice, and for that reason it was of use?

Glaucon:: Clearly.

Socrates:: But in reality justice was such as we were describing, being concerned however, not with the outward man, but with the inward, which is the true self and concernment of man: for the just man does not permit the several elements within him to interfere with one another, or any of them to do the work of others,—he sets in order his own inner life, and is his own master and his own law, and at peace with himself; and when he has bound together the three principles within him, which may be compared to the higher, lower, and middle notes of the scale, and the intermediate intervals—when he has bound all these together, and is no longer many, but has become one entirely temperate and perfectly adjusted nature, then he proceeds to act, if he has to act, whether in a matter of property, or in the treatment of the body, or in some affair of politics or private business; always thinking and calling that which preserves and co-operates with this harmonious condition, just and good action, and the knowledge which presides over it, wisdom, and that which at any time impairs this condition, he will call unjust action, and the opinion which presides over it ignorance.

Glaucon:: You have said the exact truth, Socrates.

Socrates:: Very good; and if we were to affirm that we had discovered the just man and the just State, and the nature of justice in each of them, we should not be telling a falsehood?

Glaucon:: Most certainly not.

Socrates:: May we say so, then?

Glaucon:: Let us say so.

Socrates:: And now, injustice has to be considered.

Glaucon:: Clearly.

Socrates:: Must not injustice be a strife which arises among the three principles—a meddlesomeness, and interference, and rising up of a part of the soul against the whole, an assertion of unlawful authority, which is made by a rebellious subject against a true prince, of whom he is the natural vassal,—what is all this confusion and delusion but injustice, and intemperance and cowardice and ignorance, and every form of vice?

Glaucon:: Exactly so.

Socrates:: And if the nature of justice and injustice be known, then the meaning of acting unjustly and being unjust, or, again, of acting justly, will also be perfectly clear?

Glaucon:: What do you mean?

Socrates:: Why, they are like disease and health; being in the soul just what disease and health are in the body.

Glaucon:: How so?

Socrates:: Why, that which is healthy causes health, and that which is unhealthy causes disease.

Glaucon:: Yes.

Socrates:: And just actions cause justice, and unjust actions cause injustice?

Glaucon:: That is certain.

Socrates:: And the creation of health is the institution of a natural order and government of one by another in the parts of the body; and the creation of disease is the production of a state of things at variance with this natural order?

Glaucon:: True.

Socrates:: And is not the creation of justice the institution of a natural order and government of one by another in the parts of the soul, and the creation of injustice the production of a state of things at variance with the natural order?

Glaucon:: Exactly so.

Socrates:: Then virtue is the health and beauty and well-being of the soul, and vice the disease and weakness and deformity of the same?

Glaucon:: True.

Socrates:: And do not good practices lead to virtue, and evil practices to vice?

Glaucon:: Assuredly.

Socrates:: Still our old question of the comparative advantage of justice and injustice has not been answered: Which is the more profitable, to be just and act justly and practice virtue, whether seen or unseen of gods and men, or to be unjust and act unjustly, if only unpunished and unreformed?

Glaucon:: In my judgment, Socrates, the question has now become ridiculous. We know that, when the bodily constitution is gone, life is no longer endurable, though pampered with all kinds of meats and drinks, and having all wealth and all power; and shall we be told that when the very essence of the vital principle is undermined and corrupted, life is still worth having to a man, if only he be allowed to do whatever he likes with the single exception that he is not to acquire justice and virtue, or to escape from injustice and vice; assuming them both to be such as we have described?

Socrates:: Yes, the question is, as you say, ridiculous. Still, as we are near the spot at which we may see the truth in the clearest manner with our own eyes, let us not faint by the way.

Glaucon:: Certainly not.

Socrates:: Come up hither, and behold the various forms of vice, those of them, I mean, which are worth looking at.

Glaucon:: I am following you: proceed.

Socrates:: The argument seems to have reached a height from which, as from some tower of speculation, a man may look down and see that virtue is one, but that the forms of vice are innumerable; there being four special ones which are deserving of note.

Glaucon:: What do you mean?

Socrates:: I mean, that there appear to be as many forms of the soul as there are distinct forms of the State.

Glaucon:: How many?

Socrates:: There are five of the State, and five of the soul.

Glaucon:: What are they?

Socrates:: The first, is that which we have been describing, and which may be said to have two names, monarchy and aristocracy, accordingly as rule is exercised by one distinguished man or by many.

Glaucon:: True.

Socrates:: But I regard the two names as describing one form only; for whether the government is in the hands of one or many, if the governors have been trained in the manner which we have supposed, the fundamental laws of the State will be maintained.

Glaucon:: That is true.

## BOOK V.

Socrates:: Such is the good and true City or State, and the good and true man is of the same pattern; and if this is right every other is wrong; and the evil is one which affects not only the ordering of the State, but also the regulation of the individual soul, and is exhibited in four forms.

Glaucon:: What are they?

Socrates:: I was proceeding to tell the order in which the four evil forms appeared to me to succeed one another, when Polemarchus, who was sitting a little way off, just beyond Adeimantus, began to whisper to him: stretching forth his hand, he took hold of the upper part of his coat by the shoulder, and drew him towards him, leaning forward himself so as to be quite close and saying something in his ear, of which I only caught the words;

Polemarchus:: 'Shall we let him off, or what shall we do?'

Socrates:: Raising his voice, Adeimantus said;

Adeimantus:: Certainly not.

Socrates:: Who is it, whom you are refusing to let off?

Adeimantus:: You.

Socrates:: Why am I especially not to be let off?

Adeimantus:: Why, we think that you are lazy, and mean to cheat us out of a whole chapter which is a very important part of the story; and you fancy that we shall not notice your airy way of proceeding; as if it were self-evident to everybody, that in the matter of women and children 'friends have all things in common.'

Socrates:: And was I not right, Adeimantus?

Adeimantus:: Yes, but what is right in this particular case, like everything else, requires to be explained; for community may be of many kinds. Please, therefore, to say what sort of community you mean. We have been long expecting that you would tell us something about the family life of your citizens—how they will bring children into the world, and rear them when they have arrived, and, in general, what is the nature of this community of women and children—for we are of opinion that the right or wrong management of such matters will have a great and paramount influence on the State for good or for evil. And now, since the question is still undetermined, and you are taking in hand another State, we have resolved, as you heard, not to let you go until you give an account of all this.

Glaucon:: To that resolution, you may regard me as saying Agreed.

Thrasymachus:: And without more ado, you may consider us all to be equally agreed.

Socrates:: You know not what you are doing in thus assailing me: What an argument are you raising about the State! Just as I thought that I had finished, and was only too glad that I had laid this question to sleep, and was reflecting how fortunate I was in your acceptance of what I then said, you ask me to begin again at the very foundation, ignorant of what a hornet’s nest of words you are stirring. Now I foresaw this gathering trouble, and avoided it.

Thrasymachus:: For what purpose do you conceive that we have come here,—to look for gold, or to hear discourse?

Socrates:: Yes, but discourse should have a limit.

Glaucon:: Yes, Socrates, and the whole of life is the only limit which wise men assign to the hearing of such discourses. But never mind about us; take heart yourself and answer the question in your own way: What sort of community of women and children is this which is to prevail among our guardians? and how shall we manage the period between birth and education, which seems to require the greatest care? Tell us how these things will be.

Socrates:: Yes, my simple friend, but the answer is the reverse of easy; many more doubts arise about this than about our previous conclusions. For the practicability of what is said may be doubted; and looked at in another point of view, whether the scheme, if ever so practicable, would be for the best, is also doubtful. Hence I feel a reluctance to approach the subject, lest our aspiration, my dear friend, should turn out to be a dream only.

Glaucon:: Fear not, for your audience will not be hard upon you; they are not skeptical or hostile.

Socrates:: My good friend, I suppose that you mean to encourage me by these words.

Glaucon:: Yes.

Socrates:: Then let me tell you that you are doing just the reverse; the encouragement which you offer would have been all very well had I myself believed that I knew what I was talking about: to declare the truth about matters of high interest which a man honors and loves among wise men who love him need occasion no fear or faltering in his mind; but to carry on an argument when you are yourself only a hesitating enquirer, which is my condition, is a dangerous and slippery thing; and the danger is not that I shall be laughed at (of which the fear would be childish), but that I shall miss the truth where I have most need to be sure of my footing, and drag my friends after me in my fall. And I pray Nemesis not to visit upon me the words which I am going to utter. For I do indeed believe that to be an involuntary homicide is a less crime than to be a deceiver about beauty or goodness or justice in the matter of laws. And that is a risk which I would rather run among enemies than among friends, and therefore you do well to encourage me.

Glaucon laughed and said:

Glaucon:: Well then, Socrates, in case you and your argument do us any serious injury you shall be acquitted beforehand of the homicide, and shall not be held to be a deceiver; take courage then and speak.

Socrates:: Well, the law says that when a man is acquitted he is free from guilt, and what holds at law may hold in argument.

Glaucon:: Then why should you mind?

Socrates:: Well, I suppose that I must retrace my steps and say what I perhaps ought to have said before in the proper place. The part of the men has been played out, and now properly enough comes the turn of the women. Of them I will proceed to speak, and the more readily since I am invited by you. For men born and educated like our citizens, the only way, in my opinion, of arriving at a right conclusion about the possession and use of women and children is to follow the path on which we originally started, when we said that the men were to be the guardians and watchdogs of the herd.

Glaucon:: True.

Socrates:: Let us further suppose the birth and education of our women to be subject to similar or nearly similar regulations; then we shall see whether the result accords with our design.

Glaucon:: What do you mean?

Socrates:: What I mean may be put into the form of a question: Are dogs divided into he's and she's, or do they both share equally in hunting and in keeping watch and in the other duties of dogs? or do we entrust to the males the entire and exclusive care of the flocks, while we leave the females at home, under the idea that the bearing and suckling their puppies is labor enough for them?

Glaucon:: No, they share alike; the only difference between them is that the males are stronger and the females weaker.

Socrates:: But can you use different animals for the same purpose, unless they are bred and fed in the same way?

Glaucon:: You cannot.

Socrates:: Then, if women are to have the same duties as men, they must have the same nurture and education?

Glaucon:: Yes.

Socrates:: The education which was assigned to the men was music and gymnastic.

Glaucon:: Yes.

Socrates:: Then women must be taught music and gymnastic and also the art of war, which they must practice like the men?

Glaucon:: That is the inference, I suppose.

Socrates:: I should rather expect, that several of our proposals, if they are carried out, being unusual, may appear ridiculous.

Glaucon:: No doubt of it.

Socrates:: Yes, and the most ridiculous thing of all will be the sight of women naked in the palaestra, exercising with the men, especially when they are no longer young; they certainly will not be a vision of beauty, any more than the enthusiastic old men who in spite of wrinkles and ugliness continue to frequent the gymnasia.

Glaucon:: Yes, indeed: according to present notions the proposal would be thought ridiculous.

Socrates:: But then, as we have determined to speak our minds, we must not fear the jests of the wits which will be directed against this sort of innovation; how they will talk of women's attainments both in music and gymnastic, and above all about their wearing armor and riding upon horseback!

Glaucon:: Very true.

Socrates:: Yet having begun we must go forward to the rough places of the law; at the same time begging of these gentlemen for once in their life to be serious. Not long ago, as we shall remind them, the Hellenes were of the opinion, which is still generally received among the barbarians, that the sight of a naked man was ridiculous and improper; and when first the Cretans and then the Lacedaemonians introduced the custom, the wits of that day might equally have ridiculed the innovation.

Glaucon:: No doubt.

Socrates:: But when experience showed that to let all things be uncovered was far better than to cover them up, and the ludicrous effect to the outward eye vanished before the better principle which reason asserted, then the man was perceived to be a fool who directs the shafts of his ridicule at any other sight but that of folly and vice, or seriously inclines to weigh the beautiful by any other standard but that of the good.

Glaucon:: Very true.

Socrates:: First, then, whether the question is to be put in jest or in earnest, let us come to an understanding about the nature of woman: Is she capable of sharing either wholly or partially in the actions of men, or not at all? And is the art of war one of those arts in which she can or can not share? That will be the best way of commencing the enquiry, and will probably lead to the fairest conclusion.

Glaucon:: That will be much the best way.

Socrates:: Shall we take the other side first and begin by arguing against ourselves; in this manner the adversary's position will not be undefended.

Glaucon:: Why not?

Socrates:: Then let us put a speech into the mouths of our opponents. They will say: 'Socrates and Glaucon, no adversary need convict you, for you yourselves, at the first foundation of the State, admitted the principle that everybody was to do the one work suited to his own nature' And certainly, if I am not mistaken, such an admission was made by us. 'And do not the natures of men and women differ very much indeed?' And we shall reply: Of course they do. Then we shall be asked, 'Whether the tasks assigned to men and to women should not be different, and such as are agreeable to their different natures?' Certainly they should. 'But if so, have you not fallen into a serious inconsistency in saying that men and women, whose natures are so entirely different, ought to perform the same actions?'—What defense will you make for us, my good Sir, against any one who offers these objections?

Glaucon:: That is not an easy question to answer when asked suddenly; and I shall and I do beg of you to draw out the case on our side.

Socrates:: These are the objections, Glaucon, and there are many others of a like kind, which I foresaw long ago; they made me afraid and reluctant to take in hand any law about the possession and nurture of women and children.

Glaucon:: By Zeus, the problem to be solved is anything but easy.

Socrates:: Why yes, but the fact is that when a man is out of his depth, whether he has fallen into a little swimming bath or into mid ocean, he has to swim all the same.

Glaucon:: Very true.

Socrates:: And must not we swim and try to reach the shore: we will hope that Arion's dolphin or some other miraculous help may save us?

Glaucon:: I suppose so.

Socrates:: Well then, let us see if any way of escape can be found. We acknowledged—did we not? that different natures ought to have different pursuits, and that men's and women's natures are different. And now what are we saying?—that different natures ought to have the same pursuits,—this is the inconsistency which is charged upon us.

Glaucon:: Precisely.

Socrates:: Verily, Glaucon, glorious is the power of the art of contradiction!

Glaucon:: Why do you say so?

Socrates:: Because I think that many a man falls into the practice against his will. When he thinks that he is reasoning he is really disputing, just because he cannot define and divide, and so know that of which he is speaking; and he will pursue a merely verbal opposition in the spirit of contention and not of fair discussion.

Glaucon:: Yes, such is very often the case; but what has that to do with us and our argument?

Socrates:: A great deal; for there is certainly a danger of our getting unintentionally into a verbal opposition.

Glaucon:: In what way?

Socrates:: Why we valiantly and pugnaciously insist upon the verbal truth, that different natures ought to have different pursuits, but we never considered at all what was the meaning of sameness or difference of nature, or why we distinguished them when we assigned different pursuits to different natures and the same to the same natures.

Glaucon:: Why, no, that was never considered by us.

Socrates:: Suppose that by way of illustration we were to ask the question whether there is not an opposition in nature between bald men and hairy men; and if this is admitted by us, then, if bald men are cobblers, we should forbid the hairy men to be cobblers, and conversely?

Glaucon:: That would be a jest.

Socrates:: Yes, a jest; and why? because we never meant when we constructed the State, that the opposition of natures should extend to every difference, but only to those differences which affected the pursuit in which the individual is engaged; we should have argued, for example, that a physician and one who is in mind a physician may be said to have the same nature.

Glaucon:: True.

Socrates:: Whereas the physician and the carpenter have different natures?

Glaucon:: Certainly.

Socrates:: And if, the male and female sex appear to differ in their fitness for any art or pursuit, we should say that such pursuit or art ought to be assigned to one or the other of them; but if the difference consists only in women bearing and men begetting children, this does not amount to a proof that a woman differs from a man in respect of the sort of education she should receive; and we shall therefore continue to maintain that our guardians and their wives ought to have the same pursuits.

Glaucon:: Very true.

Socrates:: Next, we shall ask our opponent how, in reference to any of the pursuits or arts of civic life, the nature of a woman differs from that of a man?

Glaucon:: That will be quite fair.

Socrates:: And perhaps he, like yourself, will reply that to give a sufficient answer on the instant is not easy; but after a little reflection there is no difficulty.

Glaucon:: Yes, perhaps.

Socrates:: Suppose then that we invite him to accompany us in the argument, and then we may hope to show him that there is nothing peculiar in the constitution of women which would affect them in the administration of the State.

Glaucon:: By all means.

Socrates:: Let us say to him: Come now, and we will ask you a question:—when you spoke of a nature gifted or not gifted in any respect, did you mean to say that one man will acquire a thing easily, another with difficulty; a little learning will lead the one to discover a great deal; whereas the other, after much study and application, no sooner learns than he forgets; or again, did you mean, that the one has a body which is a good servant to his mind, while the body of the other is a hindrance to him?—would not these be the sort of differences which distinguish the man gifted by nature from the one who is ungifted?

Glaucon:: No one will deny that.

Socrates:: And can you mention any pursuit of mankind in which the male sex has not all these gifts and qualities in a higher degree than the female? Need I waste time in speaking of the art of weaving, and the management of pancakes and preserves, in which womankind does really appear to be great, and in which for her to be beaten by a man is of all things the most absurd?

Glaucon:: You are quite right, in maintaining the general inferiority of the female sex: although many women are in many things superior to many men, yet on the whole what you say is true.

Socrates:: And if so, my friend, there is no special faculty of administration in a state which a woman has because she is a woman, or which a man has by virtue of his sex, but the gifts of nature are alike diffused in both; all the pursuits of men are the pursuits of women also, but in all of them a woman is inferior to a man.

Glaucon:: Very true.

Socrates:: Then are we to impose all our enactments on men and none of them on women?

Glaucon:: That will never do.

Socrates:: One woman has a gift of healing, another not; one is a musician, and another has no music in her nature?

Glaucon:: Very true.

Socrates:: And one woman has a turn for gymnastic and military exercises, and another is unwarlike and hates gymnastics?

Glaucon:: Certainly.

Socrates:: And one woman is a philosopher, and another is an enemy of philosophy; one has spirit, and another is without spirit?

Glaucon:: That is also true.

Socrates:: Then one woman will have the temper of a guardian, and another not. Was not the selection of the male guardians determined by differences of this sort?

Glaucon:: Yes.

Socrates:: Men and women alike possess the qualities which make a guardian; they differ only in their comparative strength or weakness.

Glaucon:: Obviously.

Socrates:: And those women who have such qualities are to be selected as the companions and colleagues of men who have similar qualities and whom they resemble in capacity and in character?

Glaucon:: Very true.

Socrates:: And ought not the same natures to have the same pursuits?

Glaucon:: They ought.

Socrates:: Then, as we were saying before, there is nothing unnatural in assigning music and gymnastic to the wives of the guardians—to that point we come round again.

Glaucon:: Certainly not.

Socrates:: The law which we then enacted was agreeable to nature, and therefore not an impossibility or mere aspiration; and the contrary practice, which prevails at present, is in reality a violation of nature.

Glaucon:: That appears to be true.

Socrates:: We had to consider, first, whether our proposals were possible, and secondly whether they were the most beneficial?

Glaucon:: Yes.

Socrates:: And the possibility has been acknowledged?

Glaucon:: Yes.

Socrates:: The very great benefit has next to be established?

Glaucon:: Quite so.

Socrates:: You will admit that the same education which makes a man a good guardian will make a woman a good guardian; for their original nature is the same?

Glaucon:: Yes.

Socrates:: I should like to ask you a question.

Glaucon:: What is it?

Socrates:: Would you say that all men are equal in excellence, or is one man better than another?

Glaucon:: The latter.

Socrates:: And in the commonwealth which we were founding do you conceive the guardians who have been brought up on our model system to be more perfect men, or the cobblers whose education has been cobbling?

Glaucon:: What a ridiculous question!

Socrates:: You have answered me, Well, and may we not further say that our guardians are the best of our citizens?

Glaucon:: By far the best.

Socrates:: And will not their wives be the best women?

Glaucon:: Yes, by far the best.

Socrates:: And can there be anything better for the interests of the State than that the men and women of a State should be as good as possible?

Glaucon:: There can be nothing better.

Socrates:: And this is what the arts of music and gymnastic, when present in such manner as we have described, will accomplish?

Glaucon:: Certainly.

Socrates:: Then we have made an enactment not only possible but in the highest degree beneficial to the State?

Glaucon:: True.

Socrates:: Then let the wives of our guardians strip, for their virtue will be their robe, and let them share in the toils of war and the defense of their country; only in the distribution of labors the lighter are to be assigned to the women, who are the weaker natures, but in other respects their duties are to be the same. And as for the man who laughs at naked women exercising their bodies from the best of motives, in his laughter he is plucking

> 'A fruit of unripe wisdom'

and he himself is ignorant of what he is laughing at, or what he is about;—for that is, and ever will be, the best of sayings, *That the useful is the noble and the hurtful is the base*.

Glaucon:: Very true.

Socrates:: Here, then, is one difficulty in our law about women, which we may say that we have now escaped; the wave has not swallowed us up alive for enacting that the guardians of either sex should have all their pursuits in common; to the utility and also to the possibility of this arrangement the consistency of the argument with itself bears witness.

Glaucon:: Yes, that was a mighty wave which you have escaped.

Socrates:: Yes, but a greater is coming; you will not think much of this when you see the next.

Glaucon:: Go on; let me see.

Socrates:: The law, which is the sequel of this and of all that has preceded, is to the following effect,—'that the wives of our guardians are to be common, and their children are to be common, and no parent is to know his own child, nor any child his parent'

Glaucon:: Yes, that is a much greater wave than the other; and the possibility as well as the utility of such a law are far more questionable.

Socrates:: I do not think, that there can be any dispute about the very great utility of having wives and children in common; the possibility is quite another matter, and will be very much disputed.

Glaucon:: I think that a good many doubts may be raised about both.

Socrates:: You imply that the two questions must be combined. Now I meant that you should admit the utility; and in this way, as I thought, I should escape from one of them, and then there would remain only the possibility.

Glaucon:: But that little attempt is detected, and therefore you will please to give a defense of both.

Socrates:: Well, I submit to my fate. Yet grant me a little favor: let me feast my mind with the dream as day dreamers are in the habit of feasting themselves when they are walking alone; for before they have discovered any means of effecting their wishes—that is a matter which never troubles them—they would rather not tire themselves by thinking about possibilities; but assuming that what they desire is already granted to them, they proceed with their plan, and delight in detailing what they mean to do when their wish has come true—that is a way which they have of not doing much good to a capacity which was never good for much. Now I myself am beginning to lose heart, and I should like, with your permission, to pass over the question of possibility at present. Assuming therefore the possibility of the proposal, I shall now proceed to enquire how the rulers will carry out these arrangements, and I shall demonstrate that our plan, if executed, will be of the greatest benefit to the State and to the guardians. First of all, then, if you have no objection, I will endeavor with your help to consider the advantages of the measure; and hereafter the question of possibility.

Glaucon:: I have no objection; proceed.

Socrates:: First, I think that if our rulers and their auxiliaries are to be worthy of the name which they bear, there must be willingness to obey in the one and the power of command in the other; the guardians must themselves obey the laws, and they must also imitate the spirit of them in any details which are entrusted to their care.

Glaucon:: That is right.

Socrates:: You, who are their legislator, having selected the men, will now select the women and give them to them;—they must be as far as possible of like natures with them; and they must live in common houses and meet at common meals. None of them will have anything specially his or her own; they will be together, and will be brought up together, and will associate at gymnastic exercises. And so they will be drawn by a necessity of their natures to have intercourse with each other—necessity is not too strong a word, I think?

Glaucon:: Yes;—necessity, not geometrical, but another sort of necessity which lovers know, and which is far more convincing and constraining to the mass of mankind.

Socrates:: True, and this, Glaucon, like all the rest, must proceed after an orderly fashion; in a city of the blessed, licentiousness is an unholy thing which the rulers will forbid.

Glaucon:: Yes, and it ought not to be permitted.

Socrates:: Then clearly the next thing will be to make matrimony sacred in the highest degree, and what is most beneficial will be deemed sacred?

Glaucon:: Exactly.

Socrates:: And how can marriages be made most beneficial?—that is a question which I put to you, because I see in your house dogs for hunting, and of the nobler sort of birds not a few. Now, I beseech you, do tell me, have you ever attended to their pairing and breeding?

Glaucon:: In what particulars?

Socrates:: Why, in the first place, although they are all of a good sort, are not some better than others?

Glaucon:: True.

Socrates:: And do you breed from them all indifferently, or do you take care to breed from the best only?

Glaucon:: From the best.

Socrates:: And do you take the oldest or the youngest, or only those of ripe age?

Glaucon:: I choose only those of ripe age.

Socrates:: And if care was not taken in the breeding, your dogs and birds would greatly deteriorate?

Glaucon:: Certainly.

Socrates:: And the same of horses and of animals in general?

Glaucon:: Undoubtedly.

Socrates:: Good heavens! my dear friend, what consummate skill will our rulers need if the same principle holds of the human species!

Glaucon:: Certainly, the same principle holds; but why does this involve any particular skill?

Socrates:: Because, our rulers will often have to practice upon the body corporate with medicines. Now you know that when patients do not require medicines, but have only to be put under a regimen, the inferior sort of practitioner is deemed to be good enough; but when medicine has to be given, then the doctor should be more of a man.

Glaucon:: That is quite true, but to what are you alluding?

Socrates:: I mean, that our rulers will find a considerable dose of falsehood and deceit necessary for the good of their subjects: we were saying that the use of all these things regarded as medicines might be of advantage.

Glaucon:: And we were very right.

Socrates:: And this lawful use of them seems likely to be often needed in the regulations of marriages and births.

Glaucon:: How so?

Socrates:: Why, the principle has been already laid down that the best of either sex should be united with the best as often, and the inferior with the inferior, as seldom as possible; and that they should rear the offspring of the one sort of union, but not of the other, if the flock is to be maintained in first-rate condition. Now these goings on must be a secret which the rulers only know, or there will be a further danger of our herd, as the guardians may be termed, breaking out into rebellion.

Glaucon:: Very true.

Socrates:: Had we not better appoint certain festivals at which we will bring together the brides and bridegrooms, and sacrifices will be offered and suitable hymeneal songs composed by our poets: the number of weddings is a matter which must be left to the discretion of the rulers, whose aim will be to preserve the average of population? There are many other things which they will have to consider, such as the effects of wars and diseases and any similar agencies, in order as far as this is possible to prevent the State from becoming either too large or too small.

Glaucon:: Certainly.

Socrates:: We shall have to invent some ingenious kind of lots which the less worthy may draw on each occasion of our bringing them together, and then they will accuse their own ill-luck and not the rulers.

Glaucon:: To be sure.

Socrates:: And I think that our braver and better youth, besides their other honors and rewards, might have greater facilities of intercourse with women given them; their bravery will be a reason, and such fathers ought to have as many sons as possible.

Glaucon:: True.

Socrates:: And the proper officers, whether male or female or both, for offices are to be held by women as well as by men—

Glaucon:: Yes—

Socrates:: The proper officers will take the offspring of the good parents to the pen or fold, and there they will deposit them with certain nurses who dwell in a separate quarter; but the offspring of the inferior, or of the better when they chance to be deformed, will be put away in some mysterious, unknown place, as they should be.

Glaucon:: Yes, that must be done if the breed of the guardians is to be kept pure.

Socrates:: They will provide for their nurture, and will bring the mothers to the fold when they are full of milk, taking the greatest possible care that no mother recognizes her own child; and other wet-nurses may be engaged if more are required. Care will also be taken that the process of suckling shall not be protracted too long; and the mothers will have no getting up at night or other trouble, but will hand over all this sort of thing to the nurses and attendants.

Glaucon:: You suppose the wives of our guardians to have a fine easy time of it when they are having children.

Socrates:: Why, and so they ought. Let us, however, proceed with our scheme. We were saying that the parents should be in the prime of life?

Glaucon:: Very true.

Socrates:: And what is the prime of life? May it not be defined as a period of about twenty years in a woman's life, and thirty in a man's?

Glaucon:: Which years do you mean to include?

Socrates:: A woman, at twenty years of age may begin to bear children to the State, and continue to bear them until forty; a man may begin at five-and-twenty, when he has passed the point at which the pulse of life beats quickest, and continue to beget children until he be fifty-five.

Glaucon:: Certainly, both in men and women those years are the prime of physical as well as of intellectual vigor.

Socrates:: Any one above or below the prescribed ages who takes part in the public hymeneals shall be said to have done an unholy and unrighteous thing; the child of which he is the father, if it steals into life, will have been conceived under auspices very unlike the sacrifices and prayers, which at each hymeneal priestesses and priests and the whole city will offer, that the new generation may be better and more useful than their good and useful parents, whereas his child will be the offspring of darkness and strange lust.

Glaucon:: Very true.

Socrates:: And the same law will apply to any one of those within the prescribed age who forms a connection with any woman in the prime of life without the sanction of the rulers; for we shall say that he is raising up a bastard to the State, uncertified and unconsecrated.

Glaucon:: Very true.

Socrates:: This applies, however, only to those who are within the specified age: after that we allow them to range at will, except that a man may not marry his daughter or his daughter's daughter, or his mother or his mother's mother; and women, on the other hand, are prohibited from marrying their sons or fathers, or son's son or father's father, and so on in either direction. And we grant all this, accompanying the permission with strict orders to prevent any embryo which may come into being from seeing the light; and if any force a way to the birth, the parents must understand that the offspring of such an union cannot be maintained, and arrange accordingly.

Glaucon:: That also, is a reasonable proposition. But how will they know who are fathers and daughters, and so on?

Socrates:: They will never know. The way will be this:—dating from the day of the hymeneal, the bridegroom who was then married will call all the male children who are born in the seventh and the tenth month afterwards his sons, and the female children his daughters, and they will call him father, and he will call their children his grandchildren, and they will call the elder generation grandfathers and grandmothers. All who were begotten at the time when their fathers and mothers came together will be called their brothers and sisters, and these, as I was saying, will be forbidden to intermarry. This, however, is not to be understood as an absolute prohibition of the marriage of brothers and sisters; if the lot favors them, and they receive the sanction of the Pythian oracle, the law will allow them.

Glaucon:: Quite right.

Socrates:: Such is the scheme, Glaucon, according to which the guardians of our State are to have their wives and families in common. And now you would have the argument show that this community is consistent with the rest of our polity, and also that nothing can be better—would you not?

Glaucon:: Yes, certainly.

Socrates:: Shall we try to find a common basis by asking of ourselves what ought to be the chief aim of the legislator in making laws and in the organization of a State,—what is the greatest good, and what is the greatest evil, and then consider whether our previous description has the stamp of the good or of the evil?

Glaucon:: By all means.

Socrates:: Can there be any greater evil than discord and distraction and plurality where unity ought to reign? or any greater good than the bond of unity?

Glaucon:: There cannot.

Socrates:: And there is unity where there is community of pleasures and pains—where all the citizens are glad or grieved on the same occasions of joy and sorrow?

Glaucon:: No doubt.

Socrates:: Yes; and where there is no common but only private feeling a State is disorganized—when you have one half of the world triumphing and the other plunged in grief at the same events happening to the city or the citizens?

Glaucon:: Certainly.

Socrates:: Such differences commonly originate in a disagreement about the use of the terms 'mine' and 'not mine,' 'his' and 'not his.'

Glaucon:: Exactly so.

Socrates:: And is not that the best-ordered State in which the greatest number of persons apply the terms ‘mine’ and ‘not mine’ in the same way to the same thing?

Glaucon:: Quite true.

Socrates:: Or that again which most nearly approaches to the condition of the individual—as in the body, when but a finger of one of us is hurt, the whole frame, drawn towards the soul as a centre and forming one kingdom under the ruling power therein, feels the hurt and sympathizes all together with the part affected, and we say that the man has a pain in his finger; and the same expression is used about any other part of the body, which has a sensation of pain at suffering or of pleasure at the alleviation of suffering.

Glaucon:: Very true, and I agree with you that in the best-ordered State there is the nearest approach to this common feeling which you describe.

Socrates:: Then when any one of the citizens experiences any good or evil, the whole State will make his case their own, and will either rejoice or sorrow with him?

Glaucon:: Yes, that is what will happen in a well-ordered State.

Socrates:: It will now be time, for us to return to our State and see whether this or some other form is most in accordance with these fundamental principles.

Glaucon:: Very good.

Socrates:: Our State like every other has rulers and subjects?

Glaucon:: True.

Socrates:: All of whom will call one another citizens?

Glaucon:: Of course.

Socrates:: But is there not another name which people give to their rulers in other States?

Glaucon:: Generally they call them masters, but in democratic States they simply call them rulers.

Socrates:: And in our State what other name besides that of citizens do the people give the rulers?

Glaucon:: They are called saviors and helpers.

Socrates:: And what do the rulers call the people?

Glaucon:: Their maintainers and foster-fathers.

Socrates:: And what do they call them in other States?

Glaucon:: Slaves.

Socrates:: And what do the rulers call one another in other States?

Glaucon:: Fellow-rulers.

Socrates:: And what in ours?

Glaucon:: Fellow-guardians.

Socrates:: Did you ever know an example in any other State of a ruler who would speak of one of his colleagues as his friend and of another as not being his friend?

Glaucon:: Yes, very often.

Socrates:: And the friend he regards and describes as one in whom he has an interest, and the other as a stranger in whom he has no interest?

Glaucon:: Exactly.

Socrates:: But would any of your guardians think or speak of any other guardian as a stranger?

Glaucon:: Certainly he would not; for every one whom they meet will be regarded by them either as a brother or sister, or father or mother, or son or daughter, or as the child or parent of those who are thus connected with him.

Socrates:: Capital, but let me ask you once more: Shall they be a family in name only; or shall they in all their actions be true to the name? For example, in the use of the word 'father,' would the care of a father be implied and the filial reverence and duty and obedience to him which the law commands; and is the violator of these duties to be regarded as an impious and unrighteous person who is not likely to receive much good either at the hands of God or of man? Are these to be or not to be the strains which the children will hear repeated in their ears by all the citizens about those who are intimated to them to be their parents and the rest of their kinsfolk?

Glaucon:: These, and none other; for what can be more ridiculous than for them to utter the names of family ties with the lips only and not to act in the spirit of them?

Socrates:: Then in our city the language of harmony and concord will be more often heard than in any other. As I was describing before, when any one is well or ill, the universal word will be 'with me it is well' or 'it is ill.'

Glaucon:: Most true.

Socrates:: And agreeably to this mode of thinking and speaking, were we not saying that they will have their pleasures and pains in common?

Glaucon:: Yes, and so they will.

Socrates:: And they will have a common interest in the same thing which they will alike call 'my own,' and having this common interest they will have a common feeling of pleasure and pain?

Glaucon:: Yes, far more so than in other States.

Socrates:: And the reason of this, over and above the general constitution of the State, will be that the guardians will have a community of women and children?

Glaucon:: That will be the chief reason.

Socrates:: And this unity of feeling we admitted to be the greatest good, as was implied in our own comparison of a well-ordered State to the relation of the body and the members, when affected by pleasure or pain?

Glaucon:: That we acknowledged, and very rightly.

Socrates:: Then the community of wives and children among our citizens is clearly the source of the greatest good to the State?

Glaucon:: Certainly.

Socrates:: And this agrees with the other principle which we were affirming,—that the guardians were not to have houses or lands or any other property; their pay was to be their food, which they were to receive from the other citizens, and they were to have no private expenses; for we intended them to preserve their true character of guardians.

Glaucon:: Right.

Socrates:: Both the community of property and the community of families, as I am saying, tend to make them more truly guardians; they will not tear the city in pieces by differing about 'mine' and 'not mine;' each man dragging any acquisition which he has made into a separate house of his own, where he has a separate wife and children and private pleasures and pains; but all will be affected as far as may be by the same pleasures and pains because they are all of one opinion about what is near and dear to them, and therefore they all tend towards a common end.

Glaucon:: Certainly.

Socrates:: And as they have nothing but their persons which they can call their own, suits and complaints will have no existence among them; they will be delivered from all those quarrels of which money or children or relations are the occasion.

Glaucon:: Of course they will.

Socrates:: Neither will trials for assault or insult ever be likely to occur among them. For that equals should defend themselves against equals we shall maintain to be honorable and right; we shall make the protection of the person a matter of necessity.

Glaucon:: That is good.

Socrates:: Yes; and there is a further good in the law; viz. that if a man has a quarrel with another he will satisfy his resentment then and there, and not proceed to more dangerous lengths.

Glaucon:: Certainly.

Socrates:: To the elder shall be assigned the duty of ruling and chastising the younger.

Glaucon:: Clearly.

Socrates:: Nor can there be a doubt that the younger will not strike or do any other violence to an elder, unless the magistrates command him; nor will he slight him in any way. For there are two guardians, shame and fear, mighty to prevent him: shame, which makes men refrain from laying hands on those who are to them in the relation of parents; fear, that the injured one will be succored by the others who are his brothers, sons, fathers.

Glaucon:: That is true.

Socrates:: Then in every way the laws will help the citizens to keep the peace with one another?

Glaucon:: Yes, there will be no want of peace.

Socrates:: And as the guardians will never quarrel among themselves there will be no danger of the rest of the city being divided either against them or against one another.

Glaucon:: None whatever.

Socrates:: I hardly like even to mention the little meannesses of which they will be rid, for they are beneath notice: such, for example, as the flattery of the rich by the poor, and all the pains and pangs which men experience in bringing up a family, and in finding money to buy necessaries for their household, borrowing and then repudiating, getting how they can, and giving the money into the hands of women and slaves to keep—the many evils of so many kinds which people suffer in this way are mean enough and obvious enough, and not worth speaking of.

Glaucon:: Yes, a man has no need of eyes in order to perceive that.

Socrates:: And from all these evils they will be delivered, and their life will be blessed as the life of Olympic victors and yet more blessed.

Glaucon:: How so?

Socrates:: The Olympic victor, is deemed happy in receiving a part only of the blessedness which is secured to our citizens, who have won a more glorious victory and have a more complete maintenance at the public cost. For the victory which they have won is the salvation of the whole State; and the crown with which they and their children are crowned is the fullness of all that life needs; they receive rewards from the hands of their country while living, and after death have an honorable burial.

Glaucon:: Yes, and glorious rewards they are.

Socrates:: Do you remember, how in the course of the previous discussion some one who shall be nameless accused us of making our guardians unhappy—they had nothing and might have possessed all things—to whom we replied that, if an occasion offered, we might perhaps hereafter consider this question, but that, as at present advised, we would make our guardians truly guardians, and that we were fashioning the State with a view to the greatest happiness, not of any particular class, but of the whole?

Glaucon:: Yes, I remember.

Socrates:: And what do you say, now that the life of our protectors is made out to be far better and nobler than that of Olympic victors—is the life of shoemakers, or any other artisans, or of husbandmen, to be compared with it?

Glaucon:: Certainly not.

Socrates:: At the same time I ought here to repeat what I have said elsewhere, that if any of our guardians shall try to be happy in such a manner that he will cease to be a guardian, and is not content with this safe and harmonious life, which, in our judgment, is of all lives the best, but infatuated by some youthful conceit of happiness which gets up into his head shall seek to appropriate the whole state to himself, then he will have to learn how wisely Hesiod spoke, when he said, 'half is more than the whole.'

Glaucon:: If he were to consult me, I should say to him: Stay where you are, when you have the offer of such a life.

Socrates:: You agree then, that men and women are to have a common way of life such as we have described—common education, common children; and they are to watch over the citizens in common whether abiding in the city or going out to war; they are to keep watch together, and to hunt together like dogs; and always and in all things, as far as they are able, women are to share with the men? And in so doing they will do what is best, and will not violate, but preserve the natural relation of the sexes.

Glaucon:: I agree with you.

Socrates:: The enquiry, has yet to be made, whether such a community will be found possible—as among other animals, so also among men—and if possible, in what way possible?

Glaucon:: You have anticipated the question which I was about to suggest.

Socrates:: There is no difficulty, in seeing how war will be carried on by them.

Glaucon:: How?

Socrates:: Why, of course they will go on expeditions together; and will take with them any of their children who are strong enough, that, after the manner of the artisan's child, they may look on at the work which they will have to do when they are grown up; and besides looking on they will have to help and be of use in war, and to wait upon their fathers and mothers. Did you never observe in the arts how the potters' boys look on and help, long before they touch the wheel?

Glaucon:: Yes, I have.

Socrates:: And shall potters be more careful in educating their children and in giving them the opportunity of seeing and practicing their duties than our guardians will be?

Glaucon:: The idea is ridiculous.

Socrates:: There is also the effect on the parents, with whom, as with other animals, the presence of their young ones will be the greatest incentive to valor.

Glaucon:: That is quite true, Socrates; and yet if they are defeated, which may often happen in war, how great the danger is! the children will be lost as well as their parents, and the State will never recover.

Socrates:: True, but would you never allow them to run any risk?

Glaucon:: I am far from saying that.

Socrates:: Well, but if they are ever to run a risk should they not do so on some occasion when, if they escape disaster, they will be the better for it?

Glaucon:: Clearly.

Socrates:: Whether the future soldiers do or do not see war in the days of their youth is a very important matter, for the sake of which some risk may fairly be incurred.

Glaucon:: Yes, very important.

Socrates:: This then must be our first step,—to make our children spectators of war; but we must also contrive that they shall be secured against danger; then all will be well.

Glaucon:: True.

Socrates:: Their parents may be supposed not to be blind to the risks of war, but to know, as far as human foresight can, what expeditions are safe and what dangerous?

Glaucon:: That may be assumed.

Socrates:: And they will take them on the safe expeditions and be cautious about the dangerous ones?

Glaucon:: True.

Socrates:: And they will place them under the command of experienced veterans who will be their leaders and teachers?

Glaucon:: Very properly.

Socrates:: Still, the dangers of war cannot be always foreseen; there is a good deal of chance about them?

Glaucon:: True.

Socrates:: Then against such chances the children must be at once furnished with wings, in order that in the hour of need they may fly away and escape.

Glaucon:: What do you mean?

Socrates:: I mean that we must mount them on horses in their earliest youth, and when they have learnt to ride, take them on horseback to see war: the horses must not be spirited and warlike, but the most tractable and yet the swiftest that can be had. In this way they will get an excellent view of what is hereafter to be their own business; and if there is danger they have only to follow their elder leaders and escape.

Glaucon:: I believe that you are right.

Socrates:: Next, as to war; what are to be the relations of your soldiers to one another and to their enemies? I should be inclined to propose that the soldier who leaves his rank or throws away his arms, or is guilty of any other act of cowardice, should be degraded into the rank of a husbandman or artisan. What do you think?

Glaucon:: By all means, I should say.

Socrates:: And he who allows himself to be taken prisoner may as well be made a present of to his enemies; he is their lawful prey, and let them do what they like with him.

Glaucon:: Certainly.

Socrates:: But the hero who has distinguished himself, what shall be done to him? In the first place, he shall receive honour in the army from his youthful comrades; every one of them in succession shall crown him. What do you say?

Glaucon:: I approve.

Socrates:: And what do you say to his receiving the right hand of fellowship?

Glaucon:: To that too, I agree.

Socrates:: But you will hardly agree to my next proposal.

Glaucon:: What is your proposal?

Socrates:: That he should kiss and be kissed by them.

Glaucon:: Most certainly, and I should be disposed to go further, and say: Let no one whom he has a mind to kiss refuse to be kissed by him while the expedition lasts. So that if there be a lover in the army, whether his love be youth or maiden, he may be more eager to win the prize of velour.

Socrates:: Capital. That the brave man is to have more wives than others has been already determined: and he is to have first choices in such matters more than others, in order that he may have as many children as possible?

Glaucon:: Agreed.

Socrates:: Again, there is another manner in which, according to Homer, brave youths should be honored; for he tells how Ajax, after he had distinguished himself in battle, was rewarded with long chines, which seems to be a compliment appropriate to a hero in the flower of his age, being not only a tribute of honour but also a very strengthening thing.

Glaucon:: Most true.

Socrates:: Then in this, Homer shall be our teacher; and we too, at sacrifices and on the like occasions, will honour the brave according to the measure of their velour, whether men or women, with hymns and those other distinctions which we were mentioning; also with

> 'seats of precedence, and meats and full cups;'

and in honouring them, we shall be at the same time training them.

Glaucon:: That, is excellent.

Socrates:: Yes, and when a man dies gloriously in war shall we not say, in the first place, that he is of the golden race?

Glaucon:: To be sure.

Socrates:: Nay, have we not the authority of Hesiod for affirming that when they are dead

> 'They are holy angels upon the earth, authors of good,
> averters of evil, the guardians of speech-gifted men'?

Glaucon:: Yes; and we accept his authority.

Socrates:: We must learn of the god how we are to order the sepulture of divine and heroic personages, and what is to be their special distinction; and we must do as he bids?

Glaucon:: By all means.

Socrates:: And in ages to come we will reverence them and kneel before their sepulchers as at the graves of heroes. And not only they but any who are deemed pre-eminently good, whether they die from age, or in any other way, shall be admitted to the same honors.

Glaucon:: That is very right.

Socrates:: Next, how shall our soldiers treat their enemies? What about this?

Glaucon:: In what respect do you mean?

Socrates:: First of all, in regard to slavery? Do you think it right that Hellenes should enslave Hellenic States, or allow others to enslave them, if they can help? Should not their custom be to spare them, considering the danger which there is that the whole race may one day fall under the yoke of the barbarians?

Glaucon:: To spare them is infinitely better.

Socrates:: Then no Hellene should be owned by them as a slave; that is a rule which they will observe and advise the other Hellenes to observe.

Glaucon:: Certainly, they will in this way be united against the barbarians and will keep their hands off one another.

Socrates:: Next as to the slain; ought the conquerors, to take anything but their armor? Does not the practice of despoiling an enemy afford an excuse for not facing the battle? Cowards skulk about the dead, pretending that they are fulfilling a duty, and many an army before now has been lost from this love of plunder.

Glaucon:: Very true.

Socrates:: And is there not illiberality and avarice in robbing a corpse, and also a degree of meanness and womanishness in making an enemy of the dead body when the real enemy has flown away and left only his fighting gear behind him,—is not this rather like a dog who cannot get at his assailant, quarrelling with the stones which strike him instead?

Glaucon:: Very like a dog.

Socrates:: Then we must abstain from spoiling the dead or hindering their burial?

Glaucon:: Yes, we most certainly must.

Socrates:: Neither shall we offer up arms at the temples of the gods, least of all the arms of Hellenes, if we care to maintain good feeling with other Hellenes; and, indeed, we have reason to fear that the offering of spoils taken from kinsmen may be a pollution unless commanded by the god himself?

Glaucon:: Very true.

Socrates:: Again, as to the devastation of Hellenic territory or the burning of houses, what is to be the practice?

Glaucon:: May I have the pleasure, of hearing your opinion?

Socrates:: Both should be forbidden, in my judgment; I would take the annual produce and no more. Shall I tell you why?

Glaucon:: Pray do.

Socrates:: Why, you see, there is a difference in the names 'discord' and 'war,' and I imagine that there is also a difference in their natures; the one is expressive of what is internal and domestic, the other of what is external and foreign; and the first of the two is termed discord, and only the second, war.

Glaucon:: That is a very proper distinction.

Socrates:: And may I not observe with equal propriety that the Hellenic race is all united together by ties of blood and friendship, and alien and strange to the barbarians?

Glaucon:: Very good.

Socrates:: And therefore when Hellenes fight with barbarians and barbarians with Hellenes, they will be described by us as being at war when they fight, and by nature enemies, and this kind of antagonism should be called war; but when Hellenes fight with one another we shall say that Hellas is then in a state of disorder and discord, they being by nature friends; and such enmity is to be called discord.

Glaucon:: I agree.

Socrates:: Consider then, when that which we have acknowledged to be discord occurs, and a city is divided, if both parties destroy the lands and burn the houses of one another, how wicked does the strife appear! No true lover of his country would bring himself to tear in pieces his own nurse and mother: There might be reason in the conqueror depriving the conquered of their harvest, but still they would have the idea of peace in their hearts and would not mean to go on fighting for ever.

Glaucon:: Yes, that is a better temper than the other.

Socrates:: And will not the city, which you are founding, be an Hellenic city?

Glaucon:: It ought to be.

Socrates:: Then will not the citizens be good and civilized?

Glaucon:: Yes, very civilized.

Socrates:: And will they not be lovers of Hellas, and think of Hellas as their own land, and share in the common temples?

Glaucon:: Most certainly.

Socrates:: And any difference which arises among them will be regarded by them as discord only—a quarrel among friends, which is not to be called a war?

Glaucon:: Certainly not.

Socrates:: Then they will quarrel as those who intend some day to be reconciled?

Glaucon:: Certainly.

Socrates:: They will use friendly correction, but will not enslave or destroy their opponents; they will be correctors, not enemies?

Glaucon:: Just so.

Socrates:: And as they are Hellenes themselves they will not devastate Hellas, nor will they burn houses, nor ever suppose that the whole population of a city—men, women, and children—are equally their enemies, for they know that the guilt of war is always confined to a few persons and that the many are their friends. And for all these reasons they will be unwilling to waste their lands and raze their houses; their enmity to them will only last until the many innocent sufferers have compelled the guilty few to give satisfaction?

Glaucon:: I agree, that our citizens should thus deal with their Hellenic enemies; and with barbarians as the Hellenes now deal with one another.

Socrates:: Then let us enact this law also for our guardians:—that they are neither to devastate the lands of Hellenes nor to burn their houses.

Glaucon:: Agreed; and we may agree also in thinking that these, like all our previous enactments, are very good. But still I must say, Socrates, that if you are allowed to go on in this way you will entirely forget the other question which at the commencement of this discussion you thrust aside:—Is such an order of things possible, and how, if at all? For I am quite ready to acknowledge that the plan which you propose, if only feasible, would do all sorts of good to the State. I will add, what you have omitted, that your citizens will be the bravest of warriors, and will never leave their ranks, for they will all know one another, and each will call the other father, brother, son; and if you suppose the women to join their armies, whether in the same rank or in the rear, either as a terror to the enemy, or as auxiliaries in case of need, I know that they will then be absolutely invincible; and there are many domestic advantages which might also be mentioned and which I also fully acknowledge: but, as I admit all these advantages and as many more as you please, if only this State of yours were to come into existence, we need say no more about them; assuming then the existence of the State, let us now turn to the question of possibility and ways and means—the rest may be left.

Socrates:: If I loiter for a moment, you instantly make a raid upon me, and have no mercy; I have hardly escaped the first and second waves, and you seem not to be aware that you are now bringing upon me the third, which is the greatest and heaviest. When you have seen and heard the third wave, I think you will be more considerate and will acknowledge that some fear and hesitation was natural respecting a proposal so extraordinary as that which I have now to state and investigate.

Glaucon:: The more appeals of this sort which you make, the more determined are we that you shall tell us how such a State is possible: speak out and at once.

Socrates:: Let me begin by reminding you that we found our way hither in the search after justice and injustice.

Glaucon:: True, but what of that?

Socrates:: I was only going to ask whether, if we have discovered them, we are to require that the just man should in nothing fail of absolute justice; or may we be satisfied with an approximation, and the attainment in him of a higher degree of justice than is to be found in other men?

Glaucon:: The approximation will be enough.

Socrates:: We were enquiring into the nature of absolute justice and into the character of the perfectly just, and into injustice and the perfectly unjust, that we might have an ideal. We were to look at these in order that we might judge of our own happiness and unhappiness according to the standard which they exhibited and the degree in which we resembled them, but not with any view of showing that they could exist in fact.

Glaucon:: True.

Socrates:: Would a painter be any the worse because, after having delineated with consummate art an ideal of a perfectly beautiful man, he was unable to show that any such man could ever have existed?

Glaucon:: He would be none the worse.

Socrates:: Well, and were we not creating an ideal of a perfect State?

Glaucon:: To be sure.

Socrates:: And is our theory a worse theory because we are unable to prove the possibility of a city being ordered in the manner described?

Glaucon:: Surely not.

Socrates:: That is the truth. But if, at your request, I am to try and show how and under what conditions the possibility is highest, I must ask you, having this in view, to repeat your former admissions.

Glaucon:: What admissions?

Socrates:: I want to know whether ideals are ever fully realized in language? Does not the word express more than the fact, and must not the actual, whatever a man may think, always, in the nature of things, fall short of the truth? What do you say?

Glaucon:: I agree.

Socrates:: Then you must not insist on my proving that the actual State will in every respect coincide with the ideal: if we are only able to discover how a city may be governed nearly as we proposed, you will admit that we have discovered the possibility which you demand; and will be contented. I am sure that I should be contented—will not you?

Glaucon:: Yes, I will.

Socrates:: Let me next endeavor to show what is that fault in States which is the cause of their present maladministration, and what is the least change which will enable a State to pass into the truer form; and let the change, if possible, be of one thing only, or, if not, of two;

at any rate, let the changes be as few and slight as possible.

Glaucon:: Certainly.

Socrates:: I think, that there might be a reform of the State if only one change were made, which is not a slight or easy though still a possible one.

Glaucon:: What is it?

Socrates:: Now then, I go to meet that which I liken to the greatest of the waves; yet shall the word be spoken, even though the wave break and drown me in laughter and dishonor; and do you mark my words.

Glaucon:: Proceed.

Socrates:: *Until philosophers are kings, or the kings and princes of this world have the spirit and power of philosophy, and political greatness and wisdom meet in one, and those commoner natures who pursue either to the exclusion of the other are compelled to stand aside, cities will never have rest from their evils,—no, nor the human race, as I believe,—and then only will this our State have a possibility of life and behold the light of day.* Such was the thought, my dear Glaucon, which I would fain have uttered if it had not seemed too extravagant; for to be convinced that in no other State can there be happiness private or public is indeed a hard thing.

Glaucon:: Socrates, what do you mean? I would have you consider that the word which you have uttered is one at which numerous persons, and very respectable persons too, in a figure pulling off their coats all in a moment, and seizing any weapon that comes to hand, will run at you might and main, before you know where you are, intending to do heaven knows what; and if you don't prepare an answer, and put yourself in motion, you will be 'pared by their fine wits' and no mistake.

Socrates:: You got me into the scrape.

Glaucon:: And I was quite right; however, I will do all I can to get you out of it; but I can only give you good-will and good advice, and, perhaps, I may be able to fit answers to your questions better than another—that is all. And now, having such an auxiliary, you must do your best to show the unbelievers that you are right.

Socrates:: I ought to try, since you offer me such invaluable assistance. And I think that, if there is to be a chance of our escaping, we must explain to them whom we mean when we say that philosophers are to rule in the State; then we shall be able to defend ourselves: There will be discovered to be some natures who ought to study philosophy and to be leaders in the State; and others who are not born to be philosophers, and are meant to be followers rather than leaders.

Glaucon:: Then now for a definition.

Socrates:: Follow me, and I hope that I may in some way or other be able to give you a satisfactory explanation.

Glaucon:: Proceed.

Socrates:: I dare say that you remember, and therefore I need not remind you, that a lover, if he is worthy of the name, ought to show his love, not to some one part of that which he loves, but to the whole.

Glaucon:: I really do not understand, and therefore beg of you to assist my memory.

Socrates:: Another person, might fairly reply as you do; but a man of pleasure like yourself ought to know that all who are in the flower of youth do somehow or other raise a pang or emotion in a lover’s breast, and are thought by him to be worthy of his affectionate regards. Is not this a way which you have with the fair: one has a snub nose, and you praise his charming face; the hook-nose of another has, you say, a royal look; while he who is neither snub nor hooked has the grace of regularity: the dark visage is manly, the fair are children of the gods; and as to the sweet ‘honey pale,’ as they are called, what is the very name but the invention of a lover who talks in diminutives, and is not averse to paleness if appearing on the cheek of youth? In a word, there is no excuse which you will not make, and nothing which you will not say, in order not to lose a single flower that blooms in the spring-time of youth.

Glaucon:: If you make me an authority in matters of love, for the sake of the argument, I assent.

Socrates:: And what do you say of lovers of wine? Do you not see them doing the same? They are glad of any pretext of drinking any wine.

Glaucon:: Very good.

Socrates:: And the same is true of ambitious men; if they cannot command an army, they are willing to command a file; and if they cannot be honored by really great and important persons, they are glad to be honored by lesser and meaner people,—but honour of some kind they must have.

Glaucon:: Exactly.

Socrates:: Once more let me ask: Does he who desires any class of goods, desire the whole class or a part only?

Glaucon:: The whole.

Socrates:: And may we not say of the philosopher that he is a lover, not of a part of wisdom only, but of the whole?

Glaucon:: Yes, of the whole.

Socrates:: And he who dislikes learning, especially in youth, when he has no power of judging what is good and what is not, such an one we maintain not to be a philosopher or a lover of knowledge, just as he who refuses his food is not hungry, and may be said to have a bad appetite and not a good one?

Glaucon:: Very true.

Socrates:: Whereas he who has a taste for every sort of knowledge and who is curious to learn and is never satisfied, may be justly termed a philosopher? Am I not right?

Glaucon:: If curiosity makes a philosopher, you will find many a strange being will have a title to the name. All the lovers of sights have a delight in learning, and must therefore be included. Musical amateurs, too, are a folk strangely out of place among philosophers, for they are the last persons in the world who would come to anything like a philosophical discussion, if they could help, while they run about at the Dionysiac festivals as if they had let out their ears to hear every chorus; whether the performance is in town or country—that makes no difference—they are there. Now are we to maintain that all these and any who have similar tastes, as well as the professors of quite minor arts, are philosophers?

Socrates:: Certainly not, they are only an imitation.

Glaucon:: Who then are the true philosophers?

Socrates:: Those, who are lovers of the vision of truth.

Glaucon:: That is also good, but I should like to know what you mean?

Socrates:: To another, I might have a difficulty in explaining; but I am sure that you will admit a proposition which I am about to make.

Glaucon:: What is the proposition?

Socrates:: That since beauty is the opposite of ugliness, they are two?

Glaucon:: Certainly.

Socrates:: And inasmuch as they are two, each of them is one?

Glaucon:: True again.

Socrates:: And of just and unjust, good and evil, and of every other class, the same remark holds: taken singly, each of them is one; but from the various combinations of them with actions and things and with one another, they are seen in all sorts of lights and appear many?

Glaucon:: Very true.

Socrates:: And this is the distinction which I draw between the sight-loving, art-loving, practical class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

Glaucon:: How do you distinguish them?

Socrates:: The lovers of sounds and sights, are, as I conceive, fond of fine tones and colors and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.

Glaucon:: True.

Socrates:: Few are they who are able to attain to the sight of this.

Glaucon:: Very true.

Socrates:: And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow—of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who likens dissimilar things, who puts the copy in the place of the real object?

Glaucon:: I should certainly say that such an one was dreaming.

Socrates:: But take the case of the other, who recognizes the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea, neither putting the objects in the place of the idea nor the idea in the place of the objects—is he a dreamer, or is he awake?

Glaucon:: He is wide awake.

Socrates:: And may we not say that the mind of the one who knows has knowledge, and that the mind of the other, who opines only, has opinion?

Glaucon:: Certainly.

Socrates:: But suppose that the latter should quarrel with us and dispute our statement, can we administer any soothing cordial or advice to him, without revealing to him that there is sad disorder in his wits?

Glaucon:: We must certainly offer him some good advice.

Socrates:: Come, then, and let us think of something to say to him. Shall we begin by assuring him that he is welcome to any knowledge which he may have, and that we are rejoiced at his having it? But we should like to ask him a question: Does he who has knowledge know something or nothing? (You must answer for him.)

Glaucon:: I answer that he knows something.

Socrates:: Something that is or is not?

Glaucon:: Something that is; for how can that which is not ever be known?

Socrates:: And are we assured, after looking at the matter from many points of view, that absolute being is or may be absolutely known; but that the utterly non-existent is utterly unknown?

Glaucon:: Nothing can be more certain.

Socrates:: Good. But if there be anything which is of such a nature as to be and not to be, that will have a place intermediate between pure being and the absolute negation of being?

Glaucon:: Yes, between them.

Socrates:: And, as knowledge corresponded to being and ignorance of necessity to not-being, for that intermediate between being and not-being there has to be discovered a corresponding intermediate between ignorance and knowledge, if there be such?

Glaucon:: Certainly.

Socrates:: Do we admit the existence of opinion?

Glaucon:: Undoubtedly.

Socrates:: As being the same with knowledge, or another faculty?

Glaucon:: Another faculty.

Socrates:: Then opinion and knowledge have to do with different kinds of matter corresponding to this difference of faculties?

Glaucon:: Yes.

Socrates:: And knowledge is relative to being and knows being. But before I proceed further I will make a division.

Glaucon:: What division?

Socrates:: I will begin by placing faculties in a class by themselves: they are powers in us, and in all other things, by which we do as we do. Sight and hearing, for example, I should call faculties. Have I clearly explained the class which I mean?

Glaucon:: Yes, I quite understand.

Socrates:: Then let me tell you my view about them. I do not see them, and therefore the distinctions of figure, color, and the like, which enable me to discern the differences of some things, do not apply to them. In speaking of a faculty I think only of its sphere and its result; and that which has the same sphere and the same result I call the same faculty, but that which has another sphere and another result I call different. Would that be your way of speaking?

Glaucon:: Yes.

Socrates:: And will you be so very good as to answer one more question? Would you say that knowledge is a faculty, or in what class would you place it?

Glaucon:: Certainly knowledge is a faculty, and the mightiest of all faculties.

Socrates:: And is opinion also a faculty?

Glaucon:: Certainly, for opinion is that with which we are able to form an opinion.

Socrates:: And yet you were acknowledging a little while ago that knowledge is not the same as opinion?

Glaucon:: Why, yes: how can any reasonable being ever identify that which is infallible with that which errs?

Socrates:: An excellent answer, proving, that we are quite conscious of a distinction between them.

Glaucon:: Yes.

Socrates:: Then knowledge and opinion having distinct powers have also distinct spheres or subject-matters?

Glaucon:: That is certain.

Socrates:: Being is the sphere or subject-matter of knowledge, and knowledge is to know the nature of being?

Glaucon:: Yes.

Socrates:: And opinion is to have an opinion?

Glaucon:: Yes.

Socrates:: And do we know what we opine? or is the subject-matter of opinion the same as the subject-matter of knowledge?

Glaucon:: Nay, that has been already disproven; if difference in faculty implies difference in the sphere or subject-matter, and if, as we were saying, opinion and knowledge are distinct faculties, then the sphere of knowledge and of opinion cannot be the same.

Socrates:: Then if being is the subject-matter of knowledge, something else must be the subject-matter of opinion?

Glaucon:: Yes, something else.

Socrates:: Well then, is not-being the subject-matter of opinion? or, rather, how can there be an opinion at all about not-being? Reflect: when a man has an opinion, has he not an opinion about something? Can he have an opinion which is an opinion about nothing?

Glaucon:: Impossible.

Socrates:: He who has an opinion has an opinion about some one thing?

Glaucon:: Yes.

Socrates:: And not-being is not one thing but, properly speaking, nothing?

Glaucon:: True.

Socrates:: Of not-being, ignorance was assumed to be the necessary correlative; of being, knowledge?

Glaucon:: True.

Socrates:: Then opinion is not concerned either with being or with not-being?

Glaucon:: Not with either.

Socrates:: And can therefore neither be ignorance nor knowledge?

Glaucon:: That seems to be true.

Socrates:: But is opinion to be sought without and beyond either of them, in a greater clearness than knowledge, or in a greater darkness than ignorance?

Glaucon:: In neither.

Socrates:: Then I suppose that opinion appears to you to be darker than knowledge, but lighter than ignorance?

Glaucon:: Both; and in no small degree.

Socrates:: And also to be within and between them?

Glaucon:: Yes.

Socrates:: Then you would infer that opinion is intermediate?

Glaucon:: No question.

Socrates:: But were we not saying before, that if anything appeared to be of a sort which is and is not at the same time, that sort of thing would appear also to lie in the interval between pure being and absolute not-being; and that the corresponding faculty is neither knowledge nor ignorance, but will be found in the interval between them?

Glaucon:: True.

Socrates:: And in that interval there has now been discovered something which we call opinion?

Glaucon:: There has.

Socrates:: Then what remains to be discovered is the object which partakes equally of the nature of being and not-being, and cannot rightly be termed either, pure and simple; this unknown term, when discovered, we may truly call the subject of opinion, and assign each to their proper faculty,—the extremes to the faculties of the extremes and the mean to the faculty of the mean.

Glaucon:: True.

Socrates:: This being premised, I would ask the gentleman who is of opinion that there is no absolute or unchangeable idea of beauty—in whose opinion the beautiful is the manifold—he, I say, your lover of beautiful sights, who cannot bear to be told that the beautiful is one, and the just is one, or that anything is one—to him I would appeal, saying, Will you be so very kind, sir, as to tell us whether, of all these beautiful things, there is one which will not be found ugly; or of the just, which will not be found unjust; or of the holy, which will not also be unholy?

Glaucon:: No, the beautiful will in some point of view be found ugly; and the same is true of the rest.

Socrates:: And may not the many which are doubles be also halves?—doubles, that is, of one thing, and halves of another?

Glaucon:: Quite true.

Socrates:: And things great and small, heavy and light, as they are termed, will not be denoted by these any more than by the opposite names?

Glaucon:: True; both these and the opposite names will always attach to all of them.

Socrates:: And can any one of those many things which are called by particular names be said to be this rather than not to be this?

Glaucon:: They are like the punning riddles which are asked at feasts or the children's puzzle about the eunuch aiming at the bat, with what he hit him, as they say in the puzzle, and upon what the bat was sitting. The individual objects of which I am speaking are also a riddle, and have a double sense: nor can you fix them in your mind, either as being or not-being, or both, or neither.

Socrates:: Then what will you do with them? Can they have a better place than between being and not-being? For they are clearly not in greater darkness or negation than not-being, or more full of light and existence than being.

Glaucon:: That is quite true.

Socrates:: Thus then we seem to have discovered that the many ideas which the multitude entertain about the beautiful and about all other things are tossing about in some region which is half-way between pure being and pure not-being?

Glaucon:: We have.

Socrates:: Yes; and we had before agreed that anything of this kind which we might find was to be described as matter of opinion, and not as matter of knowledge; being the intermediate flux which is caught and detained by the intermediate faculty.

Glaucon:: Quite true.

Socrates:: Then those who see the many beautiful, and who yet neither see absolute beauty, nor can follow any guide who points the way thither; who see the many just, and not absolute justice, and the like,—such persons may be said to have opinion but not knowledge?

Glaucon:: That is certain.

Socrates:: But those who see the absolute and eternal and immutable may be said to know, and not to have opinion only?

Glaucon:: Neither can that be denied.

Socrates:: The one love and embrace the subjects of knowledge, the other those of opinion? The latter are the same, as I dare say you will remember, who listened to sweet sounds and gazed upon fair colors, but would not tolerate the existence of absolute beauty.

Glaucon:: Yes, I remember.

Socrates:: Shall we then be guilty of any impropriety in calling them lovers of opinion rather than lovers of wisdom, and will they be very angry with us for thus describing them?

Glaucon:: I shall tell them not to be angry; no man should be angry at what is true.

Socrates:: But those who love the truth in each thing are to be called lovers of wisdom and not lovers of opinion.

Glaucon:: Assuredly.

## BOOK VI.

Socrates:: And thus, Glaucon, after the argument has gone a weary way, the true and the false philosophers have at length appeared in view.

Glaucon:: I do not think, that the way could have been shortened.

Socrates:: I suppose not, and yet I believe that we might have had a better view of both of them if the discussion could have been confined to this one subject and if there were not many other questions awaiting us, which he who desires to see in what respect the life of the just differs from that of the unjust must consider.

Glaucon:: And what is the next question?

Socrates:: Surely, the one which follows next in order. Inasmuch as philosophers only are able to grasp the eternal and unchangeable, and those who wander in the region of the many and variable are not philosophers, I must ask you which of the two classes should be the rulers of our State?

Glaucon:: And how can we rightly answer that question?

Socrates:: Whichever of the two are best able to guard the laws and institutions of our State—let them be our guardians.

Glaucon:: Very good.

Socrates:: Neither, can there be any question that the guardian who is to keep anything should have eyes rather than no eyes?

Glaucon:: There can be no question of that.

Socrates:: And are not those who are verily and indeed wanting in the knowledge of the true being of each thing, and who have in their souls no clear pattern, and are unable as with a painter’s eye to look at the absolute truth and to that original to repair, and having perfect vision of the other world to order the laws about beauty, goodness, justice in this, if not already ordered, and to guard and preserve the order of them—are not such persons, I ask, simply blind?

Glaucon:: Truly, they are much in that condition.

Socrates:: And shall they be our guardians when there are others who, besides being their equals in experience and falling short of them in no particular of virtue, also know the very truth of each thing?

Glaucon:: There can be no reason, for rejecting those who have this greatest of all great qualities; they must always have the first place unless they fail in some other respect.

Socrates:: Suppose then, that we determine how far they can unite this and the other excellences.

Glaucon:: By all means.

Socrates:: In the first place, as we began by observing, the nature of the philosopher has to be ascertained. We must come to an understanding about him, and, when we have done so, then, if I am not mistaken, we shall also acknowledge that such an union of qualities is possible, and that those in whom they are united, and those only, should be rulers in the State.

Glaucon:: What do you mean?

Socrates:: Let us suppose that philosophical minds always love knowledge of a sort which shows them’ the eternal nature not varying from generation and corruption.

Glaucon:: Agreed.

Socrates:: And further, let us agree that they are lovers of all true being; there is no part whether greater or less, or more or less honorable, which they are willing to renounce; as we said before of the lover and the man of ambition.

Glaucon:: True.

Socrates:: And if they are to be what we were describing, is there not another quality which they should also possess?

Glaucon:: What quality?

Socrates:: Truthfulness: they will never intentionally receive into their mind falsehood, which is their detestation, and they will love the truth.

Glaucon:: Yes, that may be safely affirmed of them.

Socrates:: 'May be,' my friend, is not the word; say rather, 'must be affirmed:' for he whose nature is amorous of anything cannot help loving all that belongs or is akin to the object of his affections.

Glaucon:: Right.

Socrates:: And is there anything more akin to wisdom than truth?

Glaucon:: How can there be?

Socrates:: Can the same nature be a lover of wisdom and a lover of falsehood?

Glaucon:: Never.

Socrates:: The true lover of learning then must from his earliest youth, as far as in him lies, desire all truth?

Glaucon:: Assuredly.

Socrates:: But then again, as we know by experience, he whose desires are strong in one direction will have them weaker in others; they will be like a stream which has been drawn off into another channel.

Glaucon:: True.

Socrates:: He whose desires are drawn towards knowledge in every form will be absorbed in the pleasures of the soul, and will hardly feel bodily pleasure—I mean, if he be a true philosopher and not a sham one.

Glaucon:: That is most certain.

Socrates:: Such an one is sure to be temperate and the reverse of covetous; for the motives which make another man desirous of having and spending, have no place in his character.

Glaucon:: Very true.

Socrates:: Another criterion of the philosophical nature has also to be considered.

Glaucon:: What is that?

Socrates:: There should be no secret corner of illiberality; nothing can be more antagonistic than meanness to a soul which is ever longing after the whole of things both divine and human.

Glaucon:: Most true.

Socrates:: Then how can he who has magnificence of mind and is the spectator of all time and all existence, think much of human life?'

Glaucon:: He cannot.

Socrates:: Or can such an one account death fearful?

Glaucon:: No indeed.

Socrates:: Then the cowardly and mean nature has no part in true philosophy?

Glaucon:: Certainly not.

Socrates:: Or again: can he who is harmoniously constituted, who is not covetous or mean, or a boaster, or a coward—can he, I say, ever be unjust or hard in his dealings?

Glaucon:: Impossible.

Socrates:: Then you will soon observe whether a man is just and gentle, or rude and unsociable; these are the signs which distinguish even in youth the philosophical nature from the unphilosophical.

Glaucon:: True.

Socrates:: There is another point which should be remarked.

Glaucon:: What point?

Socrates:: Whether he has or has not a pleasure in learning; for no one will love that which gives him pain, and in which after much toil he makes little progress.

Glaucon:: Certainly not.

Socrates:: And again, if he is forgetful and retains nothing of what he learns, will he not be an empty vessel?

Glaucon:: That is certain.

Socrates:: Laboring in vain, he must end in hating himself and his fruitless occupation?

Glaucon:: Yes.

Socrates:: Then a soul which forgets cannot be ranked among genuine philosophic natures; we must insist that the philosopher should have a good memory?

Glaucon:: Certainly.

Socrates:: And once more, the inharmonious and unseemly nature can only tend to disproportion?

Glaucon:: Undoubtedly.

Socrates:: And do you consider truth to be akin to proportion or to disproportion?

Glaucon:: To proportion.

Socrates:: Then, besides other qualities, we must try to find a naturally well-proportioned and gracious mind, which will move spontaneously towards the true being of everything.

Glaucon:: Certainly.

Socrates:: Well, and do not all these qualities, which we have been enumerating, go together, and are they not, in a manner, necessary to a soul, which is to have a full and perfect participation of being?

Glaucon:: They are absolutely necessary.

Socrates:: And must not that be a blameless study which he only can pursue who has the gift of a good memory, and is quick to learn,—noble, gracious, the friend of truth, justice, courage, temperance, who are his kindred?

Glaucon:: The god of jealousy himself, could find no fault with such a study.

Socrates:: And to men like him, when perfected by years and education, and to these only you will entrust the State.

Here Adeimantus interposed and said:

Adeimantus:: To these statements, Socrates, no one can offer a reply; but when you talk in this way, a strange feeling passes over the minds of your hearers: They fancy that they are led astray a little at each step in the argument, owing to their own want of skill in asking and answering questions; these littles accumulate, and at the end of the discussion they are found to have sustained a mighty overthrow and all their former notions appear to be turned upside down. And as unskillful players of draughts are at last shut up by their more skilful adversaries and have no piece to move, so they too find themselves shut up at last; for they have nothing to say in this new game of which words are the counters; and yet all the time they are in the right. The observation is suggested to me by what is now occurring. For any one of us might say, that although in words he is not able to meet you at each step of the argument, he sees as a fact that the votaries of philosophy, when they carry on the study, not only in youth as a part of education, but as the pursuit of their maturer years, most of them become strange monsters, not to say utter rogues, and that those who may be considered the best of them are made useless to the world by the very study which you extol.

Socrates:: Well, and do you think that those who say so are wrong?

Adeimantus:: I cannot tell, but I should like to know what is your opinion.

Socrates:: Hear my answer; I am of opinion that they are quite right.

Adeimantus:: Then how can you be justified in saying that cities will not cease from evil until philosophers rule in them, when philosophers are acknowledged by us to be of no use to them?

Socrates:: You ask a question, to which a reply can only be given in a parable.

Adeimantus:: Yes, Socrates; and that is a way of speaking to which you are not at all accustomed, I suppose.

Socrates:: I perceive, that you are vastly amused at having plunged me into such a hopeless discussion; but now hear the parable, and then you will be still more amused at the meagerness of my imagination: for the manner in which the best men are treated in their own States is so grievous that no single thing on earth is comparable to it; and therefore, if I am to plead their cause, I must have recourse to fiction, and put together a figure made up of many things, like the fabulous unions of goats and stags which are found in pictures. Imagine then a fleet or a ship in which there is a captain who is taller and stronger than any of the crew, but he is a little deaf and has a similar infirmity in sight, and his knowledge of navigation is not much better. The sailors are quarrelling with one another about the steering—every one is of opinion that he has a right to steer, though he has never learned the art of navigation and cannot tell who taught him or when he learned, and will further assert that it cannot be taught, and they are ready to cut in pieces any one who says the contrary. They throng about the captain, begging and praying him to commit the helm to them; and if at any time they do not prevail, but others are preferred to them, they kill the others or throw them overboard, and having first chained up the noble captain's senses with drink or some narcotic drug, they mutiny and take possession of the ship and make free with the stores; thus, eating and drinking, they proceed on their voyage in such manner as might be expected of them. Him who is their partisan and cleverly aids them in their plot for getting the ship out of the captain's hands into their own whether by force or persuasion, they compliment with the name of sailor, pilot, able seaman, and abuse the other sort of man, whom they call a good-for-nothing; but that the true pilot must pay attention to the year and seasons and sky and stars and winds, and whatever else belongs to his art, if he intends to be really qualified for the command of a ship, and that he must and will be the steerer, whether other people like or not—the possibility of this union of authority with the steerer's art has never seriously entered into their thoughts or been made part of their calling. Now in vessels which are in a state of mutiny and by sailors who are mutineers, how will the true pilot be regarded? Will he not be called by them a prater, a star-gazer; a good-for-nothing?

Adeimantus:: Of course.

Socrates:: Then you will hardly need, to hear the interpretation of the figure, which describes the true philosopher in his relation to the State; for you understand already.

Adeimantus:: Certainly.

Socrates:: Then suppose you now take this parable to the gentleman who is surprised at finding that philosophers have no honor in their cities; explain it to him and try to convince him that their having honor would be far more extraordinary.

Adeimantus:: I will.

Socrates:: Say to him, that, in deeming the best votaries of philosophy to be useless to the rest of the world, he is right; but also tell him to attribute their uselessness to the fault of those who will not use them, and not to themselves. The pilot should not humbly beg the sailors to be commanded by him—that is not the order of nature; neither are 'the wise to go to the doors of the rich'—the ingenious author of this saying told a lie—but the truth is, that, when a man is ill, whether he be rich or poor, to the physician he must go, and he who wants to be governed, to him who is able to govern. The ruler who is good for anything ought not to beg his subjects to be ruled by him; although the present governors of mankind are of a different stamp; they may be justly compared to the mutinous sailors, and the true helmsmen to those who are called by them good-for-nothings and stargazers.

Adeimantus:: Precisely so.

Socrates:: For these reasons, and among men like these, philosophy, the noblest pursuit of all, is not likely to be much esteemed by those of the opposite faction; not that the greatest and most lasting injury is done to her by her opponents, but by her own professing followers, the same of whom you suppose the accuser to say, that the greater number of them are arrant rogues, and the best are useless; in which opinion I agreed.

Adeimantus:: Yes.

Socrates:: And the reason why the good are useless has now been explained?

Adeimantus:: True.

Socrates:: Then shall we proceed to show that the corruption of the majority is also unavoidable, and that this is not to be laid to the charge of philosophy any more than the other?

Adeimantus:: By all means.

Socrates:: And let us ask and answer in turn, first going back to the description of the gentle and noble nature. Truth, as you will remember, was his leader, whom he followed always and in all things; failing in this, he was an impostor, and had no part or lot in true philosophy.

Adeimantus:: Yes, that was said.

Socrates:: Well, and is not this one quality, to mention no others, greatly at variance with present notions of him?

Adeimantus:: Certainly.

Socrates:: And have we not a right to say in his defense, that the true lover of knowledge is always striving after being—that is his nature; he will not rest in the multiplicity of individuals which is an appearance only, but will go on—the keen edge will not be blunted, nor the force of his desire abate until he have attained the knowledge of the true nature of every essence by a sympathetic and kindred power in the soul, and by that power drawing near and mingling and becoming incorporate with very being, having begotten mind and truth, he will have knowledge and will live and grow truly, and then, and not till then, will he cease from his travail.

Adeimantus:: Nothing, can be more just than such a description of him.

Socrates:: And will the love of a lie be any part of a philosopher's nature? Will he not utterly hate a lie?

Adeimantus:: He will.

Socrates:: And when truth is the captain, we cannot suspect any evil of the band which he leads?

Adeimantus:: Impossible.

Socrates:: Justice and health of mind will be of the company, and temperance will follow after?

Adeimantus:: True.

Socrates:: Neither is there any reason why I should again set in array the philosopher's virtues, as you will doubtless remember that courage, magnificence, apprehension, memory, were his natural gifts. And you objected that, although no one could deny what I then said, still, if you leave words and look at facts, the persons who are thus described are some of them manifestly useless, and the greater number utterly depraved; we were then led to enquire into the grounds of these accusations, and have now arrived at the point of asking why are the majority bad, which question of necessity brought us back to the examination and definition of the true philosopher.

Adeimantus:: Exactly.

Socrates:: And we have next to consider the corruptions of the philosophic nature, why so many are spoiled and so few escape spoiling—I am speaking of those who were said to be useless but not wicked—and, when we have done with them, we will speak of the imitators of philosophy, what manner of men are they who aspire after a profession which is above them and of which they are unworthy, and then, by their manifold inconsistencies, bring upon philosophy, and upon all philosophers, that universal reprobation of which we speak.

Adeimantus:: What are these corruptions?

Socrates:: I will see if I can explain them to you. Every one will admit that a nature having in perfection all the qualities which we required in a philosopher, is a rare plant which is seldom seen among men.

Adeimantus:: Rare indeed.

Socrates:: And what numberless and powerful causes tend to destroy these rare natures!

Adeimantus:: What causes?

Socrates:: In the first place there are their own virtues, their courage, temperance, and the rest of them, every one of which praiseworthy qualities (and this is a most singular circumstance) destroys and distracts from philosophy the soul which is the possessor of them.

Adeimantus:: That is very singular.

Socrates:: Then there are all the ordinary goods of life—beauty, wealth, strength, rank, and great connections in the State—you understand the sort of things—these also have a corrupting and distracting effect.

Adeimantus:: I understand; but I should like to know more precisely what you mean about them.

Socrates:: Grasp the truth as a whole, and in the right way; you will then have no difficulty in apprehending the preceding remarks, and they will no longer appear strange to you.

Adeimantus:: And how am I to do so?

Socrates:: Why, we know that all germs or seeds, whether vegetable or animal, when they fail to meet with proper nutriment or climate or soil, in proportion to their vigor, are all the more sensitive to the want of a suitable environment, for evil is a greater enemy to what is good than to what is not.

Adeimantus:: Very true.

Socrates:: There is reason in supposing that the finest natures, when under alien conditions, receive more injury than the inferior, because the contrast is greater.

Adeimantus:: Certainly.

Socrates:: And may we not say, Adeimantus, that the most gifted minds, when they are ill-educated, become pre-eminently bad? Do not great crimes and the spirit of pure evil spring out of a fullness of nature ruined by education rather than from any inferiority, whereas weak natures are scarcely capable of any very great good or very great evil?

Adeimantus:: There I think that you are right.

Socrates:: And our philosopher follows the same analogy—he is like a plant which, having proper nurture, must necessarily grow and mature into all virtue, but, if sown and planted in an alien soil, becomes the most noxious of all weeds, unless he be preserved by some divine power. Do you really think, as people so often say, that our youth are corrupted by Sophists, or that private teachers of the art corrupt them in any degree worth speaking of? Are not the public who say these things the greatest of all Sophists? And do they not educate to perfection young and old, men and women alike, and fashion them after their own hearts?

Adeimantus:: When is this accomplished?

Socrates:: When they meet together, and the world sits down at an assembly, or in a court of law, or a theatre, or a camp, or in any other popular resort, and there is a great uproar, and they praise some things which are being said or done, and blame other things, equally exaggerating both, shouting and clapping their hands, and the echo of the rocks and the place in which they are assembled redoubles the sound of the praise or blame—at such a time will not a young man's heart, as they say, leap within him? Will any private training enable him to stand firm against the overwhelming flood of popular opinion? or will he be carried away by the stream? Will he not have the notions of good and evil which the public in general have—he will do as they do, and as they are, such will he be?

Adeimantus:: Yes, Socrates; necessity will compel him.

Socrates:: And yet, there is a still greater necessity, which has not been mentioned.

Adeimantus:: What is that?

Socrates:: The gentle force of attainder or confiscation or death, which, as you are aware, these new Sophists and educators, who are the public, apply when their words are powerless.

Adeimantus:: Indeed they do; and in right good earnest.

Socrates:: Now what opinion of any other Sophist, or of any private person, can be expected to overcome in such an unequal contest?

Adeimantus:: None.

Socrates:: No, indeed, even to make the attempt is a great piece of folly; there neither is, nor has been, nor is ever likely to be, any different type of character which has had no other training in virtue but that which is supplied by public opinion—I speak, my friend, of human virtue only; what is more than human, as the proverb says, is not included: for I would not have you ignorant that, in the present evil state of governments, whatever is saved and comes to good is saved by the power of God, as we may truly say.

Adeimantus:: I quite assent.

Socrates:: Then let me crave your assent also to a further observation.

Adeimantus:: What are you going to say?

Socrates:: Why, that all those mercenary individuals, whom the many call Sophists and whom they deem to be their adversaries, do, in fact, teach nothing but the opinion of the many, that is to say, the opinions of their assemblies; and this is their wisdom. I might compare them to a man who should study the tempers and desires of a mighty strong beast who is fed by him—he would learn how to approach and handle him, also at what times and from what causes he is dangerous or the reverse, and what is the meaning of his several cries, and by what sounds, when another utters them, he is soothed or infuriated; and you may suppose further, that when, by continually attending upon him, he has become perfect in all this, he calls his knowledge wisdom, and makes of it a system or art, which he proceeds to teach, although he has no real notion of what he means by the principles or passions of which he is speaking, but calls this honorable and that dishonorable, or good or evil, or just or unjust, all in accordance with the tastes and tempers of the great brute. Good he pronounces to be that in which the beast delights and evil to be that which he dislikes; and he can give no other account of them except that the just and noble are the necessary, having never himself seen, and having no power of explaining to others the nature of either, or the difference between them, which is immense. By heaven, would not such an one be a rare educator?

Adeimantus:: Indeed he would.

Socrates:: And in what way does he who thinks that wisdom is the discernment of the tempers and tastes of the motley multitude, whether in painting or music, or, finally, in politics, differ from him whom I have been describing? For when a man consorts with the many, and exhibits to them his poem or other work of art or the service which he has done the State, making them his judges when he is not obliged, the so-called necessity of Diomede will oblige him to produce whatever they praise. And yet the reasons are utterly ludicrous which they give in confirmation of their own notions about the honorable and good. Did you ever hear any of them which were not?

Adeimantus:: No, nor am I likely to hear.

Socrates:: You recognize the truth of what I have been saying ? Then let me ask you to consider further whether the world will ever be induced to believe in the existence of absolute beauty rather than of the many beautiful, or of the absolute in each kind rather than of the many in each kind?

Adeimantus:: Certainly not.

Socrates:: Then the world cannot possibly be a philosopher?

Adeimantus:: Impossible.

Socrates:: And therefore philosophers must inevitably fall under the censure of the world?

Adeimantus:: They must.

Socrates:: And of individuals who consort with the mob and seek to please them?

Adeimantus:: That is evident.

Socrates:: Then, do you see any way in which the philosopher can be preserved in his calling to the end? and remember what we were saying of him, that he was to have quickness and memory and courage and magnificence—

these were admitted by us to be the true philosopher’s gifts.

Adeimantus:: Yes.

Socrates:: Will not such an one from his early childhood be in all things first among all, especially if his bodily endowments are like his mental ones?

Adeimantus:: Certainly.

Socrates:: And his friends and fellow-citizens will want to use him as he gets older for their own purposes?

Adeimantus:: No question.

Socrates:: Falling at his feet, they will make requests to him and do him honor and flatter him, because they want to get into their hands now, the power which he will one day possess.

Adeimantus:: That often happens.

Socrates:: And what will a man such as he is be likely to do under such circumstances, especially if he be a citizen of a great city, rich and noble, and a tall proper youth? Will he not be full of boundless aspirations, and fancy himself able to manage the affairs of Hellenes and of barbarians, and having got such notions into his head will he not dilate and elevate himself in the fullness of vain pomp and senseless pride?

Adeimantus:: To be sure he will.

Socrates:: Now, when he is in this state of mind, if some one gently comes to him and tells him that he is a fool and must get understanding, which can only be got by slaving for it, do you think that, under such adverse circumstances, he will be easily induced to listen?

Adeimantus:: Far otherwise.

Socrates:: And even if there be some one who through inherent goodness or natural reasonableness has had his eyes opened a little and is humbled and taken captive by philosophy, how will his friends behave when they think that they are likely to lose the advantage which they were hoping to reap from his companionship? Will they not do and say anything to prevent him from yielding to his better nature and to render his teacher powerless, using to this end private intrigues as well as public prosecutions?

Adeimantus:: There can be no doubt of it.

Socrates:: And how can one who is thus circumstanced ever become a philosopher?

Adeimantus:: Impossible.

Socrates:: Then were we not right in saying that even the very qualities which make a man a philosopher may, if he be ill-educated, divert him from philosophy, no less than riches and their accompaniments and the other so-called goods of life?

Adeimantus:: We were quite right.

Socrates:: Thus, my excellent friend, is brought about all that ruin and failure which I have been describing of the natures best adapted to the best of all pursuits; they are natures which we maintain to be rare at any time; this being the class out of which come the men who are the authors of the greatest evil to States and individuals; and also of the greatest good when the tide carries them in that direction; but a small man never was the doer of any great thing either to individuals or to States.

Adeimantus:: That is most true.

Socrates:: And so philosophy is left desolate, with her marriage rite incomplete: for her own have fallen away and forsaken her, and while they are leading a false and unbecoming life, other unworthy persons, seeing that she has no kinsmen to be her protectors, enter in and dishonor her; and fasten upon her the reproaches which, as you say, her reprovers utter, who affirm of her votaries that some are good for nothing, and that the greater number deserve the severest punishment.

Adeimantus:: That is certainly what people say.

Socrates:: Yes; and what else would you expect, when you think of the puny creatures who, seeing this land open to them—a land well stocked with fair names and showy titles—like prisoners running out of prison into a sanctuary, take a leap out of their trades into philosophy; those who do so being probably the cleverest hands at their own miserable crafts? For, although philosophy be in this evil case, still there remains a dignity about her which is not to be found in the arts. And many are thus attracted by her whose natures are imperfect and whose souls are maimed and disfigured by their meannesses, as their bodies are by their trades and crafts. Is not this unavoidable?

Adeimantus:: Yes.

Socrates:: Are they not exactly like a bald little tinker who has just got out of durance and come into a fortune; he takes a bath and puts on a new coat, and is decked out as a bridegroom going to marry his master's daughter, who is left poor and desolate?

Adeimantus:: A most exact parallel.

Socrates:: What will be the issue of such marriages? Will they not be vile and bastard?

Adeimantus:: There can be no question of it.

Socrates:: And when persons who are unworthy of education approach philosophy and make an alliance with her who is in a rank above them, what sort of ideas and opinions are likely to be generated? Will they not be sophisms captivating to the ear, having nothing in them genuine, or worthy of or akin to true wisdom?

Adeimantus:: Adeimantus: No doubt.

Socrates:: Then, Adeimantus, the worthy disciples of philosophy will be but a small remnant: perchance some noble and well-educated person, detained by exile in her service, who in the absence of corrupting influences remains devoted to her; or some lofty soul born in a mean city, the politics of which he contemns and neglects; and there may be a gifted few who leave the arts, which they justly despise, and come to her;—or peradventure there are some who are restrained by our friend Theages' bridle; for everything in the life of Theages conspired to divert him from philosophy; but ill-health kept him away from politics. My own case of the internal sign is hardly worth mentioning, for rarely, if ever, has such a monitor been given to any other man. Those who belong to this small class have tasted how sweet and blessed a possession philosophy is, and have also seen enough of the madness of the multitude; and they know that no politician is honest, nor is there any champion of justice at whose side they may fight and be saved. Such an one may be compared to a man who has fallen among wild beasts—he will not join in the wickedness of his fellows, but neither is he able singly to resist all their fierce natures, and therefore seeing that he would be of no use to the State or to his friends, and reflecting that he would have to throw away his life without doing any good either to himself or others, he holds his peace, and goes his own way. He is like one who, in the storm of dust and sleet which the driving wind hurries along, retires under the shelter of a wall; and seeing the rest of mankind full of wickedness, he is content, if only he can live his own life and be pure from evil or unrighteousness, and depart in peace and good-will, with bright hopes.

Adeimantus:: Yes, and he will have done a great work before he departs.

Socrates:: A great work—yes; but not the greatest, unless he find a State suitable to him; for in a State which is suitable to him, he will have a larger growth and be the savior of his country, as well as of himself. The causes why philosophy is in such an evil name have now been sufficiently explained: the injustice of the charges against her has been shown—is there anything more which you wish to say?

Adeimantus:: Nothing more on that subject, but I should like to know which of the governments now existing is in your opinion the one adapted to her.

Socrates:: Not any of them, and that is precisely the accusation which I bring against them—not one of them is worthy of the philosophic nature, and hence that nature is warped and estranged;—as the exotic seed which is sown in a foreign land becomes denaturalized, and is wont to be overpowered and to lose itself in the new soil, even so this growth of philosophy, instead of persisting, degenerates and receives another character. But if philosophy ever finds in the State that perfection which she herself is, then will be seen that she is in truth divine, and that all other things, whether natures of men or institutions, are but human;—and now, I know, that you are going to ask, What that State is:

Adeimantus:: No, there you are wrong, for I was going to ask another question—whether it is the State of which we are the founders and inventors, or some other?

Socrates:: Yes, ours in most respects; but you may remember my saying before, that some living authority would always be required in the State having the same idea of the constitution which guided you when as legislator you were laying down the laws.

Adeimantus:: That was said.

Socrates:: Yes, but not in a satisfactory manner; you frightened us by interposing objections, which certainly showed that the discussion would be long and difficult; and what still remains is the reverse of easy.

Adeimantus:: What is there remaining?

Socrates:: The question how the study of philosophy may be so ordered as not to be the ruin of the State: All great attempts are attended with risk; ‘hard is the good’ as men say.

Adeimantus:: Still, let the point be cleared up, and the enquiry will then be complete.

Socrates:: I shall not be hindered, by any want of will, but, if at all, by a want of power: my zeal you may see for yourselves; and please to remark in what I am about to say how boldly and unhesitatingly I declare that States should pursue philosophy, not as they do now, but in a different spirit.

Adeimantus:: In what manner?

Socrates:: At present, the students of philosophy are quite young; beginning when they are hardly past childhood, they devote only the time saved from moneymaking and housekeeping to such pursuits; and even those of them who are reputed to have most of the philosophic spirit, when they come within sight of the great difficulty of the subject, I mean dialectic, take themselves off. In after life when invited by some one else, they may, perhaps, go and hear a lecture, and about this they make much ado, for philosophy is not considered by them to be their proper business: at last, when they grow old, in most cases they are extinguished more truly than Heracleitus' sun, inasmuch as they never light up again.

Adeimantus:: But what ought to be their course?

Socrates:: Just the opposite. In childhood and youth their study, and what philosophy they learn, should be suited to their tender years: during this period while they are growing up towards manhood, the chief and special care should be given to their bodies that they may have them to use in the service of philosophy; as life advances and the intellect begins to mature, let them increase the gymnastics of the soul; but when the strength of our citizens fails and is past civil and military duties, then let them range at will and engage in no serious labor, as we intend them to live happily here, and to crown this life with a similar happiness in another.

Adeimantus:: How truly in earnest you are, Socrates! I am sure of that; and yet most of your hearers, if I am not mistaken, are likely to be still more earnest in their opposition to you, and will never be convinced; Thrasymachus least of all.

Socrates:: Do not make a quarrel, between Thrasymachus and me, who have recently become friends, although, indeed, we were never enemies; for I shall go on striving to the utmost until I either convert him and other men, or do something which may profit them against the day when they live again, and hold the like discourse in another state of existence.

Adeimantus:: You are speaking of a time which is not very near.

Socrates:: Rather, of a time which is as nothing in comparison with eternity. Nevertheless, I do not wonder that the many refuse to believe; for they have never seen that of which we are now speaking realized; they have seen only a conventional imitation of philosophy, consisting of words artificially brought together, not like these of ours having a natural unity. But a human being who in word and work is perfectly molded, as far as he can be, into the proportion and likeness of virtue—such a man ruling in a city which bears the same image, they have never yet seen, neither one nor many of them—do you think that they ever did?

Adeimantus:: No indeed.

Socrates:: No, my friend, and they have seldom, if ever, heard free and noble sentiments; such as men utter when they are earnestly and by every means in their power seeking after truth for the sake of knowledge, while they look coldly on the subtleties of controversy, of which the end is opinion and strife, whether they meet with them in the courts of law or in society.

Adeimantus:: They are strangers, to the words of which you speak.

Socrates:: And this was what we foresaw, and this was the reason why truth forced us to admit, not without fear and hesitation, that neither cities nor States nor individuals will ever attain perfection until the small class of philosophers whom we termed useless but not corrupt are providentially compelled, whether they will or not, to take care of the State, and until a like necessity be laid on the State to obey them; or until kings, or if not kings, the sons of kings or princes, are divinely inspired with a true love of true philosophy. That either or both of these alternatives are impossible, I see no reason to affirm: if they were so, we might indeed be justly ridiculed as dreamers and visionaries. Am I not right?

Adeimantus:: Quite right.

Socrates:: If then, in the countless ages of the past, or at the present hour in some foreign clime which is far away and beyond our ken, the perfected philosopher is or has been or hereafter shall be compelled by a superior power to have the charge of the State, we are ready to assert to the death, that this our constitution has been, and is—yea, and will be whenever the Muse of Philosophy is queen. There is no impossibility in all this; that there is a difficulty, we acknowledge ourselves.

Adeimantus:: My opinion agrees with yours.

Socrates:: But do you mean to say that this is not the opinion of the multitude?

Adeimantus:: I should imagine not.

Socrates:: O my friend, do not attack the multitude: they will change their minds, if, not in an aggressive spirit, but gently and with the view of soothing them and removing their dislike of over-education, you show them your philosophers as they really are and describe as you were just now doing their character and profession, and then mankind will see that he of whom you are speaking is not such as they supposed—if they view him in this new light, they will surely change their notion of him, and answer in another strain. Who can be at enmity with one who loves them, who that is himself gentle and free from envy will be jealous of one in whom there is no jealousy? Nay, let me answer for you, that in a few this harsh temper may be found but not in the majority of mankind.

Adeimantus:: I quite agree with you.

Socrates:: And do you not also think, as I do, that the harsh feeling which the many entertain towards philosophy originates in the pretenders, who rush in uninvited, and are always abusing them, and finding fault with them, who make persons instead of things the theme of their conversation? and nothing can be more unbecoming in philosophers than this.

Adeimantus:: It is most unbecoming.

Socrates:: For he, Adeimantus, whose mind is fixed upon true being, has surely no time to look down upon the affairs of earth, or to be filled with malice and envy, contending against men; his eye is ever directed towards things fixed and immutable, which he sees neither injuring nor injured by one another, but all in order moving according to reason; these he imitates, and to these he will, as far as he can, conform himself. Can a man help imitating that with which he holds reverential converse?

Adeimantus:: Impossible.

Socrates:: And the philosopher holding converse with the divine order, becomes orderly and divine, as far as the nature of man allows; but like every one else, he will suffer from detraction.

Adeimantus:: Of course.

Socrates:: And if a necessity be laid upon him of fashioning, not only himself, but human nature generally, whether in States or individuals, into that which he beholds elsewhere, will he, think you, be an unskillful artificer of justice, temperance, and every civil virtue?

Adeimantus:: Anything but unskillful.

Socrates:: And if the world perceives that what we are saying about him is the truth, will they be angry with philosophy? Will they disbelieve us, when we tell them that no State can be happy which is not designed by artists who imitate the heavenly pattern?

Adeimantus:: They will not be angry if they understand. But how will they draw out the plan of which you are speaking?

Socrates:: They will begin by taking the State and the manners of men, from which, as from a tablet, they will rub out the picture, and leave a clean surface.

Adeimantus:: This is no easy task.

Socrates:: But whether easy or not, herein will lie the difference between them and every other legislator,—they will have nothing to do either with individual or State, and will inscribe no laws, until they have either found, or themselves made, a clean surface.

Adeimantus:: They will be very right.

Socrates:: Having effected this, they will proceed to trace an outline of the constitution?

Adeimantus:: No doubt.

Socrates:: And when they are filling in the work, as I conceive, they will often turn their eyes upwards and downwards: I mean that they will first look at absolute justice and beauty and temperance, and again at the human copy; and will mingle and temper the various elements of life into the image of a man; and this they will conceive according to that other image, which, when existing among men, Homer calls the form and likeness of God.

Adeimantus:: Very true.

Socrates:: And one feature they will erase, and another they will put in, until they have made the ways of men, as far as possible, agreeable to the ways of God?

Adeimantus:: Indeed, in no way could they make a fairer picture.

Socrates:: And now, are we beginning to persuade those whom you described as rushing at us with might and main, that the painter of constitutions is such an one as we were praising; at whom they were so very indignant because to his hands we committed the State; and are they growing a little calmer at what they have just heard?

Adeimantus:: Much calmer, if there is any sense in them.

Socrates:: Why, where can they still find any ground for objection? Will they doubt that the philosopher is a lover of truth and being?

Adeimantus:: They would not be so unreasonable.

Socrates:: Or that his nature, being such as we have delineated, is akin to the highest good?

Adeimantus:: Neither can they doubt this.

Socrates:: But again, will they tell us that such a nature, placed under favorable circumstances, will not be perfectly good and wise if any ever was? Or will they prefer those whom we have rejected?

Adeimantus:: Surely not.

Socrates:: Then will they still be angry at our saying, that, until philosophers bear rule, States and individuals will have no rest from evil, nor will this our imaginary State ever be realized?

Adeimantus:: I think that they will be less angry.

Socrates:: Shall we assume that they are not only less angry but quite gentle, and that they have been converted and for very shame, if for no other reason, cannot refuse to come to terms?

Adeimantus:: By all means.

Socrates:: Then let us suppose that the reconciliation has been effected. Will any one deny the other point, that there may be sons of kings or princes who are by nature philosophers?

Adeimantus:: Surely no man.

Socrates:: And when they have come into being will any one say that they must of necessity be destroyed; that they can hardly be saved is not denied even by us; but that in the whole course of ages no single one of them can escape—who will venture to affirm this?

Adeimantus:: Who indeed!

Socrates:: But, one is enough; let there be one man who has a city obedient to his will, and he might bring into existence the ideal polity about which the world is so incredulous.

Adeimantus:: Yes, one is enough.

Socrates:: The ruler may impose the laws and institutions which we have been describing, and the citizens may possibly be willing to obey them?

Adeimantus:: Certainly.

Socrates:: And that others should approve, of what we approve, is no miracle or impossibility?

Adeimantus:: I think not.

Socrates:: But we have sufficiently shown, in what has preceded, that all this, if only possible, is assuredly for the best.

Adeimantus:: We have.

Socrates:: And now we say not only that our laws, if they could be enacted, would be for the best, but also that the enactment of them, though difficult, is not impossible.

Adeimantus:: Very good.

Socrates:: And so with pain and toil we have reached the end of one subject, but more remains to be discussed;—how and by what studies and pursuits will the saviors of the constitution be created, and at what ages are they to apply themselves to their several studies?

Adeimantus:: Certainly.

Socrates:: I omitted the troublesome business of the possession of women, and the procreation of children, and the appointment of the rulers, because I knew that the perfect State would be eyed with jealousy and was difficult of attainment; but that piece of cleverness was not of much service to me, for I had to discuss them all the same. The women and children are now disposed of, but the other question of the rulers must be investigated from the very beginning. We were saying, as you will remember, that they were to be lovers of their country, tried by the test of pleasures and pains, and neither in hardships, nor in dangers, nor at any other critical moment were to lose their patriotism—he was to be rejected who failed, but he who always came forth pure, like gold tried in the refiner's fire, was to be made a ruler, and to receive honors and rewards in life and after death. This was the sort of thing which was being said, and then the argument turned aside and veiled her face; not liking to stir the question which has now arisen.

Adeimantus:: I perfectly remember.

Socrates:: Yes, my friend, and I then shrank from hazarding the bold word; but now let me dare to say—that the perfect guardian must be a philosopher.

Adeimantus:: Yes, let that be affirmed.

Socrates:: And do not suppose that there will be many of them; for the gifts which were deemed by us to be essential rarely grow together; they are mostly found in shreds and patches.

Adeimantus:: What do you mean?

Socrates:: You are aware, that quick intelligence, memory, sagacity, cleverness, and similar qualities, do not often grow together, and that persons who possess them and are at the same time high-spirited and magnanimous are not so constituted by nature as to live orderly and in a peaceful and settled manner; they are driven any way by their impulses, and all solid principle goes out of them.

Adeimantus:: Very true.

Socrates:: On the other hand, those steadfast natures which can better be depended upon, which in a battle are impregnable to fear and immovable, are equally immovable when there is anything to be learned; they are always in a torpid state, and are apt to yawn and go to sleep over any intellectual toil.

Adeimantus:: Quite true.

Socrates:: And yet we were saying that both qualities were necessary in those to whom the higher education is to be imparted, and who are to share in any office or command.

Adeimantus:: Certainly.

Socrates:: And will they be a class which is rarely found?

Adeimantus:: Yes, indeed.

Socrates:: Then the aspirant must not only be tested in those labors and dangers and pleasures which we mentioned before, but there is another kind of probation which we did not mention—he must be exercised also in many kinds of knowledge, to see whether the soul will be able to endure the highest of all, or will faint under them, as in any other studies and exercises.

Adeimantus:: Yes, you are quite right in testing him. But what do you mean by the highest of all knowledge?

Socrates:: You may remember, that we divided the soul into three parts; and distinguished the several natures of justice, temperance, courage, and wisdom?

Adeimantus:: Indeed, if I had forgotten, I should not deserve to hear more.

Socrates:: And do you remember the word of caution which preceded the discussion of them?

Adeimantus:: To what do you refer?

Socrates:: We were saying, if I am not mistaken, that he who wanted to see them in their perfect beauty must take a longer and more circuitous way, at the end of which they would appear; but that we could add on a popular exposition of them on a level with the discussion which had preceded. And you replied that such an exposition would be enough for you, and so the enquiry was continued in what to me seemed to be a very inaccurate manner; whether you were satisfied or not, it is for you to say.

Adeimantus:: Yes, I thought and the others thought that you gave us a fair measure of truth.

Socrates:: But, my friend, a measure of such things which in any degree falls short of the whole truth is not fair measure; for nothing imperfect is the measure of anything, although persons are too apt to be contented and think that they need search no further.

Adeimantus:: Not an uncommon case when people are indolent.

Socrates:: Yes, and there cannot be any worse fault in a guardian of the State and of the laws.

Adeimantus:: True.

Socrates:: The guardian then, must be required to take the longer circuit, and toil at learning as well as at gymnastics, or he will never reach the highest knowledge of all which, as we were just now saying, is his proper calling.

Adeimantus:: What, is there a knowledge still higher than this—higher than justice and the other virtues?

Socrates:: Yes, there is. And of the virtues too we must behold not the outline merely, as at present—nothing short of the most finished picture should satisfy us. When little things are elaborated with an infinity of pains, in order that they may appear in their full beauty and utmost clearness, how ridiculous that we should not think the highest truths worthy of attaining the highest accuracy!

Adeimantus:: A right noble thought; but do you suppose that we shall refrain from asking you what is this highest knowledge?

Socrates:: Nay, ask if you will; but I am certain that you have heard the answer many times, and now you either do not understand me or, as I rather think, you are disposed to be troublesome; for you have often been told that the idea of good is the highest knowledge, and that all other things become useful and advantageous only by their use of this. You can hardly be ignorant that of this I was about to speak, concerning which, as you have often heard me say, we know so little; and, without which, any other knowledge or possession of any kind will profit us nothing. Do you think that the possession of all other things is of any value if we do not possess the good? or the knowledge of all other things if we have no knowledge of beauty and goodness?

Adeimantus:: Assuredly not.

Socrates:: You are further aware that most people affirm pleasure to be the good, but the finer sort of wits say it is knowledge?

Adeimantus:: Yes.

Socrates:: And you are aware too that the latter cannot explain what they mean by knowledge, but are obliged after all to say knowledge of the good?

Adeimantus:: How ridiculous!

Socrates:: Yes, that they should begin by reproaching us with our ignorance of the good, and then presume our knowledge of it—for the good they define to be knowledge of the good, just as if we understood them when they use the term ‘good’—this is of course ridiculous.

Adeimantus:: Most true.

Socrates:: And those who make pleasure their good are in equal perplexity; for they are compelled to admit that there are bad pleasures as well as good.

Adeimantus:: Certainly.

Socrates:: And therefore to acknowledge that bad and good are the same?

Adeimantus:: True.

Socrates:: There can be no doubt about the numerous difficulties in which this question is involved.

Adeimantus:: There can be none.

Socrates:: Further, do we not see that many are willing to do or to have or to seem to be what is just and honorable without the reality; but no one is satisfied with the appearance of good—the reality is what they seek; in the case of the good, appearance is despised by every one.

Adeimantus:: Very true.

Socrates:: Of this then, which every soul of man pursues and makes the end of all his actions, having a presentiment that there is such an end, and yet hesitating because neither knowing the nature nor having the same assurance of this as of other things, and therefore losing whatever good there is in other things,—of a principle such and so great as this ought the best men in our State, to whom everything is entrusted, to be in the darkness of ignorance?

Adeimantus:: Certainly not.

Socrates:: I am sure, that he who does not know how the beautiful and the just are likewise good will be but a sorry guardian of them; and I suspect that no one who is ignorant of the good will have a true knowledge of them.

Adeimantus:: That, is a shrewd suspicion of yours.

Socrates:: And if we only have a guardian who has this knowledge our State will be perfectly ordered?

Adeimantus:: Of course, but I wish that you would tell me whether you conceive this supreme principle of the good to be knowledge or pleasure, or different from either?

Socrates:: Aye, I knew all along that a fastidious gentleman like you would not be contented with the thoughts of other people about these matters.

Adeimantus:: True, Socrates; but I must say that one who like you has passed a lifetime in the study of philosophy should not be always repeating the opinions of others, and never telling his own.

Socrates:: Well, but has any one a right to say positively what he does not know?

Adeimantus:: Not, with the assurance of positive certainty; he has no right to do that: but he may say what he thinks, as a matter of opinion.

Socrates:: And do you not know, that all mere opinions are bad, and the best of them blind? You would not deny that those who have any true notion without intelligence are only like blind men who feel their way along the road?

Adeimantus:: Very true.

Socrates:: And do you wish to behold what is blind and crooked and base, when others will tell you of brightness and beauty?

Glaucon:: Still, I must implore you, Socrates, not to turn away just as you are reaching the goal; if you will only give such an explanation of the good as you have already given of justice and temperance and the other virtues, we shall be satisfied.

Socrates:: Yes, my friend, and I shall be at least equally satisfied, but I cannot help fearing that I shall fail, and that my indiscreet zeal will bring ridicule upon me. No, sweet sirs, let us not at present ask what is the actual nature of the good, for to reach what is now in my thoughts would be an effort too great for me. But of the child of the good who is likest him, I would fain speak, if I could be sure that you wished to hear—otherwise, not.

Glaucon:: By all means, tell us about the child, and you shall remain in our debt for the account of the parent.

Socrates:: I do indeed wish, that I could pay, and you receive, the account of the parent, and not, as now, of the offspring only; take, however, this latter by way of interest, and at the same time have a care that I do not render a false account, although I have no intention of deceiving you.

Glaucon:: Yes, we will take all the care that we can: proceed.

Socrates:: Yes, but I must first come to an understanding with you, and remind you of what I have mentioned in the course of this discussion, and at many other times.

Glaucon:: What?

Socrates:: The old story, that there is a many beautiful and a many good, and so of other things which we describe and define; to all of them the term ‘many’ is applied.

Glaucon:: True.

Socrates:: And there is an absolute beauty and an absolute good, and of other things to which the term ‘many’ is applied there is an absolute; for they may be brought under a single idea, which is called the essence of each.

Glaucon:: Very true.

Socrates:: The many, as we say, are seen but not known, and the ideas are known but not seen.

Glaucon:: Exactly.

Socrates:: And what is the organ with which we see the visible things?

Glaucon:: The sight.

Socrates:: And with the hearing, we hear, and with the other senses perceive the other objects of sense?

Glaucon:: True.

Socrates:: But have you remarked that sight is by far the most costly and complex piece of workmanship which the artificer of the senses ever contrived?

Glaucon:: No, I never have.

Socrates:: Then reflect: has the ear or voice need of any third or additional nature in order that the one may be able to hear and the other to be heard?

Glaucon:: Nothing of the sort.

Socrates:: No, indeed, and the same is true of most, if not all, the other senses—you would not say that any of them requires such an addition?

Glaucon:: Certainly not.

Socrates:: But you see that without the addition of some other nature there is no seeing or being seen?

Glaucon:: How do you mean?

Socrates:: Sight being, as I conceive, in the eyes, and he who has eyes wanting to see; color being also present in them, still unless there be a third nature specially adapted to the purpose, the owner of the eyes will see nothing and the colors will be invisible.

Glaucon:: Of what nature are you speaking?

Socrates:: Of that which you term light.

Glaucon:: True.

Socrates:: Noble, then, is the bond which links together sight and visibility, and great beyond other bonds by no small difference of nature; for light is their bond, and light is no ignoble thing?

Glaucon:: Nay, the reverse of ignoble.

Socrates:: And which, of the gods in heaven would you say was the lord of this element? Whose is that light which makes the eye to see perfectly and the visible to appear?

Glaucon:: You mean the sun, as you and all mankind say.

Socrates:: May not the relation of sight to this deity be described as follows?

Glaucon:: How?

Socrates:: Neither sight nor the eye in which sight resides is the sun?

Glaucon:: No.

Socrates:: Yet of all the organs of sense the eye is the most like the sun?

Glaucon:: By far the most like.

Socrates:: And the power which the eye possesses is a sort of effluence which is dispensed from the sun?

Glaucon:: Exactly.

Socrates:: Then the sun is not sight, but the author of sight who is recognized by sight?

Glaucon:: True.

Socrates:: And this is he whom I call the child of the good, whom the good begat in his own likeness, to be in the visible world, in relation to sight and the things of sight, what the good is in the intellectual world in relation to mind and the things of mind:

Glaucon:: Will you be a little more explicit?

Socrates:: Why, you know, that the eyes, when a person directs them towards objects on which the light of day is no longer shining, but the moon and stars only, see dimly, and are nearly blind; they seem to have no clearness of vision in them?

Glaucon:: Very true.

Socrates:: But when they are directed towards objects on which the sun shines, they see clearly and there is sight in them?

Glaucon:: Certainly.

Socrates:: And the soul is like the eye: when resting upon that on which truth and being shine, the soul perceives and understands, and is radiant with intelligence; but when turned towards the twilight of becoming and perishing, then she has opinion only, and goes blinking about, and is first of one opinion and then of another, and seems to have no intelligence?

Glaucon:: Just so.

Socrates:: Now, that which imparts truth to the known and the power of knowing to the knower is what I would have you term the idea of good, and this you will deem to be the cause of science, and of truth in so far as the latter becomes the subject of knowledge; beautiful too, as are both truth and knowledge, you will be right in esteeming this other nature as more beautiful than either; and, as in the previous instance, light and sight may be truly said to be like the sun, and yet not to be the sun, so in this other sphere, science and truth may be deemed to be like the good, but not the good; the good has a place of honor yet higher.

Glaucon:: What a wonder of beauty that must be, which is the author of science and truth, and yet surpasses them in beauty; for you surely cannot mean to say that pleasure is the good?

Socrates:: God forbid, but may I ask you to consider the image in another point of view?

Glaucon:: In what point of view?

Socrates:: You would say, would you not, that the sun is not only the author of visibility in all visible things, but of generation and nourishment and growth, though he himself is not generation?

Glaucon:: Certainly.

Socrates:: In like manner the good may be said to be not only the author of knowledge to all things known, but of their being and essence, and yet the good is not essence, but far exceeds essence in dignity and power.

Glaucon said, with a ludicrous earnestness:

Glaucon:: By the light of heaven, how amazing!

Socrates:: Yes, and the exaggeration may be set down to you; for you made me utter my fancies.

Glaucon:: And pray continue to utter them; at any rate let us hear if there is anything more to be said about the similitude of the sun.

Socrates:: Yes, there is a great deal more.

Glaucon:: Then omit nothing, however slight.

Socrates:: I will do my best, but I should think that a great deal will have to be omitted.

Glaucon:: I hope not.

Socrates:: You have to imagine, then, that there are two ruling powers, and that one of them is set over the intellectual world, the other over the visible. I do not say heaven, lest you should fancy that I am playing upon the name (οὐρανός, ὁρατός). May I suppose that you have this distinction of the visible and intelligible fixed in your mind?

Glaucon:: I have.

Socrates:: Now take a line which has been cut into two unequal parts, and divide each of them again in the same proportion, and suppose the two main divisions to answer, one to the visible and the other to the intelligible, and then compare the subdivisions in respect of their clearness and want of clearness, and you will find that the first section in the sphere of the visible consists of images. And by images I mean, in the first place, shadows, and in the second place, reflections in water and in solid, smooth and polished bodies and the like: Do you understand?

Glaucon:: Yes, I understand.

Socrates:: Imagine, now, the other section, of which this is only the resemblance, to include the animals which we see, and everything that grows or is made.

Glaucon:: Very good.

Socrates:: Would you not admit that both the sections of this division have different degrees of truth, and that the copy is to the original as the sphere of opinion is to the sphere of knowledge?

Glaucon:: Most undoubtedly.

Socrates:: Next proceed to consider the manner in which the sphere of the intellectual is to be divided.

Glaucon:: In what manner?

Socrates:: Thus:—There are two subdivisions, in the lower of which the soul uses the figures given by the former division as images; the enquiry can only be hypothetical, and instead of going upwards to a principle descends to the other end; in the higher of the two, the soul passes out of hypotheses, and goes up to a principle which is above hypotheses, making no use of images as in the former case, but proceeding only in and through the ideas themselves.

Glaucon:: I do not quite understand your meaning.

Socrates:: Then I will try again; you will understand me better when I have made some preliminary remarks. You are aware that students of geometry, arithmetic, and the kindred sciences assume the odd and the even and the figures and three kinds of angles and the like in their several branches of science; these are their hypotheses, which they and every body are supposed to know, and therefore they do not deign to give any account of them either to themselves or others; but they begin with them, and go on until they arrive at last, and in a consistent manner, at their conclusion?

Glaucon:: Yes, I know.

Socrates:: And do you not know also that although they make use of the visible forms and reason about them, they are thinking not of these, but of the ideals which they resemble; not of the figures which they draw, but of the absolute square and the absolute diameter, and so on—the forms which they draw or make, and which have shadows and reflections in water of their own, are converted by them into images, but they are really seeking to behold the things themselves, which can only be seen with the eye of the mind?

Glaucon:: That is true.

Socrates:: And of this kind I spoke as the intelligible, although in the search after it the soul is compelled to use hypotheses; not ascending to a first principle, because she is unable to rise above the region of hypothesis, but employing the objects of which the shadows below are resemblances in their turn as images, they having in relation to the shadows and reflections of them a greater distinctness, and therefore a higher value.

Glaucon:: I understand, that you are speaking of the province of geometry and the sister arts.

Socrates:: And when I speak of the other division of the intelligible, you will understand me to speak of that other sort of knowledge which reason herself attains by the power of dialectic, using the hypotheses not as first principles, but only as hypotheses—that is to say, as steps and points of departure into a world which is above hypotheses, in order that she may soar beyond them to the first principle of the whole; and clinging to this and then to that which depends on this, by successive steps she descends again without the aid of any sensible object, from ideas, through ideas, and in ideas she ends.

Glaucon:: I understand you, not perfectly, for you seem to me to be describing a task which is really tremendous; but, at any rate, I understand you to say that knowledge and being, which the science of dialectic contemplates, are clearer than the notions of the arts, as they are termed, which proceed from hypotheses only: these are also contemplated by the understanding, and not by the senses: yet, because they start from hypotheses and do not ascend to a principle, those who contemplate them appear to you not to exercise the higher reason upon them, although when a first principle is added to them they are cognizable by the higher reason. And the habit which is concerned with geometry and the cognate sciences I suppose that you would term understanding and not reason, as being intermediate between opinion and reason.

Socrates:: You have quite conceived my meaning, and now, corresponding to these four divisions, let there be four faculties in the soul—reason answering to the highest, understanding to the second, faith (or conviction) to the third, and perception of shadows to the last—and let there be a scale of them, and let us suppose that the several faculties have clearness in the same degree that their objects have truth.

Glaucon:: I understand, and give my assent, and accept your arrangement.

## BOOK VII.

Socrates:: And now, let me show in a figure how far our nature is enlightened or unenlightened:—Behold! human beings living in an underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs at and necks chained so that they cannot move, and a distance; can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

Glaucon:: I see.

Socrates:: And do you see, men passing along the wall carrying all sorts of vessels, and statues and figures of animals made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent.

Glaucon:: You have shown me a strange image, and they are strange prisoners.

Socrates:: Like ourselves, and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

Glaucon:: True, how could they see anything but the shadows if they were never allowed to move their heads?

Socrates:: And of the objects which are being carried in like manner they would only see the shadows?

Glaucon:: Yes.

Socrates:: And if they were able to converse with one another, would they not suppose that they were naming what was actually before them?

Glaucon:: Very true.

Socrates:: And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by spoke that the voice which they heard came from the passing shadow?

Glaucon:: No question.

Socrates:: To them, the truth would be literally nothing but the shadows of the images.

Glaucon:: That is certain.

Socrates:: And now look again, and see what will naturally follow if the prisoners are released and disabused of their error. At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then conceive some one saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye is turned towards more real existence, he has a clearer vision,—what will be his reply? And you may further imagine that his instructor is pointing to the objects as they pass and requiring him to name them,—will he not be perplexed? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

Glaucon:: Far truer.

Socrates:: And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take refuge in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

Glaucon:: True.

Socrates:: And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he is forced into the presence of the sun himself, is he not likely to be pained and irritated? When he approaches the light his eyes will be dazzled, and he will not be able to see anything at all of what are now called realities.

Glaucon:: Not all in a moment.

Socrates:: He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the moon and the stars and the spangled heaven; and he will see the sky and the stars by night better than the sun or the light of the sun by day?

Glaucon:: Certainly.

Socrates:: Last of all he will be able to see the sun, and not mere reflections of him in the water, but he will see him in his own proper place, and not in another; and he will contemplate him as he is.

Glaucon:: Certainly.

Socrates:: He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold?

Glaucon:: Clearly, he would first see the sun and then reason about him.

Socrates:: And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

Glaucon:: Certainly, he would.

Socrates:: And if they were in the habit of conferring honors among themselves on those who were quickest to observe the passing shadows and to remark which of them went before, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honors and glories, or envy the possessors of them? Would he not say with Homer;

> 'Better to be the poor servant of a poor master,'

and to endure anything, rather than think as they do and live after their manner?

Glaucon:: Yes, I think that he would rather suffer anything than entertain these false notions and live in this miserable manner.

Socrates:: Imagine once more, such an one coming suddenly out of the sun to be replaced in his old situation; would he not be certain to have his eyes full of darkness?

Glaucon:: To be sure.

Socrates:: And if there were a contest, and he had to compete in measuring the shadows with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the time which would be needed to acquire this new habit of sight might be very considerable), would he not be ridiculous? Men would say of him that up he went and down he came without his eyes; and that it was better not even to think of ascending; and if any one tried to loose another and lead him up to the light, let them only catch the offender, and they would put him to death.

Glaucon:: No question.

Socrates:: This entire allegory, you may now append, dear Glaucon, to the previous argument; the prison-house is the world of sight, the light of the fire is the sun, and you will not misapprehend me if you interpret the journey upwards to be the ascent of the soul into the intellectual world according to my poor belief, which, at your desire, I have expressed—whether rightly or wrongly God knows. But, whether true or false, my opinion is that in the world of knowledge the idea of good appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this visible world, and the immediate source of reason and truth in the intellectual; and that this is the power upon which he who would act rationally either in public or private life must have his eye fixed.

Glaucon:: I agree, as far as I am able to understand you.

Socrates:: Moreover, you must not wonder that those who attain to this beatific vision are unwilling to descend to human affairs; for their souls are ever hastening into the upper world where they desire to dwell; which desire of theirs is very natural, if our allegory may be trusted.

Glaucon:: Yes, very natural.

Socrates:: And is there anything surprising in one who passes from divine contemplations to the evil state of man, misbehaving himself in a ridiculous manner; if, while his eyes are blinking and before he has become accustomed to the surrounding darkness, he is compelled to fight in courts of law, or in other places, about the images or the shadows of images of justice, and is endeavoring to meet the conceptions of those who have never yet seen absolute justice?

Glaucon:: Anything but surprising.

Socrates:: Any one who has common sense will remember that the bewilderments of the eyes are of two kinds, and arise from two causes, either from coming out of the light or from going into the light, which is true of the mind's eye, quite as much as of the bodily eye; and he who remembers this when he sees any one whose vision is perplexed and weak, will not be too ready to laugh; he will first ask whether that soul of man has come out of the brighter life, and is unable to see because unaccustomed to the dark, or having turned from darkness to the day is dazzled by excess of light. And he will count the one happy in his condition and state of being, and he will pity the other; or, if he have a mind to laugh at the soul which comes from below into the light, there will be more reason in this than in the laugh which greets him who returns from above out of the light into the den.

Glaucon:: That, is a very just distinction.

Socrates:: But then, if I am right, certain professors of education must be wrong when they say that they can put a knowledge into the soul which was not there before, like sight into blind eyes.

Glaucon:: They undoubtedly say this.

Socrates:: Whereas, our argument shows that the power and capacity of learning exists in the soul already; and that just as the eye was unable to turn from darkness to light without the whole body, so too the instrument of knowledge can only by the movement of the whole soul be turned from the world of becoming into that of being, and learn by degrees to endure the sight of being, and of the brightest and best of being, or in other words, of the good.

Glaucon:: Very true.

Socrates:: And must there not be some art which will effect conversion in the easiest and quickest manner; not implanting the faculty of sight, for that exists already, but has been turned in the wrong direction, and is looking away from the truth?

Glaucon:: Yes, such an art may be presumed.

Socrates:: And whereas the other so-called virtues of the soul seem to be akin to bodily qualities, for even when they are not originally innate they can be implanted later by habit and exercise, the virtue of wisdom more than anything else contains a divine element which always remains, and by this conversion is rendered useful and profitable; or, on the other hand, hurtful and useless. Did you never observe the narrow intelligence flashing from the keen eye of a clever rogue—how eager he is, how clearly his paltry soul sees the way to his end; he is the reverse of blind, but his keen eye-sight is forced into the service of evil, and he is mischievous in proportion to his cleverness?

Glaucon:: Very true.

Socrates:: But what if there had been a circumcision of such natures in the days of their youth; and they had been severed from those sensual pleasures, such as eating and drinking, which, like leaden weights, were attached to them at their birth, and which drag them down and turn the vision of their souls upon the things that are below—if, I say, they had been released from these impediments and turned in the opposite direction, the very same faculty in them would have seen the truth as keenly as they see what their eyes are turned to now.

Glaucon:: Very likely.

Socrates:: Yes, and there is another thing which is likely, or rather a necessary inference from what has preceded, that neither the uneducated and uninformed of the truth, nor yet those who never make an end of their education, will be able ministers of State; not the former, because they have no single aim of duty which is the rule of all their actions, private as well as public; nor the latter, because they will not act at all except upon compulsion, fancying that they are already dwelling apart in the islands of the blest.

Glaucon:: Very true.

Socrates:: Then, the business of us who are the founders of the State will be to compel the best minds to attain that knowledge which we have already shown to be the greatest of all—they must continue to ascend until they arrive at the good; but when they have ascended and seen enough we must not allow them to do as they do now.

Glaucon:: What do you mean?

Socrates:: I mean that they remain in the upper world: but this must not be allowed; they must be made to descend again among the prisoners in the den, and partake of their labors and honors, whether they are worth having or not.

Glaucon:: But is not this unjust? ought we to give them a worse life, when they might have a better?

Socrates:: You have again forgotten, my friend, the intention of the legislator, who did not aim at making any one class in the State happy above the rest; the happiness was to be in the whole State, and he held the citizens together by persuasion and necessity, making them benefactors of the State, and therefore benefactors of one another; to this end he created them, not to please themselves, but to be his instruments in binding up the State.

Glaucon:: True, I had forgotten.

Socrates:: Observe, Glaucon, that there will be no injustice in compelling our philosophers to have a care and providence of others; we shall explain to them that in other

States, men of their class are not obliged to share in the toils of politics: and this is reasonable, for they grow up at their own sweet will, and the government would rather not have them. Being self-taught, they cannot be expected to show any gratitude for a culture which they have never received. But we have brought you into the world to be rulers of the hive, kings of yourselves and of the other citizens, and have educated you far better and more perfectly than they have been educated, and you are better able to share in the double duty. Wherefore each of you, when his turn comes, must go down to the general underground abode, and get the habit of seeing in the dark. When you have acquired the habit, you will see ten thousand times better than the inhabitants of the den, and you will know what the several images are, and what they represent, because you have seen the beautiful and just and good in their truth. And thus our State, which is also yours, will be a reality, and not a dream only, and will be administered in a spirit unlike that of other States, in which men fight with one another about shadows only and are distracted in the struggle for power, which in their eyes is a great good. Whereas the truth is that the State in which the rulers are most reluctant to govern is always the best and most quietly governed, and the State in which they are most eager, the worst.

Glaucon:: Quite true.

Socrates:: And will our pupils, when they hear this, refuse to take their turn at the toils of State, when they are allowed to spend the greater part of their time with one another in the heavenly light?

Glaucon:: Impossible; for they are just men, and the commands which we impose upon them are just; there can be no doubt that every one of them will take office as a stern necessity, and not after the fashion of our present rulers of State.

Socrates:: Yes, my friend, and there lies the point. You must contrive for your future rulers another and a better life than that of a ruler, and then you may have a well-ordered State; for only in the State which offers this, will they rule who are truly rich, not in silver and gold, but in virtue and wisdom, which are the true blessings of life. Whereas if they go to the administration of public affairs, poor and hungering after their own private advantage, thinking that hence they are to snatch the chief good, order there can never be; for they will be fighting about office, and the civil and domestic broils which thus arise will be the ruin of the rulers themselves and of the whole State.

Glaucon:: Most true.

Socrates:: And the only life which looks down upon the life of political ambition is that of true philosophy. Do you know of any other?

Glaucon:: Indeed, I do not.

Socrates:: And those who govern ought not to be lovers of the task? For, if they are, there will be rival lovers, and they will fight.

Glaucon:: No question.

Socrates:: Who then are those whom we shall compel to be guardians? Surely they will be the men who are wisest about affairs of State, and by whom the State is best administered, and who at the same time have other honors and another and a better life than that of politics?

Glaucon:: They are the men, and I will choose them.

Socrates:: And now shall we consider in what way such guardians will be produced, and how they are to be brought from darkness to light,—as some are said to have ascended from the world below to the gods?

Glaucon:: By all means.

Socrates:: The process, is not the turning over of an oyster-shell, but the turning round of a soul passing from a day which is little better than night to the true day of being, that is, the ascent from below, which we affirm to be true philosophy?

Glaucon:: Quite so.

Socrates:: And should we not enquire what sort of knowledge has the power of effecting such a change?

Glaucon:: Certainly.

Socrates:: What sort of knowledge is there which would draw the soul from becoming to being? And another consideration has just occurred to me: You will remember that our young men are to be warrior athletes?

Glaucon:: Yes, that was said.

Socrates:: Then this new kind of knowledge must have an additional quality?

Glaucon:: What quality?

Socrates:: Usefulness in war.

Glaucon:: Yes, if possible.

Socrates:: There were two parts in our former scheme of education, were there not?

Glaucon:: Just so.

Socrates:: There was gymnastic which presided over the growth and decay of the body, and may therefore be regarded as having to do with generation and corruption?

Glaucon:: True.

Socrates:: Then that is not the knowledge which we are seeking to discover?

Glaucon:: No.

Socrates:: But what do you say of music, what also entered to a certain extent into our former scheme?

Glaucon:: Music, as you will remember, was the counterpart of gymnastic, and trained the guardians by the influences of habit, by harmony making them harmonious, by rhythm rhythmical, but not giving them science; and the words, whether fabulous or possibly true, had kindred elements of rhythm and harmony in them. But in music there was nothing which tended to that good which you are now seeking.

Socrates:: You are most accurate, in your recollection; in music there certainly was nothing of the kind. But what branch of knowledge is there, my dear Glaucon, which is of the desired nature; since all the useful arts were reckoned mean by us?

Glaucon:: Undoubtedly; and yet if music and gymnastic are excluded, and the arts are also excluded, what remains?

Socrates:: Well, there may be nothing left of our special subjects; and then we shall have to take something which is not special, but of universal application.

Glaucon:: What may that be?

Socrates:: A something which all arts and sciences and intelligences use in common, and which every one first has to learn among the elements of education.

Glaucon:: What is that?

Socrates:: The little matter of distinguishing one, two, and three—in a word, number and calculation:—do not all arts and sciences necessarily partake of them?

Glaucon:: Yes.

Socrates:: Then the art of war partakes of them?

Glaucon:: To be sure.

Socrates:: Then Palamedes, whenever he appears in tragedy, proves Agamemnon ridiculously unfit to be a general. Did you never remark how he declares that he had invented number, and had numbered the ships and set in array the ranks of the army at Troy; which implies that they had never been numbered before, and Agamemnon must be supposed literally to have been incapable of counting his own feet—how could he if he was ignorant of number? And if that is true, what sort of general must he have been?

Glaucon:: I should say a very strange one, if this was as you say.

Socrates:: Can we deny that a warrior should have a knowledge of arithmetic?

Glaucon:: Certainly he should, if he is to have the smallest understanding of military tactics, or indeed, I should rather say, if he is to be a man at all.

Socrates:: I should like to know whether you have the same notion which I have of this study?

Glaucon:: What is your notion?

Socrates:: It appears to me to be a study of the kind which we are seeking, and which leads naturally to reflection, but never to have been rightly used; for the true use of it is simply to draw the soul towards being.

Glaucon:: Will you explain your meaning?

Socrates:: I will try, and I wish you would share the enquiry with me, and say 'yes' or 'no' when I attempt to distinguish in my own mind what branches of knowledge have this attracting power, in order that we may have clearer proof that arithmetic is, as I suspect, one of them.

Glaucon:: Explain.

Socrates:: I mean to say that objects of sense are of two kinds; some of them do not invite thought because the sense is an adequate judge of them; while in the case of other objects sense is so untrustworthy that further enquiry is imperatively demanded.

Glaucon:: You are clearly referring, to the manner in which the senses are imposed upon by distance, and by painting in light and shade.

Socrates:: No, that is not at all my meaning.

Glaucon:: Then what is your meaning?

Socrates:: When speaking of uninviting objects, I mean those which do not pass from one sensation to the opposite; inviting objects are those which do; in this latter case the sense coming upon the object, whether at a distance or near, gives no more vivid idea of anything in particular than of its opposite. An illustration will make my meaning clearer:—here are three fingers—a little finger, a second finger, and a middle finger.

Glaucon:: Very good.

Socrates:: You may suppose that they are seen quite close: And here comes the point.

Glaucon:: What is it?

Socrates:: Each of them equally appears a finger, whether seen in the middle or at the extremity, whether white or black, or thick or thin—it makes no difference; a finger is a finger all the same. In these cases a man is not compelled to ask of thought the question what is a finger? for the sight never intimates to the mind that a finger is other than a finger.

Glaucon:: True.

Socrates:: And therefore, as we might expect, there is nothing here which invites or excites intelligence.

Glaucon:: There is not.

Socrates:: But is this equally true of the greatness and smallness of the fingers? Can sight adequately perceive them? and is no difference made by the circumstance that one of the fingers is in the middle and another at the extremity? And in like manner does the touch adequately perceive the qualities of thickness or thinness, of softness or hardness? And so of the other senses; do they give perfect intimations of such matters? Is not their mode of operation on this wise—the sense which is concerned with the quality of hardness is necessarily concerned also with the quality of softness, and only intimates to the soul that the same thing is felt to be both hard and soft?

Glaucon:: You are quite right.

Socrates:: And must not the soul be perplexed at this intimation which the sense gives of a hard which is also soft? What, again, is the meaning of light and heavy, if that which is light is also heavy, and that which is heavy, light?

Glaucon:: Yes, these intimations which the soul receives are very curious and require to be explained.

Socrates:: Yes, and in these perplexities the soul naturally summons to her aid calculation and intelligence, that she may see whether the several objects announced to her are one or two.

Glaucon:: True.

Socrates:: And if they turn out to be two, is not each of them one and different?

Glaucon:: Certainly.

Socrates:: And if each is one, and both are two, she will conceive the two as in a state of division, for if they were undivided they could only be conceived of as one?

Glaucon:: True.

Socrates:: The eye certainly did see both small and great, but only in a confused manner; they were not distinguished.

Glaucon:: Yes.

Socrates:: Whereas the thinking mind, intending to light up the chaos, was compelled to reverse the process, and look at small and great as separate and not confused.

Glaucon:: Very true.

Socrates:: Was not this the beginning of the enquiry 'What is great?' and 'What is small?'

Glaucon:: Exactly so.

Socrates:: And thus arose the distinction of the visible and the intelligible.

Glaucon:: Most true.

Socrates:: This was what I meant when I spoke of impressions which invited the intellect, or the reverse—those which are simultaneous with opposite impressions, invite thought; those which are not simultaneous do not.

Glaucon:: I understand, and agree with you.

Socrates:: And to which class do unity and number belong?

Glaucon:: I do not know.

Socrates:: Think a little and you will see that what has preceded will supply the answer; for if simple unity could be adequately perceived by the sight or by any other sense, then, as we were saying in the case of the finger, there would be nothing to attract towards being; but when there is some contradiction always present, and one is the reverse of one and involves the conception of plurality, then thought begins to be aroused within us, and the soul perplexed and wanting to arrive at a decision asks 'What is absolute unity?' This is the way in which the study of the one has a power of drawing and converting the mind to the contemplation of true being.

Glaucon:: And surely, this occurs notably in the case of one; for we see the same thing to be both one and infinite in multitude?

Socrates:: Yes, and this being true of one must be equally true of all number?

Glaucon:: Certainly.

Socrates:: And all arithmetic and calculation have to do with number?

Glaucon:: Yes.

Socrates:: And they appear to lead the mind towards truth?

Glaucon:: Yes, in a very remarkable manner.

Socrates:: Then this is knowledge of the kind for which we are seeking, having a double use, military and philosophical; for the man of war must learn the art of number or he will not know how to array his troops, and the philosopher also, because he has to rise out of the sea of change and lay hold of true being, and therefore he must be an arithmetician.

Glaucon:: That is true.

Socrates:: And our guardian is both warrior and philosopher?

Glaucon:: Certainly.

Socrates:: Then this is a kind of knowledge which legislation may fitly prescribe; and we must endeavor to persuade those who are to be the principal men of our State to go and learn arithmetic, not as amateurs, but they must carry on the study until they see the nature of numbers with the mind only; nor again, like merchants or retail-traders, with a view to buying or selling, but for the sake of their military use, and of the soul herself; and because this will be the easiest way for her to pass from becoming to truth and being.

Glaucon:: That is excellent.

Socrates:: Yes, and now having spoken of it, I must add how charming the science is! and in how many ways it conduces to our desired end, if pursued in the spirit of a philosopher, and not of a shopkeeper!

Glaucon:: How do you mean?

Socrates:: I mean, as I was saying, that arithmetic has a very great and elevating effect, compelling the soul to reason about abstract number, and rebelling against the introduction of visible or tangible objects into the argument. You know how steadily the masters of the art repel and ridicule any one who attempts to divide absolute unity when he is calculating, and if you divide, they multiply, taking care that one shall continue one and not become lost in fractions.

Glaucon:: That is very true.

Socrates:: Now, suppose a person were to say to them: O my friends, what are these wonderful numbers about which you are reasoning, in which, as you say, there is a unity such as you demand, and each unit is equal, invariable, indivisible,—what would they answer?

Glaucon:: They would answer, as I should conceive, that they were speaking of those numbers which can only be realized in thought.

Socrates:: Then you see that this knowledge may be truly called necessary, necessitating as it clearly does the use of the pure intelligence in the attainment of pure truth?

Glaucon:: Yes; that is a marked characteristic of it.

Socrates:: And have you further observed, that those who have a natural talent for calculation are generally quick at every other kind of knowledge; and even the dull, if they have had an arithmetical training, although they may derive no other advantage from it, always become much quicker than they would otherwise have been.

Glaucon:: Very true.

Socrates:: And indeed, you will not easily find a more difficult study, and not many as difficult.

Glaucon:: You will not.

Socrates:: And, for all these reasons, arithmetic is a kind of knowledge in which the best natures should be trained, and which must not be given up.

Glaucon:: I agree.

Socrates:: Let this then be made one of our subjects of education. And next, shall we enquire whether the kindred science also concerns us?

Glaucon:: You mean geometry?

Socrates:: Exactly so.

Glaucon:: Clearly, we are concerned with that part of geometry which relates to war; for in pitching a camp, or taking up a position, or closing or extending the lines of an army, or any other military maneuver, whether in actual battle or on a march, it will make all the difference whether a general is or is not a geometrician.

Socrates:: Yes, but for that purpose a very little of either geometry or calculation will be enough; the question relates rather to the greater and more advanced part of geometry—whether that tends in any degree to make more easy the vision of the idea of good; and thither, as I was saying, all things tend which compel the soul to turn her gaze towards that place, where is the full perfection of being, which she ought, by all means, to behold.

Glaucon:: True.

Socrates:: Then if geometry compels us to view being, it concerns us; if becoming only, it does not concern us?

Glaucon:: Yes, that is what we assert.

Socrates:: Yet anybody who has the least acquaintance with geometry will not deny that such a conception of the science is in flat contradiction to the ordinary language of geometricians.

Glaucon:: How so?

Socrates:: They have in view practice only, and are always speaking, in a narrow and ridiculous manner, of squaring and extending and applying and the like—they confuse the necessities of geometry with those of daily life; whereas knowledge is the real object of the whole science.

Glaucon:: Certainly.

Socrates:: Then must not a further admission be made?

Glaucon:: What admission?

Socrates:: That the knowledge at which geometry aims is knowledge of the eternal, and not of aught perishing and transient.

Glaucon:: That, may be readily allowed, and is true.

Socrates:: Then, my noble friend, geometry will draw the soul towards truth, and create the spirit of philosophy, and raise up that which is now unhappily allowed to fall down.

Glaucon:: Nothing will be more likely to have such an effect.

Socrates:: Then nothing should be more sternly laid down than that the inhabitants of your fair city should by all means learn geometry. Moreover the science has indirect effects, which are not small.

Glaucon:: Of what kind?

Socrates:: There are the military advantages of which you spoke, and in all departments of knowledge, as experience proves, any one who has studied geometry is infinitely quicker of apprehension than one who has not.

Glaucon:: Yes indeed, there is an infinite difference between them.

Socrates:: Then shall we propose this as a second branch of knowledge which our youth will study?

Glaucon:: Let us do so.

Socrates:: And suppose we make astronomy the third—what do you say?

Glaucon:: I am strongly inclined to it, the observation of the seasons and of months and years is as essential to the general as it is to the farmer or sailor.

Socrates:: I am amused, at your fear of the world, which makes you guard against the appearance of insisting upon useless studies; and I quite admit the difficulty of believing that in every man there is an eye of the soul which, when by other pursuits lost and dimmed, is by these purified and re-illumined; and is more precious far than ten thousand bodily eyes, for by it alone is truth seen. Now there are two classes of persons: one class of those who will agree with you and will take your words as a revelation; another class to whom they will be utterly unmeaning, and who will naturally deem them to be idle tales, for they see no sort of profit which is to be obtained from them. And therefore you had better decide at once with which of the two you are proposing to argue. You will very likely say with neither, and that your chief aim in carrying on the argument is your own improvement; at the same time you do not grudge to others any benefit which they may receive.

Glaucon:: I think that I should prefer to carry on the argument mainly on my own behalf.

Socrates:: Then take a step backward, for we have gone wrong in the order of the sciences.

Glaucon:: What was the mistake?

Socrates:: After plane geometry, we proceeded at once to solids in revolution, instead of taking solids in themselves; whereas after the second dimension the third, which is concerned with cubes and dimensions of depth, ought to have followed.

Glaucon:: That is true, Socrates; but so little seems to be known as yet about these subjects.

Socrates:: Why, yes, and for two reasons:—in the first place, no government patronizes them; this leads to a want of energy in the pursuit of them, and they are difficult; in the second place, students cannot learn them unless they have a director. But then a director can hardly be found, and even if he could, as matters now stand, the students, who are very conceited, would not attend to him. That, however, would be otherwise if the whole State became the director of these studies and gave honour to them; then disciples would want to come, and there would be continuous and earnest search, and discoveries would be made; since even now, disregarded as they are by the world, and maimed of their fair proportions, and although none of their votaries can tell the use of them, still these studies force their way by their natural charm, and very likely, if they had the help of the State, they would some day emerge into light.

Glaucon:: Yes, there is a remarkable charm in them. But I do not clearly understand the change in the order. First you began with a geometry of plane surfaces?

Socrates:: Yes.

Glaucon:: And you placed astronomy next, and then you made a step backward?

Socrates:: Yes, and I have delayed you by my hurry; the ludicrous state of solid geometry, which, in natural order, should have followed, made me pass over this branch and go on to astronomy, or motion of solids.

Glaucon:: True.

Socrates:: Then assuming that the science now omitted would come into existence if encouraged by the State, let us go on to astronomy, which will be fourth.

Glaucon:: The right order. And now, Socrates, as you rebuked the vulgar manner in which I praised astronomy before, my praise shall be given in your own spirit. For every one, as I think, must see that astronomy compels the soul to look upwards and leads us from this world to another.

Socrates:: Every one but myself, to every one else this may be clear, but not to me.

Glaucon:: And what then would you say?

Socrates:: I should rather say that those who elevate astronomy into philosophy appear to me to make us look downwards and not upwards.

Glaucon:: What do you mean?

Socrates:: You, have in your mind a truly sublime conception of our knowledge of the things above. And I dare say that if a person were to throw his head back and study the fretted ceiling, you would still think that his mind was the percipient, and not his eyes. And you are very likely right, and I may be a simpleton: but, in my opinion, that knowledge only which is of being and of the unseen can make the soul look upwards, and whether a man gapes at the heavens or blinks on the ground, seeking to learn some particular of sense, I would deny that he can learn, for nothing of that sort is matter of science; his soul is looking downwards, not upwards, whether his way to knowledge is by water or by land, whether he floats, or only lies on his back.

Glaucon:: I acknowledge, the justice of your rebuke. Still, I should like to ascertain how astronomy can be learned in any manner more conducive to that knowledge of which we are speaking?

Socrates:: I will tell you: The starry heaven which we behold is wrought upon a visible ground, and therefore, although the fairest and most perfect of visible things, must necessarily be deemed inferior far to the true motions of absolute swiftness and absolute slowness, which are relative to each other, and carry with them that which is contained in them, in the true number and in every true figure. Now, these are to be apprehended by reason and intelligence, but not by sight.

Glaucon:: True.

Socrates:: The spangled heavens should be used as a pattern and with a view to that higher knowledge; their beauty is like the beauty of figures or pictures excellently wrought by the hand of Daedalus, or some other great artist, which we may chance to behold; any geometrician who saw them would appreciate the exquisiteness of their workmanship, but he would never dream of thinking that in them he could find the true equal or the true double, or the truth of any other proportion.

Glaucon:: No, such an idea would be ridiculous.

Socrates:: And will not a true astronomer have the same feeling when he looks at the movements of the stars? Will he not think that heaven and the things in heaven are framed by the Creator of them in the most perfect manner? But he will never imagine that the proportions of night and day, or of both to the month, or of the month to the year, or of the stars to these and to one another, and any other things that are material and visible can also be eternal and subject to no deviation—that would be absurd; and it is equally absurd to take so much pains in investigating their exact truth.

Glaucon:: I quite agree, though I never thought of this before.

Socrates:: Then, in astronomy, as in geometry, we should employ problems, and let the heavens alone if we would approach the subject in the right way and so make the natural gift of reason to be of any real use.

Glaucon:: That, is a work infinitely beyond our present astronomers.

Socrates:: Yes, and there are many other things which must also have a similar extension given to them, if our legislation is to be of any value. But can you tell me of any other suitable study?

Glaucon:: No, not without thinking.

Socrates:: Motion, has many forms, and not one only; two of them are obvious enough even to wits no better than ours; and there are others, as I imagine, which may be left to wiser persons.

Glaucon:: But where are the two?

Socrates:: There is a second, which is the counterpart of the one already named.

Glaucon:: And what may that be?

Socrates:: The second, would seem relatively to the ears to be what the first is to the eyes; for I conceive that as the eyes are designed to look up at the stars, so are the ears to hear harmonious motions; and these are sister sciences—

as the Pythagoreans say, and we, Glaucon, agree with them?

Glaucon:: Yes.

Socrates:: But this, is a laborious study, and therefore we had better go and learn of them; and they will tell us whether there are any other applications of these sciences. At the same time, we must not lose sight of our own higher object.

Glaucon:: What is that?

Socrates:: There is a perfection which all knowledge ought to reach, and which our pupils ought also to attain, and not to fall short of, as I was saying that they did in astronomy. For in the science of harmony, as you probably know, the same thing happens. The teachers of harmony compare the sounds and consonances which are heard only, and their labor, like that of the astronomers, is in vain.

Glaucon:: Yes, by heaven! and ’tis as good as a play to hear them talking about their condensed notes, as they call them; they put their ears close alongside of the strings like persons catching a sound from their neighbor’s wall—one set of them declaring that they distinguish an intermediate note and have found the least interval which should be the unit of measurement; the others insisting that the two sounds have passed into the same—either party setting their ears before their understanding.

Socrates:: You mean, those gentlemen who tease and torture the strings and rack them on the pegs of the instrument: I might carry on the metaphor and speak after their manner of the blows which the plectrum gives, and make accusations against the strings, both of backwardness and forwardness to sound; but this would be tedious, and therefore I will only say that these are not the men, and that I am referring to the Pythagoreans, of whom I was just now proposing to enquire about harmony. For they too are in error, like the astronomers; they investigate the numbers of the harmonies which are heard, but they never attain to problems—that is to say, they never reach the natural harmonies of number, or reflect why some numbers are harmonious and others not.

Glaucon:: That, is a thing of more than mortal knowledge.

Socrates:: A thing, which I would rather call useful; that is, if sought after with a view to the beautiful and good; but if pursued in any other spirit, useless.

Glaucon:: Very true.

Socrates:: Now, when all these studies reach the point of intercommunion and connection with one another, and come to be considered in their mutual affinities, then, I think, but not till then, will the pursuit of them have a value for our objects; otherwise there is no profit in them.

Glaucon:: I suspect so; but you are speaking, Socrates, of a vast work.

Socrates:: What do you mean? the prelude or what? Do you not know that all this is but the prelude to the actual strain which we have to learn? For you surely would not regard the skilled mathematician as a dialectician?

Glaucon:: Assuredly not, I have hardly ever known a mathematician who was capable of reasoning.

Socrates:: But do you imagine that men who are unable to give and take a reason will have the knowledge which we require of them?

Glaucon:: Neither can this be supposed.

Socrates:: And so, Glaucon, we have at last arrived at the hymn of dialectic. This is that strain which is of the intellect only, but which the faculty of sight will nevertheless be found to imitate; for sight, as you may remember, was imagined by us after a while to behold the real animals and stars, and last of all the sun himself. And so with dialectic; when a person starts on the discovery of the absolute by the light of reason only, and without any assistance of sense, and perseveres until by pure intelligence he arrives at the perception of the absolute good, he at last finds himself at the end of the intellectual world, as in the case of sight at the end of the visible.

Glaucon:: Exactly.

Socrates:: Then this is the progress which you call dialectic?

Glaucon:: True.

Socrates:: But the release of the prisoners from chains, and their translation from the shadows to the images and to the light, and the ascent from the underground den to the sun, while in his presence they are vainly trying to look on animals and plants and the light of the sun, but are able to perceive even with their weak eyes the images in the water [which are divine], and are the shadows of true existence (not shadows of images cast by a light of fire, which compared with the sun is only an image)—this power of elevating the highest principle in the soul to the contemplation of that which is best in existence, with which we may compare the raising of that faculty which is the very light of the body to the sight of that which is brightest in the material and visible world—this power is given, as I was saying, by all that study and pursuit of the arts which has been described.

Glaucon:: I agree in what you are saying, which may be hard to believe, yet, from another point of view, is harder still to deny. This however is not a theme to be treated of in passing only, but will have to be discussed again and again. And so, whether our conclusion be true or false, let us assume all this, and proceed at once from the prelude or preamble to the chief strain, and describe that in like manner. Say, then, what is the nature and what are the divisions of dialectic, and what are the paths which lead thither; for these paths will also lead to our final rest.

Socrates:: Dear Glaucon, you will not be able to follow me here, though I would do my best, and you should behold not an image only but the absolute truth, according to my notion. Whether what I told you would or would not have been a reality I cannot venture to say; but you would have seen something like reality; of that I am confident.

Glaucon:: Doubtless.

Socrates:: But I must also remind you, that the power of dialectic alone can reveal this, and only to one who is a disciple of the previous sciences.

Glaucon:: Of that assertion you may be as confident as of the last.

Socrates:: And assuredly no one will argue that there is any other method of comprehending by any regular process all true existence or of ascertaining what each thing is in its own nature; for the arts in general are concerned with the desires or opinions of men, or are cultivated with a view to production and construction, or for the preservation of such productions and constructions; and as to the mathematical sciences which, as we were saying, have some apprehension of true being—geometry and the like—they only dream about being, but never can they behold the waking reality so long as they leave the hypotheses which they use unexamined, and are unable to give an account of them. For when a man knows not his own first principle, and when the conclusion and intermediate steps are also constructed out of he knows not what, how can he imagine that such a fabric of convention can ever become science?

Glaucon:: Impossible.

Socrates:: Then dialectic, and dialectic alone, goes directly to the first principle and is the only science which does away with hypotheses in order to make her ground secure; the eye of the soul, which is literally buried in an outlandish slough, is by her gentle aid lifted upwards; and she uses as handmaids and helpers in the work of conversion, the sciences which we have been discussing. Custom terms them sciences, but they ought to have some other name, implying greater clearness than opinion and less clearness than science: and this, in our previous sketch, was called understanding. But why should we dispute about names when we have realities of such importance to consider?

Glaucon:: Why indeed, when any name will do which expresses the thought of the mind with clearness?

Socrates:: At any rate, we are satisfied, as before, to have four divisions; two for intellect and two for opinion, and to call the first division science, the second understanding, the third belief, and the fourth perception of shadows, opinion being concerned with becoming, and intellect with being; and so to make a proportion

> As being is to becoming, so is pure intellect to opinion.
> Socrates:: And as intellect is to opinion, so is science to belief, and
> understanding to the perception of shadows.

But let us defer the further correlation and subdivision of the subjects of opinion and of intellect, for it will be a long enquiry, many times longer than this has been.

Glaucon:: As far as I understand, I agree.

Socrates:: And do you also agree, in describing the dialectician as one who attains a conception of the essence of each thing? And he who does not possess and is therefore unable to impart this conception, in whatever degree he fails, may in that degree also be said to fail in intelligence? Will you admit so much?

Glaucon:: Yes, how can I deny it?

Socrates:: And you would say the same of the conception of the good? Until the person is able to abstract and define rationally the idea of good, and unless he can run the gauntlet of all objections, and is ready to disprove them, not by appeals to opinion, but to absolute truth, never faltering at any step of the argument—unless he can do all this, you would say that he knows neither the idea of good nor any other good; he apprehends only a shadow, if anything at all, which is given by opinion and not by science;—dreaming and slumbering in this life, before he is well awake here, he arrives at the world below, and has his final quietus.

Glaucon:: In all that I should most certainly agree with you.

Socrates:: And surely you would not have the children of your ideal State, whom you are nurturing and educating—if the ideal ever becomes a reality—you would not allow the future rulers to be like posts, having no reason in them, and yet to be set in authority over the highest matters?

Glaucon:: Certainly not.

Socrates:: Then you will make a law that they shall have such an education as will enable them to attain the greatest skill in asking and answering questions?

Glaucon:: Yes, you and I together will make it.

Socrates:: Dialectic, then, as you will agree, is the coping-stone of the sciences, and is set over them; no other science can be placed higher—the nature of knowledge can no further go?

Glaucon:: I agree.

Socrates:: But to whom we are to assign these studies, and in what way they are to be assigned, are questions which remain to be considered.

Glaucon:: Yes, clearly.

Socrates:: You remember, how the rulers were chosen before?

Glaucon:: Certainly.

Socrates:: The same natures must still be chosen, and the preference again given to the surest and the bravest, and, if possible, to the fairest; and, having noble and generous tempers, they should also have the natural gifts which will facilitate their education.

Glaucon:: And what are these?

Socrates:: Such gifts as keenness and ready powers of acquisition; for the mind more often faints from the severity of study than from the severity of gymnastics: the toil is more entirely the mind's own, and is not shared with the body.

Glaucon:: Very true.

Socrates:: Further, he of whom we are in search should have a good memory, and be an unwearied solid man who is a lover of labor in any line; or he will never be able to endure the great amount of bodily exercise and to go through all the intellectual discipline and study which we require of him.

Glaucon:: Certainly, he must have natural gifts.

Socrates:: The mistake at present is, that those who study philosophy have no vocation, and this, as I was before saying, is the reason why she has fallen into disrepute: her true sons should take her by the hand and not bastards.

Glaucon:: What do you mean?

Socrates:: In the first place, her votary should not have a lame or halting industry—I mean, that he should not be half industrious and half idle: as, for example, when a man is a lover of gymnastic and hunting, and all other bodily exercises, but a hater rather than a lover of the labor of learning or listening or enquiring. Or the occupation to which he devotes himself may be of an opposite kind, and he may have the other sort of lameness.

Glaucon:: Certainly.

Socrates:: And as to truth, is not a soul equally to be deemed halt and lame which hates voluntary falsehood and is extremely indignant at herself and others when they tell lies, but is patient of involuntary falsehood, and does not mind wallowing like a swinish beast in the mire of ignorance, and has no shame at being detected?

Glaucon:: To be sure.

Socrates:: And, again, in respect of temperance, courage, magnificence, and every other virtue, should we not carefully distinguish between the true son and the bastard? for where there is no discernment of such qualities states and individuals unconsciously err; and the state makes a ruler, and the individual a friend, of one who, being defective in some part of virtue, is in a figure lame or a bastard.

Glaucon:: That is very true.

Socrates:: All these things, then, will have to be carefully considered by us; and if only those whom we introduce to this vast system of education and training are sound in body and mind, justice herself will have nothing to say against us, and we shall be the saviors of the constitution and of the State; but, if our pupils are men of another stamp, the reverse will happen, and we shall pour a still greater flood of ridicule on philosophy than she has to endure at present.

Glaucon:: That would not be creditable.

Socrates:: Certainly not, and yet perhaps, in thus turning jest into earnest I am equally ridiculous.

Glaucon:: In what respect?

Socrates:: I had forgotten, that we were not serious, and spoke with too much excitement. For when I saw philosophy so undeservedly trampled under foot of men I could not help feeling a sort of indignation at the authors of her disgrace: and my anger made me too vehement.

Glaucon:: Indeed! I was listening, and did not think so.

Socrates:: But I, who am the speaker, felt that I was. And now let me remind you that, although in our former selection we chose old men, we must not do so in this. Solon was under a delusion when he said that a man when he grows old may learn many things—for he can no more learn much than he can run much; youth is the time for any extraordinary toil.

Glaucon:: Of course.

Socrates:: And, therefore, calculation and geometry and all the other elements of instruction, which are a preparation for dialectic, should be presented to the mind in childhood; not, however, under any notion of forcing our system of education.

Glaucon:: Why not?

Socrates:: Because a freeman ought not to be a slave in the acquisition of knowledge of any kind. Bodily exercise, when compulsory, does no harm to the body; but knowledge which is acquired under compulsion obtains no hold on the mind.

Glaucon:: Very true.

Socrates:: Then, my good friend, do not use compulsion, but let early education be a sort of amusement; you will then be better able to find out the natural bent.

Glaucon:: That is a very rational notion.

Socrates:: Do you remember that the children, too, were to be taken to see the battle on horseback; and that if there were no danger they were to be brought close up and, like young hounds, have a taste of blood given them?

Glaucon:: Yes, I remember.

Socrates:: The same practice may be followed, in all these things—labors, lessons, dangers—and he who is most at home in all of them ought to be enrolled in a select number.

Glaucon:: At what age?

Socrates:: At the age when the necessary gymnastics are over: the period whether of two or three years which passes in this sort of training is useless for any other purpose; for sleep and exercise are unpropitious to learning; and the trial of who is first in gymnastic exercises is one of the most important tests to which our youth are subjected.

Glaucon:: Certainly.

Socrates:: After that time those who are selected from the class of twenty years old will be promoted to higher honour, and the sciences which they learned without any order in their early education will now be brought together, and they will be able to see the natural relationship of them to one another and to true being.

Glaucon:: Yes, that is the only kind of knowledge which takes lasting root.

Socrates:: Yes, and the capacity for such knowledge is the great criterion of dialectical talent: the comprehensive mind is always the dialectical.

Glaucon:: I agree with you.

Socrates:: These, are the points which you must consider; and those who have most of this comprehension, and who are most steadfast in their learning, and in their military and other appointed duties, when they have arrived at the age of thirty will have to be chosen by you out of the select class, and elevated to higher honour; and you will have to prove them by the help of dialectic, in order to learn which of them is able to give up the use of sight and the other senses, and in company with truth to attain absolute being: And here, my friend, great caution is required.

Glaucon:: Why great caution?

Socrates:: Do you not remark, how great is the evil which dialectic has introduced?

Glaucon:: What evil?

Socrates:: The students of the art are filled with lawlessness.

Glaucon:: Quite true.

Socrates:: Do you think that there is anything so very unnatural or inexcusable in their case? or will you make allowance for them?

Glaucon:: In what way make allowance?

Socrates:: I want you, by way of parallel, to imagine a supposititious son who is brought up in great wealth; he is one of a great and numerous family, and has many flatterers. When he grows up to manhood, he learns that his alleged are not his real parents; but who the real are he is unable to discover. Can you guess how he will be likely to behave towards his flatterers and his supposed parents, first of all during the period when he is ignorant of the false relation, and then again when he knows? Or shall I guess for you?

Glaucon:: If you please.

Socrates:: Then I should say, that while he is ignorant of the truth he will be likely to honour his father and his mother and his supposed relations more than the flatterers; he will be less inclined to neglect them when in need, or to do or say anything against them; and he will be less willing to disobey them in any important matter.

Glaucon:: He will.

Socrates:: But when he has made the discovery, I should imagine that he would diminish his honour and regard for them, and would become more devoted to the flatterers; their influence over him would greatly increase; he would now live after their ways, and openly associate with them, and, unless he were of an unusually good disposition, he would trouble himself no more about his supposed parents or other relations.

Glaucon:: Well, all that is very probable. But how is the image applicable to the disciples of philosophy?

Socrates:: In this way: you know that there are certain principles about justice and honour, which were taught us in childhood, and under their parental authority we have been brought up, obeying and honouring them.

Glaucon:: That is true.

Socrates:: There are also opposite maxims and habits of pleasure which flatter and attract the soul, but do not influence those of us who have any sense of right, and they continue to obey and honour the maxims of their fathers.

Glaucon:: True.

Socrates:: Now, when a man is in this state, and the questioning spirit asks what is fair or honorable, and he answers as the legislator has taught him, and then arguments many and diverse refute his words, until he is driven into believing that nothing is honorable any more than dishonorable, or just and good any more than the reverse, and so of all the notions which he most valued, do you think that he will still honour and obey them as before?

Glaucon:: Impossible.

Socrates:: And when he ceases to think them honorable and natural as heretofore, and he fails to discover the true, can he be expected to pursue any life other than that which flatters his desires?

Glaucon:: He cannot.

Socrates:: And from being a keeper of the law he is converted into a breaker of it?

Glaucon:: Unquestionably.

Socrates:: Now all this is very natural in students of philosophy such as I have described, and also, as I was just now saying, most excusable.

Glaucon:: Yes, and, I may add, pitiable.

Socrates:: Therefore, that your feelings may not be moved to pity about our citizens who are now thirty years of age, every care must be taken in introducing them to dialectic.

Glaucon:: Certainly.

Socrates:: There is a danger lest they should taste the dear delight too early; for youngsters, as you may have observed, when they first get the taste in their mouths, argue for amusement, and are always contradicting and refuting others in imitation of those who refute them; like puppy-dogs, they rejoice in pulling and tearing at all who come near them.

Glaucon:: Yes, there is nothing which they like better.

Socrates:: And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything which they believed before, and hence, not only they, but philosophy and all that relates to it is apt to have a bad name with the rest of the world.

Glaucon:: Too true.

Socrates:: But when a man begins to get older, he will no longer be guilty of such insanity; he will imitate the dialectician who is seeking for truth, and not the eristic, who is contradicting for the sake of amusement; and the greater moderation of his character will increase instead of diminishing the honour of the pursuit.

Glaucon:: Very true.

Socrates:: And did we not make special provision for this, when we said that the disciples of philosophy were to be orderly and steadfast, not, as now, any chance aspirant or intruder?

Glaucon:: Very true.

Socrates:: Suppose, the study of philosophy to take the place of gymnastics and to be continued diligently and earnestly and exclusively for twice the number of years which were passed in bodily exercise—will that be enough?

Glaucon:: Would you say six or four years?

Socrates:: Say five years, at the end of the time they must be sent down again into the den and compelled to hold any military or other office which young men are qualified to hold: in this way they will get their experience of life, and there will be an opportunity of trying whether, when they are drawn all manner of ways by temptation, they will stand firm or flinch.

Glaucon:: And how long is this stage of their lives to last?

Socrates:: Fifteen years; and when they have reached fifty years of age, then let those who still survive and have distinguished themselves in every action of their lives and in every branch of knowledge come at last to their consummation: the time has now arrived at which they must raise the eye of the soul to the universal light which lightens all things, and behold the absolute good; for that is the pattern according to which they are to order the State and the lives of individuals, and the remainder of their own lives also; making philosophy their chief pursuit, but, when their turn comes, toiling also at politics and ruling for the public good, not as though they were performing some heroic action, but simply as a matter of duty; and when they have brought up in each generation others like themselves and left them in their place to be governors of the State, then they will depart to the Islands of the Blest and dwell there; and the city will give them public memorials and sacrifices and honour them, if the Pythian oracle consent, as demigods, but if not, as in any case blessed and divine.

Glaucon:: You are a sculptor, Socrates, and have made statues of our governors faultless in beauty.

Socrates:: Yes, Glaucon, and of our governesses too; for you must not suppose that what I have been saying applies to men only and not to women as far as their natures can go.

Glaucon:: There you are right, since we have made them to share in all things like the men.

Socrates:: Well, and you would agree (would you not?) that what has been said about the State and the government is not a mere dream, and although difficult not impossible, but only possible in the way which has been supposed; that is to say, when the true philosopher kings are born in a State, one or more of them, despising the honors of this present world which they deem mean and worthless, esteeming above all things right and the honour that springs from right, and regarding justice as the greatest and most necessary of all things, whose ministers they are, and whose principles will be exalted by them when they set in order their own city?

Glaucon:: How will they proceed?

Socrates:: They will begin by sending out into the country all the inhabitants of the city who are more than ten years old, and will take possession of their children, who will be unaffected by the habits of their parents; these they will train in their own habits and laws, I mean in the laws which we have given them: and in this way the State and constitution of which we were speaking will soonest and most easily attain happiness, and the nation which has such a constitution will gain most.

Glaucon:: Yes, that will be the best way. And I think, Socrates, that you have very well described how, if ever, such a constitution might come into being.

Socrates:: Enough then of the perfect State, and of the man who bears its image—there is no difficulty in seeing how we shall describe him.

Glaucon:: There is no difficulty, and I agree with you in thinking that nothing more need be said.

## BOOK VIII.

Socrates:: And so, Glaucon, we have arrived at the conclusion that in the perfect State wives and children are to be in common; and that all education and the pursuits of war and peace are also to be common, and the best philosophers and the bravest warriors are to be their kings?

Glaucon:: That has been acknowledged.

Socrates:: Yes, and we have further acknowledged that the governors, when appointed themselves, will take their soldiers and place them in houses such as we were describing, which are common to all, and contain nothing private, or individual; and about their property, you remember what we agreed?

Glaucon:: Yes, I remember that no one was to have any of the ordinary possessions of mankind; they were to be warrior athletes and guardians, receiving from the other citizens, in lieu of annual payment, only their maintenance, and they were to take care of themselves and of the whole State.

Socrates:: True, and now that this division of our task is concluded, let us find the point at which we digressed, that we may return into the old path.

Glaucon:: There is no difficulty in returning; you implied, then as now, that you had finished the description of the State: you said that such a State was good, and that the man was good who answered to it, although, as now appears, you had more excellent things to relate both of State and man. And you said further, that if this was the true form, then the others were false; and of the false forms, you said, as I remember, that there were four principal ones, and that their defects, and the defects of the individuals corresponding to them, were worth examining. When we had seen all the individuals, and finally agreed as to who was the best and who was the worst of them, we were to consider whether the best was not also the happiest, and the worst the most miserable. I asked you what were the four forms of government of which you spoke, and then Polemarchus and Adeimantus put in their word; and you began again, and have found your way to the point at which we have now arrived.

Socrates:: Your recollection, is most exact.

Glaucon:: Then, like a wrestler, you must put yourself again in the same position; and let me ask the same questions, and do you give me the same answer which you were about to give me then.

Socrates:: Yes, if I can, I will.

Glaucon:: I shall particularly wish to hear what were the four constitutions of which you were speaking.

Socrates:: That question, is easily answered: the four governments of which I spoke, so far as they have distinct names, are, first, those of Crete and Sparta, which are generally applauded; what is termed oligarchy comes next; this is not equally approved, and is a form of government which teems with evils: thirdly, democracy, which naturally follows oligarchy, although very different: and lastly comes tyranny, great and famous, which differs from them all, and is the fourth and worst disorder of a State. I do not know, do you? of any other constitution which can be said to have a distinct character. There are lordships and principalities which are bought and sold, and some other intermediate forms of government. But these are nondescripts and may be found equally among Hellenes and among barbarians.

Glaucon:: Yes, we certainly hear of many curious forms of government which exist among them.

Socrates:: Do you know, that governments vary as the dispositions of men vary, and that there must be as many of the one as there are of the other? For we cannot suppose that States are made of 'oak and rock,' and not out of the human natures which are in them, and which in a figure turn the scale and draw other things after them?

Glaucon:: Yes, the States are as the men are; they grow out of human characters.

Socrates:: Then if the constitutions of States are five, the dispositions of individual minds will also be five?

Glaucon:: Certainly.

Socrates:: Him who answers to aristocracy, and whom we rightly call just and good, we have already described.

Glaucon:: We have.

Socrates:: Then let us now proceed to describe the inferior sort of natures, being the contentious and ambitious, who answer to the Spartan polity; also the oligarchical, democratical, and tyrannical. Let us place the most just by the side of the most unjust, and when we see them we shall be able to compare the relative happiness or unhappiness of him who leads a life of pure justice or pure injustice. The enquiry will then be completed. And we shall know whether we ought to pursue injustice, as Thrasymachus advises, or in accordance with the conclusions of the argument to prefer justice.

Glaucon:: Certainly, we must do as you say.

Socrates:: Shall we follow our old plan, which we adopted with a view to clearness, of taking the State first and then proceeding to the individual, and begin with the government of honour?—I know of no name for such a government other than timocracy, or perhaps timarchy. We will compare with this the like character in the individual; and, after that, consider oligarchy and the oligarchical man; and then again we will turn our attention to democracy and the democratical man; and lastly, we will go and view the city of tyranny, and once more take a look into the tyrant's soul, and try to arrive at a satisfactory decision.

Glaucon:: That way of viewing and judging of the matter will be very suitable.

Socrates:: First, then, let us enquire how timocracy (the government of honour) arises out of aristocracy (the government of the best). Clearly, all political changes originate in divisions of the actual governing power; a government which is united, however small, cannot be moved.

Glaucon:: Very true.

Socrates:: In what way, then, will our city be moved, and in what manner will the two classes of auxiliaries and rulers disagree among themselves or with one another? Shall we, after the manner of Homer, pray the Muses to tell us 'how discord first arose'? Shall we imagine them in solemn mockery, to play and jest with us as if we were children, and to address us in a lofty tragic vein, making believe to be in earnest?

Glaucon:: How would they address us?

Socrates:: After this manner:—A city which is thus constituted can hardly be shaken; but, seeing that everything which has a beginning has also an end, even a constitution such as yours will not last for ever, but will in time be dissolved. And this is the dissolution:—In plants that grow in the earth, as well as in animals that move on the earth's surface, fertility and sterility of soul and body occur when the circumferences of the circles of each are completed, which in short-lived existences pass over a short space, and in long-lived ones over a long space. But to the knowledge of human fecundity and sterility all the wisdom and education of your rulers will not attain; the laws which regulate them will not be discovered by an intelligence which is alloyed with sense, but will escape them, and they will bring children into the world when they ought not. Now that which is of divine birth has a period which is contained in a perfect number, but the period of human birth is comprehended in a number in which first increments by involution and evolution [or squared and cubed] obtaining three intervals and four terms of like and unlike, waxing and waning numbers, make all the terms commensurable and agreeable to one another. The base of these (3) with a third added (4) when combined with five (20) and raised to the third power furnishes two harmonies; the first a square which is a hundred times as great (400 = 4 × 100), and the other a figure having one side equal to the former, but oblong, consisting of a hundred numbers squared upon rational diameters of a square (i.e. omitting fractions), the side of which is five (7 × 7 = 49 × 100 = 4900), each of them being less by one (than the perfect square which includes the fractions, sc. 50) or less by two perfect squares of irrational diameters (of a square the side of which is five = 50 + 50 = 100); and a hundred cubes of three (27 × 100 = 2700 + 4900 + 400 = 8000). Now this number represents a geometrical figure which has control over the good and evil of births. For when your guardians are ignorant of the law of births, and unite bride and bridegroom out of season, the children will not be goodly or fortunate. And though only the best of them will be appointed by their predecessors, still they will be unworthy to hold their fathers' places, and when they come into power as guardians, they will soon be found to fail in taking care of us, the Muses, first by undervaluing music; which neglect will soon extend to gymnastic; and hence the young men of your State will be less cultivated. In the succeeding generation rulers will be appointed who have lost the guardian power of testing the metal of your different races, which, like Hesiod’s, are of gold and silver and brass and iron. And so iron will be mingled with silver, and brass with gold, and hence there will arise dissimilarity and inequality and irregularity, which always and in all places are causes of hatred and war. This the Muses affirm to be the stock from which discord has sprung, wherever arising; and this is their answer to us.

Glaucon:: Yes, and we may assume that they answer truly.

Socrates:: Why, yes, of course they answer truly; how can the Muses speak falsely?

Glaucon:: And what do the Muses say next?

Socrates:: When discord arose, then the two races were drawn different ways: the iron and brass fell to acquiring money and land and houses and gold and silver; but the gold and dual silver races, not wanting money but having the true riches in their own nature, inclined towards virtue and the ancient order of things. There was a battle between them, and at last they agreed to distribute their land and houses among individual owners; and they enslaved their friends and maintainers, whom they had formerly protected in the condition of freemen, and made of them subjects and servants; and they themselves were engaged in war and in keeping a watch against them.

Glaucon:: I believe that you have rightly conceived the origin of the change.

Socrates:: And the new government which thus arises will be of a form intermediate between oligarchy and aristocracy?

Glaucon:: Very true.

Socrates:: Such will be the change, and after the change has been made, how will they proceed? Clearly, the new State, being in a mean between oligarchy and the perfect State, will partly follow one and partly the other, and will also have some peculiarities.

Glaucon:: True.

Socrates:: In the honor given to rulers, in the abstinence of the warrior class from agriculture, handicrafts, and trade in general, in the institution of common meals, and in the attention paid to gymnastics and military training—in all these respects this State will resemble the former.

Glaucon:: True.

Socrates:: But in the fear of admitting philosophers to power, because they are no longer to be had simple and earnest, but are made up of mixed elements; and in turning from them to passionate and less complex characters, who are by nature fitted for war rather than peace; and in the value set by them upon military stratagems and contrivances, and in the waging of everlasting wars—this State will be for the most part peculiar.

Glaucon:: Yes.

Socrates:: Yes, and men of this stamp will be covetous of money, like those who live in oligarchies; they will have a fierce secret longing after gold and silver, which they will hoard in dark places, having magazines and treasuries of their own for the deposit and concealment of them; also castles which are just nests for their eggs, and in which they will spend large sums on their wives, or on any others whom they please.

Glaucon:: That is most true.

Socrates:: And they are miserly because they have no means of openly acquiring the money which they prize;

they will spend that which is another man’s on the gratification of their desires, stealing their pleasures and running away like children from the law, their father: they have been schooled not by gentle influences but by force, for they have neglected her who is the true Muse, the companion of reason and philosophy, and have honored gymnastic more than music.

Glaucon:: Undoubtedly, the form of government which you describe is a mixture of good and evil.

Socrates:: Why, there is a mixture, but one thing, and one thing only, is predominantly seen,—the spirit of contention and ambition; and these are due to the prevalence of the passionate or spirited element.

Glaucon:: Assuredly.

Socrates:: Such is the origin and such the character of this State, which has been described in outline only; the more perfect execution was not required, for a sketch is enough to show the type of the most perfectly just and most perfectly unjust; and to go through all the States and all the characters of men, omitting none of them, would be an interminable labor.

Glaucon:: Very true.

Socrates:: Now what man answers to this form of government—how did he come into being, and what is he like?

Adeimantus:: I think, that in the spirit of contention which characterizes him, he is not unlike our friend Glaucon.

Socrates:: Perhaps, he may be like him in that one point; but there are other respects in which he is very different.

Adeimantus:: In what respects?

Socrates:: He should have more of self-assertion and be less cultivated, and yet a friend of culture; and he should be a good listener, but no speaker. Such a person is apt to be rough with slaves, unlike the educated man, who is too proud for that; and he will also be courteous to freemen, and remarkably obedient to authority; he is a lover of power and a lover of honor; claiming to be a ruler, not because he is eloquent, or on any ground of that sort, but because he is a soldier and has performed feats of arms; he is also a lover of gymnastic exercises and of the chase.

Adeimantus:: Yes, that is the type of character which answers to timocracy.

Socrates:: Such an one will despise riches only when he is young; but as he gets older he will be more and more attracted to them, because he has a piece of the avaricious nature in him, and is not single-minded towards virtue, having lost his best guardian.

Adeimantus:: Who was that?

Socrates:: Philosophy, tempered with music, who comes and takes up her abode in a man, and is the only savior of his virtue throughout life.

Adeimantus:: Good.

Socrates:: Such, is the timocratical youth, and he is like the timocratical State.

Adeimantus:: Exactly.

Socrates:: His origin is as follows:—He is often the young son of a brave father, who dwells in an ill-governed city, of which he declines the honors and offices, and will not go to law, or exert himself in any way, but is ready to waive his rights in order that he may escape trouble.

Adeimantus:: And how does the son come into being?

Socrates:: The character of the son begins to develop when he hears his mother complaining that her husband has no place in the government, of which the consequence is that she has no precedence among other women. Further, when she sees her husband not very eager about money, and instead of battling and railing in the law courts or assembly, taking whatever happens to him quietly; and when she observes that his thoughts always centre in himself, while he treats her with very considerable indifference, she is annoyed, and says to her son that his father is only half a man and far too easy-going: adding all the other complaints about her own ill-treatment which women are so fond of rehearsing.

Adeimantus:: Yes, they give us plenty of them, and their complaints are so like themselves.

Socrates:: And you know, that the old servants also, who are supposed to be attached to the family, from time to time talk privately in the same strain to the son; and if they see any one who owes money to his father, or is wronging him in any way, and he fails to prosecute them, they tell the youth that when he grows up he must retaliate upon people of this sort, and be more of a man than his father. He has only to walk abroad and he hears and sees the same sort of thing: those who do their own business in the city are called simpletons, and held in no esteem, while the busy-bodies are honored and applauded. The result is that the young man, hearing and seeing all these things—hearing, too, the words of his father, and having a nearer view of his way of life, and making comparisons of him and others—is drawn opposite ways: while his father is watering and nourishing the rational principle in his soul, the others are encouraging the passionate and appetitive; and he being not originally of a bad nature, but having kept bad company, is at last brought by their joint influence to a middle point, and gives up the kingdom which is within him to the middle principle of contentiousness and passion, and becomes arrogant and ambitious.

Adeimantus:: You seem to me to have described his origin perfectly.

Socrates:: Then we have now, the second form of government and the second type of character?

Adeimantus:: We have.

Socrates:: Next, let us look at another man who, as Aeschylus says;

> 'Is set over against another State;'

Socrates:: or rather, as our plan requires, begin with the State.

Adeimantus:: By all means.

Socrates:: I believe that oligarchy follows next in order.

Adeimantus:: And what manner of government do you term oligarchy?

Socrates:: A government resting on a valuation of property, in which the rich have power and the poor man is deprived of it.

Adeimantus:: I understand.

Socrates:: Ought I not to begin by describing how the change from timocracy to oligarchy arises?

Adeimantus:: Yes.

Socrates:: Well, no eyes are required in order to see how the one passes into the other.

Adeimantus:: How?

Socrates:: The accumulation of gold in the treasury of private individuals is the ruin of timocracy; they invent illegal modes of expenditure; for what do they or their wives care about the law?

Adeimantus:: Yes, indeed.

Socrates:: And then one, seeing another grow rich, seeks to rival him, and thus the great mass of the citizens become lovers of money.

Adeimantus:: Likely enough.

Socrates:: And so they grow richer and richer, and the more they think of making a fortune the less they think of virtue; for when riches and virtue are placed together in the scales of the balance, the one always rises as the other falls.

Adeimantus:: True.

Socrates:: And in proportion as riches and rich men are honored in the State, virtue and the virtuous are dishonored.

Adeimantus:: Clearly.

Socrates:: And what is honored is cultivated, and that which has no honor is neglected.

Adeimantus:: That is obvious.

Socrates:: And so at last, instead of loving contention and glory, men become lovers of trade and money; they honor and look up to the rich man, and make a ruler of him, and dishonor the poor man.

Adeimantus:: They do so.

Socrates:: They next proceed to make a law which fixes a sum of money as the qualification of citizenship; the sum is higher in one place and lower in another, as the oligarchy is more or less exclusive; and they allow no one whose property falls below the amount fixed to have any share in the government. These changes in the constitution they effect by force of arms, if intimidation has not already done their work.

Adeimantus:: Very true.

Socrates:: And this, speaking generally, is the way in which oligarchy is established.

Adeimantus:: Yes, but what are the characteristics of this form of government, and what are the defects of which we were speaking?

Socrates:: First of all, consider the nature of the qualification. Just think what would happen if pilots were to be chosen according to their property, and a poor man were refused permission to steer, even though he were a better pilot?

Adeimantus:: You mean that they would shipwreck?

Socrates:: Yes; and is not this true of the government of anything?

Adeimantus:: I should imagine so.

Socrates:: Except a city?—or would you include a city?

Adeimantus:: Nay, the case of a city is the strongest of all, inasmuch as the rule of a city is the greatest and most difficult of all.

Socrates:: This, then, will be the first great defect of oligarchy?

Adeimantus:: Clearly.

Socrates:: And here is another defect which is quite as bad.

Adeimantus:: What defect?

Socrates:: The inevitable division: such a State is not one, but two States, the one of poor, the other of rich men; and they are living on the same spot and always conspiring against one another.

Adeimantus:: That, surely, is at least as bad.

Socrates:: Another discreditable feature is, that, for a like reason, they are incapable of carrying on any war. Either they arm the multitude, and then they are more afraid of them than of the enemy; or, if they do not call them out in the hour of battle, they are oligarchs indeed, few to fight as they are few to rule. And at the same time their fondness for money makes them unwilling to pay taxes.

Adeimantus:: How discreditable!

Socrates:: And, as we said before, under such a constitution the same persons have too many callings—they are husbandmen, tradesmen, warriors, all in one. Does that look well?

Adeimantus:: Anything but well.

Socrates:: There is another evil which is, perhaps, the greatest of all, and to which this State first begins to be liable.

Adeimantus:: What evil?

Socrates:: A man may sell all that he has, and another may acquire his property; yet after the sale he may dwell in the city of which he is no longer a part, being neither trader, nor artisan, nor horseman, nor hoplite, but only a poor, helpless creature.

Adeimantus:: Yes, that is an evil which also first begins in this State.

Socrates:: The evil is certainly not prevented there; for oligarchies have both the extremes of great wealth and utter poverty.

Adeimantus:: True.

Socrates:: But think again: In his wealthy days, while he was spending his money, was a man of this sort a whit more good to the State for the purposes of citizenship? Or did he only seem to be a member of the ruling body, although in truth he was neither ruler nor subject, but just a spendthrift?

Adeimantus:: As you say, he seemed to be a ruler, but was only a spendthrift.

Socrates:: May we not say that this is the drone in the house who is like the drone in the honeycomb, and that the one is the plague of the city as the other is of the hive?

Adeimantus:: Just so, Socrates.

Socrates:: And God has made the flying drones, Adeimantus, all without stings, whereas of the walking drones he has made some without stings but others have dreadful stings; of the stingless class are those who in their old age end as paupers; of the stingers come all the criminal class, as they are termed.

Adeimantus:: Most true.

Socrates:: Clearly then, whenever you see paupers in a State, somewhere in that neighborhood there are hidden away thieves and cut-purses and robbers of temples, and all sorts of malefactors.

Adeimantus:: Clearly.

Socrates:: Well, and in oligarchical States do you not find paupers?

Adeimantus:: Yes, nearly everybody is a pauper who is not a ruler.

Socrates:: And may we be so bold as to affirm that there are also many criminals to be found in them, rogues who have stings, and whom the authorities are careful to restrain by force?

Adeimantus:: Certainly, we may be so bold.

Socrates:: The existence of such persons is to be attributed to want of education, ill-training, and an evil constitution of the State?

Adeimantus:: True.

Socrates:: Such, then, is the form and such are the evils of oligarchy; and there may be many other evils.

Adeimantus:: Very likely.

Socrates:: Then oligarchy, or the form of government in which the rulers are elected for their wealth, may now be dismissed. Let us next proceed to consider the nature and origin of the individual who answers to this State.

Adeimantus:: By all means.

Socrates:: Does not the timocratical man change into the oligarchical on this wise?

Adeimantus:: How?

Socrates:: A time arrives when the representative of timocracy has a son: at first he begins by emulating his father and walking in his footsteps, but presently he sees him of a sudden foundering against the State as upon a sunken reef, and he and all that he has is lost; he may have been a general or some other high officer who is brought to trial under a prejudice raised by informers, and either put to death, or exiled, or deprived of the privileges of a citizen, and all his property taken from him.

Adeimantus:: Nothing more likely.

Socrates:: And the son has seen and known all this—he is a ruined man, and his fear has taught him to knock ambition and passion headforemost from his bosom's throne; humbled by poverty he takes to money-making and by mean and miserly savings and hard work gets a fortune together. Is not such an one likely to seat the concupiscent and covetous element on the vacant throne and to suffer it to play the great king within him, girt with tiara and chain and scimitar?

Adeimantus:: Most true.

Socrates:: And when he has made reason and spirit sit down on the ground obediently on either side of their sovereign, and taught them to know their place, he compels the one to think only of how lesser sums may be turned into larger ones, and will not allow the other to worship and admire anything but riches and rich men, or to be ambitious of anything so much as the acquisition of wealth and the means of acquiring it.

Adeimantus:: Of all changes, there is none so speedy or so sure as the conversion of the ambitious youth into the avaricious one.

Socrates:: And the avaricious, is the oligarchical youth?

Adeimantus:: Yes, at any rate the individual out of whom he came is like the State out of which oligarchy came.

Socrates:: Let us then consider whether there is any likeness between them.

Adeimantus:: Very good.

Socrates:: First, then, they resemble one another in the value which they set upon wealth?

Adeimantus:: Certainly.

Socrates:: Also in their penurious, laborious character; the individual only satisfies his necessary appetites, and confines his expenditure to them; his other desires he subdues, under the idea that they are unprofitable.

Adeimantus:: True.

Socrates:: He is a shabby fellow, who saves something out of everything and makes a purse for himself; and this is the sort of man whom the vulgar applaud. Is he not a true image of the State which he represents?

Adeimantus:: He appears to me to be so; at any rate money is highly valued by him as well as by the State.

Socrates:: You see that he is not a man of cultivation.

Adeimantus:: I imagine not, had he been educated he would never have made a blind god director of his chorus, or given him chief honor.

Socrates:: Excellent! Yet consider: Must we not further admit that owing to this want of cultivation there will be found in him drone-like desires as of pauper and rogue, which are forcibly kept down by his general habit of life?

Adeimantus:: True.

Socrates:: Do you know where you will have to look if you want to discover his rogueries?

Adeimantus:: Where must I look?

Socrates:: You should see him where he has some great opportunity of acting dishonestly, as in the guardianship of an orphan.

Adeimantus:: Aye.

Socrates:: It will be clear enough then that in his ordinary dealings which give him a reputation for honesty he coerces his bad passions by an enforced virtue; not making them see that they are wrong, or taming them by reason, but by necessity and fear constraining them, and because he trembles for his possessions.

Adeimantus:: To be sure.

Socrates:: Yes, indeed, my dear friend, but you will find that the natural desires of the drone commonly exist in him all the same whenever he has to spend what is not his own.

Adeimantus:: Yes, and they will be strong in him too.

Socrates:: The man, then, will be at war with himself; he will be two men, and not one; but, in general, his better desires will be found to prevail over his inferior ones.

Adeimantus:: True.

Socrates:: For these reasons such an one will be more respectable than most people; yet the true virtue of a unanimous and harmonious soul will flee far away and never come near him.

Adeimantus:: I should expect so.

Socrates:: And surely, the miser individually will be an ignoble competitor in a State for any prize of victory, or other object of honorable ambition; he will not spend his money in the contest for glory; so afraid is he of awakening his expensive appetites and inviting them to help and join in the struggle; in true oligarchical fashion he fights with a small part only of his resources, and the result commonly is that he loses the prize and saves his money.

Adeimantus:: Very true.

Socrates:: Can we any longer doubt, then, that the miser and money-maker answers to the oligarchical State?

Adeimantus:: There can be no doubt.

Socrates:: Next comes democracy; of this the origin and nature have still to be considered by us; and then we will enquire into the ways of the democratic man, and bring him up for judgment.

Adeimantus:: That, is our method.

Socrates:: Well, and how does the change from oligarchy into democracy arise? Is it not on this wise?—The good at which such a State aims is to become as rich as possible, a desire which is insatiable?

Adeimantus:: What then?

Socrates:: The rulers, being aware that their power rests upon their wealth, refuse to curtail by law the extravagance of the spendthrift youth because they gain by their ruin; they take interest from them and buy up their estates and thus increase their own wealth and importance?

Adeimantus:: To be sure.

Socrates:: There can be no doubt that the love of wealth and the spirit of moderation cannot exist together in citizens of the same state to any considerable extent; one or the other will be disregarded.

Adeimantus:: That is tolerably clear.

Socrates:: And in oligarchical States, from the general spread of carelessness and extravagance, men of good family have often been reduced to beggary?

Adeimantus:: Yes, often.

Socrates:: And still they remain in the city; there they are, ready to sting and fully armed, and some of them owe money, some have forfeited their citizenship; a third class are in both predicaments; and they hate and conspire against those who have got their property, and against everybody else, and are eager for revolution.

Adeimantus:: That is true.

Socrates:: On the other hand, the men of business, stooping as they walk, and pretending not even to see those whom they have already ruined, insert their sting—that is, their money—into some one else who is not on his guard against them, and recover the parent sum many times over multiplied into a family of children: and so they make drone and pauper to abound in the State.

Adeimantus:: Yes, there are plenty of them—that is certain.

Socrates:: The evil blazes up like a fire; and they will not extinguish it, either by restricting a man's use of his own property, or by another remedy:

Adeimantus:: What other?

Socrates:: One which is the next best, and has the advantage of compelling the citizens to look to their characters:—Let there be a general rule that every one shall enter into voluntary contracts at his own risk, and there will be less of this scandalous money-making, and the evils of which we were speaking will be greatly lessened in the State.

Adeimantus:: Yes, they will be greatly lessened.

Socrates:: At present the governors, induced by the motives which I have named, treat their subjects badly; while they and their adherents, especially the young men of the governing class, are habituated to lead a life of luxury and idleness both of body and mind; they do nothing, and are incapable of resisting either pleasure or pain.

Adeimantus:: Very true.

Socrates:: They themselves care only for making money, and are as indifferent as the pauper to the cultivation of virtue.

Adeimantus:: Yes, quite as indifferent.

Socrates:: Such is the state of affairs which prevails among them. And often rulers and their subjects may come in one another's way, whether on a journey or on some other occasion of meeting, on a pilgrimage or a march, as fellow-soldiers or fellow-sailors; aye and they may observe the behavior of each other in the very moment of danger—for where danger is, there is no fear that the poor will be despised by the rich—and very likely the wiry sunburnt poor man may be placed in battle at the side of a wealthy one who has never spoilt his complexion and has plenty of superfluous flesh— when he sees such an one puffing and at his wits'-end, how can he avoid drawing the conclusion that men like him are only rich because no one has the courage to despoil them? And when they meet in private will not people be saying to one another 'Our warriors are not good for much'?

Adeimantus:: Yes, I am quite aware that this is their way of talking.

Socrates:: And, as in a body which is diseased the addition of a touch from without may bring on illness, and sometimes even when there is no external provocation a commotion may arise within—in the same way wherever there is weakness in the State there is also likely to be illness, of which the occasion may be very slight, the one party introducing from without their oligarchical, the other their democratical allies, and then the State falls sick, and is at war with herself; and may be at times distracted, even when there is no external cause.

Adeimantus:: Yes, surely.

Socrates:: And then democracy comes into being after the poor have conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power; and this is the form of government in which the magistrates are commonly elected by lot.

Adeimantus:: Yes, that is the nature of democracy, whether the revolution has been effected by arms, or whether fear has caused the opposite party to withdraw.

Socrates:: And now what is their manner of life, and what sort of a government have they? for as the government is, such will be the man.

Adeimantus:: Clearly.

Socrates:: In the first place, are they not free; and is not the city full of freedom and frankness—a man may say and do what he likes?

Adeimantus:: 'Tis said so.

Socrates:: And where freedom is, the individual is clearly able to order for himself his own life as he pleases?

Adeimantus:: Clearly.

Socrates:: Then in this kind of State there will be the greatest variety of human natures?

Adeimantus:: There will.

Socrates:: This, then, seems likely to be the fairest of States, being like an embroidered robe which is spangled with every sort of flower. And just as women and children think a variety of colors to be of all things most charming, so there are many men to whom this State, which is spangled with the manners and characters of mankind, will appear to be the fairest of States.

Adeimantus:: Yes.

Socrates:: Yes, my good Sir, and there will be no better in which to look for a government.

Adeimantus:: Why?

Socrates:: Because of the liberty which reigns there—they have a complete assortment of constitutions; and he who has a mind to establish a State, as we have been doing, must go to a democracy as he would to a bazaar at which they sell them, and pick out the one that suits him; then, when he has made his choice, he may found his State.

Adeimantus:: He will be sure to have patterns enough.

Socrates:: And there being no necessity, for you to govern in this State, even if you have the capacity, or to be governed, unless you like, or to go to war when the rest go to war, or to be at peace when others are at peace, unless you are so disposed—there being no necessity also, because some law forbids you to hold office or be a dicast, that you should not hold office or be a dicast, if you have a fancy—is not this a way of life which for the moment is supremely delightful?

Adeimantus:: For the moment, yes.

Socrates:: And is not their humanity to the condemned in some cases quite charming? Have you not observed how, in a democracy, many persons, although they have been sentenced to death or exile, just stay where they are and walk about the world—the gentleman parades like a hero, and nobody sees or cares?

Adeimantus:: Yes, many and many a one.

Socrates:: See too, the forgiving spirit of democracy, and the ‘don’t care’ about trifles, and the disregard which she shows of all the fine principles which we solemnly laid down at the foundation of the city—as when we said that, except in the case of some rarely gifted nature, there never will be a good man who has not from his childhood been used to play amid things of beauty and make of them a joy and a study—how grandly does she trample all these fine notions of ours under her feet, never giving a thought to the pursuits which make a statesman, and promoting to honor any one who professes to be the people’s friend.

Adeimantus:: Yes, she is of a noble spirit.

Socrates:: These and other kindred characteristics are proper to democracy, which is a charming form of government, full of variety and disorder, and dispensing a sort of equality to equals and unequals alike.

Adeimantus:: We know her well.

Socrates:: Consider now, what manner of man the individual is, or rather consider, as in the case of the State, how he comes into being.

Adeimantus:: Very good.

Socrates:: Is not this the way—he is the son of the miserly and oligarchical father who has trained him in his own habits?

Adeimantus:: Exactly.

Socrates:: And, like his father, he keeps under by force the pleasures which are of the spending and not of the getting sort, being those which are called unnecessary?

Adeimantus:: Obviously.

Socrates:: Would you like, for the sake of clearness, to distinguish which are the necessary and which are the unnecessary pleasures?

Adeimantus:: I should.

Socrates:: Are not necessary pleasures those of which we cannot get rid, and of which the satisfaction is a benefit to us? And they are rightly called so, because we are framed by nature to desire both what is beneficial and what is necessary, and cannot help it.

Adeimantus:: True.

Socrates:: We are not wrong therefore in calling them necessary?

Adeimantus:: We are not.

Socrates:: And the desires of which a man may get rid, if he takes pains from his youth upwards—of which the presence, moreover, does no good, and in some cases the reverse of good—shall we not be right in saying that all these are unnecessary?

Adeimantus:: Yes, certainly.

Socrates:: Suppose we select an example of either kind, in order that we may have a general notion of them?

Adeimantus:: Very good.

Socrates:: Will not the desire of eating, that is, of simple food and condiments, in so far as they are required for health and strength, be of the necessary class?

Adeimantus:: That is what I should suppose.

Socrates:: The pleasure of eating is necessary in two ways; it does us good and it is essential to the continuance of life?

Adeimantus:: Yes.

Socrates:: But the condiments are only necessary in so far as they are good for health?

Adeimantus:: Certainly.

Socrates:: And the desire which goes beyond this, of more delicate food, or other luxuries, which might generally be got rid of, if controlled and trained in youth, and is hurtful to the body, and hurtful to the soul in the pursuit of wisdom and virtue, may be rightly called unnecessary?

Adeimantus:: Very true.

Socrates:: May we not say that these desires spend, and that the others make money because they conduce to production?

Adeimantus:: Certainly.

Socrates:: And of the pleasures of love, and all other pleasures, the same holds good?

Adeimantus:: True.

Socrates:: And the drone of whom we spoke was he who was surfeited in pleasures and desires of this sort, and was the slave of the unnecessary desires, whereas he who was subject to the necessary only was miserly and oligarchical?

Adeimantus:: Very true.

Socrates:: Again, let us see how the democratical man grows out of the oligarchical: the following, as I suspect, is commonly the process.

Adeimantus:: What is the process?

Socrates:: When a young man who has been brought up as we were just now describing, in a vulgar and miserly way, has tasted drones' honey and has come to associate with fierce and crafty natures who are able to provide for him all sorts of refinements and varieties of pleasure—then, as you may imagine, the change will begin of the oligarchical principle within him into the democratical?

Adeimantus:: Inevitably.

Socrates:: And as in the city like was helping like, and the change was effected by an alliance from without assisting one division of the citizens, so too the young man is changed by a class of desires coming from without to assist the desires within him, that which is akin and alike again helping that which is akin and alike?

Adeimantus:: Certainly.

Socrates:: And if there be any ally which aids the oligarchical principle within him, whether the influence of a father or of kindred, advising or rebuking him, then there arises in his soul a faction and an opposite faction, and he goes to war with himself.

Adeimantus:: It must be so.

Socrates:: And there are times when the democratical principle gives way to the oligarchical, and some of his desires die, and others are banished; a spirit of reverence enters into the young man's soul and order is restored.

Adeimantus:: Yes, that sometimes happens.

Socrates:: And then, again, after the old desires have been driven out, fresh ones spring up, which are akin to them, and because he their father does not know how to educate them, wax fierce and numerous.

Adeimantus:: Yes, that is apt to be the way.

Socrates:: They draw him to his old associates, and holding secret intercourse with them, breed and multiply in him.

Adeimantus:: Very true.

Socrates:: At length they seize upon the citadel of the young man's soul, which they perceive to be void of all accomplishments and fair pursuits and true words, which make their abode in the minds of men who are dear to the gods, and are their best guardians and sentinels.

Adeimantus:: None better.

Socrates:: False and boastful conceits and phrases mount upwards and take their place.

Adeimantus:: They are certain to do so.

Socrates:: And so the young man returns into the country of the lotus-eaters, and takes up his dwelling there in the face of all men; and if any help be sent by his friends to the oligarchical part of him, the aforesaid vain conceits shut the gate of the king's fastness; and they will neither allow the embassy itself to enter, nor if private advisers offer the fatherly counsel of the aged will they listen to them or receive them. There is a battle and they gain the day, and then modesty, which they call silliness, is ignominiously thrust into exile by them, and temperance, which they nickname unmanliness, is trampled in the mire and cast forth; they persuade men that moderation and orderly expenditure are vulgarity and meanness, and so, by the help of a rabble of evil appetites, they drive them beyond the border.

Adeimantus:: Yes, with a will.

Socrates:: And when they have emptied and swept clean the soul of him who is now in their power and who is being initiated by them in great mysteries, the next thing is to bring back to their house insolence and anarchy and waste and impudence in bright array having garlands on their heads, and a great company with them, hymning their praises and calling them by sweet names; insolence they term breeding, and anarchy liberty, and waste magnificence, and impudence courage. And so the young man passes out of his original nature, which was trained in the school of necessity, into the freedom and libertinism of useless and unnecessary pleasures.

Adeimantus:: Yes, the change in him is visible enough.

Socrates:: After this he lives on, spending his money and labor and time on unnecessary pleasures quite as much as on necessary ones; but if he be fortunate, and is not too much disordered in his wits, when years have elapsed, and the heyday of passion is over—supposing that he then re-admits into the city some part of the exiled virtues, and does not wholly give himself up to their successors—in that case he balances his pleasures and lives in a sort of equilibrium, putting the government of himself into the hands of the one which comes first and wins the turn; and when he has had enough of that, then into the hands of another; he despises none of them but encourages them all equally.

Adeimantus:: Very true.

Socrates:: Neither does he receive or let pass into the fortress any true word of advice; if any one says to him that some pleasures are the satisfactions of good and noble desires, and others of evil desires, and that he ought to use and honor some and chastise and master the others—whenever this is repeated to him he shakes his head and says that they are all alike, and that one is as good as another.

Adeimantus:: Yes, that is the way with him.

Socrates:: Yes, he lives from day to day indulging the appetite of the hour; and sometimes he is lapped in drink and strains of the flute; then he becomes a water-drinker, and tries to get thin; then he takes a turn at gymnastics; sometimes idling and neglecting everything, then once more living the life of a philosopher; often he is busy with politics, and starts to his feet and says and does whatever comes into his head; and, if he is emulous of any one who is a warrior, off he is in that direction, or of men of business, once more in that. His life has neither law nor order; and this distracted existence he terms joy and bliss and freedom; and so he goes on.

Adeimantus:: Yes, he is all liberty and equality.

Socrates:: Yes, his life is motley and manifold and an epitome of the lives of many;—he answers to the State which we described as fair and spangled. And many a man and many a woman will take him for their pattern, and many a constitution and many an example of manners is contained in him.

Adeimantus:: Just so.

Socrates:: Let him then be set over against democracy; he may truly be called the democratic man.

Adeimantus:: Let that be his place.

Socrates:: Last of all comes the most beautiful of all, man and State alike, tyranny and the tyrant; these we have now to consider.

Adeimantus:: Quite true.

Socrates:: Say then, my friend, In what manner does tyranny arise?—that it has a democratic origin is evident.

Adeimantus:: Clearly.

Socrates:: And does not tyranny spring from democracy in the same manner as democracy from oligarchy—I mean, after a sort?

Adeimantus:: How?

Socrates:: The good which oligarchy proposed to itself and the means by which it was maintained was excess of wealth—am I not right?

Adeimantus:: Yes.

Socrates:: And the insatiable desire of wealth and the neglect of all other things for the sake of money-getting was also the ruin of oligarchy?

Adeimantus:: True.

Socrates:: And democracy has her own good, of which the insatiable desire brings her to dissolution?

Adeimantus:: What good?

Socrates:: Freedom, which, as they tell you in a democracy, is the glory of the State—and that therefore in a democracy alone will the freeman of nature deign to dwell.

Adeimantus:: Yes; the saying is in every body's mouth.

Socrates:: I was going to observe, that the insatiable desire of this and the neglect of other things introduces the change in democracy, which occasions a demand for tyranny.

Adeimantus:: How so?

Socrates:: When a democracy which is thirsting for freedom has evil cup-bearers presiding over the feast, and has drunk too deeply of the strong wine of freedom, then, unless her rulers are very amenable and give a plentiful draught, she calls them to account and punishes them, and says that they are cursed oligarchs.

Adeimantus:: Yes, a very common occurrence.

Socrates:: Yes, and loyal citizens are insultingly termed by her slaves who hug their chains and men of naught; she would have subjects who are like rulers, and rulers who are like subjects: these are men after her own heart, whom she praises and honors both in private and public. Now, in such a State, can liberty have any limit?

Adeimantus:: Certainly not.

Socrates:: By degrees the anarchy finds a way into private houses, and ends by getting among the animals and infecting them.

Adeimantus:: How do you mean?

Socrates:: I mean that the father grows accustomed to descend to the level of his sons and to fear them, and the son is on a level with his father, he having no respect or reverence for either of his parents; and this is his freedom, and the metic is equal with the citizen and the citizen with the metic, and the stranger is quite as good as either.

Adeimantus:: Yes, that is the way.

Socrates:: And these are not the only evils,—there are several lesser ones: In such a state of society the master fears and flatters his scholars, and the scholars despise their masters and tutors; young and old are all alike; and the young man is on a level with the old, and is ready to compete with him in word or deed; and old men condescend to the young and are full of pleasantry and gaiety; they are loth to be thought morose and authoritative, and therefore they adopt the manners of the young.

Adeimantus:: Quite true.

Socrates:: The last extreme of popular liberty is when the slave bought with money, whether male or female, is just as free as his or her purchaser; nor must I forget to tell of the liberty and equality of the two sexes in relation to each other.

Adeimantus:: Why not, as Aeschylus says, utter the word which rises to our lips?

Socrates:: That is what I am doing, and I must add that no one who does not know would believe, how much greater is the liberty which the animals who are under the dominion of man have in a democracy than in any other

State: for truly, the she-dogs, as the proverb says, are as good as their she-mistresses, and the horses and asses have a way of marching along with all the rights and dignities of freemen; and they will run at any body who comes in their way if he does not leave the road clear for them: and all things are just ready to burst with liberty.

Adeimantus:: When I take a country walk, I often experience what you describe. You and I have dreamed the same thing.

Socrates:: And above all, and as the result of all, see how sensitive the citizens become; they chafe impatiently at the least touch of authority, and at length, as you know, they cease to care even for the laws, written or unwritten; they will have no one over them.

Adeimantus:: Yes, I know it too well.

Socrates:: Such, my friend, is the fair and glorious beginning out of which springs tyranny.

Adeimantus:: Glorious indeed. But what is the next step?

Socrates:: The ruin of oligarchy is the ruin of democracy; the same disease magnified and intensified by liberty overmasters democracy—the truth being that the excessive increase of anything often causes a reaction in the opposite direction; and this is the case not only in the seasons and in vegetable and animal life, but above all in forms of government.

Adeimantus:: True.

Socrates:: The excess of liberty, whether in States or individuals, seems only to pass into excess of slavery.

Adeimantus:: Yes, the natural order.

Socrates:: And so tyranny naturally arises out of democracy, and the most aggravated form of tyranny and slavery out of the most extreme form of liberty?

Adeimantus:: As we might expect.

Socrates:: That, however, was not, as I believe, your question—you rather desired to know what is that disorder which is generated alike in oligarchy and democracy, and is the ruin of both?

Adeimantus:: Just so.

Socrates:: Well, I meant to refer to the class of idle spendthrifts, of whom the more courageous are the leaders and the more timid the followers, the same whom we were comparing to drones, some stingless, and others having stings.

Adeimantus:: A very just comparison.

Socrates:: These two classes are the plagues of every city in which they are generated, being what phlegm and bile are to the body. And the good physician and lawgiver of the State ought, like the wise bee-master, to keep them at a distance and prevent, if possible, their ever coming in; and if they have anyhow found a way in, then he should have them and their cells cut out as speedily as possible.

Adeimantus:: Yes, by all means.

Socrates:: Then, in order that we may see clearly what we are doing, let us imagine democracy to be divided, as indeed it is, into three classes; for in the first place freedom creates rather more drones in the democratic than there were in the oligarchical State.

Adeimantus:: That is true.

Socrates:: And in the democracy they are certainly more intensified.

Adeimantus:: How so?

Socrates:: Because in the oligarchical State they are disqualified and driven from office, and therefore they cannot train or gather strength; whereas in a democracy they are almost the entire ruling power, and while the keener sort speak and act, the rest keep buzzing about the bema and do not suffer a word to be said on the other side; hence in democracies almost everything is managed by the drones.

Adeimantus:: Very true.

Socrates:: Then there is another class which is always being severed from the mass.

Adeimantus:: What is that?

Socrates:: They are the orderly class, which in a nation of traders is sure to be the richest.

Adeimantus:: Naturally so.

Socrates:: They are the most squeezable persons and yield the largest amount of honey to the drones.

Adeimantus:: Why, there is little to be squeezed out of people who have little.

Socrates:: And this is called the wealthy class, and the drones feed upon them.

Adeimantus:: That is pretty much the case.

Socrates:: The people are a third class, consisting of those who work with their own hands; they are not politicians, and have not much to live upon. This, when assembled, is the largest and most powerful class in a democracy.

Adeimantus:: True, but then the multitude is seldom willing to congregate unless they get a little honey.

Socrates:: And do they not share? Do not their leaders deprive the rich of their estates and distribute them among the people; at the same time taking care to reserve the larger part for themselves?

Adeimantus:: Why, yes, to that extent the people do share.

Socrates:: And the persons whose property is taken from them are compelled to defend themselves before the people as they best can?

Adeimantus:: What else can they do?

Socrates:: And then, although they may have no desire of change, the others charge them with plotting against the people and being friends of oligarchy?

Adeimantus:: True.

Socrates:: And the end is that when they see the people, not of their own accord, but through ignorance, and because they are deceived by informers, seeking to do them wrong, then at last they are forced to become oligarchs in reality; they do not wish to be, but the sting of the drones torments them and breeds revolution in them.

Adeimantus:: That is exactly the truth.

Socrates:: Then come impeachments and judgments and trials of one another.

Adeimantus:: True.

Socrates:: The people have always some champion whom they set over them and nurse into greatness.

Adeimantus:: Yes, that is their way.

Socrates:: This and no other is the root from which a tyrant springs; when he first appears above ground he is a protector.

Adeimantus:: Yes, that is quite clear.

Socrates:: How then does a protector begin to change into a tyrant? Clearly when he does what the man is said to do in the tale of the Arcadian temple of Lycaean Zeus.

Adeimantus:: What tale?

Socrates:: The tale is that he who has tasted the entrails of a single human victim minced up with the entrails of other victims is destined to become a wolf. Did you never hear it?

Adeimantus:: O yes.

Socrates:: And the protector of the people is like him; having a mob entirely at his disposal, he is not restrained from shedding the blood of kinsmen; by the favorite method of false accusation he brings them into court and murders them, making the life of man to disappear, and with unholy tongue and lips tasting the blood of his fellow citizens; some he kills and others he banishes, at the same time hinting at the abolition of debts and partition of lands: and after this, what will be his destiny? Must he not either perish at the hands of his enemies, or from being a man become a wolf—that is, a tyrant?

Adeimantus:: Inevitably.

Socrates:: This, is he who begins to make a party against the rich?

Adeimantus:: The same.

Socrates:: After a while he is driven out, but comes back, in spite of his enemies, a tyrant full grown.

Adeimantus:: That is clear.

Socrates:: And if they are unable to expel him, or to get him condemned to death by a public accusation, they conspire to assassinate him.

Adeimantus:: Yes, that is their usual way.

Socrates:: Then comes the famous request for a bodyguard, which is the device of all those who have got thus far in their tyrannical career—'Let not the people's friend' as they say, 'be lost to them.'

Adeimantus:: Exactly.

Socrates:: The people readily assent; all their fears are for him—they have none for themselves.

Adeimantus:: Very true.

Socrates:: And when a man who is wealthy and is also accused of being an enemy of the people sees this, then, my friend, as the oracle said to Croesus;

> 'By pebbly Hermus' shore he flees and rests not, and is not ashamed to be a coward.'

Adeimantus:: And quite right too, for if he were, he would never be ashamed again.

Socrates:: But if he is caught he dies.

Adeimantus:: Of course.

Socrates:: And he, the protector of whom we spoke, is to be seen, not 'larding the plain' with his bulk, but himself the overthrower of many, standing up in the chariot of State with the reins in his hand, no longer protector, but tyrant absolute.

Adeimantus:: No doubt.

Socrates:: And now let us consider the happiness of the man, and also of the State in which a creature like him is generated.

Adeimantus:: Yes, let us consider that.

Socrates:: At first, in the early days of his power, he is full of smiles, and he salutes every one whom he meets;—he to be called a tyrant, who is making promises in public and also in private! liberating debtors, and distributing land to the people and his followers, and wanting to be so kind and good to every one!

Adeimantus:: Of course.

Socrates:: But when he has disposed of foreign enemies by conquest or treaty, and there is nothing to fear from them, then he is always stirring up some war or other, in order that the people may require a leader.

Adeimantus:: To be sure.

Socrates:: Has he not also another object, which is that they may be impoverished by payment of taxes, and thus compelled to devote themselves to their daily wants and therefore less likely to conspire against him?

Adeimantus:: Clearly.

Socrates:: And if any of them are suspected by him of having notions of freedom, and of resistance to his authority, he will have a good pretext for destroying them by placing them at the mercy of the enemy; and for all these reasons the tyrant must be always getting up a war.

Adeimantus:: He must.

Socrates:: Now he begins to grow unpopular.

Adeimantus:: A necessary result.

Socrates:: Then some of those who joined in setting him up, and who are in power, speak their minds to him and to one another, and the more courageous of them cast in his teeth what is being done.

Adeimantus:: Yes, that may be expected.

Socrates:: And the tyrant, if he means to rule, must get rid of them; he cannot stop while he has a friend or an enemy who is good for anything.

Adeimantus:: He cannot.

Socrates:: And therefore he must look about him and see who is valiant, who is high-minded, who is wise, who is wealthy; happy man, he is the enemy of them all, and must seek occasion against them whether he will or no, until he has made a purgation of the State.

Adeimantus:: Yes, and a rare purgation.

Socrates:: Yes, not the sort of purgation which the physicians make of the body; for they take away the worse and leave the better part, but he does the reverse.

Adeimantus:: If he is to rule, I suppose that he cannot help himself.

Socrates:: What a blessed alternative:—to be compelled to dwell only with the many bad, and to be by them hated, or not to live at all!

Adeimantus:: Yes, that is the alternative.

Socrates:: And the more detestable his actions are to the citizens the more satellites and the greater devotion in them will he require?

Adeimantus:: Certainly.

Socrates:: And who are the devoted band, and where will he procure them?

Adeimantus:: They will flock to him, of their own accord, if he pays them.

Socrates:: By the dog!, here are more drones, of every sort and from every land.

Adeimantus:: Yes, there are.

Socrates:: But will he not desire to get them on the spot?

Adeimantus:: How do you mean?

Socrates:: He will rob the citizens of their slaves; he will then set them free and enroll them in his body-guard.

Adeimantus:: To be sure, and he will be able to trust them best of all.

Socrates:: What a blessed creature, must this tyrant be; he has put to death the others and has these for his trusted friends.

Adeimantus:: Yes, they are quite of his sort.

Socrates:: Yes, and these are the new citizens whom he has called into existence, who admire him and are his companions, while the good hate and avoid him.

Adeimantus:: Of course.

Socrates:: Verily, then, tragedy is a wise thing and Euripides a great tragedian.

Adeimantus:: Why so?

Socrates:: Why, because he is the author of the pregnant saying;

> 'Tyrants are wise by living with the wise;'

and he clearly meant to say that they are the wise whom the tyrant makes his companions.

Adeimantus:: Yes, and he also praises tyranny as godlike; and many other things of the same kind are said by him and by the other poets.

Socrates:: And therefore, the tragic poets being wise men will forgive us and any others who live after our manner if we do not receive them into our State, because they are the eulogists of tyranny.

Adeimantus:: Yes, those who have the wit will doubtless forgive us.

Socrates:: But they will continue to go to other cities and attract mobs, and hire voices fair and loud and persuasive, and draw the cities over to tyrannies and democracies.

Adeimantus:: Very true.

Socrates:: Moreover, they are paid for this and receive honor—the greatest honor, as might be expected, from tyrants, and the next greatest from democracies; but the higher they ascend our constitution hill, the more their reputation fails, and seems unable from shortness of breath to proceed further.

Adeimantus:: True.

Socrates:: But we are wandering from the subject: Let us therefore return and enquire how the tyrant will maintain that fair and numerous and various and ever-changing army of his.

Adeimantus:: If, there are sacred treasures in the city, he will confiscate and spend them; and in so far as the fortunes of attainted persons may suffice, he will be able to diminish the taxes which he would otherwise have to impose upon the people.

Socrates:: And when these fail?

Adeimantus:: Why, clearly, then he and his boon companions, whether male or female, will be maintained out of his father's estate.

Socrates:: You mean to say that the people, from whom he has derived his being, will maintain him and his companions?

Adeimantus:: Yes, they cannot help themselves.

Socrates:: But what if the people fly into a passion, and aver that a grown-up son ought not to be supported by his father, but that the father should be supported by the son? The father did not bring him into being, or settle him in life, in order that when his son became a man he should himself be the servant of his own servants and should support him and his rabble of slaves and companions; but that his son should protect him, and that by his help he might be emancipated from the government of the rich and aristocratic, as they are termed. And so he bids him and his companions depart, just as any other father might drive out of the house a riotous son and his undesirable associates.

Adeimantus:: By heaven, then the parent will discover what a monster he has been fostering in his bosom; and, when he wants to drive him out, he will find that he is weak and his son strong.

Socrates:: Why, you do not mean to say that the tyrant will use violence? What! beat his father if he opposes him?

Adeimantus:: Yes, he will, having first disarmed him.

Socrates:: Then he is a parricide, and a cruel guardian of an aged parent; and this is real tyranny, about which there can be no longer a mistake: as the saying is, the people who would escape the smoke which is the slavery of freemen, has fallen into the fire which is the tyranny of slaves. Thus liberty, getting out of all order and reason, passes into the harshest and bitterest form of slavery.

Adeimantus:: True.

Socrates:: Very well; and may we not rightly say that we have sufficiently discussed the nature of tyranny, and the manner of the transition from democracy to tyranny?

Adeimantus:: Yes, quite enough.

## BOOK IX.

Socrates:: Last of all comes the tyrannical man; about whom we have once more to ask, how is he formed out of the democratical? and how does he live, in happiness or in misery?

Adeimantus:: Yes, he is the only one remaining.

Socrates:: There is, however, a previous question which remains unanswered.

Adeimantus:: What question?

Socrates:: I do not think that we have adequately determined the nature and number of the appetites, and until this is accomplished the enquiry will always be confused.

Adeimantus:: Well, it is not too late to supply the omission.

Socrates:: Very true, and observe the point which I want to understand: Certain of the unnecessary pleasures and appetites I conceive to be unlawful; every one appears to have them, but in some persons they are controlled by the laws and by reason, and the better desires prevail over them—either they are wholly banished or they become few and weak; while in the case of others they are stronger, and there are more of them.

Adeimantus:: Which appetites do you mean?

Socrates:: I mean those which are awake when the reasoning and human and ruling power is asleep; then the wild beast within us, gorged with meat or drink, starts up and having shaken off sleep, goes forth to satisfy his desires; and there is no conceivable folly or crime—not excepting incest or any other unnatural union, or parricide, or the eating of forbidden food—which at such a time, when he has parted company with all shame and sense, a man may not be ready to commit.

Adeimantus:: Most true.

Socrates:: But when a man's pulse is healthy and temperate, and when before going to sleep he has awakened his rational powers, and fed them on noble thoughts and enquiries, collecting himself in meditation; after having first indulged his appetites neither too much nor too little, but just enough to lay them to sleep, and prevent them and their enjoyments and pains from interfering with the higher principle—which he leaves in the solitude of pure abstraction, free to contemplate and aspire to the knowledge of the unknown, whether in past, present, or future: when again he has allayed the passionate element, if he has a quarrel against any one—I say, when, after pacifying the two irrational principles, he rouses up the third, which is reason, before he takes his rest, then, as you know, he attains truth most nearly, and is least likely to be the sport of fantastic and lawless visions.

Adeimantus:: I quite agree.

Socrates:: In saying this I have been running into a digression; but the point which I desire to note is that in all of us, even in good men, there is a lawless wild-beast nature, which peers out in sleep. Pray, consider whether I am right, and you agree with me.

Adeimantus:: Yes, I agree.

Socrates:: And now remember the character which we attributed to the democratic man. He was supposed from his youth upwards to have been trained under a miserly parent, who encouraged the saving appetites in him, but discountenanced the unnecessary, which aim only at amusement and ornament?

Adeimantus:: True.

Socrates:: And then he got into the company of a more refined, licentious sort of people, and taking to all their wanton ways rushed into the opposite extreme from an abhorrence of his father's meanness. At last, being a better man than his corruptors, he was drawn in both directions until he halted midway and led a life, not of vulgar and slavish passion, but of what he deemed moderate indulgence in various pleasures. After this manner the democrat was generated out of the oligarch?

Adeimantus:: Yes, that was our view of him, and is so still.

Socrates:: And now, years will have passed away, and you must conceive this man, such as he is, to have a son, who is brought up in his father's principles.

Adeimantus:: I can imagine him.

Socrates:: Then you must further imagine the same thing to happen to the son which has already happened to the father:—he is drawn into a perfectly lawless life, which by his seducers is termed perfect liberty; and his father and friends take part with his moderate desires, and the opposite party assist the opposite ones. As soon as these dire magicians and tyrant-makers find that they are losing their hold on him, they contrive to implant in him a master passion, to be lord over his idle and spendthrift lusts—a sort of monstrous winged drone—that is the only image which will adequately describe him.

Adeimantus:: Yes, that is the only adequate image of him.

Socrates:: And when his other lusts, amid clouds of incense and perfumes and garlands and wines, and all the pleasures of a dissolute life, now let loose, come buzzing around him, nourishing to the utmost the sting of desire which they implant in his drone-like nature, then at last this lord of the soul, having Madness for the captain of his guard, breaks out into a frenzy; and if he finds in himself any good opinions or appetites in process of formation, and there is in him any sense of shame remaining, to these better principles he puts an end, and casts them forth until he has purged away temperance and brought in madness to the full.

Adeimantus:: Yes, that is the way in which the tyrannical man is generated.

Socrates:: And is not this the reason why of old love has been called a tyrant?

Adeimantus:: I should not wonder.

Socrates:: Further, has not a drunken man also the spirit of a tyrant?

Adeimantus:: He has.

Socrates:: And you know that a man who is deranged and not right in his mind, will fancy that he is able to rule, not only over men, but also over the gods?

Adeimantus:: That he will.

Socrates:: And the tyrannical man in the true sense of the word comes into being when, either under the influence of nature, or habit, or both, he becomes drunken, lustful, passionate?

Adeimantus:: O my friend, is not that so?

Socrates:: Assuredly.

Adeimantus:: Such is the man and such is his origin. And next, how does he live?

Socrates:: Suppose, as people facetiously say, you were to tell me. I imagine, at the next step in his progress, that there will be feasts and carousals and retellings and courtesans, and all that sort of thing; Love is the lord of the house within him, and orders all the concerns of his soul.

Adeimantus:: That is certain.

Socrates:: Yes; and every day and every night desires grow up many and formidable, and their demands are many.

Adeimantus:: They are indeed.

Socrates:: His revenues, if he has any, are soon spent.

Adeimantus:: True.

Socrates:: Then comes debt and the cutting down of his property.

Adeimantus:: Of course.

Socrates:: When he has nothing left, must not his desires, crowding in the nest like young ravens, be crying aloud for food; and he, goaded on by them, and especially by love himself, who his is in a manner the captain of them, is in a frenzy, and would fain discover whom he can defraud or despoil of his property, in order that he may gratify them?

Adeimantus:: Yes, that is sure to be the case.

Socrates:: He must have money, no matter how, if he is to escape horrid pains and pangs.

Adeimantus:: He must.

Socrates:: And as in himself there was a succession of pleasures, and the new got the better of the old and took away their rights, so he being younger will claim to have more than his father and his mother, and if he has spent his own share of the property, he will take a slice of theirs.

Adeimantus:: No doubt he will.

Socrates:: And if his parents will not give way, then he will try first of all to cheat and deceive them.

Adeimantus:: Very true.

Socrates:: And if he fails, then he will use force and plunder them.

Adeimantus:: Yes, probably.

Socrates:: And if the old man and woman fight for their own, what then, my friend? Will the creature feel any compunction at tyrannizing over them?

Adeimantus:: Nay, I should not feel at all comfortable about his parents.

Socrates:: But, O heavens! Adeimantus, on account of some newfangled love of a harlot, who is anything but a necessary connection, can you believe that he would strike the mother who is his ancient friend and necessary to his very existence, and would place her under the authority of the other, when she is brought under the same roof with her; or that, under like circumstances, he would do the same to his withered old father, first and most indispensable of friends, for the sake of some newly-found blooming youth who is the reverse of indispensable?

Adeimantus:: Yes, indeed, I believe that he would.

Socrates:: Truly, then, a tyrannical son is a blessing to his father and mother.

Adeimantus:: He is indeed.

Socrates:: He first takes their property, and when that fails, and pleasures are beginning to swarm in the hive of his soul, then he breaks into a house, or steals the garments of some nightly wayfarer; next he proceeds to clear a temple. Meanwhile the old opinions which he had when a child, and which gave judgment about good and evil, are overthrown by those others which have just been emancipated, and are now the body-guard of love and share his empire. These in his democratic days, when he was still subject to the laws and to his father, were only let loose in the dreams of sleep. But now that he is under the dominion of Love, he becomes always and in waking reality what he was then very rarely and in a dream only; he will commit the foulest murder, or eat forbidden food, or be guilty of any other horrid act. Love is his tyrant, and lives lordly in him and lawlessly, and being himself a king, leads him on, as a tyrant leads a State, to the performance of any reckless deed by which he can maintain himself and the rabble of his associates, whether those whom evil communications have brought in from without, or those whom he himself has allowed to break loose within him by reason of a similar evil nature in himself. Have we not here a picture of his way of life?

Adeimantus:: Yes, indeed.

Socrates:: And if there are only a few of them in the State, and the rest of the people are well disposed, they go away and become the body-guard or mercenary soldiers of some other tyrant who may probably want them for a war; and if there is no war, they stay at home and do many little pieces of mischief in the city.

Adeimantus:: What sort of mischief?

Socrates:: For example, they are the thieves, burglars, cut-purses, foot-pads, robbers of temples, man-stealers of the community; or if they are able to speak they turn informers, and bear false witness, and take bribes.

Adeimantus:: A small catalogue of evils, even if the perpetrators of them are few in number.

Socrates:: Yes, but small and great are comparative terms, and all these things, in the misery and evil which they inflict upon a State, do not come within a thousand miles of the tyrant; when this noxious class and their followers grow numerous and become conscious of their strength, assisted by the infatuation of the people, they choose from among themselves the one who has most of the tyrant in his own soul, and him they create their tyrant.

Adeimantus:: Yes, and he will be the most fit to be a tyrant.

Socrates:: If the people yield, well and good; but if they resist him, as he began by beating his own father and mother, so now, if he has the power, he beats them, and will keep his dear old fatherland or motherland, as the Cretans say, in subjection to his young retainers whom he has introduced to be their rulers and masters. This is the end of his passions and desires.

Adeimantus:: Exactly.

Socrates:: When such men are only private individuals and before they get power, this is their character; they associate entirely with their own flatterers or ready tools; or if they want anything from anybody, they in their turn are equally ready to bow down before them: they profess every sort of affection for them; but when they have gained their point they know them no more.

Adeimantus:: Yes, truly.

Socrates:: They are always either the masters or servants and never the friends of anybody; the tyrant never tastes of true freedom or friendship.

Adeimantus:: Certainly not.

Socrates:: And may we not rightly call such men treacherous?

Adeimantus:: No question.

Socrates:: Also they are utterly unjust, if we were right in our notion of justice?

Adeimantus:: Yes, and we were perfectly right.

Socrates:: Let us then sum up in a word, the character of the worst man: he is the waking reality of what we dreamed.

Adeimantus:: Most true.

Socrates:: And this is he who being by nature most of a tyrant bears rule, and the longer he lives the more of a tyrant he becomes.

Glaucon, taking his turn to answer, said:

Glaucon:: That is certain.

Socrates:: And will not he who has been shown to be the wickedest, be also the most miserable? and he who has tyrannized longest and most, most continually and truly miserable; although this may not be the opinion of men in general?

Glaucon:: Yes, inevitably.

Socrates:: And must not the tyrannical man be like the tyrannical State, and the democratical man like the democratical State; and the same of the others?

Glaucon:: Certainly.

Socrates:: And as State is to State in virtue and happiness, so is man in relation to man?

Glaucon:: To be sure.

Socrates:: Then comparing our original city, which was under a king, and the city which is under a tyrant, how do they stand as to virtue?

Glaucon:: They are the opposite extremes, for one is the very best and the other is the very worst.

Socrates:: There can be no mistake, as to which is which, and therefore I will at once enquire whether you would arrive at a similar decision about their relative happiness and misery. And here we must not allow ourselves to be panic-stricken at the apparition of the tyrant, who is only a unit and may perhaps have a few retainers about him; but let us go as we ought into every corner of the city and look all about, and then we will give our opinion.

Glaucon:: A fair invitation, and I see, as every one must, that a tyranny is the wretchedest form of government, and the rule of a king the happiest.

Socrates:: And in estimating the men too, may I not fairly make a like request, that I should have a judge whose mind can enter into and see through human nature? he must not be like a child who looks at the outside and is dazzled at the pompous aspect which the tyrannical nature assumes to the beholder, but let him be one who has a clear insight. May I suppose that the judgment is given in the hearing of us all by one who is able to judge, and has dwelt in the same place with him, and been present at his daily life and known him in his family relations, where he may be seen stripped of his tragedy attire, and again in the hour of public danger—he shall tell us about the happiness and misery of the tyrant when compared with other men?

Glaucon:: That again, is a very fair proposal.

Socrates:: Shall I assume that we ourselves are able and experienced judges and have before now met with such a person? We shall then have some one who will answer our enquiries.

Glaucon:: By all means.

Socrates:: Let me ask you not to forget the parallel of the individual and the State; bearing this in mind, and glancing in turn from one to the other of them, will you tell me their respective conditions?

Glaucon:: What do you mean?

Socrates:: Beginning with the State, would you say that a city which is governed by a tyrant is free or enslaved?

Glaucon:: No city, can be more completely enslaved.

Socrates:: And yet, as you see, there are freemen as well as masters in such a State?

Glaucon:: Yes, I see that there are—a few; but the people, speaking generally, and the best of them are miserably degraded and enslaved.

Socrates:: Then if the man is like the State, must not the same rule prevail? his soul is full of meanness and vulgarity—the best elements in him are enslaved; and there is a small ruling part, which is also the worst and maddest.

Glaucon:: Inevitably.

Socrates:: And would you say that the soul of such an one is the soul of a freeman, or of a slave?

Glaucon:: He has the soul of a slave, in my opinion.

Socrates:: And the State which is enslaved under a tyrant is utterly incapable of acting voluntarily?

Glaucon:: Utterly incapable.

Socrates:: And also the soul which is under a tyrant (I am speaking of the soul taken as a whole) is least capable of doing what she desires; there is a gadfly which goads her, and she is full of trouble and remorse?

Glaucon:: Certainly.

Socrates:: And is the city which is under a tyrant rich or poor?

Glaucon:: Poor.

Socrates:: And the tyrannical soul must be always poor and insatiable?

Glaucon:: True.

Socrates:: And must not such a State and such a man be always full of fear?

Glaucon:: Yes, indeed.

Socrates:: Is there any State in which you will find more of lamentation and sorrow and groaning and pain?

Glaucon:: Certainly not.

Socrates:: And is there any man in whom you will find more of this sort of misery than in the tyrannical man, who is in a fury of passions and desires?

Glaucon:: Impossible.

Socrates:: Reflecting upon these and similar evils, you held the tyrannical State to be the most miserable of States?

Glaucon:: And I was right.

Socrates:: Certainly. And when you see the same evils in the tyrannical man, what do you say of him?

Glaucon:: I say that he is by far the most miserable of all men.

Socrates:: There, I think that you are beginning to go wrong.

Glaucon:: What do you mean?

Socrates:: I do not think that he has as yet reached the utmost extreme of misery.

Glaucon:: Then who is more miserable?

Socrates:: One of whom I am about to speak.

Glaucon:: Who is that?

Socrates:: He who is of a tyrannical nature, and instead of leading a private life has been cursed with the further misfortune of being a public tyrant.

Glaucon:: From what has been said, I gather that you are right.

Socrates:: Yes, but in this high argument you should be a little more certain, and should not conjecture only; for of all questions, this respecting good and evil is the greatest.

Glaucon:: Very true.

Socrates:: Let me then offer you an illustration, which may, I think, throw a light upon this subject.

Glaucon:: What is your illustration?

Socrates:: The case of rich individuals in cities who possess many slaves: from them you may form an idea of the tyrant’s condition, for they both have slaves; the only difference is that he has more slaves.

Glaucon:: Yes, that is the difference.

Socrates:: You know that they live securely and have nothing to apprehend from their servants?

Glaucon:: What should they fear?

Socrates:: Nothing. But do you observe the reason of this?

Glaucon:: Yes; the reason is, that the whole city is leagued together for the protection of each individual.

Socrates:: Very true. But imagine one of these owners, the master say of some fifty slaves, together with his family and property and slaves, carried off by a god into the wilderness, where there are no freemen to help him—will he not be in an agony of fear lest he and his wife and children should be put to death by his slaves?

Glaucon:: Yes, he will be in the utmost fear.

Socrates:: The time has arrived when he will be compelled to flatter divers of his slaves, and make many promises to them of freedom and other things, much against his will—he will have to cajole his own servants.

Glaucon:: Yes, that will be the only way of saving himself.

Socrates:: And suppose the same god, who carried him away, to surround him with neighbors who will not suffer one man to be the master of another, and who, if they could catch the offender, would take his life?

Glaucon:: His case will be still worse, if you suppose him to be everywhere surrounded and watched by enemies.

Socrates:: And is not this the sort of prison in which the tyrant will be bound—he who being by nature such as we have described, is full of all sorts of fears and lusts? His soul is dainty and greedy, and yet alone, of all men in the city, he is never allowed to go on a journey, or to see the things which other freemen desire to see, but he lives in his hole like a woman hidden in the house, and is jealous of any other citizen who goes into foreign parts and sees anything of interest.

Glaucon:: Very true.

Socrates:: And amid evils such as these will not he who is ill-governed in his own person—the tyrannical man, I mean—whom you just now decided to be the most miserable of all—will not he be yet more miserable when, instead of leading a private life, he is constrained by fortune to be a public tyrant? He has to be master of others when he is not master of himself: he is like a diseased or paralytic man who is compelled to pass his life, not in retirement, but fighting and combating with other men.

Glaucon:: Yes, the similitude is most exact.

Socrates:: Is not his case utterly miserable? and does not the actual tyrant lead a worse life than he whose life you determined to be the worst?

Glaucon:: Certainly.

Socrates:: He who is the real tyrant, whatever men may think, is the real slave, and is obliged to practice the greatest adulation and servility, and to be the flatterer of the vilest of mankind. He has desires which he is utterly unable to satisfy, and has more wants than any one, and is truly poor, if you know how to inspect the whole soul of him: all his life long he is beset with fear and is full of convulsions and distractions, even as the State which he resembles: and surely the resemblance holds?

Glaucon:: Very true.

Socrates:: Moreover, as we were saying before, he grows worse from having power: he becomes and is of necessity more jealous, more faithless, more unjust, more friendless, more impious, than he was at first; he is the purveyor and cherisher of every sort of vice, and the consequence is that he is supremely miserable, and that he makes everybody else as miserable as himself.

Glaucon:: No man of any sense will dispute your words.

Socrates:: Come then, and as the general umpire in theatrical contests proclaims the result, do you also decide who in your opinion is first in the scale of happiness, and who second, and in what order the others follow: there are five of them in all—they are the royal, timocratical, oligarchical, democratical, tyrannical.

Glaucon:: The decision will be easily given, they shall be choruses coming on the stage, and I must judge them in the order in which they enter, by the criterion of virtue and vice, happiness and misery.

Socrates:: Need we hire a herald, or shall I announce, that the son the of Ariston [the best] has decided that the best and justest is also the happiest, and that this is he who is the most royal man and king over himself; and that the worst and most unjust man is also the most miserable, and that this is he who being the greatest tyrant of himself is also the greatest tyrant of his State?

Glaucon:: Make the proclamation yourself.

Socrates:: And shall I add, ‘whether seen or unseen by gods and men’?

Glaucon:: Let the words be added.

Socrates:: Then this, will be our first proof; and there is another, which may also have some weight.

Glaucon:: What is that?

Socrates:: The second proof is derived from the nature of the soul: seeing that the individual soul, like the State, has been divided by us into three principles, the division may, I think, furnish a new demonstration.

Glaucon:: Of what nature?

Socrates:: It seems to me that to these three principles three pleasures correspond; also three desires and governing powers.

Glaucon:: How do you mean?

Socrates:: There is one principle with which, as we were saying, a man learns, another with which he is angry; the third, having many forms, has no special name, but is denoted by the general term appetitive, from the extraordinary strength and vehemence of the desires of eating and drinking and the other sensual appetites which are the main elements of it; also money-loving, because such desires are generally satisfied by the help of money.

Glaucon:: That is true.

Socrates:: If we were to say that the loves and pleasures of this third part were concerned with gain, we should then be able to fall back on a single notion; and might truly and intelligibly describe this part of the soul as loving gain or money.

Glaucon:: I agree with you.

Socrates:: Again, is not the passionate element wholly set on ruling and conquering and getting fame?

Glaucon:: True.

Socrates:: Suppose we call it the contentious or ambitious—would the term be suitable?

Glaucon:: Extremely suitable.

Socrates:: On the other hand, every one sees that the principle of knowledge is wholly directed to the truth, and cares less than either of the others for gain or fame.

Glaucon:: Far less.

Socrates:: 'Lover of wisdom,' 'lover of knowledge,' are titles which we may fitly apply to that part of the soul?

Glaucon:: Certainly.

Socrates:: One principle prevails in the souls of one class of men, another in others, as may happen?

Glaucon:: Yes.

Socrates:: Then we may begin by assuming that there are three classes of men—lovers of wisdom, lovers of honour, lovers of gain?

Glaucon:: Exactly.

Socrates:: And there are three kinds of pleasure, which are their several objects?

Glaucon:: Very true.

Socrates:: Now, if you examine the three classes of men, and ask of them in turn which of their lives is pleasantest, each will be found praising his own and depreciating that of others: the money-maker will contrast the vanity of honour or of learning if they bring no money with the solid advantages of gold and silver?

Glaucon:: True.

Socrates:: And the lover of honour—what will be his opinion? Will he not think that the pleasure of riches is vulgar, while the pleasure of learning, if it brings no distinction, is all smoke and nonsense to him?

Glaucon:: Very true.

Socrates:: And are we to suppose, that the philosopher sets any value on other pleasures in comparison with the pleasure of knowing the truth, and in that pursuit abiding, ever learning, not so far indeed from the heaven of pleasure? Does he not call the other pleasures necessary, under the idea that if there were no necessity for them, he would rather not have them?

Glaucon:: There can be no doubt of that.

Socrates:: Since, then, the pleasures of each class and the life of each are in dispute, and the question is not which life is more or less honorable, or better or worse, but which is the more pleasant or painless—how shall we know who speaks truly?

Glaucon:: I cannot myself tell.

Socrates:: Well, but what ought to be the criterion? Is any better than experience and wisdom and reason?

Glaucon:: There cannot be a better.

Socrates:: Then, reflect. Of the three individuals, which has the greatest experience of all the pleasures which we enumerated? Has the lover of gain, in learning the nature of essential truth, greater experience of the pleasure of knowledge than the philosopher has of the pleasure of gain?

Glaucon:: The philosopher, has greatly the advantage; for he has of necessity always known the taste of the other pleasures from his childhood upwards: but the lover of gain in all his experience has not of necessity tasted—or, I should rather say, even had he desired, could hardly have tasted—the sweetness of learning and knowing truth.

Socrates:: Then the lover of wisdom has a great advantage over the lover of gain, for he has a double experience?

Glaucon:: Yes, very great.

Socrates:: Again, has he greater experience of the pleasures of honour, or the lover of honour of the pleasures of wisdom?

Glaucon:: Nay, all three are honored in proportion as they attain their object; for the rich man and the brave man and the wise man alike have their crowd of admirers, and as they all receive honour they all have experience of the pleasures of honour; but the delight which is to be found in the knowledge of true being is known to the philosopher only.

Socrates:: His experience, then, will enable him to judge better than any one?

Glaucon:: Far better.

Socrates:: And he is the only one who has wisdom as well as experience?

Glaucon:: Certainly.

Socrates:: Further, the very faculty which is the instrument of judgment is not possessed by the covetous or ambitious man, but only by the philosopher?

Glaucon:: What faculty?

Socrates:: Reason, with whom, as we were saying, the decision ought to rest.

Glaucon:: Yes.

Socrates:: And reasoning is peculiarly his instrument?

Glaucon:: Certainly.

Socrates:: If wealth and gain were the criterion, then the praise or blame of the lover of gain would surely be the most trustworthy?

Glaucon:: Assuredly.

Socrates:: Or if honour or victory or courage, in that case the judgment of the ambitious or pugnacious would be the truest?

Glaucon:: Clearly.

Socrates:: But since experience and wisdom and reason are the judges—

Glaucon:: The only inference possible, is that pleasures which are approved by the lover of wisdom and reason are the truest.

Socrates:: And so we arrive at the result, that the pleasure of the intelligent part of the soul is the pleasantest of the three, and that he of us in whom this is the ruling principle has the pleasantest life.

Glaucon:: Unquestionably, the wise man speaks with authority when he approves of his own life.

Socrates:: And what does the judge affirm to be the life which is next, and the pleasure which is next?

Glaucon:: Clearly that of the soldier and lover of honour; who is nearer to himself than the money-maker.

Socrates:: Last comes the lover of gain?

Glaucon:: Very true.

Socrates:: Twice in succession, then, has the just man overthrown the unjust in this conflict; and now comes the third trial, which is dedicated to Olympian Zeus the savior: a sage whispers in my ear that no pleasure except that of the wise is quite true and pure—all others are a shadow only; and surely this will prove the greatest and most decisive of falls?

Glaucon:: Yes, the greatest; but will you explain yourself?

Socrates:: I will work out the subject and you shall answer my questions.

Glaucon:: Proceed.

Socrates:: Say, then, is not pleasure opposed to pain?

Glaucon:: True.

Socrates:: And there is a neutral state which is neither pleasure nor pain?

Glaucon:: There is.

Socrates:: A state which is intermediate, and a sort of repose of the soul about either—that is what you mean?

Glaucon:: Yes.

Socrates:: You remember what people say when they are sick?

Glaucon:: What do they say?

Socrates:: That after all nothing is pleasanter than health. But then they never knew this to be the greatest of pleasures until they were ill.

Glaucon:: Yes, I know.

Socrates:: And when persons are suffering from acute pain, you must have heard them say that there is nothing pleasanter than to get rid of their pain?

Glaucon:: I have.

Socrates:: And there are many other cases of suffering in which the mere rest and cessation of pain, and not any positive enjoyment, is extolled by them as the greatest pleasure?

Glaucon:: Yes, at the time they are pleased and well content to be at rest.

Socrates:: Again, when pleasure ceases, that sort of rest or cessation will be painful?

Glaucon:: Doubtless.

Socrates:: Then the intermediate state of rest will be pleasure and will also be pain?

Glaucon:: So it would seem.

Socrates:: But can that which is neither become both?

Glaucon:: I should say not.

Socrates:: And both pleasure and pain are motions of the soul, are they not?

Glaucon:: Yes.

Socrates:: But that which is neither was just now shown to be rest and not motion, and in a mean between them?

Glaucon:: Yes.

Socrates:: How, then, can we be right in supposing that the absence of pain is pleasure, or that the absence of pleasure is pain?

Glaucon:: Impossible.

Socrates:: This then is an appearance only and not a reality; that is to say, the rest is pleasure at the moment and in comparison of what is painful, and painful in comparison of what is pleasant; but all these representations, when tried by the test of true pleasure, are not real but a sort of imposition?

Glaucon:: That is the inference.

Socrates:: Look at the other class of pleasures which have no antecedent pains and you will no longer suppose, as you perhaps may at present, that pleasure is only the cessation of pain, or pain of pleasure.

Glaucon:: What are they, and where shall I find them?

Socrates:: There are many of them: take as an example the pleasures of smell, which are very great and have no antecedent pains; they come in a moment, and when they depart leave no pain behind them.

Glaucon:: Most true.

Socrates:: Let us not, then, be induced to believe that pure pleasure is the cessation of pain, or pain of pleasure.

Glaucon:: No.

Socrates:: Still, the more numerous and violent pleasures which reach the soul through the body are generally of this sort—they are reliefs of pain.

Glaucon:: That is true.

Socrates:: And the anticipations of future pleasures and pains are of a like nature?

Glaucon:: Yes.

Socrates:: Shall I give you an illustration of them?

Glaucon:: Let me hear.

Socrates:: You would allow, that there is in nature an upper and lower and middle region?

Glaucon:: I should.

Socrates:: And if a person were to go from the lower to the middle region, would he not imagine that he is going up; and he who is standing in the middle and sees whence he has come, would imagine that he is already in the upper region, if he has never seen the true upper world?

Glaucon:: To be sure, how can he think otherwise?

Socrates:: But if he were taken back again he would imagine, and truly imagine, that he was descending?

Glaucon:: No doubt.

Socrates:: All that would arise out of his ignorance of the true upper and middle and lower regions?

Glaucon:: Yes.

Socrates:: Then can you wonder that persons who are inexperienced in the truth, as they have wrong ideas about many other things, should also have wrong ideas about pleasure and pain and the intermediate state; so that when they are only being drawn towards the painful they feel pain and think the pain which they experience to be real, and in like manner, when drawn away from pain to the neutral or intermediate state, they firmly believe that they have reached the goal of satiety and pleasure; they, not knowing pleasure, err in contrasting pain with the absence of pain, which is like contrasting black with grey instead of white—can you wonder, I say, at this?

Glaucon:: No, indeed; I should be much more disposed to wonder at the opposite.

Socrates:: Look at the matter thus:—Hunger, thirst, and the like, are inanition's of the bodily state?

Glaucon:: Yes.

Socrates:: And ignorance and folly are inanition's of the soul?

Glaucon:: True.

Socrates:: And food and wisdom are the corresponding satisfactions of either?

Glaucon:: Certainly.

Socrates:: And is the satisfaction derived from that which has less or from that which has more existence the truer?

Glaucon:: Clearly, from that which has more.

Socrates:: What classes of things have a greater share of pure existence in your judgment—those of which food and drink and condiments and all kinds of sustenance are examples, or the class which contains true opinion and knowledge and mind and all the different kinds of virtue? Put the question in this way:—Which has a more pure being—that which is concerned with the invariable, the immortal, and the true, and is of such a nature, and is found in such natures; or that which is concerned with and found in the variable and mortal, and is itself variable and mortal?

Glaucon:: Far purer, is the being of that which is concerned with the invariable.

Socrates:: And does the essence of the invariable partake of knowledge in the same degree as of essence?

Glaucon:: Yes, of knowledge in the same degree.

Socrates:: And of truth in the same degree?

Glaucon:: Yes.

Socrates:: And, conversely, that which has less of truth will also have less of essence?

Glaucon:: Necessarily.

Socrates:: Then, in general, those kinds of things which are in the service of the body have less of truth and essence than those which are in the service of the soul?

Glaucon:: Far less.

Socrates:: And has not the body itself less of truth and essence than the soul?

Glaucon:: Yes.

Socrates:: What is filled with more real existence, and actually has a more real existence, is more really filled than that which is filled with less real existence and is less real?

Glaucon:: Of course.

Socrates:: And if there be a pleasure in being filled with that which is according to nature, that which is more really filled with more real being will more really and truly enjoy true pleasure; whereas that which participates in less real being will be less truly and surely satisfied, and will participate in an illusory and less real pleasure?

Glaucon:: Unquestionably.

Socrates:: Those then who know not wisdom and virtue, and are always busy with gluttony and sensuality, go down and up again as far as the mean; and in this region they move at random throughout life, but they never pass into the true upper world; thither they neither look, nor do they ever find their way, neither are they truly filled with true being, nor do they taste of pure and abiding pleasure. Like cattle, with their eyes always looking down and their heads stooping to the earth, that is, to the dining-table, they fatten and feed and breed, and, in their excessive love of these delights, they kick and butt at one another with horns and hoofs which are made of iron; and they kill one another by reason of their insatiable lust. For they fill themselves with that which is not substantial, and the part of themselves which they fill is also unsubstantial and incontinent.

Glaucon:: Verily, Socrates, you describe the life of the many like an oracle.

Socrates:: Their pleasures are mixed with pains—how can they be otherwise? For they are mere shadows and pictures of the true, and are colored by contrast, which exaggerates both light and shade, and so they implant in the minds of fools insane desires of themselves; and they are fought about as Stesichorus says that the Greeks fought about the shadow of Helen at Troy in ignorance of the truth.

Glaucon:: Something of that sort must inevitably happen.

Socrates:: And must not the like happen with the spirited or passionate element of the soul? Will not the passionate man who carries his passion into action, be in the like case, whether he is envious and ambitious, or violent and contentious, or angry and discontented, if he be seeking to attain honour and victory and the satisfaction of his anger without reason or sense?

Glaucon:: Yes, the same will happen with the spirited element also.

Socrates:: Then may we not confidently assert that the lovers of money and honour, when they seek their pleasures under the guidance and in the company of reason and knowledge, and pursue after and win the pleasures which wisdom shows them, will also have the truest pleasures in the highest degree which is attainable to them, inasmuch as they follow truth: and they will have the pleasures which are natural to them, if that which is best for each one is also most natural to him?

Glaucon:: Yes, certainly; the best is the most natural.

Socrates:: And when the whole soul follows the philosophical principle, and there is no division, the several parts are just, and do each of them their own business, and enjoy severally the best and truest pleasures of which they are capable?

Glaucon:: Exactly.

Socrates:: But when either of the two other principles prevails, it fails in attaining its own pleasure, and compels the rest to pursue after a pleasure which is a shadow only and which is not their own?

Glaucon:: True.

Socrates:: And the greater the interval which separates them from philosophy and reason, the more strange and illusive will be the pleasure?

Glaucon:: Yes.

Socrates:: And is not that farthest from reason which is at the greatest distance from law and order?

Glaucon:: Clearly.

Socrates:: And the lustful and tyrannical desires are, as we saw, at the greatest distance?

Glaucon:: Yes.

Socrates:: And the royal and orderly desires are nearest?

Glaucon:: Yes.

Socrates:: Then the tyrant will live at the greatest distance from true or natural pleasure, and the king at the least?

Glaucon:: Certainly.

Socrates:: But if so, the tyrant will live most unpleasantly, and the king most pleasantly?

Glaucon:: Inevitably.

Socrates:: Would you know the measure of the interval which separates them?

Glaucon:: Will you tell me?

Socrates:: There appear to be three pleasures, one genuine and two spurious: now the transgression of the tyrant reaches a point beyond the spurious; he has run away from the region of law and reason, and taken up his abode with certain slave pleasures which are his satellites, and the measure of his inferiority can only be expressed in a figure.

Glaucon:: How do you mean?

Socrates:: I assume, that the tyrant is in the third place from the oligarch; the democrat was in the middle?

Glaucon:: Yes.

Socrates:: And if there is truth in what has preceded, he will be wedded to an image of pleasure which is thrice removed as to truth from the pleasure of the oligarch?

Glaucon:: He will.

Socrates:: And the oligarch is third from the royal; since we count as one royal and aristocratical?

Glaucon:: Yes, he is third.

Socrates:: Then the tyrant is removed from true pleasure by the space of a number which is three times three?

Glaucon:: Manifestly.

Socrates:: The shadow then of tyrannical pleasure determined by the number of length will be a plane figure.

Glaucon:: Certainly.

Socrates:: And if you raise the power and make the plane a solid, there is no difficulty in seeing how vast is the interval by which the tyrant is parted from the king.

Glaucon:: Yes; the arithmetician will easily do the sum.

Socrates:: Or if some person begins at the other end and measures the interval by which the king is parted from the tyrant in truth of pleasure, he will find him, when the multiplication is completed, living 729 times more pleasantly, and the tyrant more painfully by this same interval.

Glaucon:: What a wonderful calculation! And how enormous is the distance which separates the just from the unjust in regard to pleasure and pain!

Socrates:: Yet a true calculation, and a number which nearly concerns human life, if human beings are concerned with days and nights and months and years.

Glaucon:: Yes, human life is certainly concerned with them.

Socrates:: Then if the good and just man be thus superior in pleasure to the evil and unjust, his superiority will be infinitely greater in propriety of life and in beauty and virtue?

Glaucon:: Immeasurably greater.

Socrates:: Well, and now having arrived at this stage of the argument, we may revert to the words which brought us hither: Was not some one saying that injustice was a gain to the perfectly unjust who was reputed to be just?

Glaucon:: Yes, that was said.

Socrates:: Now then, having determined the power and quality of justice and injustice, let us have a little conversation with him.

Glaucon:: What shall we say to him?

Socrates:: Let us make an image of the soul, that he may have his own words presented before his eyes.

Glaucon:: Of what sort?

Socrates:: An ideal image of the soul, like the composite creations of ancient mythology, such as the Chimera or Scylla or Cerberus, and there are many others in which two or more different natures are said to grow into one.

Glaucon:: There are said to have been such unions.

Socrates:: Then do you now model the form of a multitudinous, many-headed monster, having a ring of heads of all manner of beasts, tame and wild, which he is able to generate and metamorphose at will.

Glaucon:: You suppose marvelous powers in the artist; but, as language is more pliable than wax or any similar substance, let there be such a model as you propose.

Socrates:: Suppose now that you make a second form as of a lion, and a third of a man, the second smaller than the first, and the third smaller than the second.

Glaucon:: That, is an easier task; and I have made them as you say.

Socrates:: And now join them, and let the three grow into one.

Glaucon:: That has been accomplished.

Socrates:: Next fashion the outside of them into a single image, as of a man, so that he who is not able to look within, and sees only the outer hull, may believe the beast to be a single human creature.

Glaucon:: I have done so.

Socrates:: And now, to him who maintains that it is profitable for the human creature to be unjust, and unprofitable to be just, let us reply that, if he be right, it is profitable for this creature to feast the multitudinous monster and strengthen the lion and the lion-like qualities, but to starve and weaken the man, who is consequently liable to be dragged about at the mercy of either of the other two; and he is not to attempt to familiarize or harmonize them with one another—he ought rather to suffer them to fight and bite and devour one another.

Glaucon:: Certainly, that is what the approver of injustice says.

Socrates:: To him the supporter of justice makes answer that he should ever so speak and act as to give the man within him in some way or other the most complete mastery over the entire human creature. He should watch over the many-headed monster like a good husbandman, fostering and cultivating the gentle qualities, and preventing the wild ones from growing; he should be making the lion-heart his ally, and in common care of them all should be uniting the several parts with one another and with himself.

Glaucon:: Yes, that is quite what the maintainer of justice will say.

Socrates:: And so from every point of view, whether of pleasure, honour, or advantage, the approver of justice is right and speaks the truth, and the disapprover is wrong and false and ignorant?

Glaucon:: Yes, from every point of view.

Socrates:: Come, now, and let us gently reason with the unjust, who is not intentionally in error. 'Sweet Sir' we will say to him, 'what think you of things esteemed noble and ignoble? Is not the noble that which subjects the beast to the man, or rather to the god in man; and the ignoble that which subjects the man to the beast?' He can hardly avoid saying Yes—can he now?

Glaucon:: Not if he has any regard for my opinion.

Socrates:: But, if he agree so far, we may ask him to answer another question: 'Then how would a man profit if he received gold and silver on the condition that he was to enslave the noblest part of him to the worst? Who can imagine that a man who sold his son or daughter into slavery for money, especially if he sold them into the hands of fierce and evil men, would be the gainer, however large might be the sum which he received? And will any one say that he is not a miserable caitiff who remorselessly sells his own divine being to that which is most godless and detestable? Eriphyle took the necklace as the price of her husband's life, but he is taking a bribe in order to compass a worse ruin.'

Glaucon:: Yes, far worse—I will answer for him.

Socrates:: Has not the intemperate been censured of old, because in him the huge multiform monster is allowed to be too much at large?

Glaucon:: Clearly.

Socrates:: And men are blamed for pride and bad temper when the lion and serpent element in them disproportionately grows and gains strength?

Glaucon:: Yes.

Socrates:: And luxury and softness are blamed, because they relax and weaken this same creature, and make a coward of him?

Glaucon:: Very true.

Socrates:: And is not a man reproached for flattery and meanness who subordinates the spirited animal to the unruly monster, and, for the sake of money, of which he can never have enough, habituates him in the days of his youth to be trampled in the mire, and from being a lion to become a monkey?

Glaucon:: True.

Socrates:: And why are mean employments and manual arts a reproach? Only because they imply a natural weakness of the higher principle; the individual is unable to control the creatures within him, but has to court them, and his great study is how to flatter them.

Glaucon:: Such appears to be the reason.

Socrates:: And therefore, being desirous of placing him under a rule like that of the best, we say that he ought to be the servant of the best, in whom the Divine rules; not, as Thrasymachus supposed, to the injury of the servant, but because every one had better be ruled by divine wisdom dwelling within him; or, if this be impossible, then by an external authority, in order that we may be all, as far as possible, under the same government, friends and equals.

Glaucon:: True.

Socrates:: And this is clearly seen to be the intention of the law, which is the ally of the whole city; and is seen also in the authority which we exercise over children, and the refusal to let them be free until we have established in them a principle analogous to the constitution of a state, and by cultivation of this higher element have set up in their hearts a guardian and ruler like our own, and when this is done they may go their ways.

Glaucon:: Yes, the purpose of the law is manifest.

Socrates:: From what point of view, then, and on what ground can we say that a man is profited by injustice or intemperance or other baseness, which will make him a worse man, even though he acquire money or power by his wickedness?

Glaucon:: From no point of view at all.

Socrates:: What shall he profit, if his injustice be undetected and unpunished? He who is undetected only gets worse, whereas he who is detected and punished has the brutal part of his nature silenced and humanized; the gentler element in him is liberated, and his whole soul is perfected and ennobled by the acquirement of justice and temperance and wisdom, more than the body ever is by receiving gifts of beauty, strength and health, in proportion as the soul is more honorable than the body.

Glaucon:: Certainly.

Socrates:: To this nobler purpose the man of understanding will devote the energies of his life. And in the first place, he will honour studies which impress these qualities on his soul, and will disregard others?

Glaucon:: Clearly.

Socrates:: In the next place, he will regulate his bodily habit and training, and so far will he be from yielding to brutal and irrational pleasures, that he will regard even health as quite a secondary matter; his first object will be not that he may be fair or strong or well, unless he is likely thereby to gain temperance, but he will always desire so to attemper the body as to preserve the harmony of the soul?

Glaucon:: Certainly he will, if he has true music in him.

Socrates:: And in the acquisition of wealth there is a principle of order and harmony which he will also observe; he will not allow himself to be dazzled by the foolish applause of the world, and heap up riches to his own infinite harm?

Glaucon:: Certainly not.

Socrates:: He will look at the city which is within him, and take heed that no disorder occur in it, such as might arise either from superfluity or from want; and upon this principle he will regulate his property and gain or spend according to his means.

Glaucon:: Very true.

Socrates:: And, for the same reason, he will gladly accept and enjoy such honors as he deems likely to make him a better man; but those, whether private or public, which are likely to disorder his life, he will avoid?

Glaucon:: Then, if that is his motive, he will not be a statesman.

Socrates:: By the dog of Egypt, he will! in the city which is his own he certainly will, though in the land of his birth perhaps not, unless he have a divine call.

Glaucon:: I understand; you mean that he will be a ruler in the city of which we are the founders, and which exists in idea only; for I do not believe that there is such an one anywhere on earth?

Socrates:: In heaven, there is laid up a pattern of it, methinks, which he who desires may behold, and beholding, may set his own house in order. But whether such an one exists, or ever will exist in fact, is no matter; for he will live after the manner of that city, having nothing to do with any other.

Glaucon:: I think so.

# BOOK X.

Socrates:: Of the many excellences which I perceive in the order of our State, there is none which upon reflection pleases me better than the rule about poetry.

Glaucon:: To what do you refer?

Socrates:: To the rejection of imitative poetry, which certainly ought not to be received; as I see far more clearly now that the parts of the soul have been distinguished.

Glaucon:: What do you mean?

Socrates:: Speaking in confidence, for I should not like to have my words repeated to the tragedians and the rest of the imitative tribe—but I do not mind saying to you, that all poetical imitations are ruinous to the understanding of the hearers, and that the knowledge of their true nature is the only antidote to them.

Glaucon:: Explain the purport of your remark.

Socrates:: Well, I will tell you, although I have always from my earliest youth had an awe and love of Homer, which even now makes the words falter on my lips, for he is the great captain and teacher of the whole of that charming tragic company; but a man is not to be reverenced more than the truth, and therefore I will speak out.

Glaucon:: Very good.

Socrates:: Listen to me then, or rather, answer me.

Glaucon:: Put your question.

Socrates:: Can you tell me what imitation is? for I really do not know.

Glaucon:: A likely thing, then, that I should know.

Socrates:: Why not? for the duller eye may often see a thing sooner than the keener.

Glaucon:: Very true, but in your presence, even if I had any faint notion, I could not muster courage to utter it. Will you enquire yourself?

Socrates:: Well then, shall we begin the enquiry in our usual manner: Whenever a number of individuals have a common name, we assume them to have also a corresponding idea or form:—do you understand me?

Glaucon:: I do.

Socrates:: Let us take any common instance; there are beds and tables in the world—plenty of them, are there not?

Glaucon:: Yes.

Socrates:: But there are only two ideas or forms of them—one the idea of a bed, the other of a table.

Glaucon:: True.

Socrates:: And the maker of either of them makes a bed or he makes a table for our use, in accordance with the idea—that is our way of speaking in this and similar instances—but no artificer makes the ideas themselves: how could he?

Glaucon:: Impossible.

Socrates:: And there is another artist,—I should like to know what you would say of him.

Glaucon:: Who is he?

Socrates:: One who is the maker of all the works of all other workmen.

Glaucon:: What an extraordinary man!

Socrates:: Wait a little, and there will be more reason for your saying so. For this is he who is able to make not only vessels of every kind, but plants and animals, himself and all other things—the earth and heaven, and the things which are in heaven or under the earth; he makes the gods also.

Glaucon:: He must be a wizard and no mistake.

Socrates:: Oh! you are incredulous, are you? Do you mean that there is no such maker or creator, or that in one sense there might be a maker of all these things but in another not? Do you see that there is a way in which you could make them all yourself?

Glaucon:: What way?

Socrates:: An easy way enough; or rather, there are many ways in which the feat might be quickly and easily accomplished, none quicker than that of turning a mirror round and round—you would soon enough make the sun and the heavens, and the earth and yourself, and other animals and plants, and all the other things of which we were just now speaking, in the mirror.

Glaucon:: Yes, but they would be appearances only.

Socrates:: Very good, you are coming to the point now. And the painter too is, as I conceive, just such another—a creator of appearances, is he not?

Glaucon:: Of course.

Socrates:: But then I suppose you will say that what he creates is untrue. And yet there is a sense in which the painter also creates a bed?

Glaucon:: Yes, but not a real bed.

Socrates:: And what of the maker of the bed? were you not saying that he too makes, not the idea which, according to our view, is the essence of the bed, but only a particular bed?

Glaucon:: Yes, I did.

Socrates:: Then if he does not make that which exists he cannot make true existence, but only some semblance of existence; and if any one were to say that the work of the maker of the bed, or of any other workman, has real existence, he could hardly be supposed to be speaking the truth.

Glaucon:: At any rate, philosophers would say that he was not speaking the truth.

Socrates:: No wonder, then, that his work too is an indistinct expression of truth.

Glaucon:: No wonder.

Socrates:: Suppose now that by the light of the examples just offered we enquire who this imitator is?

Glaucon:: If you please.

Socrates:: Well then, here are three beds: one existing in nature, which is made by God, as I think that we may say—for no one else can be the maker?

Glaucon:: No.

Socrates:: There is another which is the work of the carpenter?

Glaucon:: Yes.

Socrates:: And the work of the painter is a third?

Glaucon:: Yes.

Socrates:: Beds, then, are of three kinds, and there are three artists who superintend them: God, the maker of the bed, and the painter?

Glaucon:: Yes, there are three of them.

Socrates:: God, whether from choice or from necessity, made one bed in nature and one only; two or more such ideal beds neither ever have been nor ever will be made by God.

Glaucon:: Why is that?

Socrates:: Because even if He had made but two, a third would still appear behind them which both of them would have for their idea, and that would be the ideal bed and not the two others.

Glaucon:: Very true.

Socrates:: God knew this, and He desired to be the real maker of a real bed, not a particular maker of a particular bed, and therefore He created a bed which is essentially and by nature one only.

Glaucon:: So we believe.

Socrates:: Shall we, then, speak of Him as the natural author or maker of the bed?

Glaucon:: Yes, inasmuch as by the natural process of creation He is the author of this and of all other things.

Socrates:: And what shall we say of the carpenter—is not he also the maker of the bed?

Glaucon:: Yes.

Socrates:: But would you call the painter a creator and maker?

Glaucon:: Certainly not.

Socrates:: Yet if he is not the maker, what is he in relation to the bed?

Glaucon:: I think, that we may fairly designate him as the imitator of that which the others make.

Socrates:: Good, then you call him who is third in the descent from nature an imitator?

Glaucon:: Certainly.

Socrates:: And the tragic poet is an imitator, and therefore, like all other imitators, he is thrice removed from the king and from the truth?

Glaucon:: That appears to be so.

Socrates:: Then about the imitator we are agreed. And what about the painter?—I would like to know whether he may be thought to imitate that which originally exists in nature, or only the creations of artists?

Glaucon:: The latter.

Socrates:: As they are or as they appear? you have still to determine this.

Glaucon:: What do you mean?

Socrates:: I mean, that you may look at a bed from different points of view, obliquely or directly or from any other point of view, and the bed will appear different, but there is no difference in reality. And the same of all things.

Glaucon:: Yes, the difference is only apparent.

Socrates:: Now let me ask you another question: Which is the art of painting designed to be—an imitation of things as they are, or as they appear—of appearance or of reality?

Glaucon:: Of appearance.

Socrates:: Then the imitator, is a long way off the truth, and can do all things because he lightly touches on a small part of them, and that part an image. For example: A painter will paint a cobbler, carpenter, or any other artist, though he knows nothing of their arts; and, if he is a good artist, he may deceive children or simple persons, when he shows them his picture of a carpenter from a distance, and they will fancy that they are looking at a real carpenter.

Glaucon:: Certainly.

Socrates:: And whenever any one informs us that he has found a man who knows all the arts, and all things else that anybody knows, and every single thing with a higher degree of accuracy than any other man—whoever tells us this, I think that we can only imagine him to be a simple creature who is likely to have been deceived by some wizard or actor whom he met, and whom he thought all-knowing, because he himself was unable to analyze the nature of knowledge and ignorance and imitation.

Glaucon:: Most true.

Socrates:: And so, when we hear persons saying that the tragedians, and Homer, who is at their head, know all the arts and all things human, virtue as well as vice, and divine things too, for that the good poet cannot compose well unless he knows his subject, and that he who has not this knowledge can never be a poet, we ought to consider whether here also there may not be a similar illusion. Perhaps they may have come across imitators and been deceived by them; they may not have remembered when they saw their works that these were but imitations thrice removed from the truth, and could easily be made without any knowledge of the truth, because they are appearances only and not realities? Or, after all, they may be in the right, and poets do really know the things about which they seem to the many to speak so well?

Glaucon:: The question, should by all means be considered.

Socrates:: Now do you suppose that if a person were able to make the original as well as the image, he would seriously devote himself to the image-making branch? Would he allow imitation to be the ruling principle of his life, as if he had nothing higher in him?

Glaucon:: I should say not.

Socrates:: The real artist, who knew what he was imitating, would be interested in realities and not in imitations; and would desire to leave as memorials of himself works many and fair; and, instead of being the author of encomiums, he would prefer to be the theme of them.

Glaucon:: Yes, that would be to him a source of much greater honor and profit.

Socrates:: Then, we must put a question to Homer; not about medicine, or any of the arts to which his poems only incidentally refer: we are not going to ask him, or any other poet, whether he has cured patients like Asclepius, or left behind him a school of medicine such as the Asclepiads were, or whether he only talks about medicine and other arts at second-hand; but we have a right to know respecting military tactics, politics, education, which are the chiefest and noblest subjects of his poems, and we may fairly ask him about them. 'Friend Homer' then we say to him, 'if you are only in the second remove from truth in what you say of virtue, and not in the third—not an image maker or imitator—and if you are able to discern what pursuits make men better or worse in private or public life, tell us what State was ever better governed by your help? The good order of Lacedaemon is due to Lycurgus, and many other cities great and small have been similarly benefited by others; but who says that you have been a good legislator to them and have done them any good? Italy and Sicily boast of Charondas, and there is Solon who is renowned among us; but what city has anything to say about you?' Is there any city which he might name?

Glaucon:: I think not. not even the Homerids themselves pretend that he was a legislator.

Socrates:: Well, but is there any war on record which was carried on successfully by him, or aided by his counsels, when he was alive?

Glaucon:: There is not.

Socrates:: Or is there any invention of his, applicable to the arts or to human life, such as Thales the Milesian or

Anacharsis the Scythian, and other ingenious men have conceived, which is attributed to him?

Glaucon:: There is absolutely nothing of the kind.

Socrates:: But, if Homer never did any public service, was he privately a guide or teacher of any? Had he in his lifetime friends who loved to associate with him, and who handed down to posterity an Homeric way of life, such as was established by Pythagoras who was so greatly beloved for his wisdom, and whose followers are to this day quite celebrated for the order which was named after him?

Glaucon:: Nothing of the kind is recorded of him. For surely, Socrates, Creophylus, the companion of Homer, that child of flesh, whose name always makes us laugh, might be more justly ridiculed for his stupidity, if, as is said, Homer was greatly neglected by him and others in his own day when he was alive?

Socrates:: Yes, that is the tradition. But can you imagine, Glaucon, that if Homer had really been able to educate and improve mankind—if he had possessed knowledge and not been a mere imitator—can you imagine, I say, that he would not have had many followers, and been honored and loved by them? Protagoras of Abdera, and Prodicus of Ceos, and a host of others, have only to whisper to their contemporaries: ‘You will never be able to manage either your own house or your own State until you appoint us to be your ministers of education’—and this ingenious device of theirs has such an effect in making men love them that their companions all but carry them about on their shoulders. And is it conceivable that the contemporaries of Homer, or again of Hesiod, would have allowed either of them to go about as rhapsodists, if they had really been able to make mankind virtuous? Would they not have been as unwilling to part with them as with gold, and have compelled them to stay at home with them? Or, if the master would not stay, then the disciples would have followed him about everywhere, until they had got education enough?

Glaucon:: Yes, Socrates, that, I think, is quite true.

Socrates:: Then must we not infer that all these poetical individuals, beginning with Homer, are only imitators; they copy images of virtue and the like, but the truth they never reach? The poet is like a painter who, as we have already observed, will make a likeness of a cobbler though he understands nothing of cobbling; and his picture is good enough for those who know no more than he does, and judge only by colors and figures.

Glaucon:: Quite so.

Socrates:: In like manner the poet with his words and phrases may be said to lay on the colors of the several arts, himself understanding their nature only enough to imitate them; and other people, who are as ignorant as he is, and judge only from his words, imagine that if he speaks of cobbling, or of military tactics, or of anything else, in meter and harmony and rhythm, he speaks very well—such is the sweet influence which melody and rhythm by nature have. And I think that you must have observed again and again what a poor appearance the tales of poets make when stripped of the colors which music puts upon them, and recited in simple prose.

Glaucon:: Yes.

Socrates:: They are like faces which were never really beautiful, but only blooming; and now the bloom of youth has passed away from them?

Glaucon:: Exactly.

Socrates:: Here is another point: The imitator or maker of the image knows nothing of true existence; he knows appearances only. Am I not right?

Glaucon:: Yes.

Socrates:: Then let us have a clear understanding, and not be satisfied with half an explanation.

Glaucon:: Proceed.

Socrates:: Of the painter we say that he will paint reins, and he will paint a bit?

Glaucon:: Yes.

Socrates:: And the worker in leather and brass will make them?

Glaucon:: Certainly.

Socrates:: But does the painter know the right form of the bit and reins? Nay, hardly even the workers in brass and leather who make them; only the horseman who knows how to use them—he knows their right form.

Glaucon:: Most true.

Socrates:: And may we not say the same of all things?

Glaucon:: What?

Socrates:: That there are three arts which are concerned with all things: one which uses, another which makes, a third which imitates them?

Glaucon:: Yes.

Socrates:: And the excellence or beauty or truth of every structure, animate or inanimate, and of every action of man, is relative to the use for which nature or the artist has intended them.

Glaucon:: True.

Socrates:: Then the user of them must have the greatest experience of them, and he must indicate to the maker the good or bad qualities which develop themselves in use; for example, the flute-player will tell the flute-maker which of his flutes is satisfactory to the performer; he will tell him how he ought to make them, and the other will attend to his instructions?

Glaucon:: Of course.

Socrates:: The one knows and therefore speaks with authority about the goodness and badness of flutes, while the other, confiding in him, will do what he is told by him?

Glaucon:: True.

Socrates:: The instrument is the same, but about the excellence or badness of it the maker will only attain to a correct belief; and this he will gain from him who knows, by talking to him and being compelled to hear what he has to say, whereas the user will have knowledge?

Glaucon:: True.

Socrates:: But will the imitator have either? Will he know from use whether or no his drawing is correct or beautiful? or will he have right opinion from being compelled to associate with another who knows and gives him instructions about what he should draw?

Glaucon:: Neither.

Socrates:: Then he will no more have true opinion than he will have knowledge about the goodness or badness of his imitations?

Glaucon:: I suppose not.

Socrates:: The imitative artist will be in a brilliant state of intelligence about his own creations?

Glaucon:: Nay, very much the reverse.

Socrates:: And still he will go on imitating without knowing what makes a thing good or bad, and may be expected therefore to imitate only that which appears to be good to the ignorant multitude?

Glaucon:: Just so.

Socrates:: Thus far then we are pretty well agreed that the imitator has no knowledge worth mentioning of what he imitates. Imitation is only a kind of play or sport, and the tragic poets, whether they write in Iambic or in Heroic verse, are imitators in the highest degree?

Glaucon:: Very true.

Socrates:: And now tell me, I conjure you, has not imitation been shown by us to be concerned with that which is thrice removed from the truth?

Glaucon:: Certainly.

Socrates:: And what is the faculty in man to which imitation is addressed?

Glaucon:: What do you mean?

Socrates:: I will explain: The body which is large when seen near, appears small when seen at a distance?

Glaucon:: True.

Socrates:: And the same objects appear straight when looked at out of the water, and crooked when in the water; and the concave becomes convex, owing to the illusion about colors to which the sight is liable. Thus every sort of confusion is revealed within us; and this is that weakness of the human mind on which the art of conjuring and of deceiving by light and shadow and other ingenious devices imposes, having an effect upon us like magic.

Glaucon:: True.

Socrates:: And the arts of measuring and numbering and weighing come to the rescue of the human understanding—there is the beauty of them—and the apparent greater or less, or more or heavier, no longer have the mastery over us, but give way before calculation and measure and weight?

Glaucon:: Most true.

Socrates:: And this, surely, must be the work of the calculating and rational principle in the soul?

Glaucon:: To be sure.

Socrates:: And when this principle measures and certifies that some things are equal, or that some are greater or less than others, there occurs an apparent contradiction?

Glaucon:: True.

Socrates:: But were we not saying that such a contradiction is impossible—the same faculty cannot have contrary opinions at the same time about the same thing?

Glaucon:: Very true.

Socrates:: Then that part of the soul which has an opinion contrary to measure is not the same with that which has an opinion in accordance with measure?

Glaucon:: True.

Socrates:: And the better part of the soul is likely to be that which trusts to measure and calculation?

Glaucon:: Certainly.

Socrates:: And that which is opposed to them is one of the inferior principles of the soul?

Glaucon:: No doubt.

Socrates:: This was the conclusion at which I was seeking to arrive when I said that painting or drawing, and imitation in general, when doing their own proper work, are far removed from truth, and the companions and friends and associates of a principle within us which is equally removed from reason, and that they have no true or healthy aim.

Glaucon:: Exactly.

Socrates:: The imitative art is an inferior who marries an inferior, and has inferior offspring.

Glaucon:: Very true.

Socrates:: And is this confined to the sight only, or does it extend to the hearing also, relating in fact to what we term poetry?

Glaucon:: Probably the same would be true of poetry.

Socrates:: Do not rely, on a probability derived from the analogy of painting; but let us examine further and see whether the faculty with which poetical imitation is concerned is good or bad.

Glaucon:: By all means.

Socrates:: We may state the question thus:—Imitation imitates the actions of men, whether voluntary or involuntary, on which, as they imagine, a good or bad result has ensued, and they rejoice or sorrow accordingly. Is there anything more?

Glaucon:: No, there is nothing else.

Socrates:: But in all this variety of circumstances is the man at unity with himself—or rather, as in the instance of sight there was confusion and opposition in his opinions about the same things, so here also is there not strife and inconsistency in his life? Though I need hardly raise the question again, for I remember that all this has been already admitted; and the soul has been acknowledged by us to be full of these and ten thousand similar oppositions occurring at the same moment?

Glaucon:: And we were right.

Socrates:: Yes, thus far we were right; but there was an omission which must now be supplied.

Glaucon:: What was the omission?

Socrates:: Were we not saying that a good man, who has the misfortune to lose his son or anything else which is most dear to him, will bear the loss with more equanimity than another?

Glaucon:: Yes.

Socrates:: But will he have no sorrow, or shall we say that although he cannot help sorrowing, he will moderate his sorrow?

Glaucon:: The latter, is the truer statement.

Socrates:: Tell me: will he be more likely to struggle and hold out against his sorrow when he is seen by his equals, or when he is alone?

Glaucon:: It will make a great difference whether he is seen or not.

Socrates:: When he is by himself he will not mind saying or doing many things which he would be ashamed of any one hearing or seeing him do?

Glaucon:: True.

Socrates:: There is a principle of law and reason in him which bids him resist, as well as a feeling of his misfortune which is forcing him to indulge his sorrow?

Glaucon:: True.

Socrates:: But when a man is drawn in two opposite directions, to and from the same object, this, as we affirm, necessarily implies two distinct principles in him?

Glaucon:: Certainly.

Socrates:: One of them is ready to follow the guidance of the law?

Glaucon:: How do you mean?

Socrates:: The law would say that to be patient under suffering is best, and that we should not give way to impatience, as there is no knowing whether such things are good or evil; and nothing is gained by impatience; also, because no human thing is of serious importance, and grief stands in the way of that which at the moment is most required.

Glaucon:: What is most required?

Socrates:: That we should take counsel about what has happened, and when the dice have been thrown order our affairs in the way which reason deems best; not, like children who have had a fall, keeping hold of the part struck and wasting time in setting up a howl, but always accustoming the soul forthwith to apply a remedy, raising up that which is sickly and fallen, banishing the cry of sorrow by the healing art.

Glaucon:: Yes, that is the true way of meeting the attacks of fortune.

Socrates:: Yes, and the higher principle is ready to follow this suggestion of reason?

Glaucon:: Clearly.

Socrates:: And the other principle, which inclines us to recollection of our troubles and to lamentation, and can never have enough of them, we may call irrational, useless, and cowardly?

Glaucon:: Indeed, we may.

Socrates:: And does not the latter—I mean the rebellious principle—furnish a great variety of materials for imitation? Whereas the wise and calm temperament, being always nearly equable, is not easy to imitate or to appreciate when imitated, especially at a public festival when a promiscuous crowd is assembled in a theatre. For the feeling represented is one to which they are strangers.

Glaucon:: Certainly.

Socrates:: Then the imitative poet who aims at being popular is not by nature made, nor is his art intended, to please or to affect the rational principle in the soul; but he will prefer the passionate and fitful temper, which is easily imitated?

Glaucon:: Clearly.

Socrates:: And now we may fairly take him and place him by the side of the painter, for he is like him in two ways: first, inasmuch as his creations have an inferior degree of truth—in this, I say, he is like him; and he is also like him in being concerned with an inferior part of the soul; and therefore we shall be right in refusing to admit him into a well-ordered State, because he awakens and nourishes and strengthens the feelings and impairs the reason. As in a city when the evil are permitted to have authority and the good are put out of the way, so in the soul of man, as we maintain, the imitative poet implants an evil constitution, for he indulges the irrational nature which has no discernment of greater and less, but thinks the same thing at one time great and at another small—he is a manufacturer of images and is very far removed from the truth.

Glaucon:: Exactly.

Socrates:: But we have not yet brought forward the heaviest count in our accusation:—the power which poetry has of harming even the good (and there are very few who are not harmed), is surely an awful thing?

Glaucon:: Yes, certainly, if the effect is what you say.

Socrates:: Hear and judge: The best of us, as I conceive, when we listen to a passage of Homer, or one of the tragedians, in which he represents some pitiful hero who is drawling out his sorrows in a long oration, or weeping, and smiting his breast—the best of us, you know, delight in giving way to sympathy, and are in raptures at the excellence of the poet who stirs our feelings most.

Glaucon:: Yes, of course I know.

Socrates:: But when any sorrow of our own happens to us, then you may observe that we pride ourselves on the opposite quality—we would fain be quiet and patient; this is the manly part, and the other which delighted us in the recitation is now deemed to be the part of a woman.

Glaucon:: Very true.

Socrates:: Now can we be right in praising and admiring another who is doing that which any one of us would abominate and be ashamed of in his own person?

Glaucon:: No, that is certainly not reasonable.

Socrates:: Nay, quite reasonable from one point of view.

Glaucon:: What point of view?

Socrates:: If you consider, that when in misfortune we feel a natural hunger and desire to relieve our sorrow by weeping and lamentation, and that this feeling which is kept under control in our own calamities is satisfied and delighted by the poets;—the better nature in each of us, not having been sufficiently trained by reason or habit, allows the sympathetic element to break loose because the sorrow is another's; and the spectator fancies that there can be no disgrace to himself in praising and pitying any one who comes telling him what a good man he is, and making a fuss about his troubles; he thinks that the pleasure is a gain, and why should he be supercilious and lose this and the poem too? Few persons ever reflect, as I should imagine, that from the evil of other men something of evil is communicated to themselves. And so the feeling of sorrow which has gathered strength at the sight of the misfortunes of others is with difficulty repressed in our own.

Glaucon:: How very true!

Socrates:: And does not the same hold also of the ridiculous? There are jests which you would be ashamed to make yourself, and yet on the comic stage, or indeed in private, when you hear them, you are greatly amused by them, and are not at all disgusted at their unseemliness;—the case of pity is repeated;—there is a principle in human nature which is disposed to raise a laugh, and this which you once restrained by reason, because you were afraid of being thought a buffoon, is now let out again; and having stimulated the risible faculty at the theatre, you are betrayed unconsciously to yourself into playing the comic poet at home.

Glaucon:: Quite true.

Socrates:: And the same may be said of lust and anger and all the other affections, of desire and pain and pleasure, which are held to be inseparable from every action—in all of them poetry feeds and waters the passions instead of drying them up; she lets them rule, although they ought to be controlled, if mankind are ever to increase in happiness and virtue.

Glaucon:: I cannot deny it.

Socrates:: Therefore, Glaucon, whenever you meet with any of the eulogists of Homer declaring that he has been the educator of Hellas, and that he is profitable for education and for the ordering of human things, and that you should take him up again and again and get to know him and regulate your whole life according to him, we may love and honor those who say these things—they are excellent people, as far as their lights extend; and we are ready to acknowledge that Homer is the greatest of poets and first of tragedy writers; but we must remain firm in our conviction that hymns to the gods and praises of famous men are the only poetry which ought to be admitted into our State. For if you go beyond this and allow the honeyed muse to enter, either in epic or lyric verse, not law and the reason of mankind, which by common consent have ever been deemed best, but pleasure and pain will be the rulers in our State.

Glaucon:: That is most true.

Socrates:: And now since we have reverted to the subject of poetry, let this our defense serve to show the reasonableness of our former judgment in sending away out of our State an art having the tendencies which we have described; for reason constrained us. But that she may not impute to us any harshness or want of politeness, let us tell her that there is an ancient quarrel between philosophy and poetry; of which there are many proofs, such as the saying of 'the yelping hound howling at her lord' or of one 'mighty in the vain talk of fools' and 'the mob of sages circumventing Zeus' and the 'subtle thinkers who are beggars after all'; and there are innumerable other signs of ancient enmity between them. Notwithstanding this, let us assure our sweet friend and the sister arts of imitation, that if she will only prove her title to exist in a well-ordered State we shall be delighted to receive her—we are very conscious of her charms; but we may not on that account betray the truth. I dare say, Glaucon, that you are as much charmed by her as I am, especially when she appears in Homer?

Glaucon:: Yes, indeed, I am greatly charmed.

Socrates:: Shall I propose, then, that she be allowed to return from exile, but upon this condition only—that she make a defense of herself in lyrical or some other meter?

Glaucon:: Certainly.

Socrates:: And we may further grant to those of her defenders who are lovers of poetry and yet not poets the permission to speak in prose on her behalf: let them show not only that she is pleasant but also useful to States and to human life, and we will listen in a kindly spirit; for if this can be proved we shall surely be the gainers—I mean, if there is a use in poetry as well as a delight?

Glaucon:: Certainly, we shall be the gainers.

Socrates:: If her defense fails, then, my dear friend, like other persons who are enamored of something, but put a restraint upon themselves when they think their desires are opposed to their interests, so too must we after the manner of lovers give her up, though not without a struggle. We too are inspired by that love of poetry which the education of noble States has implanted in us, and therefore we would have her appear at her best and truest; but so long as she is unable to make good her defense, this argument of ours shall be a charm to us, which we will repeat to ourselves while we listen to her strains; that we may not fall away into the childish love of her which captivates the many. At all events we are well aware that poetry being such as we have described is not to be regarded seriously as attaining to the truth; and he who listens to her, fearing for the safety of the city which is within him, should be on his guard against her seductions and make our words his law.

Glaucon:: Yes, I quite agree with you.

Socrates:: Yes, my dear Glaucon, for great is the issue at stake, greater than appears, whether a man is to be good or bad. And what will any one be profited if under the influence of honor or money or power, aye, or under the excitement of poetry, he neglect justice and virtue?

Glaucon:: Yes, I have been convinced by the argument, as I believe that any one else would have been.

Socrates:: And yet no mention has been made of the greatest prizes and rewards which await virtue.

Glaucon:: What, are there any greater still? If there are, they must be of an inconceivable greatness.

Socrates:: Why, what was ever great in a short time? The whole period of three score years and ten is surely but a little thing in comparison with eternity?

Glaucon:: Say rather 'nothing'.

Socrates:: And should an immortal being seriously think of this little space rather than of the whole?

Glaucon:: Of the whole, certainly. But why do you ask?

Socrates:: Are you not aware, that the soul of man is immortal and imperishable?

—He looked at me in astonishment, and said:

Glaucon:: No, by heaven: And are you really prepared to maintain this?

Socrates:: Yes, I ought to be, and you too—there is no difficulty in proving it.

Glaucon:: I see a great difficulty; but I should like to hear you state this argument of which you make so light.

Socrates:: Listen then.

Glaucon:: I am attending.

Socrates:: There is a thing which you call good and another which you call evil?

Glaucon:: Yes.

Socrates:: Would you agree with me in thinking that the corrupting and destroying element is the evil, and the saving and improving element the good?

Glaucon:: Yes.

Socrates:: And you admit that everything has a good and also an evil; as ophthalmia is the evil of the eyes and disease of the whole body; as mildew is of corn, and rot of timber, or rust of copper and iron: in everything, or in almost everything, there is an inherent evil and disease?

Glaucon:: Yes.

Socrates:: And anything which is infected by any of these evils is made evil, and at last wholly dissolves and dies?

Glaucon:: True.

Socrates:: The vice and evil which is inherent in each is the destruction of each; and if this does not destroy them there is nothing else that will; for good certainly will not destroy them, nor again, that which is neither good nor evil.

Glaucon:: Certainly not.

Socrates:: If, then, we find any nature which having this inherent corruption cannot be dissolved or destroyed, we may be certain that of such a nature there is no destruction?

Glaucon:: That may be assumed.

Socrates:: Well, and is there no evil which corrupts the soul?

Glaucon:: Yes, there are all the evils which we were just now passing in review: unrighteousness, intemperance, cowardice, ignorance.

Socrates:: But does any of these dissolve or destroy her?—and here do not let us fall into the error of supposing that the unjust and foolish man, when he is detected, perishes through his own injustice, which is an evil of the soul. Take the analogy of the body: The evil of the body is a disease which wastes and reduces and annihilates the body; and all the things of which we were just now speaking come to annihilation through their own corruption attaching to them and inhering in them and so destroying them. Is not this true?

Glaucon:: Yes.

Socrates:: Consider the soul in like manner. Does the injustice or other evil which exists in the soul waste and consume her? do they by attaching to the soul and inhering in her at last bring her to death, and so separate her from the body?

Glaucon:: Certainly not.

Socrates:: And yet, it is unreasonable to suppose that anything can perish from without through affection of external evil which could not be destroyed from within by a corruption of its own?

Glaucon:: It is.

Socrates:: Consider, Glaucon, that even the badness of food, whether staleness, decomposition, or any other bad quality, when confined to the actual food, is not supposed to destroy the body; although, if the badness of food communicates corruption to the body, then we should say that the body has been destroyed by a corruption of itself, which is disease, brought on by this; but that the body, being one thing, can be destroyed by the badness of food, which is another, and which does not engender any natural infection—this we shall absolutely deny?

Glaucon:: Very true.

Socrates:: And, on the same principle, unless some bodily evil can produce an evil of the soul, we must not suppose that the soul, which is one thing, can be dissolved by any merely external evil which belongs to another?

Glaucon:: Yes, there is reason in that.

Socrates:: Either, then, let us refute this conclusion, or, while it remains unrefuted, let us never say that fever, or any other disease, or the knife put to the throat, or even the cutting up of the whole body into the minutest pieces, can destroy the soul, until she herself is proved to become more unholy or unrighteous in consequence of these things being done to the body; but that the soul, or anything else if not destroyed by an internal evil, can be destroyed by an external one, is not to be affirmed by any man.

Glaucon:: And surely, no one will ever prove that the souls of men become more unjust in consequence of death.

Socrates:: But if some one who would rather not admit the immortality of the soul boldly denies this, and says that the dying do really become more evil and unrighteous, then, if the speaker is right, I suppose that injustice, like disease, must be assumed to be fatal to the unjust, and that those who take this disorder die by the natural inherent power of destruction which evil has, and which kills them sooner or later, but in quite another way from that in which, at present, the wicked receive death at the hands of others as the penalty of their deeds?

Glaucon:: Nay, in that case injustice, if fatal to the unjust, will not be so very terrible to him, for he will be delivered from evil. But I rather suspect the opposite to be the truth, and that injustice which, if it have the power, will murder others, keeps the murderer alive—aye, and well awake too; so far removed is her dwelling-place from being a house of death.

Socrates:: True, if the inherent natural vice or evil of the soul is unable to kill or destroy her, hardly will that which is appointed to be the destruction of some other body, destroy a soul or anything else except that of which it was appointed to be the destruction.

Glaucon:: Yes, that can hardly be.

Socrates:: But the soul which cannot be destroyed by an evil, whether inherent or external, must exist for ever, and if existing for ever, must be immortal?

Glaucon:: Certainly.

Socrates:: That is the conclusion, and, if a true conclusion, then the souls must always be the same, for if none be destroyed they will not diminish in number. Neither will they increase, for the increase of the immortal natures must come from something mortal, and all things would thus end in immortality.

Glaucon:: Very true.

Socrates:: But this we cannot believe—reason will not allow us—any more than we can believe the soul, in her truest nature, to be full of variety and difference and dissimilarity.

Glaucon:: What do you mean?

Socrates:: The soul, being, as is now proven, immortal, must be the fairest of compositions and cannot be compounded of many elements?

Glaucon:: Certainly not.

Socrates:: Her immortality is demonstrated by the previous argument, and there are many other proofs; but to see her as she really is, not as we now behold her, marred by communion with the body and other miseries, you must contemplate her with the eye of reason, in her original purity; and then her beauty will be revealed, and justice and injustice and all the things which we have described will be manifested more clearly. Thus far, we have spoken the truth concerning her as she appears at present, but we must remember also that we have seen her only in a condition which may be compared to that of the sea-god Glaucus, whose original image can hardly be discerned because his natural members are broken off and crushed and damaged by the waves in all sorts of ways, and incrustations have grown over them of seaweed and shells and stones, so that he is more like some monster than he is to his own natural form. And the soul which we behold is in a similar condition, disfigured by ten thousand ills. But not there, Glaucon, not there must we look.

Glaucon:: Where then?

Socrates:: At her love of wisdom. Let us see whom she affects, and what society and converse she seeks in virtue of her near kindred with the immortal and eternal and divine; also how different she would become if wholly following this superior principle, and borne by a divine impulse out of the ocean in which she now is, and disengaged from the stones and shells and things of earth and rock which in wild variety spring up around her because she feeds upon earth, and is overgrown by the good things of this life as they are termed: then you would see her as she is, and know whether she have one shape only or many, or what her nature is. Of her affections and of the forms which she takes in this present life I think that we have now said enough.

Glaucon:: True.

Socrates:: And thus, we have fulfilled the conditions of the argument; we have not introduced the rewards and glories of justice, which, as you were saying, are to be found in Homer and Hesiod; but justice in her own nature has been shown to be best for the soul in her own nature. Let a man do what is just, whether he have the ring of Gyges or not, and even if in addition to the ring of Gyges he put on the helmet of Hades.

Glaucon:: Very true.

Socrates:: And now, Glaucon, there will be no harm in further enumerating how many and how great are the rewards which justice and the other virtues procure to the soul from gods and men, both in life and after death.

Glaucon:: Certainly not.

Socrates:: Will you repay me, then, what you borrowed in the argument?

Glaucon:: What did I borrow?

Socrates:: The assumption that the just man should appear unjust and the unjust just: for you were of opinion that even if the true state of the case could not possibly escape the eyes of gods and men, still this admission ought to be made for the sake of the argument, in order that pure justice might be weighed against pure injustice. Do you remember?

Glaucon:: I should be much to blame if I had forgotten.

Socrates:: Then, as the cause is decided, I demand on behalf of justice that the estimation in which she is held by gods and men and which we acknowledge to be her due should now be restored to her by us; since she has been shown to confer reality, and not to deceive those who truly possess her, let what has been taken from her be given back, that so she may win that palm of appearance which is hers also, and which she gives to her own.

Glaucon:: The demand, is just.

Socrates:: In the first place,—and this is the first thing which you will have to give back—the nature both of the just and unjust is truly known to the gods.

Glaucon:: Granted.

Socrates:: And if they are both known to them, one must be the friend and the other the enemy of the gods, as we admitted from the beginning?

Glaucon:: True.

Socrates:: And the friend of the gods may be supposed to receive from them all things at their best, excepting only such evil as is the necessary consequence of former sins?

Glaucon:: Certainly.

Socrates:: Then this must be our notion of the just man, that even when he is in poverty or sickness, or any other seeming misfortune, all things will in the end work together for good to him in life and death: for the gods have a care of any one whose desire is to become just and to be like God, as far as man can attain the divine likeness, by the pursuit of virtue?

Glaucon:: Yes, if he is like God he will surely not be neglected by him.

Socrates:: And of the unjust may not the opposite be supposed?

Glaucon:: Certainly.

Socrates:: Such, then, are the palms of victory which the gods give the just?

Glaucon:: That is my conviction.

Socrates:: And what do they receive of men? Look at things as they really are, and you will see that the clever unjust are in the case of runners, who run well from the starting-place to the goal but not back again from the goal: they go off at a great pace, but in the end only look foolish, slinking away with their ears draggling on their shoulders, and without a crown; but the true runner comes to the finish and receives the prize and is crowned. And this is the way with the just; he who endures to the end of every action and occasion of his entire life has a good report and carries off the prize which men have to bestow.

Glaucon:: True.

Socrates:: And now you must allow me to repeat of the just the blessings which you were attributing to the fortunate unjust. I shall say of them, what you were saying of the others, that as they grow older, they become rulers in their own city if they care to be; they marry whom they like and give in marriage to whom they will; all that you said of the others I now say of these. And, on the other hand, of the unjust I say that the greater number, even though they escape in their youth, are found out at last and look foolish at the end of their course, and when they come to be old and miserable are flouted alike by stranger and citizen; they are beaten and then come those things unfit for ears polite, as you truly term them; they will be racked and have their eyes burned out, as you were saying. And you may suppose that I have repeated the remainder of your tale of horrors. But will you let me assume, without reciting them, that these things are true?

Glaucon:: Certainly, what you say is true.

Socrates:: These, then, are the prizes and rewards and gifts which are bestowed upon the just by gods and men in this present life, in addition to the other good things which justice of herself provides.

Glaucon:: Yes, and they are fair and lasting.

Socrates:: And yet, all these are as nothing either in number or greatness in comparison with those other recompenses which await both just and unjust after death. And you ought to hear them, and then both just and unjust will have received from us a full payment of the debt which the argument owes to them.

Glaucon:: Speak, there are few things which I would more gladly hear.

Socrates:: Well, I will tell you a tale; not one of the tales which Odysseus tells to the hero Alcinous, yet this too is a tale of a hero, Er the son of Armenius, a Pamphylian by birth. He was slain in battle, and ten days afterwards, when the bodies of the dead were taken up already in a state of corruption, his body was found unaffected by decay, and carried away home to be buried. And on the twelfth day, as he was lying on the funeral pile, he returned to life and told them what he had seen in the other world. He said that when his soul left the body he went on a journey with a great company, and that they came to a mysterious place at which there were two openings in the earth; they were near together, and over against them were two other openings in the heaven above. In the intermediate space there were judges seated, who commanded the just, after they had given judgment on them and had bound their sentences in front of them, to ascend by the heavenly way on the right hand; and in like manner the unjust were bidden by them to descend by the lower way on the left hand; these also bore the symbols of their deeds, but fastened on their backs. He drew near, and they told him that he was to be the messenger who would carry the report of the other world to men, and they bade him hear and see all that was to be heard and seen in that place. Then he beheld and saw on one side the souls departing at either opening of heaven and earth when sentence had been given on them; and at the two other openings other souls, some ascending out of the earth dusty and worn with travel, some descending out of heaven clean and bright. And arriving ever and anon they seemed to have come from a long journey, and they went forth with gladness into the meadow, where they encamped as at a festival; and those who knew one another embraced and conversed, the souls which came from earth curiously enquiring about the things above, and the souls which came from heaven about the things beneath. And they told one another of what had happened by the way, those from below weeping and sorrowing at the remembrance of the things which they had endured and seen in their journey beneath the earth (now the journey lasted a thousand years), while those from above were describing heavenly delights and visions of inconceivable beauty. The story, Glaucon, would take too long to tell; but the sum was this:—He said that for every wrong which they had done to any one they suffered tenfold; or once in a hundred years—such being reckoned to be the length of man's life, and the penalty being thus paid ten times in a thousand years. If, for example, there were any who had been the cause of many deaths, or had betrayed or enslaved cities or armies, or been guilty of any other evil behavior, for each and all of their offences they received punishment ten times over, and the rewards of beneficence and justice and holiness were in the same proportion. I need hardly repeat what he said concerning young children dying almost as soon as they were born. Of piety and impiety to gods and parents, and of murderers, there were retributions other and greater far which he described. He mentioned that he was present when one of the spirits asked another, 'Where is Ardiaeus the Great?' (Now this Ardiaeus lived a thousand years before the time of Er: he had been the tyrant of some city of Pamphylia, and had murdered his aged father and his elder brother, and was said to have committed many other abominable crimes.) The answer of the other spirit was: 'He comes not hither and will never come. And this' said he, 'was one of the dreadful sights which we ourselves witnessed. We were at the mouth of the cavern, and, having completed all our experiences, were about to reascend, when of a sudden Ardiaeus appeared and several others, most of whom were tyrants; and there were also besides the tyrants private individuals who had been great criminals: they were just, as they fancied, about to return into the upper world, but the mouth, instead of admitting them, gave a roar, whenever any of these incurable sinners or some one who had not been sufficiently punished tried to ascend; and then wild men of fiery aspect, who were standing by and heard the sound, seized and carried them off; and Ardiaeus and others they bound head and foot and hand, and threw them down and flayed them with scourges, and dragged them along the road at the side, carding them on thorns like wool, and declaring to the passers-by what were their crimes, and that they were being taken away to be cast into hell.' And of all the many terrors which they had endured, he said that there was none like the terror which each of them felt at that moment, lest they should hear the voice; and when there was silence, one by one they ascended with exceeding joy. These, said Er, were the penalties and retributions, and there were blessings as great.

Now when the spirits which were in the meadow had tarried seven days, on the eighth they were obliged to proceed on their journey, and, on the fourth day after, he said that they came to a place where they could see from above a line of light, straight as a column, extending right through the whole heaven and through the earth, in color resembling the rainbow, only brighter and purer; another day's journey brought them to the place, and there, in the midst of the light, they saw the ends of the chains of heaven let down from above: for this light is the belt of heaven, and holds together the circle of the universe, like the under-girders of a trireme. From these ends is extended the spindle of Necessity, on which all the revolutions turn. The shaft and hook of this spindle are made of steel, and the whorl is made partly of steel and also partly of other materials. Now the whorl is in form like the whorl used on earth; and the description of it implied that there is one large hollow whorl which is quite scooped out, and into this is fitted another lesser one, and another, and another, and four others, making eight in all, like vessels which fit into one another; the whorls show their edges on the upper side, and on their lower side all together form one continuous whorl. This is pierced by the spindle, which is driven home through the centre of the eighth. The first and outermost whorl has the rim broadest, and the seven inner whorls are narrower, in the following proportions—the sixth is next to the first in size, the fourth next to the sixth; then comes the eighth; the seventh is fifth, the fifth is sixth, the third is seventh, last and eighth comes the second. The largest [or fixed stars] is spangled, and the seventh [or sun] is brightest; the eighth [or moon] colored by the reflected light of the seventh; the second and fifth [Saturn and Mercury] are in color like one another, and yellower than the preceding; the third [Venus] has the whitest light; the fourth [Mars] is reddish; the sixth [Jupiter] is in whiteness second. Now the whole spindle has the same motion; but, as the whole revolves in one direction, the seven inner circles move slowly in the other, and of these the swiftest is the eighth; next in swiftness are the seventh, sixth, and fifth, which move together; third in swiftness appeared to move according to the law of this reversed motion the fourth; the third appeared fourth and the second fifth. The spindle turns on the knees of Necessity; and on the upper surface of each circle is a siren, who goes round with them, hymning a single tone or note. The eight together form one harmony; and round about, at equal intervals, there is another band, three in number, each sitting upon her throne: these are the Fates, daughters of Necessity, who are clothed in white robes and have chaplets upon their heads, Lachesis and Clotho and

Atropos, who accompany with their voices the harmony of the sirens—Lachesis singing of the past, Clotho of the present, Atropos of the future; Clotho from time to time assisting with a touch of her right hand the revolution of the outer circle of the whorl or spindle, and Atropos with her left hand touching and guiding the inner ones, and Lachesis laying hold of either in turn, first with one hand and then with the other.

When Er and the spirits arrived, their duty was to go at once to Lachesis; but first of all there came a prophet who arranged them in order; then he took from the knees of Lachesis lots and samples of lives, and having mounted a high pulpit, spoke as follows: 'Hear the word of Lachesis, the daughter of Necessity. Mortal souls, behold a new cycle of life and mortality. Your genius will not be allotted to you, but you will choose your genius; and let him who draws the first lot have the first choice, and the life which he chooses shall be his destiny. Virtue is free, and as a man honors or dishonors her he will have more or less of her; the responsibility is with the chooser—God is justified' When the Interpreter had thus spoken he scattered lots indifferently among them all, and each of them took up the lot which fell near him, all but Er himself (he was not allowed), and each as he took his lot perceived the number which he had obtained. Then the Interpreter placed on the ground before them the samples of lives; and there were many more lives than the souls present, and they were of all sorts. There were lives of every animal and of man in every condition. And there were tyrannies among them, some lasting out the tyrant's life, others which broke off in the middle and came to an end in poverty and exile and beggary; and there were lives of famous men, some who were famous for their form and beauty as well as for their strength and success in games, or, again, for their birth and the qualities of their ancestors; and some who were the reverse of famous for the opposite qualities. And of women likewise; there was not, however, any definite character in them, because the soul, when choosing a new life, must of necessity become different. But there was every other quality, and they all mingled with one another, and also with elements of wealth and poverty, and disease and health; and there were mean states also. And here, my dear Glaucon, is the supreme peril of our human state; and therefore the utmost care should be taken. Let each one of us leave every other kind of knowledge and seek and follow one thing only, if peradventure he may be able to learn and may find some one who will make him able to learn and discern between good and evil, and so to choose always and everywhere the better life as he has opportunity. He should consider the bearing of all these things which have been mentioned severally and collectively upon virtue; he should know what the effect of beauty is when combined with poverty or wealth in a particular soul, and what are the good and evil consequences of noble and humble birth, of private and public station, of strength and weakness, of cleverness and dullness, and of all the natural and acquired gifts of the soul, and the operation of them when conjoined; he will then look at the nature of the soul, and from the consideration of all these qualities he will be able to determine which is the better and which is the worse; and so he will choose, giving the name of evil to the life which will make his soul more unjust, and good to the life which will make his soul more just; all else he will disregard. For we have seen and know that this is the best choice both, in life and after death. A man must take with him into the world below an adamantine faith in truth and right, that there too he may be undazzled by the desire of wealth or the other allurements of evil, lest, coming upon tyrannies and similar villainies, he do irremediable wrongs to others and suffer yet worse himself; but let him know how to choose the mean and avoid the extremes on either side, as far as possible, not only in this life but in all that which is to come. For this is the way of happiness.

And according to the report of the messenger from the other world this was what the prophet said at the time: ‘Even for the last comer, if he chooses wisely and will live diligently, there is appointed a happy and not undesirable existence. Let not him who chooses first be careless, and let not the last despair.’ And when he had spoken, he who had the first choice came forward and in a moment chose the greatest tyranny; his mind having been darkened by folly and sensuality, he had not thought out the whole matter before he chose, and did not at first sight perceive that he was fated, among other evils, to devour his own children. But when he had time to reflect, and saw what was in the lot, he began to beat his breast and lament over his choice, forgetting the proclamation of the prophet; for, instead of throwing the blame of his misfortune on himself, he accused chance and the gods, and everything rather than himself. Now he was one of those who came from heaven, and in a former life had dwelt in a well-ordered State, but his virtue was a matter of habit only, and he had no philosophy. And it was true of others who were similarly overtaken, that the greater number of them came from heaven and therefore they had never been schooled by trial, whereas the pilgrims who came from earth having themselves suffered and seen others suffer were not in a hurry to choose. And owing to this inexperience of theirs, and also because the lot was a chance, many of the souls exchanged a good destiny for an evil or an evil for a good. For if a man had always on his arrival in this world dedicated himself from the first to sound philosophy, and had been moderately fortunate in the number of the lot, he might, as the messenger reported, be happy here, and also his journey to another life and return to this, instead of being rough and underground, would be smooth and heavenly. Most curious, was the spectacle—sad and laughable and strange; for the choice of the souls was in most cases based on their experience of a previous life. There he saw the soul which had once been Orpheus choosing the life of a swan out of enmity to the race of women, hating to be born of a woman because they had been his murderers; he beheld also the soul of Thamyras choosing the life of a nightingale; birds, on the other hand, like the swan and other musicians, wanting to be men. The soul which obtained the twentieth lot chose the life of a lion, and this was the soul of Ajax the son of Telamon, who would not be a man, remembering the injustice which was done him in the judgment about the arms. The next was Agamemnon, who took the life of an eagle, because, like Ajax, he hated human nature by reason of his sufferings. About the middle came the lot of Atalanta; she, seeing the great fame of an athlete, was unable to resist the temptation: and after her there followed the soul of Epeus the son of Panopeus passing into the nature of a woman cunning in the arts; and far away among the last who chose, the soul of the jester Thersites was putting on the form of a monkey. There came also the soul of Odysseus having yet to make a choice, and his lot happened to be the last of them all. Now the recollection of former toils had disenchanted him of ambition, and he went about for a considerable time in search of the life of a private man who had no cares; he had some difficulty in finding this, which was lying about and had been neglected by everybody else; and when he saw it, he said that he would have done the same had his lot been first instead of last, and that he was delighted to have it. And not only did men pass into animals, but I must also mention that there were animals tame and wild who changed into one another and into corresponding human natures—the good into the gentle and the evil into the savage, in all sorts of combinations.

All the souls had now chosen their lives, and they went in the order of their choice to Lachesis, who sent with them the genius whom they had severally chosen, to be the guardian of their lives and the fulfiller of the choice: this genius led the souls first to Clotho, and drew them within the revolution of the spindle impelled by her hand, thus ratifying the destiny of each; and then, when they were fastened to this, carried them to Atropos, who spun the threads and made them irreversible, whence without turning round they passed beneath the throne of Necessity; and when they had all passed, they marched on in a scorching heat to the plain of Forgetfulness, which was a barren waste destitute of trees and verdure; and then towards evening they encamped by the river of Unmindfulness, whose water no vessel can hold; of this they were all obliged to drink a certain quantity, and those who were not saved by wisdom drank more than was necessary; and each one as he drank forgot all things. Now after they had gone to rest, about the middle of the night there was a thunderstorm and earthquake, and then in an instant they were driven upwards in all manner of ways to their birth, like stars shooting. He himself was hindered from drinking the water. But in what manner or by what means he returned to the body he could not say; only, in the morning, awaking suddenly, he found himself lying on the pyre.

And thus, Glaucon, the tale has been saved and has not perished, and will save us if we are obedient to the word spoken; and we shall pass safely over the river of

Forgetfulness and our soul will not be defiled. Wherefore my counsel is, that we hold fast ever to the heavenly way and follow after justice and virtue always, considering that the soul is immortal and able to endure every sort of good and every sort of evil. Thus shall we live dear to one another and to the gods, both while remaining here and when, like conquerors in the games who go round to gather gifts, we receive our reward. And it shall be well with us both in this life and in the pilgrimage of a thousand years which we have been describing.

# Republic Of Plato.

Translated by A. D. Lindsay.

PERSONS OF THE DIALOGUE

| | |
|---|---|
| Socrates, *who is the narrator.* | Cephalus. |
| Glaucon. | Thrasymachus. |
| Adeimantus. | Cleitophon. |
| Polemarchus. | |

*And others who are mute auditors.*

The scene is laid in the house of Cephalus at the Piraeus.

## Book 1.

Socrates:: I went down to the Peiraeus yesterday with Glaucon, the son of Ariston. As this was the first celebration of the festival, I wished to make my prayers to the goddess and see the ceremony. I liked the procession of the residents, but I thought that the Thracians ordered theirs quite as successfully. We had offered our prayers and finished our sight-seeing, and were leaving for the city, when from some way off, Polemarchus, the son of Cephalus, saw that we were starting homewards, and sent his slave to run after us and bid us wait. The lad caught my cloak from behind and said:

Boy:: 'Polemarchus bids you wait.'

Socrates:: I turned round and asked him where his master was.

Boy:: 'He is coming behind. but will you please wait?'

Glaucon:: 'Surely we will.'

Socrates:: Very soon up came Polemarchus, and with him Adeimantus, Glaucon's brother, and Niceratus the son of Nicias, and some others, evidently from the procession.

Polemarchus:: ‘Socrates, you seem to be leaving, and to be on your way to the city.’

Socrates:: ‘You are not far wrong.’

Polemarchus:: ‘Well, do you see our numbers?’

Socrates:: ‘Surely.’

Polemarchus:: ‘Then either show yourselves the stronger or remain here.’

Socrates:: ‘But there is still an alternative. What if we persuade you that you ought to let us go?’

Polemarchus:: ‘Do you mean to say, that you can persuade those who won’t listen?’

Glaucon:: ‘No, indeed.’

Polemarchus:: ‘Well, you may make up your minds that we won’t.’

Adeimantus:: ‘But you do not know, that in the evening there is to be a torch race on horseback in honor of the goddess?’

Socrates:: ‘On horseback? That is certainly a novelty. Will it be a horse-race with the riders carrying torches and handing them to one another, or how will it be done?’

Polemarchus:: ‘As you say, and there will be a night festival besides, which will be worth seeing. We can go out and watch it after dinner, and many of the young men here will join our party, and we shall talk. So, please, stay, and don’t refuse.

Glaucon:: ‘It seems that we had better.’

Socrates:: ‘Well, if you think so, let us stay.’

We went home, therefore, with Polemarchus, and found there his brothers Lysias and Euthydemus, and with them also Thrasymachus of Chalcedon, Charmantides of Paeania and Cleitophon, the son of Aristomenes; within was Polemarchus’ father, Cephalus. I thought him looking very old. It was indeed some time since I had seen him. He was sitting upon a cushioned chair, a garland on his head, for he had just been sacrificing in the court. There were seats round the room, and we sat down beside him. Cephalus, as soon as he saw me, greeted me, and said:

Cephalus:: ‘You don’t very often visit us in the Peiraeus, Socrates. But you ought to. If I were still able to walk to town easily, there would be no need for you to come here; we could come to you. But, as things are, you ought to come here oftener; for I find that as I lose my taste for bodily pleasures, I grow more eager than ever for discussion, and enjoy it more. So do not refuse me. Spend your time with these young men, and visit us here where you know you are with old friends.’

Socrates:: ‘Indeed, Cephalus, I enjoy talking with very old men. I consider that they have gone before us along a road which we must all travel in our turn, and it is good that we should ask them of the nature of that road, whether it be rough and difficult, or easy and smooth. You, Cephalus, are now at that time of life which the poets call “old age the threshold,” and I should particularly like to ask your thoughts on this question. Is it a painful period of life, or what is your news of it?’

Cephalus:: ‘I will give you my own opinion gladly, Socrates. You know some of us old men are often together, true to the old proverb. Now most of the company whenever they meet lament their wretched lot. They long for the pleasures of youth, and call to mind the delights of love, and drink and feasting, and so on. They complain that they are as men who have lost a great treasure, who once lived well, and now don’t live at all; and some of them bewail the insults which their kinsfolk heap upon their years, and therefore they decry old age for all the evils it has brought upon them. But in my opinion, Socrates, they don’t really see what is wrong. If they were right, then I too, and all who have come to my time of life, would by reason of old age have suffered as they have; but, as a matter of fact, I have met many whose experience is different. Take the poet Sophocles, for example. I was with him once, when someone asked him: “How do you stand, Sophocles, in respect to the pleasures of sex? Are you still capable of intercourse?” “Hush, sir,” “It gives me the greatest joy to have escaped the clutches of that savage and fierce master.” I thought then that he spoke wisely, and I think so still, for certainly old age brings great peace and freedom from passions such as these. When the desires grow less intense and slacken, most certainly it is as Sophocles says: it means release from masters many and ravening. But all these troubles, their complaints against their kinsfolk among them, have but one cause, and that is not old age, Socrates, but men’s dispositions; for old age lays but a moderate burden on men who have order and peace within themselves, but ill-governed natures find youth and old age alike irksome.’

Socrates:: I was delighted with him for what he said, and, wishing to hear more, I tried to draw him out by saying: ‘I fancy, Cephalus, that most people don’t admit what you say, but consider that you find old age pleasant, not because of your disposition, but because of your great wealth; for the rich, they say, have many consolations.’

Cephalus:: ‘True. they do not admit it, and in a sense, they are right; but not so right as they think. There is great force in that retort of Themistocles to a Seriphian who said sneeringly that his fame was due not to himself but to his city. “Certainly,” said Themistocles, “I should not have become famous were I a Seriphian, but neither would you were you an Athenian.” The same applies to men ‘ho are not rich and cannot endure old age. A good man even would not easily endure old age and poverty conjoined, nor would the bad man, though he got riches, ever attain peace with himself.'

Socrates:: 'Did you inherit the greater part of your wealth, Cephalus, or have you made it?'

Cephalus:: 'What have I made myself, Socrates? In the matter of money-making, I might be called the mean between my grandfather and my father. My grandfather, Cephalus, inherited about as much wealth as now possess, and increased it many times, while Lysanias, my father, reduced it to even less than it is now. But I am content if I leave these young men not less, but perhaps a little more than I inherited.'

Socrates:: 'I asked, because you seemed to me not excessively fond of money; and that is usually the case with men who have not made it. But those who have made their money are twice as much attached to it as others; for as poets love their poems and fathers their children, just so money-makers value their money, not only for its uses, as other people do, but because it is their own production. They are disagreeable people to meet for that reason: they have no praise for anything but riches.'

Cephalus:: 'You are right.'

Socrates:: 'Yes, but tell me this: What do you consider the greatest good in the possession of ample means?'

Cephalus:: 'Something that perhaps few men will credit. But you know, Socrates, when a man faces the thought that he must die, there come upon him fear and foreboding about things that have not troubled him before. Once he laughed at the tales about those in Hades, of punishment to be suffered there by him who here has done injustice. But now his soul is tormented by the thought that these may be true, and whether from the bodily weakness of old age, or because he is now nearer that other world, he himself sees those things more clearly. He becomes full of fear and suspicion. He begins to reckon up and consider if he has done any injustice to any man. And finding in his life many such acts, often, like a child, he awakes out of sleep in terror, and lives in expectation of evil. But with him that is conscious of no injustice in him, kindly hope, the nurse of age, as Pindar calls it, is always present. For that is a beautiful saying of his, Socrates, that whoever has lived a righteous and holy life;

> She on his pilgrimage
> Fareth beside him, and his heart feedeth.
> Sweet hope, the nurse of age;
> Most surely she of all
> To its haven leadeth
> The many-turning mind
> Of human kind.

It is really a wonderfully fine description. Now here, I hold, lies the chief advantage of the possession of wealth, not perhaps for every one, but for the good man; for we can go to that other world without fear only if we are guiltless of even involuntary deceit or falsehood, and if we are quit of all our debts of sacrifice to God and of money to man, and to this result money largely contributes. It has indeed many other uses; but setting one thing against another, I should regard this as not the least of the uses of wealth to a man of sense.'

Socrates:: 'What you say, Cephalus, is excellent. But as to this justice, can we quite without qualification define it as truthfulness and repayment of anything that we have received; or are these very actions sometimes just and sometimes unjust? For example, if we had been given weapons by a friend when he was of sound mind, and he went mad and reclaimed them, it would surely be universally admitted that it would not be right to give them back. Any one who did so, and who was prepared to tell the whole truth to a man in that state, would not be just.'

Cephalus:: 'You are right.'

Socrates:: 'Then this is not the definition of justice—speaking the truth and restoring what we have received?'

Polemarchus:: 'Yes, but it is, Socrates, if we are to believe Simonides.'

Cephalus:: 'Well, well, I leave the argument with you, for it is time for me to attend to the sacrifice.'

Socrates:: 'Well,' said I, 'is not Polemarchus your heir?'

Cephalus:: 'Certainly,'

Socrates:: he smiling, departed to sacrifice.—

'Come, then, you who have inherited the argument, what is this saying of Simonides about justice of which you approve?'

Polemarchus:: 'That to render to every man what is owing is just, and I for one think he was right in so saying.'

Socrates:: 'Well, Simonides is one whom we cannot lightly disbelieve. He was a wise and godlike man. But as to what this saying means, you, Polemarchus, may know that; I certainly do not. For it clearly does not mean what we were just saying, repayment of what has been given to a man in pledge if the claimant is out of his senses. Yet surely what has been given in pledge is owing, is it not?'

Polemarchus:: "Yes.'

Socrates:: 'But we were certainly not to make repayment when the claimant is out of his senses.'

Polemarchus:: "True.'

Socrates:: 'Then Simonides apparently means something else when he says that to repay what is owing is just.'

Polemarchus:: “But assuredly he does, for he thinks that friends owe to friends to do good and no evil.’

Socrates:: ‘I understand, for what is repaid is not always what is owing; when, for example, a man repays money to one who has deposited it with him, if the repayment or acceptance is harmful and the repayer and the receiver are friends. Is that what you say Simonides meant?’

Polemarchus:: “Certainly.’

Socrates:: ‘Then are we to repay to enemies whatever is owing to them?’

Polemarchus:: “Certainly we must pay them what is owing. But I imagine that from an enemy to an enemy evil of some sort is owing, because there evil is appropriate.’

Socrates:: ‘Simonides then apparently, as poets will, made a riddle on the nature of justice. For he thought, as it appears, that to pay every man what is appropriate is just; but he called that, what is owing.’

Polemarchus:: “Do you not agree?’

Socrates:: ’In heaven’s name, what answer do you think he would have given us if we had asked him: “Simonides, what that is owing and appropriate does the art called medicine render, and to whom or what?”‘

Polemarchus:: “Clearly that it renders drugs and food and drink to bodies.’

Socrates:: ‘And what that is owing and appropriate does the art called cookery render, and to whom or what?’

Polemarchus:: “Seasoning to dishes.’

Socrates:: ‘Well, what then does the art called justice render, and to whom or what?’

Polemarchus:: “If, Socrates, we are to be consistent, it renders benefits and injuries to friends and enemies.’

Socrates:: ‘Then does he mean by justice doing good to friends and evil to enemies?’

Polemarchus:: “I think so.’

Socrates:: ‘But when people are ill, who, as regards health and disease, is most capable of doing good to friends and harm to enemies?’

Polemarchus:: “A doctor.’

Socrates:: ‘And when they are on a voyage, as regards the dangers of the sea?’

Polemarchus:: “A ship captain.’

Socrates:: ‘Then what about the just man? In what action and in’ what regard is he most capable of benefiting his friends and harming his enemies?’

Polemarchus:: “In wars and alliances, I imagine.’

Socrates:: ‘Very good! But, my dear Polemarchus, a doctor is useless when men are not ill.’

Polemarchus:: “True.’

Socrates:: ‘And a ship captain when they are not on the sea.’

Polemarchus:: “Yes.’

Socrates:: ‘Then is the just man also useless when men are not at war?’

Polemarchus:: “I cannot think so.’

Socrates:: ‘Then justice is useful in peace also?’

Polemarchus:: “It is.’

Socrates:: ‘So is farming, is it not?’

Polemarchus:: “Yes.’

Socrates:: ‘In the procuring of the fruits of the earth, that is to say?’

Polemarchus:: “Yes.’

Socrates:: ‘And is shoemaking also useful?’

Polemarchus:: “Yes.’

Socrates:: ‘In the procuring of shoes, you would say?’

Polemarchus:: “Certainly.’

Socrates:: ‘Now, then, as to justice. What need docs it satisfy or what benefit procure that makes it useful in peace?’

Polemarchus:: “It is useful in dealings, Socrates.’

Socrates:: ‘By dealings, do you mean partnerships or something different?’

Polemarchus:: “Yes, partnerships.’

Socrates:: ‘Then in a game of draughts is the just man or the draught player a good and useful partner?’

Polemarchus:: “The draught player.’

Socrates:: ‘In bricklaying and masonry will the just man be a better and more useful partner than the builder?’

Polemarchus:: “Certainly not.’

Socrates:: ‘Then as the harp player is a better partner than the just man in playing music, in what kind of partnership will the just man be better than the harp player or the builder?’

Polemarchus:: “In a money partnership, I imagine.’

Socrates:: ‘Except, perhaps, Polemarchus, in using money, as when it comes to buying or selling a horse. There, I imagine, the man who knows horses is the better partner. Is he not?’

Polemarchus:: “Apparently.’

Socrates:: ‘And in buying or selling a ship, the shipbuilder or the captain will be the better?’

Polemarchus:: “Probably.’

Socrates:: ‘Then on which occasions of using silver and gold is the just man a more useful partner than others?’

Polemarchus:: “In cases of depositing and keeping money safe.’

Socrates:: ‘Is not that as good as saying, when there is no need to use money, but only to keep it unused?’

Polemarchus:: “Yes.’

Socrates:: ‘Then justice is useful in regard to money when money is useless?’

Polemarchus:: “It looks like it.’

Socrates:: ‘And when a pruning knife is to be kept, justice is useful both in dealing with others, or for yourself; but when it is to be used, the art of vine-dressing is more useful?’

Polemarchus:: “Apparently.’

Socrates:: ‘Would you say the same of a shield and a harp? When they are to be kept and not used, justice is useful; but when they are to be used, the arts of fighting and of music are more useful.’

Polemarchus:: “That must be so.’

Socrates:: ‘And is it not the same with everything else? When anything is to be used, justice is useless; and when it is not to be used, useful?’

Polemarchus:: “It looks like it.’

Socrates:: ‘Justice, then, my friend, cannot be of any great moment if it is useful only for things that are useless. But let us consider this point. In any kind of fight, whether with fists or weapons, is not he who is cleverest in striking also cleverest in warding off blows?’

Polemarchus:: “Certainly.’

Socrates:: ‘Moreover, is not he who is clever in warding off disease also cleverest in implanting it without being found out?’

Polemarchus:: “I think so.’

Socrates:: ‘And he is an excellent guard of an army who is clever in stealing the plans of the enemy and all their dispositions?’

Polemarchus:: “Certainly.’

Socrates:: ‘Then whoever is a clever guarder of anything is also a clever thief of it?’

Polemarchus:: “Apparently.’

Socrates:: ‘Then if the just man is clever at guarding money, he is also clever at stealing it?’

Polemarchus:: “That is certainly the drift of the argument.’

Socrates:: ‘Then the just man stands revealed as a clever thief, and you have probably learnt that from Homer, for he had a great liking for Odysseus’ maternal grandfather, Autolycus, and says that he excelled all men in theft and perjury. Justice, then, according to you and Homer and Simonides seems to be a form of theft, for the advantage of friends and the harm of enemies. Have you not said so?’

Polemarchus:: “Good heavens, no! but I do not know now what I have said. Still I am of the same opinion, that justice is to help your and harm your enemies.’

Socrates:: ‘Do you define a man’s friends as those who seem to him to be trustworthy, or as those who really are whether they seems so or not, and so with his enemies?’

Polemarchus:: “It is but likely, that a man should love those whom he thinks trustworthy, and hate those whom he thinks evil.’

Socrates:: ‘But do not men make mistakes in this matter so that they think many men trustworthy who are not really so, and vice versa?’

Polemarchus:: “They do.’

Socrates:: 'Then to those men are not the good enemies and the bad friends?'

Polemarchus:: "Certainly.'

Socrates:: 'But nevertheless it is just for them in those circumstances to help the evil and harm the good, is it not?'

Polemarchus:: "Apparently.'

Socrates:: 'But are not the good just, and such as do no injustice?'

Polemarchus:: "Yes.'

Socrates:: 'Then, according to your argument, it is just to do ill to those who do no injustice.'

Polemarchus:: "Certainly not, Socrates. It Is the argument that seems evil.'

Socrates:: 'Then is it just to harm the unjust and benefit the just?'

Polemarchus:: "That seems a fairer conclusion than the former.'

Socrates:: 'Then, Polemarchus, for the many who have been entirely mistaken about men, it will be just to harm their friends, for some of them are evil, and to help their enemies, for some of them are good. So we shall come to a conclusion exactly contrary to what we asserted to be Simonides' meaning.'

Polemarchus:: "Yes, that is certainly the result. But let us change, for we probably did not define friend and enemy rightly.'

Socrates:: 'Where was the definition wrong, Polemarchus?'

Polemarchus:: "In defining the friend as him who seems to be trustworthy.'

Socrates:: 'And now, what change shall we make?'

Polemarchus:: “We shall say, that he is a friend who not only is thought to be but really is trustworthy, but he who is only thought to be and is not really trustworthy is thought to be but is not really a friend. And the same change will apply to enemies.’

Socrates:: ‘Then apparently according to the argument, the good man will be a friend and the bad an enemy.’

Polemarchus:: “Yes.’

Socrates:: ‘Then would you have us add to our definition of justice? In other words, whereas we said previously that it was just to do good to friends and harm to enemies, shall we now further say that justice is to do good to friends when they are good, and to harm enemies when they are bad?’

Polemarchus:: “Certainly. I think that is an excellent definition.’

Socrates:: ‘Is it then, the nature of a just man to harm any human being whatever?’

Polemarchus:: “Why, certainly. He must harm those who are wicked and enemies.’

Socrates:: ‘When horses are harmed, do they become better or worse?’

Polemarchus:: “Worse.’

Socrates:: ‘Worse as horses, or worse as dogs?’

Polemarchus:: “Worse as horses.’

Socrates:: ‘And, similarly, when dogs are harmed, do they become worse as dogs and not worse as horses?’

Polemarchus:: “Necessarily.’

Socrates:: ‘Then, my good sir, shall we not say the same of men, that when harmed they become worse as men—that is, worse in human excellence?’

Polemarchus:: “Certainly.’

Socrates:: ‘But is not justice a human excellence?’

Polemarchus:: “That, too, is indisputable.’

Socrates:: ‘Then, my friend, it is also indisputable that men who are harmed become more unjust.’

Polemarchus:: “ Apparently.’

Socrates:: ‘Now, can musicians, by the art of music, make men unmusical?’

Polemarchus:: “That is impossible.’

Socrates:: ‘Or can horsemen by horsemanship make men worse riders?’

Polemarchus:: “No.’

Socrates:: ‘Then can just men by justice make men unjust; or, in short, can good men by virtue make men bad?’

Polemarchus:: “No, that is impossible.’

Socrates:: ‘It is not the function of heat, I imagine, to make cold, but of its opposite?’

Polemarchus:: “Yes.’

Socrates:: ‘Nor of dryness to make wet, but of its opposite?’

Polemarchus:: “Certainly.’

Socrates:: ‘Nor of the good man to do harm, but of his opposite?’

Polemarchus:: “That is evident.’

Socrates:: And is not the just man good?’

Polemarchus:: “Certainly.’

Socrates:: ‘Then to harm either his friend or any man is not the function of the just man, Polemarchus, but of his opposite, the unjust?’

Polemarchus:: What you say seems to me indisputable, Socrates.’

Socrates:: ‘Then if any man has said that it is just to restore to each man what is owing, and if that means that the just owes harm to his enemies and help to his friends, he was not a wise man, in that he said what was untrue. For we have discovered that it is never just to injure any man.’

Polemarchus:: “I agree.’

Socrates:: ‘Then, you and I will take up arms together against any one who attributes this saying to Simonides, or Bias, or Pittacus, or any other wise and blessed man.’

Polemarchus:: ‘I am quite ready to do my share of the fighting.’

Socrates:: ‘But do you know, whom I think to be the author of the saying that it is just to help friends and harm enemies?’

Polemarchus:: ‘Whom?’

Socrates:: ‘I fancy that it was Periander, or Perdiccas, or Xerxes, or Ismenias the Theban, or some other man of wealth and fancied power.’

Polemarchus:: ‘Yes, you are certainly right.’

Socrates:: ‘Very good. Now since this definition of justice and what is just has been rejected, what other definition can any one give?’

Now, while we had been talking, Thrasymachus had several times tried to interrupt the argument, but had been restrained by those next him who wished to hear it to the end. When we stopped for a moment, and I said these words, he could keep still no longer; but, gathering himself up, he sprang at us like a wild beast to make us his prey. Polemarchus and I shrank aside in fear. Then, speaking so that all could hear, he said:

Thrasymachus:: 'What nonsense has possessed you two all this time, Socrates? What do you mean by all your polite bowing and scraping to one another? If you have a genuine desire to know what justice is, don't confine yourself to asking questions, and making a show by refuting any answer that is given. You know that it is much easier to ask questions than to answer them. But answer yourself, and say how you define justice; and don't dare to tell me that it is the obligatory, or the expedient, or the profitable, or the lucrative, or the advantageous, but make your answer precise and accurate, for I will not have any rubbish of that kind from you.'

Socrates:: When I heard this I was struck with amazement, and gazed at him, and began to be afraid. I think that if I had not looked at him before he looked at me, I should have been struck dumb. But when the argument began to exasperate him I had looked at him first, so that I was able to answer him:

'Thrasymachus, don't be hard on us, for if Polemarchus and I have gone astray in our scrutiny of the argument, our sin has assuredly not been deliberate. If gold had been the object of our search, we could never have allowed our politeness to spoil our chance of finding it; and now, when we are seeking for justice, a thing more precious than much gold, never imagine that we should have given way to one another so weakly and foolishly, instead of making every effort to discover it. We are in earnest, my friend, believe me; but the task, I fancy, is beyond our powers; and, therefore, you clever people should rather pity than scold us.'

When he heard this he burst out laughing and said:

Thrasymachus:: 'O Heracles, this is our sly Socrates whom we all know so well. I knew how it would be, and I told the others that you would refuse to give an answer, but would take refuge in slyness or anything to excuse your answering a simple question.’

Socrates:: ‘You are a wise man, Thrasymachus, and you know that if you’ asked someone what are the factors of twelve, and said to him: “Don’t dare, sir, to tell me that twelve is twice six, or three times four, or six times two, or four times three, for I will not have any such nonsense from you,” you could see, I fancy, that no one would answer that kind of question. If he said to you: “Thrasymachus, what do you mean? Am I to give none of these answers? But what, my good sir, if one of them happens to be right? Am I then to give another answer than the true one? or what do you mean?” What would you have said to that?’

Thrasymachus:: ‘Oh, well, the cases are so exactly parallel, are they not?’

Socrates:: "There is no reason why they should not be. But even if they are not, but one of those answers seems true to the person questioned, do you fancy that he will not answer as he thinks, whether we forbid him or not?’

Thrasymachus:: ‘Then are you actually going to do that? Will you give one of those answers which I have forbidden?’

Socrates:: ‘I should not be surprised, if on consideration I thought it right to do so.’

Thrasymachus:: ‘Well, what if I give you an answer about justice different from all these, and better? What penalty are you prepared to pay?’

Socrates:: ‘None, but the befitting penalty of ignorance. It is befitting surely to learn from wisdom. I am ready to pay that penalty.’

Thrasymachus:: ‘You are an entertaining fellow. Yes, you must learn, but you must pay in money also.’

Socrates:: ‘Certainly, if I have any.’

Glaucon:: ‘But that is all right. As far as money is concerned, Thrasymachus, you may say on, for we will all contribute for Socrates.’

Thrasymachus:: ‘Oh, yes, to let Socrates play his usual game, refuse to answer himself, but listen to another’s answer, and then refute it.’

Socrates:: ‘But, my good sir, how can a man answer when, in the first place, he is ignorant and confesses his ignorance, and when, secondly, even if he has any opinions on the subject, he has been forbidden to say what he thinks by a man of no mean authority? It is much better that you should speak, for you say that you know and have an answer. Therefore don’t refuse, but do me the favor of answering, and don’t grudge instructing Glaucon here and the rest of us.

When I had said this, Glaucon and the others entreated him not to refuse. Now Thrasymachus was evidently eager to speak and win applause for the excellent answer he thought he had ready. But he pretended to insist on my answering. In the end he gave way and said:

Thrasymachus:: ‘This is Socrates’ wisdom. He refuses to teach, but goes about learning from others, and shows no gratitude for his lessons.’

Socrates:: ‘It is perfectly true, Thrasymachus, that I learn from others. But it is untrue to say that I show no gratitude. I show all that I can, for I have no money. I can only give praise. When you answer, you will see at once how willingly I give that if I think an answer good, for I fancy that yours will be good.’

Thrasymachus:: ‘Listen, then. I declare that justice is nothing else than that which is advantageous to the stronger. Well, where is your praise? You refuse it?

Socrates:: ‘I must first learn what you mean. As yet I do not know. You say that what is advantageous to the stronger is just. Now, what do you mean by that, Thrasymachus? For example, you surely do not assert that if Polydamas the athlete is stronger than we, and it is to his bodily advantage to eat meat, then for us also who are weaker this diet is advantageous, and consequently just?’

Thrasymachus:: ‘You are shameless, Socrates. You conceive my meaning in the one way in which you can do most harm to the argument.’

Socrates:: ‘Not at all, my good sir, but tell us your meaning more clearly.’

Thrasymachus:: ‘Do you mean to say you don’t know, that in some cities a tyrant is master, in others a democracy, in others an oligarchy?’

Socrates:: ‘Surely.’

Thrasymachus:: ‘Then it is the government which is master in each city, is it not?’

Socrates:: ‘Certainly.’

Thrasymachus:: ‘Well, every government lays down laws for its own advantage—a democracy democratic, a tyranny tyrannical laws, and so on. In laying down these laws they have made it plain that what is to their advantage is just. They punish him who departs from this as a law-breaker and an unjust man. And this, my good sir, is what I mean. In every city justice is the same. It is what is advantageous to the established government. But the established government is master, and so sound reasoning gives the conclusion that the same thing is always just—namely, what is advantageous to the stronger.’

Socrates:: ‘I have found out, what you mean. I shall try to find out whether it is true or not. But, Thrasymachus, you yourself have given the answer that the advantageous is just; yet you forbade me to give that answer, though indeed you have added the qualification, “to the stronger.”‘

Thrasymachus:: ‘And that is an insignificant qualification, I suppose?’

Socrates:: ‘It is not yet evident whether it is insignificant or important, but it is evident that we must examine whether your assertion is true; for I myself acknowledge that justice is in a sense advantageous, but you define the advantageous further by the addition of “to the stronger.” I do not know about that. I must think.’

Thrasymachus:: ‘Think away.’

Socrates:: ‘That I will. Now tell me. Do you not also say that it is just to obey the rulers?’

Thrasymachus:: ‘I do.’

Socrates:: ‘Then are the rulers in every city infallible, or are they liable sometimes to make mistakes?’

Thrasymachus:: ‘They are certainly liable to make mistakes.’

Socrates:: ‘Then in their legislation will they not lay down some right and some mistaken laws?’

Thrasymachus:: ‘I fancy so.’

Socrates:: ‘Are right laws those which are to their advantage, and mistaken laws those which are to their disadvantage?’

Thrasymachus:: ‘Surely.’

Socrates:: ‘And their subjects must do what they order and this is justice?’

Thrasymachus:: ‘Yes.’

Socrates:: ‘Then, according to your argument, not only is it just to do what is advantageous to the stronger, but also to do the opposite, what is not advantageous.’

Thrasymachus:: ‘What are you saying?’

Socrates:: ‘Just what you are, I imagine. But let us look more closely. Has it not been admitted that the rulers in prescribing certain acts to the governed sometimes mistake what is best for themselves, but that at the same time it is just for the governed to do what the rulers prescribe? Has not that been admitted?’

Thrasymachus:: ‘I think so.’

Socrates:: ‘Think also, that you have admitted that it is just to do what is to the disadvantage of those who govern and are stronger. The rulers unwittingly prescribe what is to their own hurt, and you say that it is just for others to do what they have prescribed. Then, my most wise Thrasymachus, must it not necessarily follow that it is thus just to do the opposite of what you say? For obviously the weaker are commanded to do what is to the disadvantage of the stronger.’

Polemarchus:: ‘But, assuredly, Socrates, that is perfectly plain.’

Clitophon:: ‘No doubt, if you are to give witness in his favor.’

Polemarchus:: ‘What need is there of witness? Thrasymachus himself acknowledges that the rulers sometimes prescribe what is to their own hurt, and that it is just for the governed to obey those commands.’

Clitophon:: ‘No, Polemarchus. Thrasymachus stated that it is just to do what the rulers command.’

Polemarchus:: ‘Yes, and he also stated, Cleitophon, that what is to the advantage of the stronger is just, and in making these two statements he acknowledged that sometimes the stronger command the weaker over whom they rule to do what is to their disadvantage, and it follows from those admissions that what is advantageous to the stronger is no more just than what is disadvantageous.’

Clitophon:: ‘But, by what is advantageous to the stronger he meant “what the stronger thinks is to his advantage.” This is what the weaker must do, and this is his definition of justice.’

Polemarchus:: ‘No, that is not what he said.’

Socrates:: ‘Well, Polemarchus, it does not matter. If Thrasymachus says so now, let us take him in that sense. Tell me, Thrasymachus, was this how you wished to define justice—namely, as that which in the judgment of the stronger is advantageous to the stronger whether it is really so or not? Are we to say that this is your meaning?’

Thrasymachus:: ‘Most certainly not. Do you think that I call him who makes a mistake the stronger at the time of his mistake?’

Socrates:: ‘I certainly thought, that that was what you meant when you admitted that the rulers are not infallible, but sometimes make mistakes.’

Thrasymachus:: ‘Well, you are a quibbler, Socrates. When a doctor makes a mistake about his patients, do you at that moment in so fur as he is mistaken call him a doctor? or do you call a man who makes a mistake in calculating an accountant at the moment of, and in respect to, his mistake? No. I fancy that is only our way of speaking. We say the doctor, or the accountant, or the writer made a mistake; but really none of these, so far as he is what we call him, ever makes a mistake. To speak precisely, since you are for being precise, every craftsman is infallible. He who makes a mistake does so where his knowledge fails him; that is, where he is no craftsman. As with craftsmen and wise men, so with a ruler; he is always infallible so long as he is a ruler, although in ordinary language we all say that the doctor made a mistake and the ruler made a mistake. In such ordinary language was my answer to you a moment ago. But this is the precise form of my statement. A ruler, so far as he is a ruler, is infallible, and being infallible he prescribes what is best for himself, and this the subject must do. So that, as I said originally, to do what is advantageous to the stronger is just.'

Socrates:: 'Very good, Thrasymachus. So you think that I am a quibbler, do you?'

Thrasymachus:: 'Certainly.'

Socrates:: 'And do you imagine that I ask those questions of you in deliberate intent to discredit you in the argument?'

Thrasymachus:: 'I know it. But it will not serve you. You will not cheat me by your tricks, nor will you oust me from the argument by open violence.'

Socrates:: 'I have no intention of trying, my dear sir, but that we may escape a similar confusion in the future, will you indicate precisely when you speak of the stronger whose advantage it is just for the weaker to serve, whether you mean "the ruler and the stronger" in the popular sense or in that more precise sense which you have just now defined?'

Thrasymachus:: 'I mean a ruler in the most precise sense of the word. Try your tricks and your quibblings against that, if you can. I ask no quarter. But you are powerless.'

Socrates:: 'Do you imagine, that I should be as mad as to try to shave a lion or trick a Thrasymachus?

Thrasymachus:: 'You tried it a moment ago, though you were no good at it.'

Socrates:: 'Well, enough of that. Answer me this. Is the doctor in the precise sense in which you have defined him a money-maker or a healer of the sick? Understand that I am asking about the real doctor.'

Thrasymachus:: ‘A healer of the sick.’

Socrates:: ‘What of the ship captain? Is the genuine captain a ruler of sailors or a sailor?’

Thrasymachus:: ‘A ruler of sailors.’

Socrates:: ‘The fact that he sails on a ship need not, I fancy, be taken into account, nor ought we to call him a sailor; for it is not because he is on board that he is called a ship captain, but because of his skill and his authority over sailors.’

Thrasymachus:: ‘True.’

Socrates:: ‘Both for sick people and for sailors there is something which is advantageous, is there not?’

Thrasymachus:: ‘Certainly.’

Socrates:: ‘And is it not the natural end of the art to seek after and provide this?’

Thrasymachus:: ‘It is.’

Socrates:: ‘But is there anything advantageous to an art, except that it should be as perfect as possible?’

Thrasymachus:: ‘What is the meaning of your question?’

Socrates:: ‘This. If you were to ask me whether it is enough for a body to be a body, or whether it needs something more, I should reply: “Certainly it needs something more. In fact, this is why the art of medicine has been discovered, because the body is defective and it is not enough for it to be a body; and to provide what is advantageous to it this art is established.” Do you think that such a statement would be correct?’

Thrasymachus:: ‘Quite correct.’

Socrates:: ‘Now is medicine itself defective? In other words, does any art whatsoever need some kind of virtue or power, as eyes need sight and ears hearing, so that what is advantageous to these powers must be discovered and provided by an art which presides over the eyes and ears? Is there any such defect in art as art, so that every art needs another to discover what is advantageous to it, and that discovering art another, and so on without end? or will each art seek its own advantage? or is it unnecessary that either itself or any other art should discover what is advantageous to it and will supply its deficiency? For in truth no art is subject to any defect or mistake, and it is not the office of an art to seek the advantage of anything except its subject. So long as an art, which is strictly an art, is true to its own nature, it is correct, and is therefore without defect or blemish. Remember that we are using the words in their strict sense. Is that a true description or not?'

Thrasymachus:: 'It seems true.'

Socrates:: 'Then, medicine seeks what is advantageous not to medicine, but to the body.'

Thrasymachus:: 'Yes.'

Socrates:: 'And horsemanship what is advantageous not to horsemanship, but to horses; and no art seeks its own advantage (for it needs nothing), but the advantage of its subject.'

Thrasymachus:: 'So it appears.'

Socrates:: 'But, Thrasymachus, the arts govern and are masters of their subject.'

To this he agreed, though very reluctantly.

Socrates:: 'Then no science either prescribes or seeks the advantage of the stronger, but the advantage of the weaker over which it rules?

This also he admitted in the end, though he tried to make a fight of it.

When he had made the admission, I said:

Socrates:: 'Then does any doctor, so far as he is a doctor, prescribe or seek the advantage of the doctor rather than of the patient? For the doctor, in the strict sense of the word, has been admitted to be a ruler of bodies, and not a moneymaker. Have we not admitted that?'

He agreed.

'And is not the ship captain, in the strict sense of the word, a ruler of sailors rather than a sailor?'

'That has been admitted.'

'Then such a captain and ruler will not prescribe and seek the advantage of the captain, but of the sailors over whom he rules.'

He agreed reluctantly.

'Then, Thrasymachus, no one in any kind of government will, so far as he is a ruler, prescribe or seek his own advantage but that of the subject of his craft over which he rules; all that he says and does is said and done with the subject in view, and for his advantage and good.'

When we had reached this stage in the argument, and it was plain to all that the definition of justice had been turned upside down, Thrasymachus, instead of answering, said:

Thrasymachus:: 'Tell me, Socrates, have you a nurse?'

Socrates:: 'Why this? Should you not answer rather than ask questions of that kind?'

Thrasymachus:: 'Because, she lets you go on sniveling, and doesn't wipe your nose when you need it, for you have not learnt from her to distinguish sheep and shepherd.'

Socrates:: 'What, in particular, makes you say that?'

Thrasymachus:: 'You imagine that shepherds or herdsmen look after the good of their sheep or cattle, and fatten and tend them with some other end in view than the good of their masters and themselves, and you actually think that rulers in cities, who are really rulers, do not regard their subjects just as a man his sheep, and do not night and day seek how they may profit themselves, and that only. So profoundly wise are you concerning the just and justice, and the unjust and injustice, that you are unaware that justice and the just is really the good of another, the advantage of the stronger who rules, but the self-inflicted injury of the subject who obeys; that injustice is the opposite, and rules those very simple just souls; that the governed serve the advantage of the stronger man, and by their obedience contribute to his happiness, but in no way to their own. My most simple Socrates, you must see that a just man always comes off worse than an unjust. Take, first, the case of commercial dealing, when a just and an unjust man are partners. At the dissolution of the partnership you will never find the just man with more than the unjust, but always with less. Then in politics, where there are taxes to pay, out of equal incomes the just man pays more, the unjust less; where there is money to be got, the just man gets nothing, the unjust much. Then, again, when they are in office, the just man, apart from other losses, ruins his own business by neglect, while his justice prevents his making a profit out of the public; and, in addition, he incurs the dislike of his kinsfolk and acquaintances by refusing to be unjust for their advantage. With the unjust man it is the opposite in every particular. For I am speaking, in accordance with my recent explanation, of him who is capable of aggrandizement on a large scale. If you wish to decide how much more advantageous for the individual injustice is than justice, consider such a man. For if you take the most perfect injustice, you will most easily see that it makes the doer of injustice the happiest of men; but those who suffer and will not do unjustly, the most miserable. This is tyranny. It plunders by fraud and force alike the goods of others, sacred and holy things, private and public possessions, and never pettily but always on a grand scale. Individual cases of these crimes are on detection visited with punishment and utter disgrace, and petty offenders of this sort are called temple-breakers, kidnappers, burglars, swindlers, and thieves. But those who not only despoil the citizens of their money, but capture and enslave their persons, get no such ugly names, but are called happy and blessed men, not only by their citizens, but by all who hear of their complete injustice. Men revile injustice, not because they fear to do it, but because they fear to suffer it. Therefore, Socrates, injustice, when great enough, is mightier and freer and more masterly than justice; and, as I said at the start, justice is to the advantage of the stronger, but injustice is profitable and advantageous to oneself.'

Socrates:: Having so spoken, Thrasymachus was going to depart after having, like a bath man, flung a great flood of words about our ears; but the company would not suffer this, but insisted on his staying and giving account for what he had said. And I myself entreated him earnestly, saying: 'My good Thrasymachus, are you going to depart after throwing a-speech like that at us, before you nave thoroughly taught us or learnt yourself whether or no such things be? Or do you think it a small matter to undertake to decide on the whole course of life which each of us must follow if we would live most profitably.'

Thrasymachus:: 'Do you mean that I don't think it a serious matter?'

Socrates:: 'Apparently, or else you are perfectly indifferent about us, and care nothing whether our ignorance of the knowledge you profess leads us to live worse or better lives. But, my dear sir, take the trouble to convince us as well as yourself. You will not suffer for having helped so many of us. For I may tell you my own opinion. I am not convinced, and I do not think that injustice is more profitable than justice even if it is given free play, and may do what it will without hindrance. No, my dear sir, a man may be unjust, and may be able to practice injustice either by escaping detection, or by overpowering opposition; nevertheless, he cannot convince me that it is really more profitable than justice. Perhaps some others of the company besides myself may feel the same. So, my good friend, give us satisfactory proof that we are wrong in prizing justice above injustice.'

Thrasymachus:: 'Well, how am I to persuade you? If you are not convinced by what I have just said, what more can I do for you? Am I to take the doctrine and feed you with it?'

Socrates:: 'God forbid! not that. But, firstly, abide by what you have said, or, if you change your mind, do so openly and don't deceive us. For as it is, Thrasymachus, to look back at the argument, observe that though you began by defining the genuine doctor, you did not think the same accuracy necessary afterwards when you came to the genuine shepherd. You thought that he, so far as he is a shepherd, fattens his sheep without considering what is best for them, but with an eye to good eating, like a gourmand who is giving a banquet, or with an eye to profit, like a moneymaker, not a shepherd. But surely the art of shepherding is only concerned with how it may provide what is best for that over which it presides? As for its own interests, all that can contribute to its excellence has been already provided, so long as it is not unfaithful to its nature. This made me think that we must admit that any government, so far as it is a government, considers what is best only for that which it governs and tends, whether the government be public or private. Now, do you think that those who rule in cities, who are genuine rulers, do so willingly?’

Thrasymachus:: ‘No, I don’t think so. I know it.’

Socrates:: ‘How is that, Thrasymachus? Do you not notice that in the ordinary offices of state there are no voluntary rulers? They demand to be paid on the assumption that their holding office benefits not themselves, but the governed. And tell me this. Is not the test by which we always distinguish one art from another its possession of different powers? Please, my dear sir, do not answer against your convictions, as we want to get on.’

Thrasymachus:: ‘Yes, that is the distinguishing test.’

Socrates:: ‘And does not each of these arts give us a distinctive, not a common benefit?—medicine health, for example; navigation safety on a voyage, and so on?’

Thrasymachus:: ‘Certainly.’

Socrates:: ‘And the art of wages gives wages, does it not? For this is its power. For you do not call medicine and navigation the same art, do you? Speaking precisely, as you suggested, if a sea captain becomes healthy because being at sea suits him, that doesn’t make you call his art medicine, does it?’

Thrasymachus:: ‘Surely not.’

Socrates:: ‘Nor do you call the art of wages medicine, I imagine, if a man gets well while earning wages?

Thrasymachus:: ‘Certainly not.’

Socrates:: ‘Well, would you call medicine the art of wages if a man earned wages in medical practice?’

Thrasymachus:: ‘No.’

Socrates:: ‘Then we have agreed that the benefit of each art is confined to that art?’

Thrasymachus:: ‘We have.’

Socrates:: ‘Then if there be any benefit which all craftsmen enjoy in common, that will clearly come from their all using as well something which is common to them all?’

Thrasymachus:: ‘Apparently.’

Socrates:: ‘We assert, therefore, that craftsmen who earn wages derive that benefit from their use of the additional art of wages.’

He agreed reluctantly.

Socrates:: ‘Then in the case of each art this benefit, the receiving of wages, does not come from the art. If we consider carefully we shall see that health is given by the art of medicine, fees by the art of wages; a house is provided by the art of architecture, and pay by the accompanying art of wages, and so on with all the arts. Each fulfils its own function and benefits its subject. But is a craftsman benefited by his art if he does not get pay in addition?’

Thrasymachus:: ‘Apparently not.’

Socrates:: ‘Then the voluntary performance of his art does not benefit him?

Thrasymachus:: ‘I think not.’

Socrates:: ‘Then, Thrasymachus, it is now clear that no art or government provides what is for its own benefit, but, as we said long ago, it provides and prescribes what is for the benefit of the subject, seeking the advantage of him who is weaker, not the advantage of the stronger. It was for this reason, my dear Thrasymachus, that I said a moment ago that no one of his own will becomes a ruler and undertakes to set straight the misfortunes of others. The ruler demands wages, because he who is going to practice his art aright, and is prescribing in accordance with his art, neither practices nor prescribes what is best for himself, but for the subject. For these reasons, naturally, it is right that those who are going to consent to rule should be paid either in money or in honor, or by escaping a penalty which the refusal to rule involves.

Glaucon:: 'What do you mean by that, Socrates? The first two kinds of wages I know, but I do not understand the penalty you mention which you describe as a kind of wages.

Socrates:: ''Do you not understand, what are the wages of the best men, which induce the most virtuous to rule when they consent to do so? Do you not know that ambition and love of money are held to be, and actually are, something to be ashamed of?

Glaucon:: 'I do.'

Socrates:: 'For that reason, neither money nor honor will make the good men consent to be rulers. They are unwilling to be called hirelings for openly exacting wages for their office, or to get the name of thieves by fraudulently enriching themselves from it. Nor will honor move them, for they are not ambitious. Therefore if they are to consent to rule the compulsion of a penalty must be laid upon them (this may be why to take office without compulsion is considered disgraceful); and the greatest penalty is to be ruled by an inferior if you will not rule yourself. When virtuous men take office I think they are prompted by this fear; and then they approach it not as a blessing or with any prospect of good fortune: they face it as a compulsory task because they can find none superior or equal to themselves to whom they might entrust it. Were there a city of good men, it is probable that men would contend to escape office as they now contend to gain and it would then be clearly shown that a true ruler is in reality one who seeks not his own advantage but the advantage of the subject, so that every man of understanding would prefer to be benefited by another rather than labor for another's benefit. Therefore I in no way agree with the statement of Thrasymachus that justice is the advantage of the stronger. But this we shall consider again. I attach much greater importance to Thrasymachus' present position, that the life of the unjust man is superior to that of the just man. And you, Glaucon? Which side do you take? Which statement do you consider the truer?'

Glaucon:: 'I think that the life of the just man is more profitable.'

Socrates:: 'Have you heard, the list of blessings which Thrasymachus has just assigned to the life of the unjust man?'

Glaucon:: 'I have, but I am not convinced.'

Socrates:: 'Then shall we convince him, if we can possibly find a way of proving that his statements are untrue?'

Glaucon:: 'Yes, let us.'

Socrates:: 'Now, if we match ourselves against him and give speech for speech, enumerating the advantages of justice, and he speaks a second time, and we speak yet again, then we must add up and measure the advantages enumerated by each party in each speech, and we shall need a jury to decide between us. But if we follow our previous form of inquiry, arguing till we come to an agreement, then we shall be at the same time jury and advocates.'

Glaucon:: 'Certainly.'

'Then have which you will.'

Glaucon:: 'Let us have the second way.'

Socrates:: ‘Come, then, Thrasymachus, answer us from the beginning. You say that perfect injustice is more profitable than perfect justice?’

Thrasymachus:: ‘Certainly I do, and I have given reasons why it is so.’

Socrates:: Well, then, how do you deal with this question on the subject? I suppose you call one of them a virtue and the other a vice?’

Thrasymachus:: Surely.’

Socrates:: Justice a virtue, and injustice a vice?’

Thrasymachus:: ‘That is likely, my dear good fellow, when I say that injustice is profitable, but justice not.’

Socrates:: ‘Well, what else?’

Thrasymachus:: ‘The opposite.’

Socrates:: ‘Do you call justice a vice?’

Thrasymachus:: ‘No, but certainly sublime good nature.’

Socrates:: ‘Then do you call injustice ill nature?’

Thrasymachus:: ‘No, I call it good policy.’

Socrates:: ‘Then, Thrasymachus, do you actually think that the unjust are sagacious and good?’

Thrasymachus:: ‘Certainly. those who are capable of perfect injustice, who can bring cities and nations under their dominion. But perhaps you imagine that I was talking of pickpockets? Such injustice indeed is, if undetected, profitable in its way. But it is not worth considering beside that which I have described.’

Socrates:: ‘I understand, that that is what you mean, but I marveled that you should class injustice with virtue and wisdom and justice with their opposites.’

Thrasymachus:: ‘Well, that is exactly what I do.’

Socrates:: ’This is a much more stubborn position, and it is hard to know what to say to it. For if you had said that injustice is profitable, but admitted that it is a vice and evil, as certain people do, then we should have had something to say in accordance with ordinary notions about it; but now it is evident that you will say that it is also beautiful and strong, and you will give it all the attributes which we used to give to justice, since you have actually dared to class it with virtue and wisdom.’

Thrasymachus:: ‘You are a most true prophet.’

Socrates:: ‘Nevertheless, I must not shrink if I may take it that this is your real opinion, but must take thought and attack the argument; for I imagine, Thrasymachus, that you are really not scoffing, but are saying what is your opinion of the truth.’

Thrasymachus:: ‘What difference does it make to you, whether this is my real opinion or not? Can you refute the argument?’

Socrates:: ‘You are right. but will you try to answer this further question? Do you think that the just man is ready to outdo the just man in anything?

Thrasymachus:: ‘Certainly not. If he was, he would not be the pretty good-natured fellow that he is.’

Socrates:: ‘Then will he outdo the just action?’

Thrasymachus:: ‘No, not the just action either.’

Socrates:: ‘Would he presume to outdo the unjust man, or would he or would he not think that just?’

Thrasymachus:: ‘He would think so, and he would presume, but he would not manage it.’

Socrates:: ‘That, is not my question. I asked whether the just man presumes and wishes to outdo not the just, but the unjust man.’

Thrasymachus:: ‘It is as you suggest.’

Socrates:: ‘Then what of the unjust? Does he presume to outdo the just man and the just action?’

Thrasymachus:: ‘What else? seeing that he presumes to outdo all the world.’

Socrates:: ‘Will he not also outdo the unjust man and action, and strive to get the most of everything for himself?’

Thrasymachus:: ‘That is the case.’

Socrates:: ‘Then let us put it in this way. The just outdoes not the like but the unlike; the unjust man both the like and the unlike.

Thrasymachus:: ‘You have expressed it excellently.’

Socrates:: ‘And of course, the unjust is sagacious and good, but the just is neither.’

Thrasymachus:: ‘That is also excellent.’

Socrates:: ‘Then the unjust resembles the sagacious and good, but the just does not?’

Thrasymachus:: ‘Yes. the former, being what he is, must be like those who are of the same nature with himself, and the latter unlike.’

Socrates:: ‘Good! Then is each man of the same nature as those whom he is like?’

Thrasymachus:: ‘What else?’

Socrates:: ‘Very good, Thrasymachus. Now do you call one man musical and another unmusical?’

Thrasymachus:: ‘I do.’

Socrates:: ‘Which do you call wise and which unwise?’

Thrasymachus:: ‘The musical man, of course, I call wise, and the unmusical unwise.’

Socrates:: 'Then do you also say that a man is good in the same respects as he is wise, and evil in the same respects as he is unwise?'

Thrasymachus:: 'Yes.'

Socrates:: 'And do you say the same of a medical man?'

Thrasymachus:: 'Yes.'

Socrates:: 'Now, my excellent friend, do you think that a musician in tuning a harp would wish to outdo or would presume to get the better of a musician in tightening or loosening the strings?'

Thrasymachus:: 'No.'

Socrates:: 'But would he outdo the unmusical man?'

Thrasymachus:: 'Of necessity.'

Socrates:: 'What of the medical man? In the prescription of food or drink, would he eek to outdo a medical man in the practice of medicine?'

Thrasymachus:: 'Of course not.'

Socrates:: 'But would he outdo the non-medical man?'

Thrasymachus:: 'Yes.'

Socrates:: 'Then consider knowledge and ignorance in general, and tell me whether you think that any expert would choose to outdo either the actions or the words of another expert? Would he not rather say or do the same as his fellow in the same case?'

Thrasymachus:: 'Perhaps, it must be as you suggest.'

Socrates:: 'But what of the ignorant man? Would he not outdo the expert and the ignorant man with equal indifference?'

Thrasymachus:: 'Perhaps.'

Socrates:: 'And is the scientific man wise?'

Thrasymachus:: 'He is.'

Socrates:: ‘And is the wise man good?’

Thrasymachus:: ‘He is.’

Socrates:: ‘Then the man who is good and wise will not try to outdo his like, but his unlike and opposite?’

Thrasymachus:: ‘Probably.’

Socrates:: ‘But the man who is bad and unlearned will outdo both his like and his opposite?’

Thrasymachus:: ‘Apparently.’

Socrates:: ‘But, Thrasymachus, does not our unjust man outdo both his like and his unlike? Did you not say so?’

Thrasymachus:: ‘I did.’

Socrates:: ‘While the just man will outdo not his like but his unlike, will he not?’

Thrasymachus:: ‘Yes.’

Socrates:: ‘Then, the just man is like the good man and wise, but the unjust man like the bad and unlearned?

Thrasymachus:: ‘That seems likely.’

Socrates:: ‘And we agreed that if two men are like one another, they are of the same nature?’

Thrasymachus:: ‘We did.’

Socrates:: ‘Then the just man is revealed to us as good and wise, but the unjust man as unlearned and bad?’

Thrasymachus made all these admissions, not in the easy way in which I repeat them, but reluctantly, after great resistance and with floods of perspiration, for the weather was hot. Then too for the first time I caught Thrasymachus blushing.

Socrates:: As we had now agreed to rank justice with virtue and wisdom, and injustice with vice and ignorance, I said: ‘So much for that point. But we also said that injustice is strong. Have you forgotten, Thrasymachus?’

Thrasymachus:: ‘No, I remember. but I am not satisfied with your arguments, and I have something to say on those points. Only if I said it, I know that you would accuse me of speechifying. So either let me say as much as I want, or if you wish to ask questions, ask them; but I shall treat you as we treat garrulous old women, say Yes! Yes! and nod or shake my head as occasion requires.’

Socrates:: ‘Please, don’t assent to what you don’t believe.’

Thrasymachus:: ‘Anything to please you, since you won’t let me speak. What else do you want?’

Socrates:: ‘Nothing in the world. If this is your desire, follow it, and I shall ask questions.’

Thrasymachus:: ‘Ask.’

Socrates:: ‘Then I shall repeat the question which I asked before, that we may go on where we left off in our inquiry into the relative advantages of justice and injustice. A statement was made that injustice is more powerful and stronger than justice. But, now that justice is ranked with wisdom and virtue, it will, I imagine, easily be seen to be stronger than injustice, since injustice is ranked with ignorance. No one could any longer fail to recognize that. However, I have no desire, Thrasymachus, to settle the matter in such an off-hand way. I would rather examine it in some such manner as this: Is it not a fact that unjust cities exist, that they attempt to subdue other cities unjustly, that they enslave them and hold many of them in subjection?’

Thrasymachus:: ‘Surely, and this will be peculiarly the work of the best city, of that which is most perfectly unjust.’

Socrates:: ‘I understand, that was your theory. But this is what I am considering. Will ‘the city which becomes master of another attain the position without the aid of justice, or in such a case is justice indispensable?’

Thrasymachus:: ‘If your recent statement that justice is wisdom be true, then justice is indispensable; but if mine be true, then injustice.’

Socrates:: ‘I am delighted, Thrasymachus, that you are not content to nod and shake your head, but give most excellent answers.’

Thrasymachus:: ‘I do it to please you.’

Socrates:: ‘It is very good of you. But please me still more by telling me whether you think that a city, or an army, or a band of robbers or thieves, or any other company which pursue some unjust end in common, would be able to effect anything if they were unjust to one another?’

Thrasymachus:: ‘Of course not.’

Socrates:: ‘What if they were not unjust? Would they effect more?’

Thrasymachus:: ‘Certainly.’

Socrates:: ‘The explanation is, I suppose, Thrasymachus, that injustice and hatred make men quarrel and fight with one another, while justice makes them friendly and of one mind. Is not that the case?’

Thrasymachus:: ‘Let us suppose so, as I don’t want to differ from you.’

Socrates:: ‘It is very good of you, my friend; but tell me this: Is it the function of injustice to implant hatred wherever it be? Whether it makes its appearance among freemen or slaves, will it not make them hate and quarrel with one another, and make them incapable of joint action?’

Thrasymachus:: ‘Certainly.’

Socrates:: ‘What if it makes its appearance in a company of two? Will they not disagree and hate and be enemies one of the other and of the just?’

Thrasymachus:: ‘They will.’

Socrates:: ‘Then, my admirable friend, if injustice appears in a single individual, will it lose its power or retain it unimpaired?’

Thrasymachus:: ‘We will suppose that it retains it.’

Socrates:: ‘Then, does not injustice seem to have some such power as this? Wherever it appears, whether in city, tribe, army, or anywhere else, by arousing dissension and division it makes that which possesses it, firstly, incapable of united action; secondly, the enemy of itself, of everything that opposes it, and of the just. Is not that so?’

Thrasymachus:: ‘Certainly.’

Socrates:: ‘And I fancy that when it exists in an individual it will do the same, and produce its natural effect. Firstly, it will make him at strife and not of one mind with himself, and incapable of action. Secondly, it will make him the enemy of himself and of the just. Is that the case?

Thrasymachus:: ‘Yes.’

Socrates:: ‘And the gods are just, my friend?’

Thrasymachus:: ‘We may presume so.’

Socrates:: ‘Then the unjust man, Thrasymachus, will be the enemy, the just the friend of the gods.’

Thrasymachus:: ‘Feast on your argument, and be of good cheer. I shall certainly not oppose you. I don’t want to displease the company.’

Socrates:: ‘Come, then, crown my feast for me by answering as you are doing. Certain things we have discovered. The just are shown to be the wiser, the better, and the more capable in action; the unjust are unable even to act together. And when we say that any vigorous joint action is the work of unjust men, our language is not altogether accurate. If they had been thoroughly unjust, they could not have kept their hands off one another. Clearly they must have possessed justice of a sort, enough to keep them from exercising their injustice on each other at the same time as on their victims. They did what they did by reason of their justice, and their injustice partially disabled them in the pursuit of their unjust purposes. For the thorough villains who are perfectly unjust, are also perfectly incapable of action. That I see to be true. The truth of your original statement I do not see. But now we have to consider what we postponed for subsequent discussion, whether the just live better and are happier than the unjust. Now this is, think, already proved by what we have said. Nevertheless we must consider it more fully. For the subject of our argument is no trifling matter. It is the question of the right manner of life.'

Thrasymachus:: 'Consider, then.'

Socrates:: Socrates: 'I am doing so. Tell me, do you think that a horse has a function?

Thrasymachus:: 'I do.'

Socrates:: Would you define the function of a horse or of anything else as that work for which it is the indispensable or the best instrument?

Thrasymachus:: 'I do not understand.'

Socrates:: 'Let me explain. Can you see with anything but your eyes?'

Thrasymachus:: 'Of course not.'

Socrates:: 'Or hear with anything but your ears?'

Thrasymachus:: 'Certainly not.'

Socrates:: ‘Then could we not justly describe seeing and hearing as the functions of eyes and ears?’

Thrasymachus:: ‘Certainly.

Socrates:: ‘Again, could not a vine shoot be cut with a carving-knife or with a chisel or with many other instruments?

Thrasymachus:: ‘Undoubtedly.

Socrates:: ‘But with no instrument so well, I imagine, as with a pruning-knife, which is made for the purpose?

Thrasymachus:: ‘True.

Socrates:: ‘Then shall we not call vine-dressing the function of the pruning-knife?

Thrasymachus:: ‘We shall.

Socrates:: ‘Now, I fancy, you will understand better what I wanted a moment ago when I asked whether the function of each thing is that for which it is the indispensable or the best instrument.

Thrasymachus:: ‘Yes. I understand, and I agree with that definition.

Socrates:: ‘Good. Now do you not think that everything which has a function has also a corresponding virtue? To revert to our previous instances. We say that the eyes have a function, have they not?

Thrasymachus:: ‘They have.’

Socrates:: ‘Then have not the eyes a virtue also?

Thrasymachus:: ‘They have.’

Socrates:: ‘Again, the ears were found to have a function, were they not?

Thrasymachus:: ‘Yes.

Socrates:: ‘Then they have a virtue also?

Thrasymachus:: ‘They have.’

Socrates:: ‘Can we say the same of everything else?’

Thrasymachus:: ‘Yes.’

Socrates:: ‘Come now, could the eyes perform their proper function well if they were without their proper virtue, but had the corresponding vice instead?’

Thrasymachus:: ‘How could they? You mean probably blindness instead of sight.’

Socrates:: ‘I mean, whatever their virtue be. I am not inquiring into that here. My question is whether things perform their own function well by reason of their proper virtue, badly by reason of the corresponding vice?’

Thrasymachus:: ‘It is as you say.’

Socrates:: ‘Then if ears are deprived of their proper virtue, will they not perform their proper function badly?’

Thrasymachus:: ‘Certainly.’

Socrates:: ‘Then may we make this principle of general application?’

Thrasymachus:: ‘I think so.’

Socrates:: ‘Come, then, consider this point next. Has the soul a function which nothing else upon earth can perform save itself? For example, to superintend and rule and advise and so on. Is there anything except the soul to which we could assign these acts as its peculiar functions?’

Thrasymachus:: ‘Nothing.’

Socrates:: ‘Then what of life? Shall we declare it to be a function of the soul?‘

Thrasymachus:: ‘Assuredly.’

Socrates:: ‘And do we say that the soul has a virtue?’

Thrasymachus:: ‘We do.’

Socrates:: 'Then, Thrasymachus, could the soul, if deprived of its proper virtue, perform its proper functions well? Or is that impossible?'

Thrasymachus:: 'It is impossible.'

Socrates:: 'Of necessity an evil soul must rule and superintend badly, but a good soul will do all these things well?'

Thrasymachus:: 'Of necessity.'

Socrates:: 'But have we not agreed that justice is a virtue of the soul, and injustice a vice?'

Thrasymachus:: 'Yes, we have.'

Socrates:: 'Then the just soul and the just man will live well, but the unjust badly?'

Thrasymachus:: 'Apparently, according to your argument.'

Socrates:: 'Again, he that lives well is blessed and happy, he that lives badly the opposite?'

Thrasymachus:: 'Agreed.'

Socrates:: 'But it is not profitable to be miserable, but to be happy?'

Thrasymachus:: 'Undoubtedly.'

Socrates:: 'Then, my noble Thrasymachus, injustice is never more profitable than justice?'

Thrasymachus:: 'Well, Socrates, let that be your entertainment for the feast of Bendis.'

Socrates:: 'I have you to thank for it, Thrasymachus, since you became gentle with me, and stopped being disagreeable. But I have no satisfaction in my feast. That is my fault, not yours. I am like those greedy fellows who before they have properly enjoyed what is before them leave it to snatch at and taste every dish that comes their way. I have done the same. We left the original object of our inquiry, the definition of justice, before we had discovered it, and went off to consider whether it is a vice and ignorance, or wisdom and virtue. Then another argument appeared, to the effect that injustice is more profitable than justice. And I could not refrain from leaving what we were at for this further point, so that now the result of our conversation is that I know nothing. For when I do not know what justice is, I am hardly likely to know whether it is a virtue or not, or whether he that possesses it is unhappy or happy.’

## Book 2.

Socrates:: With these words I thought that I had finished. But this, it appeared, was after all only a prelude, for Glaucon with his usual fearlessness would not accept Thrasymachus' refutation, but said:

Glaucon:: 'Socrates, are you content with the appearance of conviction, or do you wish really to convince us that to be just is in every way better than to be unjust?'

Socrates:: 'I should certainly prefer, really to convince you if I could.'

Glaucon:: 'Well, you do not effect your desire. Tell me now, how do you classify things we call good? Do you think that there are some which we would gladly have, not for their consequences, but because we appreciate them for their own sake; as, for example, enjoyment and those harmless pleasures which produce no further effects beyond the mere pleasurable experience?'

Socrates:: 'I certainly think, that there are some like that.'

Glaucon:: 'Secondly, there are some which we prize both for themselves and for their consequences ' as, for example, thought and sight and health. These and similar good things we appreciate for a twofold reason.'

Socrates:: 'Yes.'

Glaucon:: 'Do you recognize a third class of good things, which includes gymnastic exercises, the undergoing of medical treatment, the practice of medicine, and the other forms of money-making? These are things which we call troublesome but advantageous. We should never take them for themselves, but we accept them for the sake of the rewards and other consequences which they bring.'

Socrates:: ‘There is certainly, a third class of that description. What then?

Glaucon:: ‘In which class, do you place justice?’

Socrates:: ‘In the fairest class, I fancy, amongst those which he, who would be blessed, must love both for their own sake and for their consequences.’

Glaucon:: That is not the opinion of most people. They place it in the troublesome class of good things, which must be pursued for the sake of the reward and the high place in public opinion which they bring, but which in themselves are irksome and to be avoided.’

Socrates:: ‘I know that people think so. It is on those grounds that Thrasymachus has always criticized justice and praised injustice. But I am apparently a slow pupil.

Glaucon:: ‘Well, as Thrasymachus has spoken, let me speak also, and see then whether you are still of the same opinion. Thrasymachus you charmed like a snake, I think, and he gave in sooner than he need have done, but I am not yet satisfied with the exposition either of justice or injustice. I want to know what each is, and what power each has of itself when existing by itself in the soul; their rewards and their consequences may be left out of account. And if you agree, I shall proceed in this way. I shall renew Thrasymachus’ argument. First, I shall state what is said to be the nature and origin of justice. Then, secondly, I shall assert that all who practice it do so unwillingly, and that they do so not because justice is good, but because it is indispensable. And, thirdly, that this conduct of theirs is reasonable; for the life of the unjust man is far better than that of the just, according to their statement. I myself, Socrates, am not at all of this opinion. But I get confused; my ears are dinned with the arguments of Thrasymachus and countless others; but from none have I heard as yet the argument in defense of justice, and its superiority to injustice, as I want to hear it. For I want to hear the praises of justice for its own sake, and I have the greatest hopes that I shall do so from you. I shall speak vehemently therefore in favor of the unjust life, and in doing so I shall show you the way in which I want to hear you condemning injustice and praising justice. Now, do you like my proposal?’

Socrates:: ‘Most certainly I do, for on what subject would a man of sense more gladly converse time and again?

Glaucon:: ‘I am delighted to hear you say so. Listen, then, and I shall begin as I proposed with the nature and origin of justice. By nature, men say, to do injustice is good, to suffer it evil, but there is more evil in suffering injustice than there is good in inflicting it. Therefore when men act unjustly towards one another, and thus experience both the doing and the suffering, those amongst them who are unable to compass the one and escape the other, come to this opinion: that it is more profitable that they should mutually agree neither to inflict injustice nor to suffer it. Hence men began to establish laws and covenants with one another, and they called what the law prescribed lawful and just. This, then, is the origin and nature of justice. It is a mean between the best—doing injustice with impunity—and the worst—suffering injustice without possibility of requital. Thus justice, being a mean between those extremes, is looked upon with favor, not because it is good, but because the inability to inflict injustice makes it valuable. For no one who had the power to inflict the injustice and was anything of a man would ever make a contract of mutual abstention from injustice with any one else. He would be mad if he did. Such, Socrates, is the nature of justice, and such is its origin, according to the popular account.

‘Now, that those who practice justice do so unwillingly and from inability to inflict, will be seen most clearly if we make the following supposition. Suppose we take the just and the unjust man and give each power to do whatever he will, and then follow them and see where each is led by his desires. We shall catch the just man following undisguisedly the very same road as the unjust. He would be led on by his desire to outdo his fellows: every nature naturally pursues that as good, though law compels it to turn aside and reverence equality. The impunity I refer to would be best exemplified if they could have the power possessed by the ancestor of Gyges the Lydian in the story. For they say that he was a shepherd, a servant of the reigning king of Lydia. There was a great storm of rain and an earthquake where he was feeding his flock: the ground was rent, and a chasm appeared. In amazement he looked in, then descended into the chasm, and saw there many marvelous things which the story enumerates. Among them was a horse of bronze, hollow, with windows in its sides. He looked in and saw inside a dead body, which seemed of almost superhuman size. On the hand was a golden ring. He took this and nothing besides, then came away. When the shepherds held their monthly gathering at which they arranged for the sending of their report on the flocks to the king, he came with the ring on his finger. As he was sitting with the others he happened to turn round the bezel of the ring till it came to the inside of his hand. On his doing so he became invisible to his companions, and they talked of him as of an absent man. In astonishment he touched his ring again and turned the bezel back to the outside of his hand. As he turned it he became visible again. Then having noticed this he tried whether this power really lay in the ring, and he found that he became invisible when he turned the bezel inwards, visible when he turned it outwards. When he had made this discovery he at once contrived to be one of the messengers sent to the king. Arriving at the palace he seduced the queen, plotted with her against the king, killed him, and so obtained the crown.

'Now, if there were two such rings, and the just man took one and the unjust the other, no one, it is thought, would be of such adamantine nature as to abide in justice and have the strength to abstain from theft, and to keep his hands from the goods of others, when it would be in his power to steal anything he wished from the very marketplace with impunity, to enter men's houses and have intercourse with whom he would, to kill or to set free whomsoever he pleased; in short, to walk among men as a god. And, in so doing, the just man would act precisely as the unjust. Both would follow the same path. This, surely, may be cited as strong evidence that no man is just willingly, but only on compulsion. Justice is not a good to the individual, for every one is unjust whenever he thinks injustice possible. Every man thinks that injustice is more profitable to the individual than justice, and thinks rightly, according to the supporters of this theory; for if any man who possessed this power we have described should yet refuse to do unjustly or to rob his fellows, all who knew of his conduct would think him the most miserable and foolish of men, but they would praise him to each other's faces, their fear of suffering injustice extorting that deceit from them. So much, then, for that. Now this question concerning the life of these two men we shall be able to decide aright only by contrasting the extremes of justice and injustice. How shall we make our contrast? In this way. Let us abstract nothing from the injustice of the unjust or from the justice of the just; each shall be perfect in his own way of life. Firstly, then, the unjust man shall be like a clever craftsman. The skilful captain or doctor can discern what is possible and what is impossible in his art. He attempts the one and leaves the other alone; and if by any chance he makes a mistake, he is able to retrieve it. Similarly the unjust man, if he is to be thoroughly unjust, shall show discernment in his unjust deeds, and shall not be found out. If he is caught, we must consider him a failure; for it is the last word in injustice to seem just without being it. To the perfectly unjust man, then, we must give perfect injustice, and abstract nothing from it. We must allow him to do the fullest injustice and be reputed truly just. If ever he makes a mistake, he must be able to retrieve it. If any of his unjust deeds are brought to light, his eloquence will be convincing in his favor. He will be able to use force where force is needed, thanks to his courage, his strength, and his resources of friends and wealth. Such is the unjust man. Beside him, in accordance with the argument, let us place our just man, a simple and noble character, one who, as Aeschylus says, desires not to seem, but to be good. The semblance, indeed, we must take from him; for if he is reputed just, he will enjoy the honors and rewards that such a reputation earns, and thus it will not be apparent, it is objected, whether he is just for justice' sake or the honors' and rewards' sake. He must be stripped of everything except justice, and made the very counterpart of the other man. He shall do no injustice, and be reputed altogether unjust that his justice may be tested as being proof against ill repute and its consequences, and he shall go on his way unchanged till death, all his life seeming unjust but being just. Thus these two will have come to the extremes of justice and of injustice, and we may judge which of them is the happier.'

Socrates:: ‘Hallo, my dear Glaucon, how energetically you are scouring these two for judgment, as if they were a pair of statues.’

Glaucon:: ‘I am doing my best. Well, given two such characters, it is not difficult now, I fancy, to go on to discover what sort of life awaits each of them. Let m’-describe it. If my description is rather harsh, remember, Socrates, that those who praise injustice above justice are responsible, and not I. They will say that our just man will be scourged, racked, fettered, will have his eyes burnt out, and at last, after all manner of suffering, will be crucified, and will learn that he ought to desire not to be but to seem just; for those words of Aeschylus applied much more truly to the unjust man. For it is the unjust man in reality, they will say, who, as his practice is akin to truth and his life not ruled by appearances, desires not to seem but to be unjust;

> And from the deep-ploughed furrow of his heart
> Reaps harvest rich of goodly purposes.

For, firstly, his semblance of justice brings him rule in his city. Then he may marry and give in marriage as he pleases; he may contract or enter into partnership with whom he will, and since he has no scruples against unjust dealings, he can besides make large profits. Therefore, when he enters into a contest, whether public or private, he comes out victorious and gets the better of his enemies. By so doing he becomes rich, helps his friends and harms his enemies, and on the gods he bestows sacrifices and offerings fitting and magnificent. Far better than the just man can he serve the gods or whatsoever man he pleases. So that even the love of the gods is more appropriately his than the just man’s. Thus they say, Socrates, that at the hands of gods and men life is made richer for the unjust than for the just.’

Socrates:: After Glaucon had spoken, I was going to say something in reply, when his brother Adeimantus said:

Adeimantus:: 'You do not imagine, I hope, Socrates, that the argument has been adequately expressed?'

Socrates:: 'Why, has it not?'

Adeimantus:: 'What most needed saying has been omitted.'

Socrates:: 'Well, you know the proverb, "Let brother help brother.' So if Glaucon falls short, you must come to his aid. I must admit he has said enough to throw me and make me quite incapable of coming to the aid of justice.'

Adeimantus:: 'Nonsense. But listen to what I have to say. For we must also examine the arguments on the other side, those which praise justice and condemn injustice, and we shall see more clearly what I think Glaucon means. For parents and all who have any one to care for, when they exhort their children and say that it is right to be just, do not praise justice itself, but the reputation it brings. Their desire is that their children may seem just, and may thus obtain the rewards that reputation brings to the just man—offices of state and advantageous marriages, and all the benefits which Glaucon has been enumerating. Even higher than this do these persons rate the importance of seeming; for they cast the esteem of the gods into the scale, and can tell of countless benefits which they say the gods give to the pious. The noble Hesiod and Homer are with them here. The first tells what the gods do for the just. First of their oak trees:

> Acorns grow on the branches, and honey is found in the tree trunks;
> Rich in wool are their flocks, bowed down by the weight of their fleeces.

and they have many other similar blessings. And Homer says much the same. Talking of someone he speaks of him as:

> Like a never ill-deserving king,
> Whose equal hand impartially doth temper
> Greatness and Goodness: to whom therefore bears
> The black earth store of all grain, trees confers
> Cracking with burthen, long-lived herds creates,
> All which the sea with her sorts emulates;

and still more delightful than these are the blessings which Musaeus and his son bestow on the just men from the gods; for they take them in their story to Hades, where they seat them on couches and prepare a banquet for the saints, making them spend all their time garlanded and drunken, as though they thought an eternity of drunkenness the fairest reward of virtue. Others make out the rewards of the gods to be even more far-reaching than these; for they say that a man who is holy and abides by his oath, leaves children's children for a posterity behind him. In these and other similar ways they sing the praises of justice. But the wicked and unjust they bury in a muddy mire in Hades, and make them carry water in a sieve. In life, too, they bring them into ill repute; and all the punishments which in Glaucon's description were suffered by those who are just but reputed to be unjust, all these, they say, tall upon the unjust. More than that they do not say. This is their praise and their condemnation of each.

'Further, Socrates, consider another way of speaking of justice and injustice which we find in ordinary conversation and in poetry. All in unison sing that temperance and justice are beautiful, but hard and troublesome, whilst their opposites are pleasant and easy of attainment, and only bad in appearance and by legal convention. Unjust deeds, they say, are on the whole more profitable than just. They have no hesitation in pronouncing wicked men happy if they are rich and powerful, or in giving them honors, both public and private; while they dishonor or slight all who are weak and poor, though they acknowledge them to be the better men. The stories they tell of the attitude of the gods towards virtue are the most astonishing of all. They say that the gods have actually given misfortunes and a life of sorrow to many good men, and the opposite to many evil. Mendicant priests and soothsayers go the round of rich men's doors and persuade them that they have power from the gods, whereby, if any sin has been committed by a man or his ancestors, they can heal it by charms and sacrifices performed to the accompaniment of feasting and pleasure, and if any man wishes to injure an enemy, at a small cost he may harm just and unjust indifferently; for with their incantations and magic formulae they say they can persuade the gods to serve their will. To support all these assertions they quote the poets. Some tell of the easiness of vice in such passages as this:

> Easy of choice is evil and pleasant it is in the choosing.
> Very smooth is the way and close beside us it lieth.
> But sweat the gods have ordained must be ours in the getting of virtue.

and a long journey too on a rough and uphill road. Others quote Homer to prove that men can turn the gods from their will, as when he says:

> The gods themselves are flexible:
> Perfumes, benign devotions, savors of offerings burned,
> And holy rites the engines are with which their hearts are turned
> By men that pray to them, whose faith their sins have falsified.

And they produce a crowd of books by Musaeus and Orpheus, the descendants of the moon and the Muses, as they say. These are their liturgies, and they persuade not only individuals, but whole cities, that there are modes of redemption and purification from sins for the living and for the departed also, by means of sacrifices and pleasurable amusements which they call mysteries. These redeem us from the evils of the other world; if they are neglected, peril awaits us. Now, my dear Socrates, when concerning the way in which gods and men honour virtue and vice, we find statements such as these made repeatedly and in the same tenor, what can we think will be their effect on the souls of those who hear them, young men of good natural dispositions who, like bees, fly from one statement to another, gather from them all an answer to the question: What must a man be, and what paths must he take, if he would live the best possible life? Naturally he will say to himself in the words of Pindar, "Shall I by justice or by crooked wiles ascend the higher wall" and so fortify myself for life? For what do men say? If I am just, unless I also seem just, I gain no advantage, but manifest toil and pains. But if I am unjust and have acquired the appearance of justice, a heavenly life, they say, is mine. Well, then, since seeming, as the wise men show me, does violence even to truth and is the lord of happiness, I must turn to it with all my heart. The fore-court of my house of life I must adorn with the presentment of virtue, but behind the walls I shall hide the crafty subtle Reynard whom that wise Archilochus loved. "But," someone says, "it is not easy to be bad and never be found out." No, we answer, and nothing else that is great is easy. Still, if we would be happy, this is the path we must follow. The tracks of the argument point this way. That we may not be found out, we shall organize clubs and fellowships, and there are masters of persuasion who impart the wisdom of the public assembly and of the law courts. By their help persuasion and force will be our weapons, and we shall pay no penalty for our aggrandizement. “But the gods you can neither cheat nor force.” But if they do not exist, or if they have no concern with men, why should we care whether we cheat them or not? while if there are gods who concern themselves with men, we know and have heard nothing of them save from the lore and the genealogies of the poets, and it is they who say that they can be turned from their will and persuaded “by prayer, slaying of victims and offerings,” and we must believe them altogether or not at all. If we are to believe them, it is best to practice injustice and then make sacrifice from our ill-gotten gains. For if we are just, all that we shall get is immunity from the penalties of heaven, but we shall lose the gains of injustice. But if we are unjust, we shall make those gains ours, and by making entreaty for our sin and transgression we shall persuade the gods and get off without punishment. “But in Hades we shall be punished for our unjust deeds of this life, we or our children’s., children.” But the young man will make his calculations and reply: My dear sir, the mysteries and the gods of redemption are of great power So say the greatest of cities and the poets who are the children of gods, and the prophets who came from the gods and tell us that such things be.

‘Now, on what grounds can we still prefer justice to the greatest injustice? For if we combine injustice with a spurious decorum we shall fare according to our mind with gods and men alike, both in life and death. That is the report of the many and of the best authorities on the subject. Now after all that has been said, Socrates, how can it be contrived that a man should wish to honour justice if he has any power of mind, or wealth, or body, or birth? Will he not smile when he hears its praises? So that if any man can prove the falsehood of what we have said and has certain knowledge that justice is best, still he will surely be very ready to excuse those who are unjust, and will not be angry with them. He knows that a man may by divine grace of nature dislike injustice or may have acquired knowledge and so avoid it, but that apart from these no one is just of his own will, and it is by reason of cowardice or age or some other weakness that men condemn the injustice which they cannot practice. The truth of this is manifest. Of such men the first to attain to power is the first to practice injustice to the measure of his ability. And the cause of it all is nothing else than this, to put it in the words which Glaucon used to you at the beginning of the argument, Socrates: "Excellent sir, of all you who profess yourselves praisers of justice, from the heroes of old whose words have come down to us, to the men of to-day, not one of you has ever condemned injustice or praised justice for anything but their reputations, their values in men's eyes, and their rewards. But what each does of itself by the power of its own nature, when dwelling in the heart of him who possesses it, hidden from gods and men alike: that no one has ever thoroughly considered either in poetry or in prose: nor shown that injustice is the greatest of evils that the soul contains within herself, and justice the greatest good. Had you all from the beginning spoken in that strain, and so persuaded us even from our youth, we should not be all watching our neighbors to prevent them from committing injustice. Each man would himself be his own best guard, in his fear lest by doing unjustly he should have portion with the greatest of evils." That, Socrates, and even more perhaps, is what Thrasymachus, and possibly others with him, would say concerning justice and injustice, ignorantly, as I conceive, reversing the inherent power of each. Now I, for I have no wish to deceive you, have put their case as vehemently as I can, from a desire to hear you contradict them. So do not be content with proving to us in your argument that justice is stronger than injustice, but show what effect each has in him who possesses it, that makes the one in itself and for itself good, and the other bad. Abstract the reputation of each, as Glaucon urged. For unless you abstract from each its proper reputation, and give it one that does not belong to it, we shall say that you are praising not the reality but the appearance of justice, and condemning not the reality but the appearance of injustice; that your advice is that we should be unjust and not be found out; and that you agree with Thrasymachus that justice is the good of another, the advantage of the stronger, while injustice is advantageous and profitable to oneself, but disadvantageous to the weaker. Now you have agreed that justice belongs to the class of the greatest goods, those that are worthy of acquisition for the sake of their consequences, but very much more for their own sake. You have ranked it with sight, hearing, thought, health, and with all other goods which are genuine and real, good in their own nature, not for the reputation they bring. Now therefore praise justice in this; show how in itself and by itself it benefits its possessor, and how injustice harms him, and leave rewards and reputations for others to praise. For I can put up with others praising justice and condemning injustice in this way, eulogizing and reviling the respective reputations and rewards they bring, but not with your doing so, unless you insist on it, for you have spent all your life in this one inquiry. Therefore do not be content with proving to us that justice is stronger than injustice, but show what effect they each have on their possessors that makes them in themselves and by themselves, whether or not they be hid from gods and men, the one good and the other bad.’

Socrates:: I have always admired the characters of Glaucon and Adeimantus, but when I had heard this I was quite extraordinarily pleased, and said: 'Well named was your father, and happily did Glaucon's lover describe you in the opening line of the verses he wrote, when you had distinguished yourselves at the battle of Megara:

Sons of Ariston, children divine of a famous father.

That seems to me very true, my friends. For there is assuredly something divine in you, if you are not persuaded that injustice is better than justice when you can speak so eloquently on its behalf. And I think that you really are not persuaded. I conclude so from your general character. For to judge by your arguments alone I should distrust you. But the greater my confidence in you, the less do I feel that I know how to meet the situation. I cannot come to the rescue. I do not think it is in me. Indeed you convince me of it. For I thought I had proved that justice is better than injustice in my argument with Thrasymachus, which you have rejected. And yet I cannot refuse to come to the rescue. I fear it would be impious were I to stand by and refuse aid while justice was being reviled, and did not come to her rescue so long as there was breath in my body, and I had voice to speak. It is best therefore that I should succor her as well as I can.'

Glaucon and the others implored me by all means to come to the rescue, and not let the argument drop, but to investigate what justice and injustice are, and what is the truth about their advantages. So said what seemed to me best.

'The search in which we are engaged is no easy matter, but needs sharp eyes, I see. Therefore, as we are not clever people, I think, that we had best adopt a method of this kind. If persons of not very sharp eyesight were given the task of reading small letters at a considerable distance, and one of them noticed that the same inscription was written up elsewhere in larger letters and on a larger space, they would, I imagine, consider it a lucky find, and would first read the larger letters and then examine whether the smaller ones were the same.

Adeimantus:: 'That is certainly true. But, Socrates, what do you see in our search after justice that is analogous to that?'

Socrates:: 'I shall tell you. Justice, we say, is the attribute of an individual, but also of a whole city, is it not?'

Adeimantus:: 'Certainly.'

Socrates:: 'And is not a city greater than an individual?'

Adeimantus:: 'It is.'

Socrates:: 'Then perhaps justice may exist in greater proportions in the greater space, and be easier to discover. So if you are willing, we shall begin our inquiry as to its nature in cities, and after that let us continue our inquiry in the individual also, looking for the likeness of the greater in the form of the less.'

Adeimantus:: 'I think your proposal is excellent.'

Socrates:: 'Now, if in our argument we were to watch a city in the making, should we not see its justice and injustice in the making also?'

Adeimantus:: 'Very probably.'

Socrates:: 'And when we have done this, may we not hope that we shall more easily see that which we are seeking?'

Adeimantus:: 'Yes, surely.'

Socrates:: 'Then do you think we should proceed with our attempt? I warn you that, in my opinion, it will be no small task, so take care how you make up your minds.'

Adeimantus:: 'They are made up, will you please proceed?'

Socrates:: 'The origin of a city, is, in my opinion, due to the fact that no one of us is sufficient for himself, but each is in need of many things. Or do you think there is any other cause for the founding of cities?'

Adeimantus:: 'No, none.'

Socrates:: 'Then men, being in want of many things, gather into one settlement many partners and helpers; one taking to himself one man, and another another, to satisfy their diverse needs, and to this common settlement we give the name of city. Is not that so?'

Adeimantus:: 'Certainly.'

Socrates:: 'And when they exchange with one another, giving or receiving as the case may be, does not each man think that such exchange is to his own good?'

Adeimantus:: 'Certainly.'

Socrates:: To me, then. Let us in our argument construct the city from the beginning. Apparently it will be the outcome of our need?'

Adeimantus:: 'Surely.'

Socrates:: 'But the first and greatest of our needs is the provision of food to support existence and life?'

Adeimantus:: 'Yes, assuredly.'

Socrates:: 'The second the provision of a dwelling-place, and the third of clothing, and so on?'

Adeimantus:: 'That is so.'

Socrates:: 'Come, then, how will our city be able to supply a sufficiency of all those things? Will it not be by having one man a farmer, another a builder, and a third a weaver? Shall we add a shoemaker, and perhaps another provider of bodily needs?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then the city of bare necessity will consist of four or five men?'

Adeimantus:: 'Apparently.'

Socrates:: 'Well, then, should each of these men place his own work at the disposal of all in common? For example, should our one farmer provide com for four and spend fourfold time and labor on the provision of com, and then share it with the rest; or should he pay no attention to the others, and provide only a fourth part of the com for himself in a fourth of the time, and spend the other three-fourths of his time in providing a house, clothes, and shoes? Should he not have the trouble of sharing with the others, but rather provide with his own hands what he wants for himself?'

Adeimantus:: 'The first alternative, Socrates, is perhaps the easier.'

Socrates:: 'Well, it is certainly not strange that it is. For as you were speaking, I myself was thinking that, in the first place, no two of us are by nature altogether alike. Our capacities differ. Some are fit for one work, some for another. Do you agree?'

Adeimantus:: 'I do.'

Socrates:: Well, then, would better work be done on the principle of one man many trades, or of one man one trade?'

Adeimantus:: 'One man one trade is better.'

Socrates:: 'Yes, for I fancy that it is also evident that, in work, opportunities which we pass by are lost.'

Adeimantus:: 'That is evident.'

Socrates:: 'I fancy that things to be done will not wait the good time of the doer. Rather the doer must wait on the opportunity for action, and not leave the doing of it for his idle moments.'

Adeimantus:: 'He must.'

Socrates:: 'And so more tasks of each kind are accomplished, and the work is better and is done more easily when each man works at the one craft for which nature fits him, that being free from all other occupations he may wait on its opportunities.'

Adeimantus:: 'That is certainly the case.'

Socrates:: 'Then, Adeimantus, we need more citizens than four to provide the above-mentioned necessities. For the fanner, naturally, will not make his own plough if it is to be a good one, nor his mattock, nor any of the other farming tools. No more will the builder, who also needs many tools. And the same will hold of the weaver and the shoemaker, will it not?'

Adeimantus:: 'True.'

Socrates:: 'Then carpenters and smiths and many other artisans of that kind will become members of our little city, and make it populous?'

Adeimantus:: 'Certainly.'

Socrates:: 'Yet it would not be so very large if we added herdsmen and shepherds and others of that class, that the farmers may have oxen for ploughing, and both builders and farmer may have yoke animals for their carting, and that the weavers and shoemakers may have skins and wool.'

Adeimantus:: 'Nor so very small if so well provided.'

Socrates:: ‘Again, it will be almost impossible to have our city so situated that it will need no imports.’

Adeimantus:: ‘Yes, that will be impossible.’

Socrates:: ‘Then it will need more men still to bring it what it needs from other cities?’

Adeimantus:: ‘It will.’

Socrates:: ‘And if they are to get what they need from other people, their agent must take with him something that those others want. If he goes empty-handed, he will return empty-handed, will he not?’

Adeimantus:: ‘I think so.’

Socrates:: ‘Then the workers of our city must not only make enough for home consumption; they must also produce goods of the number and kind required by other people?’

Adeimantus:: ‘Yes, they must.’

Socrates:: ‘Then our city will need more farmers, and more of all the other craftsmen?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And among the rest it will need more agents who are to import and export the different kinds of goods. These are merchants, are they not?’

Adeimantus:: ‘Yes.’

Socrates:: ‘We shall need merchants, then?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘And if the commerce is over sea, we shall need a host of others who are experts in sea-trading.’

Adeimantus:: ‘Yes, there will be many of them.’

Socrates:: ‘Again, in the city itself how will men exchange the produce of their labors with one another? For this was the original reason of our establishing the principle of community and founding a city.’

Adeimantus:: ‘Clearly, by selling and buying.’

Socrates:: ‘This will give us a market-place, and money as a token for the sake of exchange.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then if the farmer or any other craftsman brings his produce into the market-place, and meets there none who wish to exchange their goods with him, is he to sit idle in the market-place when he might be working?’

Adeimantus:: ‘Certainly not. There are men who have taken note of this, and devote themselves to this service. In well-governed cities they are usually those who are weakest in body, and incapable of any other work. They have to stay there in the market-place and exchange money for goods with those who want to sell, and goods for money with those who want to buy.’

Socrates:: ‘Then, this necessity brings shopkeepers into our city. We give the name of shopkeepers, do we not, to those who serve buyers and sellers in their stations at the market-place, but the name of merchants to whose who travel from city to city?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then are there not other agents also who have no mental gifts to make them at all worthy to share in the community, but who have bodily strength sufficient for hard labor? They sell the use of their strength, and the price they get for it being called hire, they are known, I fancy, as hired laborers?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then these hired laborers, too, serve to complete our city?’

Adeimantus:: ‘I think so.’

Socrates:: ‘Then, Adeimantus, has our city now grown to its perfection?’

Adeimantus:: ‘Perhaps.’

Socrates:: ‘Then, where in it shall we find justice and injustice? With which of the elements we have noticed did they make their entry?’

Adeimantus:: ‘I cannot see how they came in, Socrates, unless we find them somewhere in the mutual needs of these same persons.’

Socrates:: ‘Well, perhaps you are right. But let us consider the matter and not draw back. And first, let us consider what will be the manner of life of men so equipped. Will they not spend their time in the production of com and wine and clothing and shoes? And they will build themselves houses; in summer they will generally work without their coats and shoes, but in winter they will be well clothed and shod. For food they will make meal from their barley and flour from their wheat, and kneading and baking them they will heap their noble scones and loaves on reeds or fresh leaves, and lying on couches of bryony and myrtle boughs will feast wit. their children, drink wine after their repast, crown their heads with garlands, and sing hymns to the gods. So they will live with one another in happiness, not begetting children above their means, and guarding against the danger of poverty or war.’

Here Glaucon interrupted and said:

Glaucon:: ‘Apparently you give your men dry bread to feast on.’

Socrates:: ‘You are right, I forgot that they would have a relish with it. They will have salt and olives and cheese, and they will have boiled dishes with onions and such vegetables as one gets in the country. And I expect we must allow them a dessert of figs, and peas and beans, and they will roast myrtle berries and acorns at the fire, and drink their wine in moderation. Leading so peaceful and healthy a life they will naturally attain to a good old age, and at death leave their children to live as they have done.'

Glaucon:: 'Why, if you had been founding a city of pigs, Socrates, this is just how you would have fattened them.

Socrates:: 'Well, Glaucon, how must they live?'

Glaucon:: 'In an ordinary decent manner. If they are not to be miserable, I think they must have couches to lie on and tables to eat from, and the ordinary dishes and dessert of modem life.'

Socrates:: 'Very well. I understand. We are considering, apparently, the making not of a city merely, but of a luxurious city. And perhaps there is no harm in doing so. From that kind, too, we shall soon learn, if we examine it, how justice and injustice arise in cities. I, for my part, think that the city I have described is the true one, what we may call the city of health. But if you wish, let us also inspect a city which is suffering from inflammation. There is no reason why we should not. Well, then, for some people the arrangements we have made will not be enough. The mode of living will not satisfy them. They shall have couches and tables and other furniture; rich dishes too, and fragrant oils and perfumes, and courtesans and sweetmeats, and many varieties of each. Then again we must make more than a bare provision for those necessities we mentioned at the first, houses and clothes and shoes. We must start painting and embroidery, and collect gold and ivory, and so on, must re not?'

Glaucon:: 'Yes.'

Socrates:: ‘Then we must make our city larger. For the healthy city will not now suffice. We need one swollen in size, and full of a multitude of things which necessity would not introduce into cities. There will be all kinds of hunters and there will be the imitators; one crowd of imitators in figure and color, and another of imitators in music; poets and their servants, rhapsodists, actors, dancers and theatrical agents; the makers of all kinds of articles, of those used for women’s adornment, for example. Then, too, we shall need more servants; or do you think we can do without footmen, wet-nurses, dry-nurses, lady’s maids, barbers, and cooks and confectioners, besides? Then we shall want swineherds too; we had none in our former city—there was no need—but we shall need them along with all the others for this city. And we shall need great quantities of all kinds of cattle if people are to eat them. Shall we not?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then if we lead this kind of life we shall require doctors far more often than we should have done in the first city?’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then I dare say even the land which was sufficient to support the first population will be now insufficient and too small?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then if we are to have enough for pasture and plough’ land, we must take a slice from our neighbors’ territory. And they will want to do the same to ours, if they also overpass the bounds of necessity and plunge into reckless pursuit of wealth?’

Glaucon:: ‘Yes, that must happen, Socrates.’

Socrates:: 'Then shall we go to war at that point, Glaucon, or what will happen?'

Glaucon:: 'We shall go to war.'

Socrates:: 'And we need not say at present whether the effects of war are good or bad. Let us only notice that we have found the origin of war in those passions which are most responsible for all the evils that come upon cities and the men that dwell in them.'

Glaucon:: 'Certainly.'

Socrates:: 'Then, my friend, our city will need to be still greater, and by no small amount either, but by a whole army, It will defend all the substance and wealth we have described, and will march out and fight the invaders.'

Glaucon:: 'Why, are they not capable of doing that themselves?'

Socrates:: 'Certainly not, if you and the rest of us were right in the principle we agreed upon when we were shaping the city. I think we agreed, if you remember, that it was impossible for one man to work well at many crafts.'

Glaucon:: 'True.'

Socrates:: 'Well, does not the business of war seem a matter of craftsmanship?'

Glaucon:: 'Yes, certainly.'

Socrates:: 'Then ought we to be more solicitous for the craft of shoemaking than for the craft of war?'

Glaucon:: 'By no means.'

Socrates:: 'But did we not forbid our shoemaker to attempt to be at the same time a farmer or a weaver or house-builder? He was to be a shoemaker only, in order that our shoe-making work might be well done. So with all the others: we gave each man one trade, that for which nature had fitted him. Nothing else was to occupy his time, but he was to spend his life working at that, using all his opportunities to the best advantage and letting none go by. And is not efficiency in war more important than anything else? Or is it such a simple profession that a farmer or a shoemaker, or any other craftsman, can be a soldier in the intervals of his craft, though no one in the world would find that practice in his leisure moments or anything short of studying the game from his youth would make him a good draught or dice player? Is he to take up a shield, or any other of the weapons and tools of war, and in a single day to become an efficient antagonist in a heavy-armed engagement or in any other kind of battle, though the mere handling of any other tools will never make a craftsman or an athlete, and though tools are useless to the man who has not acquired the special knowledge and gone through the proper training for their use?'

Glaucon:: Yes, tools that taught their own use would be worth having.'

Socrates:: 'Then, because the work of our guardians is the most important of all, it will demand the most exclusive attention and the greatest skill and practice.'

Glaucon:: 'I certainly think so.'

Socrates:: 'And will it not need also a nature fitted for this profession?'

Glaucon:: 'Surely.'

Socrates:: 'Then it will be our business to do our best to select the proper persons and to determine the proper character required for the guardians of the city?'

Glaucon:: 'Yes, we shall have to do that.'

Socrates:: 'Well, certainly it is no trivial task we have undertaken, but we must be brave and do all in our power.'

Glaucon:: 'Yes, we must.'

Socrates:: ‘Do you not think, then, that so far as their fitness for guarding is concerned, a noble youth and a well-bred dog are very much alike?’

Glaucon:: ‘What do you mean?’

Socrates:: ‘I mean, for example, that both must be sharp-sighted, quick of foot to pursue the moment they perceive, and strong enough to make captures and overcome opposition when necessary.’

Glaucon:: ‘Yes. all these qualities are required.’

Socrates:: ‘And since they are good fighters, they must certainly be brave.’

Glaucon:: ‘Surely.’

Socrates:: ‘But will either horse or dog or any animal be brave if it is not spirited? Have you not observed that spirit is unconquerable and irresistible? Every soul possessed by it will meet any danger fearless and unshrinking.’

Glaucon:: ‘I have noticed that.’

Socrates:: ‘Then we are quite clear as to what must be the bodily characteristics of our guardians?

Glaucon:: ‘Yes.’

Socrates:: ‘And as to their mental qualities, we know they must be spirited.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then, Glaucon, with such natures as these, how are they to be prevented from behaving savagely towards one another and the other citizens?’

Glaucon:: ‘By Zeus, that will not be easy.’

Socrates:: ‘Still we must have them gentle to their fellows and fierce to their enemies. If we can’t effect that, they will prevent the enemy from destroying the city by doing it first themselves.’

Glaucon:: ‘True.’

Socrates:: ‘What then are we to do? Where shall we find a character at once gentle and high-spirited? For a gentle nature is surely the antithesis of a spirited one?

Glaucon:: ‘So it appears.’

Socrates:: ‘Nevertheless, if either is lacking, we shall certainly not have a good guardian. But this combination is apparently unattainable, and so you see it follows that a good guardian is an impossibility.’

Glaucon:: ‘It looks like it.’

Socrates:: I was perplexed, but reflecting on what had gone before I said, ‘We certainly deserve to be in difficulties, for we have forsaken the simile we set before ourselves.’

Glaucon:: ‘What do you mean?

Socrates:: ‘Have we not noticed that natures are to be found possessed of those opposite qualities, for all that we thought them non-existent?’

Glaucon:: ‘Where?’

Socrates:: ‘In many animals, but perhaps best in that with which we compared our guardian. Well-bred dogs, you surely know, are naturally of that disposition—as gentle as possible to their friends and those whom they know, but the very opposite to strangers.’

Glaucon:: ‘Yes, I know that.’

Socrates:: ‘Then, we may assume that the character we seek in our guardian is possible, and not contrary to nature?’

Glaucon:: ‘I think we may.’

Socrates:: ‘Do you think, then, that there is another quality indispensable to the guardian? The spirited element is not enough; he must be of a philosophical nature as well.’

Glaucon:: ‘What are you saying? I don’t understand.’

Socrates:: ‘You will notice this other quality in dogs. It certainly is surprising in the creatures.’

Glaucon:: ‘What quality?’

Socrates:: ‘Why, when dogs see a stranger, without any provocation they get angry; but if they see someone they know, they welcome him, even though they have received no kindness at his hands. Have you never wondered at that?’

Glaucon:: ‘I have hardly thought of it before. But that certainly is how they behave.’

Socrates:: ‘Well, but this instinct in the dog is a very fine thing, and genuinely philosophical.’

Glaucon:: ‘In what way?’

Socrates:: ‘Why, he distinguishes between a friendly and an unfriendly face, simply by the fact that he knows the one and is ignorant of the other. Now, how could the creature be anything but fond of learning when knowledge and ignorance are its criterion to distinguish between the friendly and the strange?’

Glaucon:: ‘How, indeed?’

Socrates:: ‘Well, but is it not the same thing to be fond of learning and to be philosophical?’

Glaucon:: ‘It is.’

Socrates:: ‘Then shall we confidently apply this to man? If he is to be gentle to his friends and acquaintances, he must be by nature philosophical and fond of learning.’

Glaucon:: ‘Let us do so.’

Socrates:: ‘Then he who is to be a good and noble guardian of our city will be by nature philosophical and spirited, and quick and strong.

Glaucon:: ‘Yes, he will be all those things.’

Socrates:: ‘This, then, will be his original character. Now, how shall we rear and educate these guardians? Will this inquiry help us in discovering the object of all our search, namely, how justice and injustice arise in a city? We don’t want to miss anything, and yet we mustn’t be tedious.

Glaucon’s brother answered:

Adeimantus:: ‘I for one most certainly anticipate that a consideration of this question will help us.

Socrates:: ‘In that case, my dear Adeimantus, we must certainly go on with it, even though it should prove rather lengthy.’

Adeimantus:: ‘Yes, we must.’

Socrates:: ‘Come, then, we shall be like idle story-tellers in a story, and our tale shall be the education of these men.

Adeimantus:: ‘Yes, by all means.’

Socrates:: ‘Well, what is our system of education to be? Is it not difficult to improve on what has been worked out through long generations? We have gymnastics for the body, and music for the soul.

Adeimantus:: ‘Yes.

Socrates:: ‘Then we shall begin our education with music before gymnastics, shall we not?

Adeimantus:: ‘Surely.

Socrates:: ‘Do you include literature in music, or not?’

Adeimantus:: ‘I do.’

Socrates:: ‘Are there not two kinds of literature—true and false?’

Adeimantus:: ‘Yes.’

Socrates:: ‘Must our education include both, or should we begin with the false?’

Adeimantus:: ‘I don’t understand what you mean.’

Socrates:: ‘Do you not understand, that we begin by telling stories to children? These surely are, as a general rule, false, though there may be some truth in them. But we tell the children stories before we give them gymnastic exercises.

Adeimantus:: ‘Yes.

Socrates:: ‘But that is what I said—literature is to come before gymnastics.

Adeimantus:: ‘You were right.’

Socrates:: ‘Then do you know that the most important part of every task is the beginning of it, especially when we are dealing with anything young and tender? For then it can be most easily molded, and whatever impression any one cares to stamp upon it sinks in.’

Adeimantus:: ‘Most certainly.’

Socrates:: ‘Then shall we carelessly and without more ado allow our children to hear any casual stories told by any casual persons, and so to receive into their souls views of life for the most part at variance with those which we think they ought to hold when they come to man’s estate?

Adeimantus:: ‘No, we shall certainly not allow that.’

Socrates:: ‘Our first duty then, it seems, is to set a watch over the makers of stories, to select every beautiful story they make, and reject any that are not beautiful. Then we shall persuade nurses and mothers to tell those selected stories to the children. Thus will they shape their souls with stories far more than they can shape their bodies with their hands. But we shall have to throw away most of the stories they tell now.’

Adeimantus:: ‘What kind do you mean?’

Socrates:: ‘In the big stories we can discern the little; for both big and little must bear the same form, and have the same effect. Do you not agree?

Adeimantus:: ‘I do. but I don’t see any more what you mean by the big stories.’

Socrates:: ‘Those, that Hesiod and Homer and the other poets have told us; for surely they have composed untrue stories, and have told, and do tell them, to men.’

Adeimantus:: ‘But what kind do you mean, and what fault do you find in them?

Socrates:: ‘A fault, that deserves immediate and emphatic condemnation, especially if the untruth have no beauty in it.’

Adeimantus:: ‘What is that?

Socrates:: ‘When any man in describing the character of gods and heroes does it badly, like an artist whose drawing is absolutely unlike the things he wishes to draw.’

Adeimantus:: ‘Well, it is certainly right that stories of that kind should be condemned; but what do you mean, and to what do you refer?

Socrates:: ‘Well, firstly, the poet, who told the greatest of falsehoods of the greatest of beings, told a falsehood with no beauty in it, when he said that Ouranos did what Hesiod said he did, and that Kronos took vengeance on him. And as for the deeds of Kronos, and what he suffered at his son’s hands, even if these stories are true, I should not think we could so lightly repeat them to the young and foolish. It were best to be silent about them, or if they had to be told, it should be done under the seal of silence to as few hearers as possible, and after the sacrifice not of the mystic pig but some great and almost unprocurable victim, so that very few would hear the story.’

Adeimantus:: ‘Yes, those are certainly hard stories.’

Socrates:: ‘Yes, Adeimantus, and stories that are not to be told in our city. We must not let a young man hear that in committing the most awful crimes or in requiting an unjust father’s misdeeds with every conceivable cruelty, he would be doing nothing extraordinary, but only acting like the chiefest and greatest of the gods.’

Adeimantus:: ‘No, certainly not. I too think it inexpedient to tell such stories.’

Socrates:: ‘And we shall strictly forbid, all stories of gods making war on or plotting against or fighting other gods. To begin with, they are not true; and besides, those who are to guard our city must think it the most deadly sin to quarrel easily with one another. The fights of the giants and the other many and varied strifes of gods and heroes with kinsfolk and friends must not be told them in story or woven on their tapestry. But if we can in any way find stories to persuade them that no citizen has ever hated another, and that such a thing is impious, it is these rather that our old men and women must tell to the young children, and when they grow older, the poets must be compelled to make stories for them of a like nature. But the binding of Hera by her son, or the hurling of Hephaestus from heaven by his father, when his mother was being beaten and he tried to defend her, and all the tales of the battles of the giants that Homer has made, these stories we shall not receive into our city, whether their purport be allegorical or not. For the child is unable to discriminate between what is allegory and what is not; whatever he receives and believes at that early age is apt to become permanent and indelible. For these reasons, perhaps, we must do everything in our power to contrive that the first stories our children are told shall teach virtue in the fairest way.’

Adeimantus:: ‘Yes, that is reasonable. But if any one were to ask us for examples of these stories and in what works they are told, how should we reply?’

Socrates:: ‘Adeimantus, you and I at this juncture are not poets, but founders of a city. The founders ought to know the canons in accordance with which the poets should tell their stories, and which they are not to be allowed to transgress, but they need not themselves compose stories.’

Adeimantus:: ‘True, but this is just what I wish to know. What are the canons for stories about the gods?’

Socrates:: ‘Something like this. If a poet tells of God in epic, lyric, or tragedy, he must surely represent him as he actually is.’

Adeimantus:: Yes, he must.’

Socrates:: ‘But is not God truly good, and must he not be described as such?’

Adeimantus:: ‘Yes. Why do you ask?’

Socrates:: ‘Well, nothing that is good is harmful, is it?’

Adeimantus:: ‘I think not.’

Socrates:: ‘And does that which is not harmful do harm?’

Adeimantus:: ‘Certainly not.’

Socrates:: ‘And does that which does no harm, do any evil?’

Adeimantus:: ‘No.’

Socrates:: ‘Then would that which does no evil cause any evil?’

Adeimantus:: ‘How could it?’

Socrates:: ‘Well, is the good beneficial?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And does it cause good fortune?’

Adeimantus:: ‘Yes.’

Socrates:: ‘Then the good does not cause all things; it is responsible for the things that are good, but not responsible for the evil?’

Adeimantus:: ‘That is certainly true.’

Socrates:: ‘Nor can God, since he is good, cause all things, as most people say. He is responsible for a few things that happen to men, but for many he is not, for the good things we enjoy are much fewer than the evil. The former we must attribute to none else but God; but for the evil we must find some other causes, not God.’

Adeimantus:: ‘That seems to me very true.’

Socrates:: ‘Then, we must have nothing to do with the mistake of Homer or of any other poet who makes the foolish misstatement that;

> Two tuns of gifts there lie
> In Zeus’ gate, one of good, one ill.

which when Zeus mixes for any man;

> One while he frolics, one while mourns.

but as for the man who gets no mixture but only of the second;

> Sad hunger in th’ abundant earth doth toss him to and fro;

nor with the statement that Zeus is to us;

> The giver both of woe and weal

And we shall not praise any one who says that Zeus and Athene were responsible for Pandarus’ violation of the oaths and treaties, or that Themis and Zeus caused strife and division among the gods, nor shall we allow the young to hear the words of Aeschylus, when he says;

> God sends a curse on mortals
> When he would utterly destroy a house.

But if any one makes a poem of the sufferings of Niobe, as is the play from which those lines are taken, or of the history of the children of Pelops, or the Trojan war, or any similar story, either he must not be allowed to say that these were the deeds of God, or if he says that, he must find some such explanation as we are now looking for. He must say that God did what was just and good, and the sufferers were benefited by punishment. We must not allow the poet to say that those who were punished were miserable, and that God made them so. But we must allow them to say that the bad were miserable because they needed punishment, and were benefited by being punished at God's hand. We must contend with all our might against the assertion that God, who is good, is the author of evil to any man. No one shall say that in our city if it is to have good laws, and no one shall hear it, neither young nor old. Neither in meter nor without shall it be told. For to tell such things is impious, and they are neither to our advantage nor self-consistent in the telling.'

Adeimantus:: 'I vote with you for this law. I like it.'

Socrates:: 'This, then, will be one of our canons concerning the gods, in accordance with which our speakers must speak and our poets compose, namely, that God is not the author of all things, but of the good alone.'

Adeimantus:: 'Yes, that is sufficiently proved.'

Socrates:: 'Well, what of this for the second? Do you think that God is a magician who of deliberate purpose appears in different forms at different times; that sometimes he actually leaves his own form and passes into many different shapes, and at other times deceives us and creates in us illusions of that kind; or do you think that God is simple, and of all beings abides most steadfast in his own form?'

Adeimantus:: ‘I can’t answer all at once.’

Socrates:: ‘Well, answer me this, if anything departs from its own form, must not the change arise in itself or be caused by something without?’

Adeimantus:: ‘It must.’

Socrates:: ‘Well, are not the most perfect things least altered and moved by any outside influence? Take, for example, the alterations effected in the body by food and drink and exertion, or in every plant by sun and wind and similar causes. Does not the healthiest and strongest body suffer least alteration?’

Adeimantus:: ‘Surely.’

Socrates:: ‘Then would not the bravest and wisest soul be least disturbed or altered by any outside effect?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And, again, the same holds good of manufactured articles—furniture, houses, and clothes. Those that are well made and in good condition suffer least alteration from time or other influences?’

Adeimantus:: ‘That is so.’

Socrates:: ‘Then everything that is at its best, either in nature or in art, or both, suffers least change from without?’

Adeimantus:: ‘So it appears.’

Socrates:: ‘But surely God and the divine nature are in every way perfect?’

Adeimantus:: ‘Surely.’

Socrates:: ‘Therefore God would least of all take on many shapes through external influence?’

Adeimantus:: ‘Yes, least of all.’

Socrates:: ‘Then would he change and alter himself?’

Adeimantus:: ‘If he changes at all, that must clearly be the manner of it.’

Socrates:: ‘Then would God in changing himself become better and fairer, or worse and uglier?’

Adeimantus:: ‘He must become worse, if he changes at all. For we certainly cannot say that God is lacking in any excellence or beauty.’

Socrates:: ‘You are perfectly right. That being so, Adeimantus, do you think that any one, God or man would deliberately make himself in any way worse than he was before?’

Adeimantus:: ‘That is impossible.’

Socrates:: ‘Then, it is also impossible for a god to wish to alter himself, but as is natural, every god having the utmost beauty and excellence, abides ever simple in his own shape.’

Adeimantus:: ‘That seems to me conclusively proven.’

Socrates:: ‘Then, my good sir, let none of the poets tell us that;

> Like such poor stranger pilgrims do the gods.
> All shapes assuming, glide through towns and towers.

and let no one tell us lies about Proteus and Thetis, or introduce either in tragedy or other poetry Hera transformed, disguised as a priestess collecting alms;

> For the life-giving of Inachus, river of Argos.

And we will have nothing to do with the many other lies of that sort. And the mothers are not to be persuaded by the poets into frightening their children with evil stories that forsooth there are certain gods that go about at night in many strange shapes. If they do, they will both blaspheme the gods and make their children cowardly.’

Adeimantus:: ‘No, that must not be allowed.’

Socrates:: ‘But, are the gods such that while they do not really change, they make themselves appear to us to have different forms, deceiving us by their magic?’

Adeimantus:: ‘Possibly.’

Socrates:: ‘What! would God wish to lie by spoken or acted illusion?’

Adeimantus:: ‘I do not know.’

Socrates:: ‘Do you not know, that all gods and men hate the true lie, if we may use the expression?’

Adeimantus:: ‘What do you mean?’

Socrates:: ‘This, no one deliberately wishes to lie in the most vital part of him about the most vital matters. Every one fears above all to harbor a lie in that quarter.’

Adeimantus:: ‘I don’t yet understand.’

Socrates:: ‘That is because you think I am uttering some mysterious truth. All I am saying is that to lie, and be the victim of a lie, and to be ignorant in the soul concerning reality, to hold and possess falsehood there, is the last thing any man would desire. Men hate falsehood in such a case above all.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘But this that I have just mentioned may be most accurately called the true lie, namely, the ignorance in the soul of him who is deluded. For the spoken lie is an imitation of this state in the soul, an image of it which arises afterwards and is not a wholly unmixed lie. Is it not so?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then the real lie is hated not only by the gods, but also by men?’

Adeimantus:: ‘I think so.’

Socrates:: ‘Then what of the spoken lie? Is it sometimes useful to certain people, and therefore not deserving of hatred? Is it not useful against enemies, and a good remedy to divert so-called friends from any evil intention they may form in madness or folly? Again, in the stories of which we have just been speaking, when we do not know the truth of those ancient happenings, but make the falsehood as near the truth as possible, is our action not useful?’

Adeimantus:: ‘Yes, certainly that is true.’

Socrates:: ‘And for which of these reasons is falsehood useful to God? Will he be seeking to make a lie like the truth because he does not know ancient history?’

Adeimantus:: ‘That would be ridiculous.’

Socrates:: ‘There is nothing of the lying poet in God, then?’

Adeimantus:: ‘I think not.’

Socrates:: ‘Would he lie from fear of his enemies?’

Adeimantus:: “‘Far from it.’

Socrates:: ‘Or because of the folly or madness of his friends?’

Adeimantus:: ‘No, no fool or madman is a friend of the gods.’

Socrates:: ‘Then there are no reasons why God should lie?’

Adeimantus:: ‘None.’

Socrates:: ‘Then the nature of gods and spirits is altogether apart from falsehood?’

Adeimantus:: ‘Most assuredly.’

Socrates:: ‘In that God is simple and true in word and deed, he does not change himself; nor does he delude others, either in fantasies or words, or by sending signs, whether in waking moments or in dreams?'

Adeimantus:: 'I think so myself, after what you have said.'

Socrates:: 'Then do you agree, that our second canon determining all speaking and writing about the gods is that they are not magicians, and do not change themselves, or deceive us by lies, either in word or deed?'

Adeimantus:: 'I agree.'

Socrates:: 'Then though we find much to praise in Homer, we should not praise him for his story of the sending of the dream to Agamemnon by Zeus; nor shall we praise the passage in Aeschylus where Thetis says that Apollo sang at her wedding, dwelling on her happy motherhood:

> The span of life from sickness free,
> And telling all my fate that gods had blest,
> He sang a song of gladness to my heart.
> I dreamed the lips of Phoebus could not lie
> Being divine, touched with the seer's skill.
> But he the singer, he the wedding guest.
> The same who sang these words, is he who dew My own dear son.

When any one says such things about the gods we shall be angry, and shall not give him a chorus; nor shall we allow our teachers to use his poems to instruct the young, if our guardians are to be god-fearing and godlike so far as man may be?'

Adeimantus:: 'Decidedly, I agree with those canons, and would use them as laws.'

**Book 3.**

Socrates:: ‘So much, then, for stories of the gods. We have settled, it seems, which of them our young children may hear and which they may not, if they are to grow up to honour the gods and their parents, and to hold friendship dear.’

Adeimantus:: ‘Yes, and I think that our conclusions are right.’

Socrates:: ‘Come, then, if they are to be brave, must they not be told such stories as will make them have no fear of death? Or do you think that any man was ever brave who had this fear in his heart?’

Adeimantus:: ‘No, indeed, not I.’

Socrates:: ‘Well, but do you think that any one who believes that Hades exists, and is a terrible place, will be without this fear, and that he will be ready in battle to choose death rather than defeat and slavery?’

Adeimantus:: ‘Certainly not.’

Socrates:: ‘Then, it seems, we must prescribe for intending poets concerning those stories also, and tell them that they must not simply abuse Hades, but rather praise it. For their stories, as ordinarily told, are neither true nor useful to those who are to be warriors.’

Adeimantus:: ‘Yes, we must do that.’

Socrates:: ‘Then we shall begin with the following verse and score out all passages like it:

> I rather wish to live on earth a swain,
> Or serve a swain for hire that scarce can gain
> Bread to sustain him, than, that life once gone.
> Of all the dead sway the imperial throne;

or;

> And so his house so dim,
> So loathsome, filthy, and abhorred of all the gods

beside.
Should open both to gods and men;

and;

O ye gods, I see we have a soul
In th' under-dwellings, and a kind of man-resembling idol;
The soul's seat yet, all matter left, stays with the carcass here;

and;

That he alone
May sing truth's solid wisdom, and not one
Prove more than shade in his comparison;

and;

His soul took instant wing,
And to the house that hath no lights descended, sorrowings
For his sad late, to leave him young and in his ablest age;

and;

Like matter vaporous
The spirit vanished under earth and murmured in his stoop;

and;

And as amid the desolate retreat
Of some vast cavern, made the sacred seat
Of austere spirits, bats with breasts and wings
Clasp fast the walls, and each to other clings.
But swept off from their coverts, up they rise
And fly with murmurs in amazeful guise
About the cavern: so these, grumbling, rose
And flockt together.

We shall bid Homer and the other poets not be angry if we strike out these passages and all like them, not that they are not poetic, or that they are not enjoyed by most people, but that the more poetic they are, the less must they be heard by boys and men who are to be free, fearing slavery more than death.'

Adeimantus:: 'Certainly.'

Socrates:: 'Then we must also get rid of all the fearful and terrifying titles belonging to those subjects, 'wailing Cocytus,' and 'loathed Styx,' and 'infernals,' and 'sapless dead,' and all the words of that type, the very sound of which is enough to make men shiver. These will probably be useful enough for other purposes, but for our guardians we are afraid that this shivering fear will make them more emotional and softer than they ought to be.'

Adeimantus:: 'Yes, your fear is justifiable.'

Socrates:: 'Shall we strike them out, then?'

Adeimantus:: 'Yes.'

Socrates:: 'And must we speak and write in the opposite strain?'

Adeimantus:: 'Clearly.'

Socrates:: 'Then shall we also strike out the weepings and wailings of famous men?

Adeimantus:: 'These must go with the others.'

Socrates:: 'But consider, whether we are justified in striking them out. We assert that the good man will not think that death is terrible for another good man who is his comrade.'

Adeimantus:: 'We do.'

Socrates:: 'Then he will not weep for him as for one who has suffered any terrible thing?'

Adeimantus:: 'No.'

Socrates:: 'We may even say this, that such a man most of all has within himself that which makes a good life possible. Far better than ordinary people can he do without others.'

Adeimantus:: 'True.'

Socrates:: 'Then for him of all people there is least that is terrible in losing a son or a brother, or in the loss of money, or any other of his possessions?'

Adeimantus:: 'Yes, least for him.'

Socrates:: 'When any such misfortune comes upon him, he does not bewail it as other men do, but bears it as patiently as may be?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then may we justifiably strike out the lamentations of famous heroes, and give them to women, to bad women and cowardly men, that those whom we are bringing up to guard our city may be ashamed to imitate them?'

Adeimantus:: 'You are right.'

Socrates:: 'Again, we shall request Homer and the other poets not to represent Achilles, the son of a goddess;

> As lying prostrate, now his side and now his face upturned.
> Now on his bosom fallen.

then starting upright and wandering unsteadily by the shore of the harvestless sea; nor as lifting with both his hands the black mould and pouring it on his head; nor as weeping and lamenting on the many other occasions and in the diverse manners depicted by Homer; nor are they to describe Priam, who was closely descended from the gods:

> Entreating, and all filed with tumbling, calling on
> Each man by name.

Still more earnestly we shall request them not to represent the gods making lament and saying:

> Hapless I brought forth unhappily
> The best of all the sons of men.

But if they speak of the gods, they must not dare so to misrepresent the greatest of the gods, as to make him say:

> Oh, ill sight
> A man I love much, I see forced in most unworthy flight
> About the city. My heart grieves;

or;

> Ah, woe is me since fate decrees that this Menoetius' son
> Shall slay Sarpedon whom I hold of all mankind most dear.

For, my dear Adeimantus, if our young were to take such passages seriously, instead of laughing at them as bad poetry, unworthy of their subjects, it would be difficult to make them feel that they themselves, who are but men, are above those actions, or to make them rebuke themselves if it should occur to them also to say or do such things. They would lose their sense of shame and their hardihood, and weep and lament loudly over the most trifling misfortunes.'

Adeimantus:: 'That is most true.'

Socrates:: 'And that we must prevent, as our argument has taught us, and we shall follow it till someone shows us a better.'

Adeimantus:: 'Yes, it must be prevented.'

Socrates:: 'Next, our guardians ought not to be ready laughers; for when any man indulges in excessive laughter, it is almost always followed by an equally violent reaction.'

Adeimantus:: 'So I think.'

Socrates:: 'Then we must not allow any poet to represent men f repute as overcome by laughter, much less to represent gods in such a case.'

Adeimantus:: 'Yes, much less.'

Socrates:: 'Then we shall not allow Homer to speak thus of the gods:

A laughter never left,
Shook all the blessed deities, to see the lame so deft
At that cup service.

Your argument will not allow that.’

Adeimantus:: ‘Well, if you like to call it mine, it will not.’

Socrates:: ‘Further, a high value must be placed upon truth. For if we were right in what we said a little while ago, and falsehood is really useless to the gods, and useful to men only as a medicine, clearly the use of medicine must be confined to our doctors. Laymen must have nothing to do with it.’

Adeimantus:: ‘That is clear.’

Socrates:: ‘Then it pertains to the guardians of the city, and to them alone, to tell falsehoods, to deceive either enemies or citizens for the city’s welfare. To all other persons such conduct is forbidden, and we shall say that, for a private citizen to tell a falsehood to such rulers as these, is a crime more serious but the same in principle as for a patient to deceive his doctor, or a pupil his training-master concerning his bodily health, or for a sailor to tell his captain an untruth about the ship or the crew in describing his own condition or that of his shipmates.’

Adeimantus:: ‘Most true.’

Socrates:: ‘Then if the governor finds any private person in the city telling falsehood, any;

Of such as craftsmen are
A seer, a doctor or a carpenter.

he will punish him as the introducer of a practice as subversive and destructive of a city as of a ship.’

Adeimantus:: ‘He will, if his deeds answer to his words.’

Socrates:: ‘Next, will our young men need to be temperate?

Adeimantus:: ‘Surely.’

Socrates:: ‘Speaking generally, is not this the greater part of temperance, that men should be subject to the rulers, and make subject to themselves the pleasures of drink and love and food?’

Adeimantus:: ‘I think so.’

Socrates:: ‘Then I fancy that we shall approve of such speeches as that which Homer puts into the mouth of Diomedes:

> Suppress thine anger’s powers,
> Good friend, and hear why refrained.

and the verses which follow:

> ‘The Greeks charged silent, and like men, bestowed their thrifty breath,
> Their silence uttering their awe of those that them controlled.’

with other passages of a like nature?

Adeimantus:: ‘Excellent.’

Socrates:: ‘Well, what of this verse:

> Thou ever steeped in wine, dog’s face, with heart but of a hart.

and those that follow it, and all the impertinences of private men to rulers, whether actually spoken or related in poetry, are they excellent?

Adeimantus:: ‘They are not.’

Socrates:: ‘No. I do not fancy the hearing of them will help young men to be temperate. It may give them pleasure of another kind. That would not surprise me. How do you think about it?’

Adeimantus:: ‘As you do.’

Socrates:: ‘Again, when the wisest of men is represented as saying that the finest sight in the world to him is;

A wine-page waiting; tables crowned with meat,
Set close to guests that are to use it skilled;
The cupboards furnisht, and the cups still filled.

do you think that is calculated to induce self-control in the young man who hears it, any more than the verse;

To die
The death of Famine is a misery
Past all death loathsome;

or the story that Zeus, when all the other gods and men were sleeping, kept awake to carry out what he had purposed, and then forgot all in the eagerness of his lust, and was so maddened by the sight of Hera that he would not wait till they returned into their chamber, but wished to enjoy her there and then, saying that he had never been so hot with desire, not even in their first stolen meetings which were hidden from their dear parents; or the story of the binding of Ares and Aphrodite by Hephaestus in a similar affair?'

Adeimantus:: 'On my word, I think such stories are not conducive to self-restraint.'

Socrates:: 'But if there be any deeds of perfect endurance, done by famous men among us, or told of them in poetry, these we must see and hear, as, for example;

He chid his angry spirit, and beat his breast.
And said, Forbear, my mind, and think on this:
There hath been time when bitterer agonies Have tried thy patience."'

Adeimantus:: 'Most certainly.'

Socrates:: 'Our heroes, again, must not be fond of money, or men who would take a bribe.'

Adeimantus:: 'Certainly not.'

Socrates:: 'Then they shall not be told that Gifts persuade gods, gifts reverend kings persuade; nor must we praise Phoenix, Achilles' tutor, nor allow that he spoke wisely when he advised him to help the Achaeans if they gave him gifts, but without the gifts not to relent from his wrath; nor shall we suppose nor admit of Achilles himself that he was so fond of money as to take gifts from Agamemnon, or to be willing to restore the body of Hector only if he were paid for it?'

Adeimantus:: It is certainly not just, to praise deeds of that description.'

Socrates:: 'Though, my admiration for Homer makes me hesitate to say it, nevertheless it is impious to speak such things of Achilles, or to believe them on the report of others, or to believe that he said to Apollo;

It is thou
That putt'st dishonor thus on me, thou worst of deities.
Held I the measure in my hand, I should requite thee dear;

or that he resisted obstinately, and was ready to fight with the river, who was a god; or that he said of his hair, which was sacred to the other river, Spercheius;

My friend's hands shall to the Stygian shore
Convey these tresses.

when his friend Patroclus was dead: that he said and did thus, we must not believe. And as for the dragging of Hector's body round the tomb of Patroclus, and the slaughter of the prisoners on the pyre, all these tales we shall declare to be untrue. We shall not suffer our guardians to believe that Achilles, whose parents were a goddess and Peleus the wisest of men and the grandson of Zeus, and who had been educated by the sage Chiron, was so full of confusion that in his heart were two most contrary diseases, meanness and love of money, and overweening contempt of gods and men.'

Adeimantus:: 'You are right.'

Socrates:: ‘Further, let us neither believe nor allow men to say that Theseus, the son of Poseidon, and Peirithous, the son of Zeus, ever attempted such terrible rapes, or that any son of god or hero dared to do the terrible and impious deeds of which those false stories tell. Rather let us compel our poets to say either that they were not the authors of those deeds, or that they were not the sons of gods—one or other. They are not to try to persuade our young men that the gods beget evil, or that heroes are no better than common men. As we said originally, these stories are both impious and untrue; for we have proved that evils cannot come from the gods.’

Adeimantus:: ‘We have.’

Socrates:: ‘And these stories are also harmful to those who hear them; for every man will excuse his own wickedness, being persuaded that like deeds have been, and are now, done by;

> The gods’ own offspring,
> Near kin to Zeus, who high on Ida’s mount
> To Zeus, their father, feed the altar flame,
> And still within their veins runs blood divine.

For these reasons we must stop such stories lest they breed in our young men a ready disposition to evil.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then what class of literature is still left for this discussion of ours as to what may and what may not be treated of in poetry? We have stated how the poets must write of the gods and of the lesser deities and heroes, and of those in Hades?’

Adeimantus:: ‘Yes.’

Socrates:: ‘Then does not the remaining class consist of stories about men?’

Adeimantus:: ‘That is evident.’

Socrates:: ‘But it is impossible for us, my friend, to lay down rules for them at present.’

Adeimantus:: ‘Why?’

Socrates:: ‘Because I fancy that we shall say that in what they tell of men, poets and makers of stories are most wrong when they say that many unjust men are happy, many just men miserable, that injustice is profitable if it be not detected, and justice the good of another, but a man’s own loss. I fancy, too, that we shall forbid them to make statements of that kind, and shall order them to make songs and stories to the contrary effect. Do you not think so?’

Adeimantus:: ‘I am certain of it.’

Socrates:: ‘Well, if you admit that I am right, shall I say that you admit what we have been after all this time?’

Adeimantus:: ‘Your assumption is correct.’

Socrates:: ‘When we have discovered the nature of justice, and have found that it is naturally profitable to him who possesses it, whether he have the reputation of a just man or no, shall we not then agree that stories which deal with men must be of the nature we have indicated?’

Adeimantus:: ‘Most true.’

Socrates:: ‘Then that may suffice for the subject-matter. We must now, I fancy, examine the question of diction, and then we shall have thoroughly examined both what the poets are to say and how they are to say it.’

Adeimantus:: ‘I don’t understand what you mean by that.’

Socrates:: ‘But we must see that you do. Perhaps you will grasp it better in this way. Is not everything which is said by story-tellers or poets a narration of past, present, or future events?’

Adeimantus:: ‘What else?’

Socrates:: ‘Then do they not use either simple narration or imitative narration, or both?’

Adeimantus:: ‘That again, I need to have explained to me.’

Socrates:: ‘I am evidently a ridiculously obscure teacher. But as poor speakers do, I shall leave the general principle alone, and taking a particular example try to make my meaning clear to you. You know the beginning of the Iliad where the poet says that Chryses asks Agamemnon to ransom his daughter and he angrily refuses, and then Chryses, since his request is refused, prays to the god against the Achaeans?

Adeimantus:: ‘I do.’

Socrates:: ‘Well, you know that up to the lines;

> And made suit to all, but most to the commands
> Of both th’ Atrides who most ruled.

the poet speaks in his own person, and does not try to make us think that the speaker is any one but himself; but in the passage after that he speaks as though he were himself Chryses, and tries as hard as he can to make us think that the speaker is not Homer, but the old priest. And all the rest of the narrative concerning the events in Ilium and in Ithaca, and all the Odyssey is written in much the same way.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘And is it not narrative when the poet presents each speech and the parts in between?

Adeimantus:: ‘Surely.’

Socrates:: ‘But when he speaks in the person of another, shall we not say that he then always makes his style as nearly as possible like that of the man whom he has announced to be speaking?

Adeimantus:: 'We shall, of course.'

Socrates:: 'But if a man makes himself either in voice or in look like another man, does he not imitate that man?

Adeimantus:: 'Of course.'

Socrates:: 'Then in such cases, it appears, Homer and the other poets carry on the narration by means of imitation?

Adeimantus:: 'Certainly.'

Socrates:: 'Now if the poet never concealed his own person, his whole poem and narration would be without imitation. To prevent you from saying that you still don't understand, I shall tell you how this would work out. After Homer has told how Chryses came bearing gifts to ransom his daughter, and how he made supplication to the Achaeans, and especially to the chiefs, if after that he had spoken, not as if he had been transformed into Chryses, but as if he were still Homer, that, you know, would not have been imitation, but simple narration. It would have gone in some such way as this. I shall not put it in meter, as I am no poet. The priest came and prayed that the gods might grant to them the capture of Troy and a safe return, and entreated them to ransom his daughter, taking the gifts he offered in fear of the god. And when he had spoken, the others reverenced his words and gave assent; but Agamemnon was angry and told him to go away and not to come back, or his sacred staff and the fillets of the god would not protect him. He said that Chryses daughter should grow old with him in Argos before he would ransom her, and told Chryses to go away and to not make him angry if he wanted to get home safe. The old man when he heard this was afraid and went away in silence; but when he left the army behind him, he prayed earnestly to Apollo, calling on the god by his titles, and putting him in remembrance, and asking to be repaid if ever he had made him an acceptable offering by building his temple or sacrificing victims. In return for these services, he prayed that the Achaeans might be made to pay for his tears by the arrows of the god. Thus, my friend, it becomes simple narration without imitation.'

Adeimantus:: 'I understand.'

Socrates:: 'You will understand, then, That we have the opposite form to this, when the words of the poet between the speeches are struck out, and only the alternating dialogue is left.'

Adeimantus:: 'Yes, I understand. That happens in tragedy.'

Socrates:: 'Your supposition, is quite correct, and I fancy that now I can make you see what before I could not, namely that all poetry and story-telling may be said to be in one of three forms: the first, where imitation is employed throughout, is, as you suggest, tragedy and comedy; in the second, the poet tells his own story—the best example of that is perhaps the dithyramb; in the third, both imitation and simple narration are used—it is found in epic and in several other kinds of poetry. I hope that you follow me.'

Adeimantus:: 'Yes, I now understand what you meant.'

Socrates:: 'Then let me remind you that we have said before that we were agreed as to the proper subjects of poetry, but had still to consider its proper manner.'

Adeimantus:: 'Yes, I remember.'

Socrates:: 'Well, then, this is what I was trying to say, that we must come to an agreement as to whether we should allow our poets to make their narrations by means of imitation, or partly by imitation and partly by the other method, in which case we should have to determine where each method should be used, or whether we should forbid imitation altogether.’

Adeimantus:: ‘I think, that you are considering whether we shall admit tragedy and comedy into the city or not.’

Socrates:: ‘Possibly, but possibly even more than that. I don’t myself know as yet. We must go where the wind of the argument carries us.’

Adeimantus:: ‘Yes, you say well.’

Socrates:: ‘Then, Adeimantus, consider whether our guardians ought to be imitative or not. Does not the answer follow from what we have said already, that each man can practice well one profession but not many, and that if he attempts more, and meddles with many, he will fail in all to attain creditable distinction?’

Adeimantus:: ‘That is certainly the case.’

Socrates:: ‘Then will not the same argument apply to imitation? The same man cannot imitate many things as well as one.’

Adeimantus:: ‘No, certainly not.’

Socrates:: ‘Then he will hardly be able to practice any worthy profession and at the same time imitate many things and be imitative, since as a matter of fact the same persons are not successful even in two forms of imitation that seem very closely allied, in writing tragedy and comedy, for example. Did you not describe these as forms of imitation?

Adeimantus:: ‘I did, and you are right. The same writers are never successful in both.’

Socrates:: ‘Nor can any one be both a rhapsodist and an actor with any success.

Adeimantus:: ‘True.’

Socrates:: ‘We even find that tragedy and comedy cannot be played by the same actor. And all these are forms of imitation, are they not?’

Adeimantus:: ‘They are.’

Socrates:: ‘Then, Adeimantus, human nature seems to me to be split up into even smaller subdivisions, so that a man is unable to imitate many things well, or to do well the things themselves of which the imitations are likenesses.’

Adeimantus:: ‘That is perfectly true.’

Socrates:: ‘Then if we are to be faithful to our original position, that our guardians must be released from all other handicrafts to be in all earnestness craftsmen of the freedom of the city, and must do nothing that does not contribute to this end, then they must neither do nor imitate anything else. And if they imitate, they must imitate from childhood subjects befitting their vocation, brave, temperate, pious, free men, and the like; but meanness and any other ugly thing they must neither do nor be able to imitate, lest from the imitation they become infected with the reality. Have you not noticed that the practice of imitation, if it is begun in youth and persisted in, leaves its impress upon character and nature, on body and voice and mind?’

Adeimantus:: ‘Yes, certainly.’

Socrates:: ‘Then we shall not allow persons for whom we say we care, who are men, and men who must grow up good, to imitate a woman, whether she be young or old. either railing at her husband, or striving and vaunting herself against the gods, thinking that she is happy, or overcome by misfortune, or grief, or tears; much less shall we allow them to imitate one who is ill, or in love, or in labor.’

Adeimantus:: ‘Most certainly not.’

Socrates:: ‘Nor may they imitate slaves, male or female, doing servile actions.’

Adeimantus:: ‘No, they may not.’

Socrates:: ‘Nor, it would follow, may they imitate bad men or cowards, or men doing actions of the contrary nature to those we described, reviling and caricaturing one another, using abominable language, whether drunk or sober, or committing any other faults of speech or action characteristic of that class of men in their personal demeanor and their relations with others. I think, too, that they must not get into the habit of making themselves resemble madmen, either in word or action. They must know madmen and bad men and women, but they must neither do nor imitate any of their actions.’

Adeimantus:: ‘Most true.’

Socrates:: ‘Further, may they imitate smiths or any other craftsmen at their trade, or men rowing in triremes or their boatswains, or anything else of that kind?

Adeimantus:: ‘How should they, when they are not to be allowed even to pay attention to any of those things?’

Socrates:: ‘Then will they imitate horses neighing, and bulls bellowing, and rivers gurgling, and seas crashing, and thunder, and all those things?’

Adeimantus:: ‘No, we have already forbidden them to be mad tor to make themselves like madmen.’

Socrates:: ‘Then, if I understand your meaning, there is one form of diction and narration which would be used by the truly noble and good man when he needed to say anything, and another different form which a man of the opposite nature and breeding would find congenial, and which he would use.’

Adeimantus:: ‘What are these?’

Socrates:: 'The man of measured character in the first place, when he came in his narration to the speech or action of a good man, would, I think, wish to speak in the good man's person, and would not be ashamed of that kind of imitation. He would imitate the good man with especial thoroughness in his cautious and wise actions, less carefully and to a less degree when he was overcome by disease, or love, or by drunkenness, or any other misfortune. But when he comes to someone unworthy of him, he will not be willing to liken himself seriously to his inferior. He may for a little when he is doing a good action, but apart from that he will be ashamed, partly because he is not in the way of imitating such people, but also from a repugnance to molding and conforming himself to the morals of inferior men whom he deliberately despises; unless it be for mere amusement.'

Adeimantus:: 'That is likely.'

Socrates:: 'Then he will use the form of narration which we described a little while ago, which is used in Homer. His manner of speech will partake both of imitation and simple narration, and only a small part of the whole will be imitation. Am I not right?'

Adeimantus:: Yes, certainly, such must be the model for such a speaker.'

Socrates:: 'Then, as for the man of a different character, the more contemptible he is, the more will he imitate everything without discrimination and think nothing beneath him, so that he will attempt in sober earnest, and before a large audience, to imitate everything, as we said a moment ago—thunder and the noise of the wind, and of hail, and of axles and of pulleys; the notes of trumpets and flutes, and fifes and all manner of instruments; the barking of dogs and the bleating of sheep, and the cries of birds.

And so his manner of speech will all involve imitation of voice and form, with possibly a little simple narration.’

Adeimantus:: ‘Yes, that is inevitable.’

Socrates:: ‘Then these, are the two classes of diction?’

Adeimantus:: ‘They are.’

Socrates:: ‘Then of the two, may we not say that the first involves no violent changes, and if it be given a musical mode and rhythm in accord with the diction, it may be performed correctly in almost the same mode throughout; that is, since character is so uniform, in one musical mode, and also in a similarly unchanging rhythm.’

Adeimantus:: ‘Yes, that is certainly the case.’

Socrates:: ‘Then what of the other kind? Does it not require just the opposite for its proper expression, all musical modes and all different rhythms, so many and manifold are its transitions?’

Adeimantus:: ‘Yes, that is very true.’

Socrates:: ‘Do not all poets and writers hit upon one or other of those modes of diction, or on a mixture of both?’

Adeimantus:: ‘That is inevitable.’

Socrates:: ‘What than shall we do? Shall we admit into our city all those different styles, or one or other of those primary styles, or the mixture?’

Adeimantus:: ‘If my opinion prevails, we shall admit the simple imitator of the good man.’

Socrates:: ‘But, Adeimantus, the mixed style is certainly attractive, while the opposite style to that which you have chosen is much the most popular with children and their attendants, and with the vulgar mass.’

Adeimantus:: ‘Popular it may be.’

Socrates:: ‘But perhaps, you will say that it is not befitting in our city where no man is twofold or manifold, since each does his own work, and that only.’

Adeimantus:: ‘No, it is not befitting.’

Socrates:: ‘Therefore is this not the only city where we shall find the shoemaker actually a shoemaker, and not sea-captain and maker of shoes in one; the farmer a farmer, and not adding jury work to his farming; and the soldier a soldier, and not money-maker and soldier in one, and so with them all?’

Adeimantus:: ‘True.’

Socrates:: ‘Then apparently if there comes to our city a man so wise that he can turn into everything under the sun and imitate every conceivable object, when he offers to show off himself and his poems to us, we shall do obeisance to him as to a sacred, wonderful, and agreeable person; but we shall say that we have no such man in our city, and the law forbids there being one, and we shall anoint him with myrrh, and crown him with a wreath of sacred wool, and send him off to another city, and for ourselves we shall employ a more austere and less attractive poet and story-teller, whose poetry will be to our profit, who will imitate for us the diction of the good man, and in saying what he has to say will conform to those canons which we laid down originally when we were undertaking ‘the task of educating the soldiers?’

Adeimantus:: ‘Yes, we shall do that, if it lies in our power.’

Socrates:: ‘Here, then, we have apparently completely finished with that branch of music which relates to literature and stories. We have discovered both subject and manner.’

Adeimantus:: ‘Yes, I think with you.’

Socrates:: 'Then after that, we have left the manner of song and melody.'

Adeimantus:: 'Obviously.'

Socrates:: 'Well, would not any one without further consideration see what we should have to say as to the proper nature of these elements, if we are to be consistent with what has gone before?'

Glaucon laughing, said;

Glaucon:: 'Then, Socrates, I am apparently no one; for at this moment I can't infer with any assurance what kinds we ought to allow, though I have my suspicions.'

Socrates:: 'Well, in any case, you can at least say with assurance that a song is composed of three elements—words, musical mode, and rhythm.'

Glaucon:: 'Yes, that is so.'

Socrates:: 'Well, as for the words, will they in any way differ from words that are not to go with music so far as concerns their conformity to those canons of subject and manner which we announced a little while ago?'

Glaucon:: 'No, they will not.'

Socrates:: 'And should not the musical mode and the rhythm accord with the words?'

Glaucon:: 'Of course.'

Socrates:: 'But we said that in our poems we want no weepings and lamentations.'

Glaucon:: 'No, certainly not.'

Socrates:: 'What are the wailful modes? Tell me. You are musical.'

Glaucon:: 'Mixed Lydian and Hyperlydian, and some other similar ones.'

Socrates:: ‘Then these we must dismiss, must we not? For even in the training of virtuous women they are useless, much more so in the training of men.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then are not drunkenness, effeminacy, and idleness most unseemly in guardians?’

Glaucon:: ‘Surely.’

Socrates:: ‘Which are the soft and convivial modes?’

Glaucon:: ‘There are Ionian and Lydian modes which are called slack.’

Socrates:: ‘Then, my friend, shall we use those for men who are warriors?’

Glaucon:: ‘By no means. You seem to have Dorian and Phrygian left.’

Socrates:: ‘I do not know these modes, but leave us the mode which will fittingly imitate the tones and accents of a man who is brave in battle and in every difficult and dangerous task, who, if he fails, or sees before him wounds or death, or falls into any other misfortune, always graces with his fate, disciplined and resolute. Another shall imitate a man in the actions of peace, where his choice has scope and he is free from compulsion: when he is persuading or entreating a god in prayer, or a man by instruction and advice, or when he is attending to the requests, or instruction, or persuasion of another. It shall imitate a man who in all these circumstances acts according to his liking, never puffing himself up, but in all his actions, and in his acceptance of their consequences, is ever prudent and restrained. These musical modes, two in number, one of compulsion, the other of free will, which imitate in the fairest manner the tones of the unfortunate and the fortunate, of the prudent and the brave, these you may leave to us.’

Glaucon:: ‘But, you are asking for just those which I mentioned a little while ago.

Socrates:: ‘Then, we shall not require for our songs and melodies a variety of strings or sudden changes of modulation?

Glaucon:: ‘I think not.’

Socrates:: ‘Then we shall not maintain the makers of harps and dulcimers, and of all instruments which are many-stringed and many-keyed?’

Glaucon:: ‘I think not.’

Socrates:: ‘Then will you allow flute makers and flute players into the city? Has not the flute more notes than any other instrument, and are not those many-keyed instruments really imitations of the flute?’

Glaucon:: ‘Obviously.’

Socrates:: ‘You have left, the lyre and the zither, which will be useful in town, and in the fields the herdsmen may have a pipe.’

Glaucon:: ‘So the argument tells us.’

Socrates:: ‘We are making no innovation, when we prefer Apollo and Apollo’s instruments to Marsyas and his instruments.’

Glaucon:: ‘No, by Zeus, I think we are not.’

Socrates:: ‘Now, by the dog, here have we been purging the city which we said before was too luxurious, and we never noticed it.’

Glaucon:: ‘Well, it was very wise of us.’

Socrates:: ‘Come, then, and let us finish our purgation. After musical modes comes the canon of rhythm, according to which we must not aim at a variety of rhythms with all kinds of metrical feet, but must discover what are the rhythms of an orderly and brave life. When we have done so, we must make our meter and our melody to suit the words describing such a life, and not make words to suit meter and melody. Which these rhythms are, it is your business to tell us, as you told us of the musical modes.’

Glaucon:: ‘But, my good sir, I can’t tell you. I know that there are three kinds of rhythm from which the measures are woven, just as in tones I could on examination discover four kinds which, are the basis of all musical modes. But which imitate which kind of life I can’t tell you.

Socrates:: ‘Well, we shall consult Damon on this subject, and ask him which metrical feet are fitter to express meanness and pride, or madness or other evil, and which rhythms must be kept to express the opposite qualities. I fancy that I have heard him using the expressions “warlike,” “complex,” “dactyl,” and “heroic” of a rhythm. He arranged it in a way I do not understand, and showed the balance of the rise and fall of the feet as the rhythm passed from short to long, and I fancy that he called one foot an iambus and another a trochee, and assigned them longs and shorts. In some of them I think his praise and blame referred to the tempo of the separate foot as much as to the whole rhythm, or perhaps it was to the combined effect of both; I cannot say definitely. But these matters, as I said, we may leave to Damon, for to settle them would take a great deal of discussion; or do you think otherwise?’

Glaucon:: ‘Not I, assuredly.’

Socrates:: ‘But this you can settle, that grace and awkwardness accompany a good and a bad rhythm, can you not?’

Glaucon:: ‘Surely.’

Socrates:: ‘But goodness and badness of rhythm follow the diction. The good rhythm is assimilated to a beautiful style, and bad rhythm to the opposite; and so with goodness and badness of music, since, as we said, rhythm and musical mode conform to the words, not the words to them.'

Glaucon:: 'Yes, they must follow the words.'

Socrates:: 'Then what of the style and the subject? Do they not conform to the character of the soul?'

Glaucon:: 'Surely.'

Socrates:: 'And the others conform to the styler'

Glaucon:: 'Yes.'

Socrates:: 'Then good speech and good music, and grace and good rhythm, follow good nature, not that silliness which we call good nature in compliment, but the mind that is really well and nobly constituted in character.'

Glaucon:: 'Most certainly.'

Socrates:: Then if our young men are to do their own work, must they not follow after these?'

Glaucon:: 'They must.'

Socrates:: 'But painting and all craftsmanship are, we know, imbued with these; so are weaving and embroidery, architecture and the making of all other articles; so too is the body and other living things. All these show either grace or absence of grace. And absence of grace and bad rhythm and bad harmony are sisters to bad words and bad nature, while their opposites are sisters and copies of the opposite, a wise and good nature.'

Glaucon:: That is certainly the case.'

Socrates:: 'Then we must speak to our poets and compel them to impress upon their poems only the image of the good, or not to make poetry in our city. And we must speak to the other craftsmen and forbid them to leave the impress of that which is evil in character, unrestrained, mean and ugly, on their likenesses of living creatures, or their houses, or on anything else which they make. He that cannot obey must not be allowed to ply his trade in our city. For we would not have our guardians reared among images of evil as in a foul pasture, and there day by day and little by little gather many impressions from all that surrounds them, taking them all in until at last a great mass of evil gathers in their inmost souls, and they know it not. No, we must seek out those craftsmen who have the happy gift of tracing out the nature of the fair and graceful, that our young men may dwell as in a health-giving region where all that surrounds them is beneficent, whencesoever from fair works of art there smite upon their eyes and ears an affluence like a wind bringing health from happy regions, which, though they know it not, leads them from their earliest years into likeness and friendship and harmony with the principle of beauty.’

Glaucon:: ‘A nobler manner of education, there could not be.’

Socrates:: ‘Then, Glaucon, is not musical education of paramount importance for those reasons, because rhythm and harmony enter most powerfully into the innermost part of the soul and lay forcible hands upon it, bearing grace with them, so making graceful him who is rightly trained, and him who is not, the reverse? Is it not a further reason that he who has been rightly trained in music would be quick to observe all works of art that were defective or ugly, and all natural objects that failed in beauty? They would displease him, and rightly; but beautiful things he would praise, and receiving them with joy into his soul, would be nourished by them and become noble and good. Ugly things he would rightly condemn, and hate even in his youth before he was capable of reason; but when reason comes he would welcome her as one he knows, with whom his training has made him familiar.

Glaucon:: ‘ Yes, I think that those are the purposes of education in music.

Socrates:: ‘Now, in learning to read, we had become fairly proficient by the time that we could recognize the few letters that there are, in all the different words in which they are scattered about: when we never passed them over, either in a big word or a small, as though they were not worth noticing, but were anxious to distinguish them everywhere, knowing that we should be no scholars until we had got thus far.’

Glaucon:: ‘True.’

Socrates:: ‘Is it not also true that we shall not know the images of letters, supposing they are to be seen in water or in mirrors, before we know the letters themselves? The same skill and practice is needed in either case?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Then by heaven, is it not true that in the same way neither we ourselves shall become musical, nor will the guardians whom we say we have to educate, until we can recognize the forms of temperance and courage and liberality and high-mindedness, and those which are akin to them, and also their opposites, wherever they are scattered about, until we discern them wherever they are to be found, both the forms and their images, never slighting them in big things or in small, but believing that the same skill and practice is needed to discern both form and image?’

Glaucon:: ‘That certainly follows.’

Socrates:: ‘Then, could he that has eyes to see have ever a fairer sight than a man in whom beautiful gifts of soul are combined with the expressions of those gifts in outward form, corresponding and harmonious to them because made in the same mould of beauty?’

Glaucon:: ‘No, never.’

Socrates:: ‘And that which is fairest is most to be beloved, is it not?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then the truly musical person will love them who come nearest to this ideal, but him in whom there is dissonance they will not love.’

Glaucon:: ‘No, at least not if there be any defect in his soul, but if it be a bodily defect, he may manage almost to welcome it.’

Socrates:: ‘I understand, you say so because you have or have had a favorite of this kind, and I acquiesce. But tell me this. Has excess of pleasure anything in common with temperance?’

Glaucon:: ‘How could it have? It unsettles the mind as surely as pain.’

Socrates:: ‘With other virtue, then?’

Glaucon:: ‘Certainly not.’

Socrates:: ‘With insolence and wantonness, perhaps?’

Glaucon:: ‘Yes, that it has.’

Socrates:: ‘Can you name any pleasure more excessive and more intense than sexual pleasure?’

Glaucon:: ‘I cannot, nor any more maddening either.’

Socrates:: ‘But does not true love really consist in loving in a temperate and musical spirit that which is orderly and beautiful?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then nothing that is maddening or touched with licentiousness must be brought near true love, must it?’

Glaucon:: ‘It must not.’

Socrates:: 'Then the pleasure we have mentioned must not come near the lover and his favorites, nor must they partake of it if they love and are loved truly?'

Glaucon:: 'By Zeus, no, Socrates, it must not come near them.'

Socrates:: 'It seems, then, that in the city we are founding you will lay down a law that the lover may kiss his beloved, may frequent his society and embrace him, as though he were his son, if he so persuade him, for beauty's sake, but in all else his relations with the person he affects shall be such that they shall never be suspected of going beyond this. If he acts otherwise, he shall draw upon himself the reproach of bad taste and vulgarity.'

Glaucon:: 'Yes.'

Socrates:: 'Then, do you agree with me that our discussion of music is finished? And it has come to an end at the proper place. For music surely ought to end with the love of the beautiful?'

Glaucon:: 'I agree.'

Socrates:: 'After music, the young men are to be trained in gymnastic?'

Glaucon:: 'Yes.'

Socrates:: 'Well, in this as well as in music they must be carefully trained all their lives from their earliest years. The true view of the case, as I think, is more or less this. See whether you agree with me. It is not my opinion that a healthy body by its excellence makes the soul good. The opposite is the case. A good soul by its excellence makes the body as good as it can be. What is your opinion?'

Glaucon:: 'I think the same.'

Socrates:: 'Then if, when we have carefully looked after the understanding, we leave to it the settlement of the details of bodily training, and content ourselves with laying down general principles, shall we not have acted rightly? That will be shorter.’

Glaucon:: ‘Certainly.’

Socrates:: ‘We have already said that drunkenness is to be avoided. The last thing we can allow is that a guardian should fie drunk and not know where in the world he is.’

Glaucon:: ‘Yes, it is absurd t at a guardian should need to be guarded.’

Socrates:: ‘What about food? Our heroes are athletes entered for the greatest of contests, are they not?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then will the habit of body of the ordinary trained athlete suit them?’

Glaucon:: ‘Possibly.’

Socrates:: ‘Well, theirs is a sleepy kind of regimen, and dangerous to the health. Do you not notice that those trained athletes sleep their whole life through, and contract serious and severe illnesses whenever they depart in the smallest respect from their prescribed diet?’

Glaucon:: ‘I do.’

Socrates:: ‘Then for our warrior athletes, we need some more subtle system of training, for they must be sleepless as watch-dogs, and of very sharp sight and hearing. In their campaigns they will have to put up with frequent changes in the water they drink and the food they eat; with changes, too, in the weather, from sultry heat to storms. They must not, then, be of delicate health.

Glaucon:: ‘I think with you.’

Socrates:: ‘Then will not the best gymnastic be sister to the simple music which we described a little while ago?’

Glaucon:: ‘What do you mean?’

Socrates:: ‘A good gymnastic, especially that assigned to warriors, must surely be simple?

Glaucon:: ‘Yes.’

Socrates:: ‘And that is a lesson that we may learn from Homer. For you know that when his heroes are on active service he does not provide fish for their banquets, and that though they were encamped by the sea at the Hellespont; nor does he give them boiled dishes, but only roasted meats, which would be, of course, most convenient for soldiers; for you may say it is everywhere easier to use the fire alone than to carry pots about.’

Glaucon:: ‘Of course.’

Socrates:: ‘Homer, too, I fancy, has never mentioned sauces. And all other trainers know this too, do they not? If you want to be in good condition you must abstain from all dainties o{that sort?’

Glaucon:: ‘Yes, and they do well in knowing and abstaining.’

Socrates:: ‘Then if you think so, you will not, I imagine, recommend Syracusan living and the Sicilian variety of foods?

Glaucon:: ‘I think not.’

Socrates:: ‘And you will say that the damsels of Corinth should not be too dear to men who purpose to keep in good condition?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Will you find fault also with the reputed delicacies of Athenian confectionery?’

Glaucon:: ‘Of necessity.’

Socrates:: ‘Yes, I fancy that we should not go wrong in comparing such manners of eating and living to the music and singing produced on many-keyed instruments and in all rhythms.’

Glaucon:: ‘Indeed, we should not.’

Socrates:: ‘And may we not say that diversity, as it there engendered licentiousness, here engenders disease, while simplicity in music breeds temperance in souls, and in gymnastic health in bodies?’

Glaucon:: ‘That is most true.’

Socrates:: ‘And when licentiousness and disease are rife in a city, do not the courts of justice and the dispensaries have their doors always open; and do not law and medicine begin to give themselves airs, when great numbers even of free men are their eager devotees?’

Glaucon:: ‘No doubt.’

Socrates:: ‘But when not only the lower and working classes in a city, but even those who have pretensions to a liberal education, require skilled doctors and lawyers, is not that the strongest possible proof that a vicious and ugly system of education rules there? Does it not seem disgraceful, and a sure sign of lack of culture, that they should be compelled to resort to justice which they get from others whom they make their masters and judges, and that they should not rely on their own resources?’

Glaucon:: ‘Yes, it is most disgraceful.’

Socrates:: ‘But do you not think one thing even more disgraceful, namely, when a man not only spends the greater part of his life in the law courts as either defendant or plaintiff, but is so vulgar as to be actually persuaded to plume himself on the fact, believing himself to be a clever villain, so well up to every turn and trick of the game, that he can wriggle out triumphantly in the end and get off scot-free; when he does all this for trifling and unimportant ends, not knowing how much nobler and better it is so to lead one's life as never to be dependent on a drowsy juryman?'

Glaucon:: 'You are right. that is even more disgraceful.'

Socrates:: 'And do you not think it disgraceful when men need medical treatment, not for wounds or because of epidemics, but because the idle, dissolute manner of life which we have described fills them with humors and winds till they are like pools of water, and the smart sons of Asclepius have to invent new names for diseases—"flatulence" and "catarrh"?'

Glaucon:: 'Yes, those really are new and extraordinary names for illnesses.'

Socrates:: 'And of a kind, that were not, I imagine, used by Asclepius. My evidence for that is, that his sons at Troy found no fault with the maiden who gave the wounded Eurypylus a potion of Pramnian wine with barley and scraped cheese sprinkled on it, though that certainly sounds inflammatory, nor did they rebuke Patroclus, who was curing him, for allowing it.'

Glaucon:: 'Yes, it is certainly an extraordinary potion for a wounded man.'

Socrates:: 'Not so extraordinary, if you observe that the sons of Asclepius, according to report, did not until the time of Herodicus resort to this coddling of diseases which is characteristic of modern medicine. Herodicus was a trainer who fell into bad health, and by a combination of gymnastic and medicine worried away to nothing first and chiefly himself, and then many others after him.'

Glaucon:: 'How?'

Socrates:: 'By making death a long process. His disease was mortal, and he could not, I imagine, cure himself, but he kept dancing attendance on it, gave up all his business, and spent his life in cures, worrying to death at the smallest departure from his regular diet, so that through his science he came to old age and died hard.'

Glaucon:: 'Well, that was a fine reward for his skill.'

Socrates:: 'It was natural enough, for a man who did not know that it was neither from ignorance nor want of practical experience that Asclepius did not reveal this form of medicine to his descendants, but because he knew that in all well-regulated communities each man has a special work assigned to him in the state, which he must do, and no one has time to spend life in being ill and being cured. We see how absurd this is in the case of artisans, but we don't see its absurdity in the case of those who are supposed to be happy—the rich.'

Glaucon:: 'What do you mean?'

Socrates:: 'When a carpenter is ill, he expects his doctor to give him medicine which will expel the disease by vomiting or purging, or to cauterize or cut the wound and set him right. If any one prescribes him a long course of treatment with head bandages and so on, he says at once that he has no time to be ill, and that it does not pay him to live like that, giving all his attention to his illness and neglecting his proper work. At that he bids that doctor good-day, and goes back to his ordinary way of life, regains his health, and lives on doing his work; or if his body is not strong enough to carry him through, he dies, and is released from troubles.'

Glaucon:: 'Yes, that is the medical treatment befitting a man of that class.'

Socrates:: 'And is not the reason for it, that he has work to do, and if he is not doing it, it doesn't pay him to live?'

Glaucon:: 'Clearly.'

Socrates:: ‘Then the rich man, as we say, has no such proper work which he must do if he is to find life worth living.’

Glaucon:: ‘So they say.’

Socrates:: ‘Then you do not listen to Phocylides, when he says that as soon as a man has got a means of livelihood he ought to practice virtue.’

Glaucon:: ‘I think he should begin even before that.’

Socrates:: ‘Well, we need not quarrel with him on that point, but let us assure ourselves whether this practice of virtue is incumbent on the rich, so that life is not worth living to the man who does not practice it, or whether valetudinarianism, while it makes carpentering and other crafts which require attention of mind impossible, does not stand in the way of following the advice of Phocylides.’

Glaucon:: ‘But assuredly it does. This excessive care of the body, which goes beyond what gymnastic admits, is perhaps worse than anything. It is equally harassing to a man in business, in a campaign, or in magisterial office at home.’

Socrates:: ‘And the worst part of it is, that it makes a man ill disposed for any kind of study, for reflection and inward meditation. It causes constant suggestions of headaches and dizziness, for which philosophy is blamed, so that it is always in the way in so far as virtue is practiced and tested by study. It is always making a man fancy himself ill and be continually worrying about his health.’

Glaucon:: ‘That is true enough.’

Socrates:: ‘Then shall we say that Asclepius knew this and revealed the science of medicine for men who had naturally sound bodies and who lived a sound life, but who had some specific isolated malady? He expelled their maladies by drugs or by surgery, and ordered them to go on living in their usual way so that the affairs of state should take no harm. But he was not prepared to deal with bodies that were diseased through and through; he would not attempt special courses of treatment, draining off a little here, and pouring in a little there, which would give a man a long and miserable life, and let him, beget children, probably as diseased as himself. He was of opinion that it was not right to treat a man who could not live in his ordinary round of duties, such a man being useless to himself and to the state.'

Glaucon:: 'You make Asclepius a statesman.'

Socrates:: 'Obviously, and don't you observe that because he was so, his sons showed themselves good fighters at Troy, and practiced medicine in the way I describe? Do you not remember how they treated the wound which Menelaus got from Pandarus:

> How first from it the clottered blood they sucked.
> Then medicines, wondrously composed, applied;

but they gave him no more instructions than they did Eurypylus, as to what he should eat or drink afterwards? Their medicines, they thought, would cure men who, before they got their wound, had been healthy and orderly in their manner of life, even if they happened to drink the next moment a compound of meal and wine and cheese; but the lives of the constitutionally diseased and intemperate they considered useless to the patients themselves and to the rest of the world. Their art was not meant for such people, and they were not to be treated, though they were richer than Midas.'

Glaucon:: 'You make out the sons of Asclepius to have been fine fellows.'

Socrates:: ‘That is but right, though the tragedians and Pindar disregard us, and say that Asclepius was the son of Apollo, but was induced by an offer of money to raise to life a rich man who was already dead, for which deed he was struck by a thunderbolt. But in accordance with what we said before, we shall not believe both these statements of theirs. If he was the son of a god, he was not, we shall say, greedy of gain; and if he was greedy of gain, he was not the son of a god.’

Glaucon:: ‘That is perfectly right. But what do you say to this, Socrates? You must get good doctors in your city, must you not? Well, surely the best doctors will be those who have had the largest practice among both the healthy and the diseased, and similarly the best judges will be those who have associated with men of every type of character?’

Socrates:: ‘Certainly, if they are really good. But do you know to whom I think that term applies?

Glaucon:: ‘Perhaps you will tell me.’

Socrates:: ‘Well, I shall try, but you have applied the same argument to two quite different things.’

Glaucon:: ‘How?’

Socrates:: ‘You would certainly, make very clever doctors of men who from their earliest years, besides acquiring scientific knowledge, had come in contact with very many cases, including those which were very much diseased, and who had themselves suffered from every malady, and were not constitutionally very healthy. Because they do not, I fancy, cure the body with the body. If that were so, it would not do for their own bodies to be unhealthy or for them to become ill; but they cure the body with the mind, and if the mind is evil, or has become so, it cannot cure anything properly.’

Glaucon:: ‘You are right.’

Socrates:: ‘But the judge, my friend, rules mind with mind, and that we cannot allow to be trained from earliest years in company with minds that are evil, and to have itself committed all manner of iniquity, in order that it may draw sharp inferences as to the guilt of others from its own self-knowledge, as is allowable in the case of bodily diseases. No, if a man’s mind is to be noble and good, and to judge just deeds in a sound way, he must from early years have been without experience of or part in evil dispositions. It is for this reason that good men show themselves in youth to be simple-minded and easily deceived by the wicked, because there is nothing in their own hearts of like nature to the thoughts of evil men, with which they might compare them.’

Glaucon:: ‘Yes, that is markedly their experience.’

Socrates:: ‘And for that reason, a good judge must not be young, but old, one who has learned late in life the nature of wickedness, not from taking note of the wickedness dwelling in his own heart, but from having learned to understand wickedness in the hearts of others, so that he has knowledge, though not personal experience of how evil it is.’

Glaucon:: ‘Such a man, would be a most noble judge.’

Socrates:: ‘And a good one also, which was the point of your question; for he that has a good mind is good. But that clever and suspicious fellow, who has himself done many evil deeds, and thinks himself a wise rascal, appears a master of cunning whilst he has to deal with men of his own kidney, thanks to those inward patterns by which he judges; but when he comes into contact with good men older than himself, he appears but a fool, stupidly incredulous and ignorant of a healthy moral character, since he has no pattern of any such thing in his heart. But as he comes across bad more often than good, he is thought by himself and other people to be more a wise man than a fool.'

Glaucon:: 'That is very true.'

Socrates:: 'Then, for a good and wise judge we must look, not to this man, but to the other. For vice can never know both virtue and herself, while virtue in a well-educated nature will in course of time attain to scientific knowledge at once of herself and of vice. So the virtuous man, it appears to me, and not the wicked makes the wise judge.'

Glaucon:: 'I think with you.'

Socrates:: 'Then along with such judges you will give the city doctors such as we described, and the two professions will tend the souls and bodies of such of your citizens as are of sound nature; but for the rest, they will permit the unsound in body to die, and actually put to death those who are incurably corrupt in soul.'

Glaucon:: 'Yes, we have seen that that is best both for the sufferers themselves and for the city.'

Socrates:: 'Your young men, it is clear, will be chary of incurring any need of law, since they will be trained in that simple music which, we have declared, engenders temperance.'

Glaucon:: 'Surely.'

Socrates:: 'And he that is trained in music will follow the same path in his pursuit of gymnastic, and may, if he will, be independent of medicine except in extreme cases.'

Glaucon:: 'I think so.'

Socrates:: 'Unlike other athletes who diet and exercise themselves to gain strength of body, he will endure the exercises and toils of gymnastic rather to stimulate the spirited part of his soul than to make himself strong.'

Glaucon:: 'You are right.'

Socrates:: 'Then, Glaucon, may we say that the purpose of those who established a joint education in music and gymnastic was not, as some people think, that they might tend the body with the one and the soul with the other?'

Glaucon:: 'What was it then?

Socrates:: 'It is more likely, that both music and gymnastic are meant especially for the soul.'

Glaucon:: 'How?'

Socrates:: 'Have you never noticed, how a lifelong training in gymnastic without music affects the character, or what is the effect of the opposite training?'

Glaucon:: 'To what do you refer?'

Socrates:: 'To fierceness and hardness on the one hand, and softness and gentleness on the other.'

Glaucon:: 'I know, exclusive devotion to gymnastic turns men out fiercer than need be, while the same devotion to music makes them softer than is good for them.'

Socrates:: 'Yes, it is the spirited element in their nature that produces the fierceness; well trained it would be bravery, but if it is strained over much it will turn into hardness and surliness, and naturally enough.'

Glaucon:: 'I agree with you.'

Socrates:: 'Then is not gentleness involved in the philosophic nature; but if it relaxes too much into gentleness, the temperament will be made too soft, while the right training will make it both gentle and orderly, will it not?'

Glaucon:: 'It will.'

Socrates:: ‘Now we assert that our guardians must have both those elements of character?’

Glaucon:: ‘They must.’

Socrates:: ‘Then must not these be made to accord with one another?’

Glaucon:: ‘Surely.’

Socrates:: ‘And when this accordance has been reached, is not the soul both temperate and brave?’

Glaucon:: ‘Certainly.’

Socrates:: ‘But when there is discord, is not the soul cowardly and boorish?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then when any man lets music flute his soul away, and pour flooding into his mind through his ears, as through a funnel, those sweet and soft and mournful melodies which we have described, till he spends his whole life piping and cloying himself with sound, that man at first tempers the spirited element in him, as steel is tempered, and makes it useful instead of useless and hard; but if he continues without ceasing to beguile that element, after a time he begins to dissolve and melt it away, till he pours out his spirit in a stream, cuts as it were the sinews of his soul, and makes of it “a feeble warrior.”

Glaucon:: ‘That is very true.’

Socrates:: ‘And if, he has at the beginning received from nature a spiritless soul, this process is rapid; if a spirited, he makes his spirit weak, and easily swayed this way and that, provoked and extinguished quickly and by trifles. Such men instead of spirited become cross and irritable, full of bad temper.’

Glaucon:: ‘Most certainly.’

Socrates:: ‘But what is the result of hard gymnastic exercise and good living, with no participation in music and philosophy? Is not the first result that a man being sound in body is filled with understanding and spirit and becomes braver than he has ever been before?

Glaucon:: ‘It is.’

Socrates:: ‘But what if he continues exclusively in this course, and has no fellowship whatever with the Muses? If there were ever in his soul any love of learning, then since it is starved of all knowledge and inquiry, and is debarred from discourse and all music, does it not become weak and deaf and blind, being never roused and never fed, and having its senses unpurged?’

Glaucon:: ‘That is so.’

Socrates:: ‘Then such a man, I fancy, becomes a hater of reason, anti unmusical. He no longer uses the persuasiveness of discourse, but accomplishes all his ends by violence and fierceness, like a brute beast, and lives in ignorance and ineptitude, devoid of all rhythm and grace.’

Glaucon:: ‘That is precisely what happens.’

Socrates:: ‘Then seemingly for those two elements of the soul, the spirited and the philosophic, God, I should say, has given men the two arts, music and gymnastic. Only incidentally do they serve soul and body. Their purpose is to tune these two elements into harmony with one another by slackening or tightening, till the proper pitch be reached.’

Glaucon:: ‘So it would appear.’

Socrates:: ‘Then we shall rightly name as the perfect master of music and understander of harmony not him who can attune the strings, but him who can most fairly mix music and gymnastic and apply them in the most perfect measure to the soul.’

Glaucon:: ‘Yes, and with reason, Socrates.’

Socrates:: ‘Then, Glaucon, shall we not need such an one in our city to be always our minister, if the constitution is to be preserved?

Glaucon:: ‘Yes, we can have no greater need than that.

Socrates:: ‘So much, then, for our outlines of education and upbringing; for why need we lay down for these men laws for their dances, for hunting and the chase, and for their gymnastic contests and their horse-racing? It is surely clear enough that these must be in accord with what we have already prescribed. To work that out is now no difficult matter.’

Glaucon:: ‘Perhaps not.’

Socrates:: ‘Good. Now what is the next question we have to settle? Is it not who of these citizens are to rule, and who are to be ruled?’

Glaucon:: ‘Yes.’

Socrates:: ‘Well, is it not obvious that the older men must rule, and the younger be ruled?’

Glaucon:: ‘It is.’

Socrates:: ‘And the best of the older men?’

Glaucon:: ‘Yes.’

Socrates:: ‘Are not those who are best at farming the best of the farmers?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then in the present case, since we must have the best of guardians, must we not have those who are best at guarding the city?’

Glaucon:: ‘Yes.’

Socrates:: ‘For this purpose must they not be intelligent and capable, and, moreover, careful of the city?’

Glaucon:: 'They must.'

Socrates:: 'A man cares best for what he loves?'

Glaucon:: 'Inevitably.'

Socrates:: 'And a man will be most likely to love that whose interests he thinks are bound up with his own, whose prosperity he fancies entails his own prosperity, whose adversity his adversity?'

Glaucon:: 'Yes.'

Socrates:: 'Then from among the guardians we must select those men who we think, on inquiry, have excelled u their life long in doing zealously whatever they thought was for the city's interests, and in refusing resolutely to do what they thought was to its harm?'

Glaucon:: 'Yes, these are the men we want.'

Socrates:: 'We must watch them, I think, at every stage of life and see that they hold fast to their doctrine, that neither witchcraft nor violence makes them forget and abandon the belief that they must do what is best for the city.

Glaucon:: 'Of what abandonment do you speak?'

Socrates:: 'I shall tell you. The loss of belief by the mind may be willing or unwilling. A man who has learnt better, loses his false belief willingly; all true beliefs, on the other hand, are lost unwillingly.'

Glaucon:: 'I understand voluntary loss; involuntary loss you must explain to me.'

Socrates:: 'Don't you understand, or do you not think with me; that men lose good things unwillingly, bad things willingly; or that to be deceived as to the truth is bad, and to think what is true is good? Or do you not think that to believe what is, is to think truly?'

Glaucon:: ‘Yes, you are right, and I think that men lose a true belief unwillingly.’

Socrates:: ‘It is taken from them by theft, or witchcraft, or violence, is it not?’

Glaucon:: ‘Again, I fail to understand.’

Socrates:: ‘My language, I am afraid, is high-flown and obscure. I call it theft when men are persuaded out of their opinion, or when they forget it; for time in the one case, and argument in the other, robs them of their belief without their knowing what is happening. Now, do you understand?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then I call it violence when pain or suffering makes men change their beliefs.’

Glaucon:: ‘That too I understand, and you are right.’

Socrates:: ‘Then I fancy that you would say with me that the bewitched are those who change their beliefs under the beguilement of pleasure or the pressure of fear?’

Glaucon:: ‘Yes, all things that deceive may be said to bewitch.’

Socrates:: ‘Then, as I said a moment ago, we must discover who are the best guardians of the doctrine that is in them, that they must do whatever they think at any time best for the city. We must watch them from their earliest childhood, and set them tasks in which there are the strongest temptations to forget or be cheated out of their devotion to the city. We must select those that are tenacious of memory and hard to deceive, the others we must reject. Do you agree?

Glaucon:: ‘Yes.’

Socrates:: ‘We must impose upon them, too, labors, and vexations, and contests, and watch for the same things there.’

Glaucon:: ‘You are right.’

Socrates:: ‘Then, we must prepare for them a contest of the third kind, a trial in resistance to witchcraft, and watch them then. As men try whether colts are easily frightened by taking them near noises and alarming sounds, so we must bring our men, while still young, into the midst of terrors, and then again plunge them into pleasures, testing them more hardly than gold is tested in the fire; and if one appears in all things gracious and a resister of enchantment, if he is a good guardian of himself and the music he has learnt, if he bears himself in all his trials with rhythm and harmony, such a man would be of the greatest service to himself and to the city. Therefore we must elect as ruler and guardian of the city him who as boy and youth and man has been tested and has come out without stain, and render him honors in life and after death, giving him the highest rewards of public burial and other memorials. The others we must reject. Some such method as that, Glaucon, seems to me the best for the election and appointment of rulers and guardians. I give the outline only without accurate details.’

Glaucon:: ‘My opinion is much the same.’

Socrates:: ‘Then is it really most correct to give these the name of perfect guardians, inasmuch as they watch over both enemies without and friends at home, taking care that the first shall be unable, and the second unwilling, to do harm; and to call the young men, whom we formerly counted as guardians, auxiliaries, and upholders of the doctrines of the rulers?’

Glaucon:: ‘I think so.’

Socrates:: ‘Well, then, can we contrive anything in the way of those necessary lies of which we spoke a little while ago, so that by means of one noble falsehood we may convince, preferably the rulers themselves, but in any case the rest of the citizens?’

Glaucon:: ‘What do you mean?’

Socrates:: ‘It is no novelty, but of Phoenician origin, and has happened in many places before this, according to the accredited stories of the poets, but we have never had it, and I am not sure whether we could. It would need a great deal of persuasion to get it believed.’

Glaucon:: ‘You seem very shy of divulging it.’

Socrates:: ‘You will understand why I am shy, when I have told it you.’

Glaucon:: ‘Out with it, and don’t be afraid.’

Socrates:: ‘Well, I will, though I don’t know how I am to find the courage or the words to tell you; and I shall try first to convince the rulers themselves and the soldiers, and then the rest of the city, that all our training and education of them, all those things which they thought they experienced, were only dreams. In reality all that time they were under the earth, being fashioned and trained, and they themselves, their arms and all their possessions, were being manufactured, and when they had been made quite ready, this earth, their mother, sent them up to the surface. Now, therefore, they must watch over the land in which they dwell, as their mother and nurse, and defend her against all invaders, and look upon the other citizens as their brothers and children of the same soil.’

Glaucon:: ‘You had reason, to be so long ashamed of telling your falsehood.’

Socrates:: ‘Yes, you are no doubt right; but still listen to the rest of the tale. “You in this city are all brothers.” so we shall tell our tale to them, “but God as he was fashioning you, put gold in those of you who are capable of ruling; hence they are deserving of most reverence. He put silver in the auxiliaries, and iron and copper in the farmers and the other craftsmen. For the most part your children are of the same nature as yourselves, but because you are all akin, sometimes from gold will come a silver offspring, or from silver a gold, and so on all round. Therefore the first and weightiest command of God to the rulers is this—that more than aught else they be good guardians of and watch zealously over the offspring, seeing which of those metals is mixed in their souls; if their own offspring has an admixture of copper or iron, they must show no pity, but giving it the honour proper to its nature, set it among the artisans or the farmers; and if on the other hand in these classes children are born with an admixture of gold and silver, they shall do them honour and appoint the first to be guardians, the second to be auxiliaries. For there is an oracle that the city shall perish when it is guarded by iron or copper.” Can you suggest any contrivance by which they may be made to believe this story?’

Glaucon:: ‘No, I see no hope of succeeding with your original citizens, but possibly their sons and their descendants, and subsequent generations, might believe it.’

Socrates:: ‘Well, even that would have a good effect in making them care more for the city and for each other; for I think I understand what you mean. ‘This will be as the popular voice shall determine. But for our part, now that we have armed these children of the soil, let us lead them forth with the guardians at their head. They shall march forth and examine which is the best place in the city for a camp, selecting a site from which they can at once control any disobedience to the law within the city, and repel all attacks from without if any enemy comes upon them like a wolf on the fold. Let them make their camp, offer sacrifices to the proper gods, and then make their arrangements for sleeping. Do you agree?'

Glaucon:: 'I do.'

Socrates:: 'Their sleeping places should suffice to protect them from storms and heat, should they not?'

Glaucon:: 'Surely. For you are talking of their houses.'

Socrates:: 'Yes, but the houses of soldiers, not of money-grubbers.'

Glaucon:: 'What is the difference you imply?'

Socrates:: 'I shall try to tell you. You know how terrible and disgraceful it is for shepherds to keep dogs to guard their flocks which are so badly bred or trained that from want of discipline or hunger, or from some other evil in their nature, they will dare to worry the sheep, and act like wolves rather than dogs?'

Glaucon:: 'It is terrible. Certainly.'

Socrates:: 'Then we must take every precaution against our auxiliaries acting in this way to the citizens, since they are stronger than they, and behaving like fierce masters rather than loving allies?'

Glaucon:: 'We must.'

Socrates:: 'Is not a really noble education the best possible precaution?'

Glaucon:: 'Well, they have that.'

Socrates:: 'Well, we need not go into that now, my dear Glaucon, but we must insist on what I have just mentioned, namely, that they must have the right kind of education, whatever that may be, if they are to have what will do more than anything else to make them gentle to one another and to those they guard.'

Glaucon:: 'Yes, you are right.'

Socrates:: ‘But besides this education, any man of sense will tell us that their houses and their other arrangements must be so regulated as in no way to discourage them from being the best of guardians, or to incite them to maltreat the rest of the citizens.’

Glaucon:: ‘And he will tell us rightly.’

Socrates:: ‘Consider, then, whether their manner of life and their dwelling-places must be of some such fashion as this if they are to answer our description. In the first place, no one shall have any private property, unless it is absolutely necessary. Secondly, no one shall have dwelling-place or storehouse which any one who pleases may not freely enter. To supply the proper necessities of men who are warrior athletes, and both prudent and courageous, they shall receive from the other citizens a fixed reward for their guardianship, large enough to support them for a year and leave nothing over. They shall live in common, taking their meals at the public tables, as in an army. As for silver and gold, we shall tell them that they have the divine metals always in their hearts, given them by the gods, and have no need of men’s silver and gold; nay, that it is an act of impiety to pollute their possession of the divine gold by conjoining it with the mortal; for many unholy deeds are done for the common currency, but the coinage in their souls is unsullied. They alone in all the city are not allowed to handle or touch silver and gold, or to be under the same roof with it, or hold it in their hands, or drink out of gold and silver vessels; this will be their salvation, and the salvation of the city. But if at any time they acquire land or houses or money of their own, and are men of business and farmers instead of guardians, they will become the hated masters instead of the allies of the other citizens. They will live their life, hating and being hated, plotting and being plotted against, always in greater and more intense fear of the citizens within than of the enemies without, rushing to the very brink of destruction, and the city with them. For all those reasons, shall we not say that this is the manner in which our guardians must be provided with houses and other necessaries, and shall we legislate accordingly?'

Glaucon:: 'Certainly.'

## Book 4.

Socrates:: Here Adeimantus interposed with the remark:

Adeimantus:: ‘How, Socrates, will you answer a possible objection that you are not making these men so very happy, and that this unhappiness is their own fault? Really the city belongs to them, and yet they enjoy none of the advantages of other rulers. These own lands, build fine and magnificent houses, which they furnish with an equal magnificence; they make their own sacrifices to the gods and indulge in hospitality, and, briefly, to come to what you mentioned, are in possession of silver and gold and everything that is thought essential to a state of blessedness. But your rulers, the objector will say, seem established in the city just like paid auxiliaries, nothing but a garrison.’

Socrates:: ‘Yes, and you may go on and say that they only get their food, and no wages in addition to it, like the other (citizens; so that if they want to travel at their own expense, they will be unable; they will have nothing to give a mistress, no money to spend on anything they may happen to want, like the men who are ordinarily thought happy; you omit these counts and many like them from your indictment.’

Adeimantus:: ‘Well, let those be added.’

Socrates:: ‘Then, you ask, how shall I reply?’

Adeimantus:: ‘Yes.’

Socrates:: ‘I fancy, that we shall find what to say, if we proceed along the path we have followed up to now. For we shall say that while it would not surprise us if even under these conditions these men were extremely happy, still our purpose in founding the city was not to make any one class in it surpassingly happy, but to make the city as a whole as happy as possible. For it was our idea that in such a city we should most certainly find justice, as we should find injustice in the worst governed city, and by inspecting both we hoped to decide our old question. And now we are, we think, constructing the happy city, not in a partial way by making happy a few people in it, but by making the whole city happy.

When we have done we shall examine the opposite city. If we were painting a statue and someone came and criticized us on the grounds that we were not putting the most beautiful colors on the most beautiful parts of the statue—for the eyes, which are the most beautiful part of the body, would not be painted purple, but black—we should be thought to reply reasonably to such a critic if we said: "My dear good sir, don't imagine that we ought to paint eyes so beautiful that they don't look like eyes at all, or paint any of the other limbs in that manner. You must consider if, by giving each part its proper color, we make the whole beautiful. Just so in the case before us, do not force us to give the guardians happiness of a kind that will make them anything rather than guardians. For we know quite well that we might clothe the farmers in glorious robes, and set crowns of gold on their heads, and tell them to cultivate the land at their pleasure; and we might have the potters recline in a graceful row by the fire, drinking and feasting, and turning their wheel when they felt inclined to do their work, and put all the others in a similar state of rapture; so making the whole city, no doubt, quite extraordinarily happy. Give us no advice of that kind, because if we take it, the farmer will not be a farmer, nor the potter a potter; no one in all the professions of which the state.-is made up will follow his profession. But the consequences in these cases are less important. For that cobblers should degenerate and be corrupt, and pretend to be what they are not, inflicts no very serious Harm on the city, but if the guardians of the laws and the state are such in seeming only, not in reality, then you may be sure that they will utterly destroy the whole city just as they alone have power to make it prosperous and happy.” We, that is, are making true guardians, who will be the last to harm the city; your objector offers us men like farmers, fitted not for a state but to be merry revelers at some congenial gathering, and cannot be speaking of a city at all. We then have to consider whether in establishing the guardians we are to aim at giving them as much happiness as possible, or whether we ought rather to turn our attention to giving happiness to the whole city, in which case we must compel the auxiliaries and guardians to second our efforts, and we must persuade them to be as skilful at their own business as lies in their power, and similarly with all the others. And when the whole city is thus increasing and prosperous, we may allow each class to partake of such happiness as their nature allows.’

Adeimantus:: ‘Your words, seem to me excellent.’

Socrates:: ‘Then, will you equally approve of the companion remark I make to that?

Adeimantus:: ‘What is that?

Socrates:: ‘Consider whether this is what corrupts the other craftsmen, so that they become not only corrupt, but bad workmen.

Adeimantus:: ‘To what do you refer?

Socrates:: ‘Riches and poverty.’

Adeimantus:: ‘In what way?

Socrates:: ‘In this way. Do you think that a potter who has come into money will want to go on with his craft?

Adeimantus:: ‘Certainly not.’

Socrates:: 'Will he not become more idle and careless than he was before?

Adeimantus:: 'Yes, much more.

Socrates:: 'And that will make him a worse potter?

Adeimantus:: 'Yes; a much worse potter too.

Socrates:: 'Then, to take the other case, if poverty prevents him from buying tools or anything else required for his craft his work will be inferior, and he will make worse craftsmen of his sons or apprentices?'

Adeimantus:: 'Surely.

Socrates:: 'Then both poverty and riches produce worse handicraft and worse craftsmen?

Adeimantus:: 'Evidently.

Socrates:: 'Then it seems we have found some other things against whose secret entrance into the city the guardians must take every precaution.

Adeimantus:: 'What are they?

Socrates:: 'Riches and poverty; for the one produces luxury and idleness and revolution, the other revolution and meanness and villainy besides.

Adeimantus:: 'Certainly. But, Socrates, think of this: How will our city be able to carry on war if it has no money, especially if it is forced to fight a city which is large and rich?

Socrates:: 'Clearly, to fight one such city will be rather hard, but to fight two will be easier.

Adeimantus:: 'What do you mean?

Socrates:: 'Well, 'in the first place you will allow that our men will be warrior athletes fighting against rich men?'

Adeimantus:: 'Yes, of course.'

Socrates:: ‘Well, Adeimantus, don’t you think that one perfectly trained boxer is an easy match for two fat wealthy men who can’t box?’

Adeimantus:: ‘Not for both at once, perhaps.’

Socrates:: ‘Not if he can start to run away and then wheel round and plant a blow on the man who happens to be in front, and go on repeating these tactics in the stifling heat? Would not such a fighter beat more than two such opponents?’

Adeimantus:: ‘Indeed, it would not be surprising.’

Socrates:: ‘And do you not think that the rich know more, both theoretically and practically, about boxing than about war?’

Adeimantus:: ‘I do.’

Socrates:: ‘Then the chances are that our athletes will be an easy match for two or three times their number?’

Adeimantus:: ‘I agree. I think what you say is just.’

Socrates:: ‘Then suppose they send an embassy to one of the cities and quite truthfully say, “We do not use gold or silver; we are not permitted to possess them, but you are. Ally yourselves with us therefore, and you may have the wealth of the other city.’ Do you imagine that any man who heard this proposal would prefer to fight against the lean and wiry dogs rather than to fight with them against fat and tender sheep?’

Adeimantus:: ‘No, I think not. But, take care that the amassing of the wealth of all the other cities by one does not involve danger to the city without wealth.’

Socrates:: ‘It is certainly a happy idea of yours, to think that we can give the name of city to any but such an one as we have been organizing.’

Adeimantus:: ‘Why not?’

Socrates:: 'You must give the others a grander title. For each of them, as the saying runs, is no city, but cities upon cities; two at the least, each other's enemies, the city of the poor and the city of the rich; and in either of these is a vast number of cities which you will be entirely wrong to treat as one. But if you treat them as many, and hand over to one class the property and offices, and even the persons of the other classes, you will always have many allies and few enemies. And so long as your city is governed wisely on the lines we have laid down, it will be the largest of all. I don't mean the most famous, but really the largest, even though it have only a thousand fighting men. For you will not easily find any one city of this size among Hellenes or barbarians, though you will find many that seem to be many times the size. Do you agree with me?'

Adeimantus:: 'Most assuredly.'

Socrates:: 'Our guardians, then, will find here the fairest standard by which to regulate, the size of the city. They may then set apart land in proportion, and let the rest alone.'

Adeimantus:: 'What standard?'

Socrates:: 'This, in my opinion. The city may go on increasing so long as it can grow without losing its unity, but no further.'

Adeimantus:: 'Yes, that is excellent.'

Socrates:: 'Then we shall lay this further command upon the guardians, that they take every precaution that the city be neither small nor of illusory greatness, but of sufficient size and unity.'

Adeimantus:: 'Well, that is certainly a trifling task.'

Socrates:: 'Here is another, still more trifling. We mentioned it before, when we said that it would be necessary to remove any inferior child that was born to the guardians and place it in another class, and to promote to the guardian class any noble children born among the other classes. This was intended to show that the other citizens as well as the guardians must be set each to the task for which nature has fitted him, one man one task, that so each citizen doing his own particular work may become one man and not many, and thus the whole city may grow to be not many cities, but one.’

Adeimantus:: Yes, that is a smaller affair than the former.’

Socrates:: ‘Really, my good Adeimantus, those tasks we are imposing upon them are not numerous or great, as any one would allow, but quite trifling, so long as they observe the proverbial one great thing: I should rather call it sufficient than great.’

Adeimantus:: ‘What is that?’

Socrates:: ‘Education, and upbringing. For if they are all educated and become reasonable men, they will easily understand all those matters and all the other details which we now pass over—the possession of wives, and questions of marriage and the begetting of children: in all these things they will see that the proverb, “Friends’ goods are common goods,” must be realized as far as possible.’

Adeimantus:: ‘Yes, that must be perfectly right.’

Socrates:: ‘Then, once our city is well started, it goes on growing as a circle round itself; for an honest upbringing and education by their preserving force create good natures, and honest natures laying hold on such an education grow better and better, and, like other animals, their breeding qualities improve at the same time.’

Adeimantus:: ‘That is likely enough.’

Socrates:: ‘In a word, the overseers of the city must devote them’ selves to this principle, preserving it from secret destruction, and guarding it with all care—the principle, namely, that there shall be no innovation of the established order in gymnastic and music. They must watch over this with all possible care, fearing when they hear such words as;

For men more praise
That which is newest of the minstrel's lays.

lest, perchance, someone thinks the poet means, not new songs, but a new fashion of songs, and praises that. But he must neither praise such a novelty nor understand this to be the poet's meaning. He must beware of changing to a new kind of music, for the change always involves far-reaching danger. Any alteration in the modes of music is always followed by alteration in the most fundamental laws of the state. So says Damon, and I believe him.'

Adeimantus:: 'You may put me down also as a believer.'

Socrates:: 'Then, here it would seem, in music, the guardians must erect their guard-house.'

Adeimantus:: 'The first beginnings of lawlessness in music are very hard to detect.'

Socrates:: 'Yes, it is looked on as an amusement which can do no harm.'

Adeimantus:: 'All it does, is gradually to establish and quietly to insinuate itself into manners and customs. From these it issues in greater force and penetrates men's mutual dealings; from mutual dealings it advances, with the utmost insolence, Socrates, to laws and constitutions, till in the end it overturns all things public and private.'

Socrates:: 'Well. Is that the case?'

Adeimantus:: 'I think so.'

Socrates:: 'Then, as we were trying to say at the beginning, must not our children be set to more law-inspired amusements? For when amusements are lawless the children are the same, and it is impossible that they should grow up law-abiding and good men.'

Adeimantus:: 'Surely.'

Socrates:: 'Then when the children make a good start in their amusements, and through music are inspired with loyalty, the result is the very reverse of that which you have described. Loyalty pervades the whole state, fostering its growth and restoring any institutions that may have fallen into decay.'

Adeimantus:: 'Yes, that is true.'

Socrates:: 'And this new generation bring to light those regulations that are thought unimportant, which their predecessors had allowed to fall into neglect.'

Adeimantus:: 'Which?'

Socrates:: 'Such, for example, as to exact of young men a proper silence in presence of their elders, befitting behavior in offering seats to others, and in rising to make room for them, and attention to parents, along with other rules concerning the mode of wearing the hair, concerning dress, shoes, and the other details of personal appearance. Do you agree with me?

Adeimantus:: 'I do.'

Socrates:: 'To lay down laws on such matters would, I think, be foolish. They are not established or maintained by force or written legislation.'

Adeimantus:: 'No.'

Socrates:: 'The probability is, Adeimantus, that the direction given by education will determine the course of all that follows. Does not like always call like after it?

Adeimantus:: 'Yes.'

Socrates:: ‘And the end I think we may expect to be some one, complete, and grand result, whether good or the reverse.’

Adeimantus:: ‘Surely.’

Socrates:: ‘Then for these reasons, I should not attempt to legislate on such matters.’

Adeimantus:: ‘And quite rightly.’

Socrates:: ‘Then in heaven’s name, what of those market troubles about contracts which the various classes make with one another in the market, and, if you please, about the contracts of craftsmen; what of libels, assaults, the bringing of lawsuits, and the empanelling of juries, and all such exaction or payment of dues as may be necessary in markets and harbors, and, in a word, all market, city, and harbor regulations, and the like—are we to venture to legislate in these matters?’

Adeimantus:: ‘No, in these matters there is no need to dictate to true men. They will easily find for themselves most of the legislation required.

Socrates:: ‘Yes, my friend, if God grant them the preservation of those laws which we have already enumerated.’

Adeimantus:: ‘Without that good fortune, they will spend their lives always legislating on such-like things, and always making reforms, ever hopeful of attaining the ideal.’

Socrates:: ‘You mean, that they will live like men who are ill and too intemperate to consent to give up their unhealthy mode of life?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Such men truly live a charming life. They are doctored and get no better, but only add to the complications and extent of their disease, always hopeful that some doctor will recommend a remedy which will make them well.'

Adeimantus:: 'Yes, those are just the symptoms of that type of invalid.'

Socrates:: 'Further, is not this a delightful trait of theirs, that they consider as their worst enemy him who tells them the truth, that until they give up their drunkenness and gluttony and chambering and idleness, no drugs or cauteries or surgery, no incantations or charms or anything else will be of any use to them?'

Adeimantus:: 'Not very delightful. There is nothing delightful in being angry when you are given good advice.'

Socrates:: 'You are not an admirer of those men apparently?'

Adeimantus:: 'No, not.'

Socrates:: 'Then neither will you admire the city as a whole which behaves as we have been describing. Do you not think that such invalids find their counterpart in those badly governed cities in which citizens are warned on pain of death against disturbing the whole constitution of the city, but in which any one who serves them most agreeably under their existing constitution, who pleases them by servility and by anticipating and by cleverly executing their wishes, will be taken for a good man and profoundly wise, and will be held in honour by them?'

Adeimantus:: 'Yes, they seem to me to be the counterpart, and I don't in any way praise them.'

Socrates:: 'What of those individuals who are willing and eager to serve such cities? Do you not admire their courage and irresponsibility?'

Adeimantus:: 'I do, except when they are deluded by them and fancy themselves genuine statesmen, because the mob praises them.'

Socrates:: ‘What do you mean? Can you not excuse these men? Do you think it possible if a man who knows nothing of measurement, that when many other equally ignorant persons tell him he is a six-footer, he should not adopt their opinion of him?’

Adeimantus:: ‘No, that is impossible.’

Socrates:: ‘Well, don’t be vexed with them, for surely the most delightful of all are the public who go on legislating as we described and setting things to rights, always imagining that they will find some way of stopping fraud in contracts and those other difficulties which I mentioned a moment ago, not knowing that they are but beheading the Hydra.’

Adeimantus:: ‘Yes, that is exactly what they are doing.’

Socrates:: ‘I, for my part, should not have thought that the genuine legislator need trouble himself with those branches of law and constitution either in an ill or in a well governed city. In the first, because they are useless, and effect nothing; in the second, because some of them are discoverable by any one, and the rest result naturally from the original institutions.’

Adeimantus:: ‘Then, what still remains for us in the way of legislation?’

Socrates:: ‘For us, nothing; but for the Delphian Apollo, the first, and chiefest, and fairest objects of legislation.’

Adeimantus:: ‘Which?’

Socrates:: ‘Building of temples, and sacrifices, and other service of gods and daemons and heroes, and burials of the dead, and all the rites which we must fulfill to propitiate the departed. For of such matters we ourselves know nothing, and in founding our city, if we are wise, we shall take no advice and ask for no guidance save from our national guide. For surely this god, as he gives his guidance from his seat on the Omphalos in the centre of the earth, is the national guide of all men.'

Adeimantus:: ' Your words are good. Let us do as you suggest.'

Socrates:: 'Then, son of Ariston, your city is now established. The next step is to search within it, getting light for your purpose whence you may. You must look yourself, and summon your brother and Polemarchus and the rest to help you, in the hope that we may see where justice is and where injustice, and how they differ from one another, and which must be chosen by him who would be happy, whether his actions be hid or revealed to all gods and men.'

Adeimantus:: 'You are talking nonsense.' 'For you promised to conduct the search, saying that it would be an act of impiety on your part to refuse to help justice with all the means at your command.'

Socrates:: 'That is true. I must do as I promised, but you must help too.'

Adeimantus:: 'But of course.'

Socrates:: 'I hope, to make the discovery in this way. I imagine that our city, as it has been rightly established, is perfectly good?'

Adeimantus:: 'Inevitably.'

Socrates:: 'Then obviously it is wise, and brave, and temperate and just?'

Adeimantus:: 'Obviously.'

Socrates:: 'Then if we discover any of those virtues in the city, the undiscovered will make up the remainder?'

Adeimantus:: 'Surely.'

Socrates:: 'Just as with any other four, if we were looking for one of them in something, we should o satisfied if we recognized that one first of all; but if, on the other hand, we detected the other three first, that in itself would mean that the object of our search had been discovered. For, then, dearly it could only be the remainder.'

Adeimantus:: 'You are right.'

Socrates:: 'Then since the objects of our present inquiry are four, ought we not to adopt this method?'

Adeimantus:: 'Clearly.'

Socrates:: 'Now, in the present case, I think that wisdom is the first to be apparent, and here we are confronted with a paradox.'

Adeimantus:: 'What?'

Socrates:: 'This city which we have described is, I think, really wise. For it is prudent in deliberation, is it not?'

Adeimantus:: 'Yes.'

Socrates:: 'And this faculty of prudent deliberation is clearly a kind of knowledge. For obviously it is by reason of knowledge and not of ignorance that their deliberations are prudent.'

Adeimantus:: 'Obviously.'

Socrates:: 'But there are in the city many and various kinds of knowledge?

Adeimantus:: 'Surely.'

Socrates:: 'Then does the knowledge of the carpenter make us call the city wise and prudent?'

Adeimantus:: 'Certainly not. Such knowledge makes us call it a city of good carpentry.'

Socrates:: 'Then the city is not to be called wise because of the knowledge it possesses about wooden vessels and its deliberation on their proper manufacture?

Adeimantus:: 'No, indeed.'

Socrates:: 'Then is its knowledge about vessels of brass, or any other knowledge about things of that sort, more relevant?

Adeimantus:: 'No; no knowledge of that kind at all.'

Socrates:: 'And its knowledge of the mode of raising crops from the soil is relevant to the question of its being a successful agricultural state, but not to the question of its being wise?

Adeimantus:: 'I agree.'

Socrates:: 'Then, in the city which we have just founded is there any knowledge among any of its citizens in virtue of which it deliberates not over any of the constituents in the city, but over the whole city, considering what is its best policy, both internal and external?

Adeimantus:: 'Yes, there is.'

Socrates:: 'What is it, and with whom is it found?

Adeimantus:: 'It is nothing but the knowledge of guarding, and it is found among those rulers whom we have just named perfect guardians.'

Socrates:: 'Then what do you call the city in virtue of this knowledge?

Adeimantus:: 'I call it prudent in deliberation and really wise.'

Socrates:: 'Then do you think, that in our city the brass-smiths or these true guardians will be in a majority?

Adeimantus:: 'The brass-smiths, easily.'

Socrates:: 'Then of all the different classes, whose names indicate the knowledge they possess, will not the guardians be the least numerous of all?'

Adeimantus:: 'Yes, much the least numerous.'

Socrates:: 'Then a city founded in accordance with nature will be wise as a whole in virtue of the smallest class and part of itself, and of the knowledge possessed by that, the presiding and ruling part. And this class, whose office it is to partake of the one and only kind of knowledge to which belongs the name of wisdom, is, as we see, naturally the least numerous?’

Adeimantus:: ‘That is very true.’

Socrates:: ‘Here, then, we have somehow or other discovered one of the four and its seat in the city.

Adeimantus:: ‘For my part, I think it has been made out satisfactorily.’

Socrates:: ‘Well, then, it is not very hard to perceive courage and the part of the city in which it was found and from which the city deserves to be called courageous.’

Adeimantus:: ‘How is it to be perceived, then?’

Socrates:: ‘Who, in calling a city cowardly or courageous would think of considering any except that part which fights and makes war on its behalf?’

Adeimantus:: ‘No, no one would consider any but that.’

Socrates:: ‘Whether the rest in the city are cowardly or brave, does not, I imagine, determine the character of the city one way or the other.’

Adeimantus:: ‘No.’

Socrates:: ‘Then a city is courageous in virtue of a part of itself, in that it has in that part power to preserve throughout the belief as to the things to be feared, which they are and what their nature, in accordance with the declaration of the lawgiver in the system of education Is not this what you call courage?’

Adeimantus:: ‘I have not quite understood what you said. Will you say it again?’

Socrates:: ‘I mean, that courage is a kind of safe-keeping.’

Adeimantus:: ‘Yes; but what kind?’

Socrates:: ‘The safe-keeping of the belief produced by law, through education, concerning the number and nature of things to be feared. By preserving throughout I meant preserving it and never losing it in pains and in pleasures, in desires and in fears. I will, if you like, illustrate it by a figure which seems to me to be apt.’

Adeimantus:: ‘Please do.’

Socrates:: ‘You know, then, that when dyers want to dye wool purple they first select from wools of different colors one particular kind, namely white; they then prepare the wool, treating it most elaborately in order that it may take the color as well as possible, and then finally they put it in the dye. Wool that is dyed in this manner takes the dye in a most lasting way; no washing, whether with or without solvents, can take out the color. But you know what happens when these precautions are neglected, when colors other than white are selected for dyeing, or when the white wool is not treated beforehand.’

Adeimantus:: ‘I do. the color washes out in a ridiculous way.’

Socrates:: ‘Then, you may conceive that we, too, were following some such method to the best of our power when we selected the soldiers and educated them in music and gymnastic. Our purpose simply was that they should be dyed with the laws as beautifully as possible, so that with their possession of the proper nature and education their belief both concerning things to be feared and other matters should be lasting. Their color would then be impervious to those terribly effective solvents—pleasure, which works more powerfully than any potash or lye, and pain, and fear, and desire, which are stronger than any solvent in the world. Such a power of preserving throughout the right and lawful belief concerning what is and what is not to be feared I define as courage, and give it that name if you do not object.'

Adeimantus:: 'No, certainly not. for I fancy that mere right opinion on these same matters such is not the result of education but the expression of an animal and slavish nature, you are very far from thinking legitimate or from calling courage.'

Socrates:: 'You are perfectly right.'

Adeimantus:: 'Then I accept this account of courage.'

Socrates:: 'Accept it, at least, as an account of the courage of a city, and you will not go wrong. We shall discuss it more satisfactorily later, if you please. As it is, we have been looking, not for courage, but for justice, and therefore, I imagine, we have done enough for our investigation of the former.'

Adeimantus:: 'You are right.'

Socrates:: 'Then we have still two things left to discover in the city—temperance and, finally, the main object of all our inquiry, justice.'

Adeimantus:: 'Yes.'

Socrates:: 'Not to give ourselves further trouble over temperance, how shall we find justice?'

Adeimantus:: 'I certainly have no notion, and in any case I have no desire to discover it first if we are to have no further inquiry into temperance. What I personally should prefer is that you should first examine that.'

Socrates:: 'Certainly. I am very glad to do so. I should be churlish to refuse.'

Adeimantus:: 'Go on then with the examination.'

Socrates:: 'I will. At first sight it is more like a harmony or a musical mode than the former virtues.'

Adeimantus:: ‘In what way?’

Socrates:: ‘Temperance, is surely an ordering and a control of certain pleasures and desires, as is declared by the common but mysterious expression that a man is master of himself; and there are other similar expressions which give a clue to its nature. Do you not agree?’

Adeimantus:: ‘Most certainly.’

Socrates:: ‘But is not “master of himself” a ridiculous phrase? For he that is master of himself will surely also be slave of himself, and he that is slave, master; for the same person is mentioned in all these phrases.’

Adeimantus:: ‘Undoubtedly.’

Socrates:: ‘This expression, however, seems to me to mean that there is in the man himself, that is, in his soul, a better and a worse, and when the better has by nature control of the worse, then, as we say, the man is master of himself; for the expression is one of approval. When, on the other hand, in consequence of bad training, or the influence of associates, the better is weaker than the worse, and is overcome by its superior numbers, this is condemned as something disgraceful, and the man who is in this condition is called slave to himself, and intemperate.’

Adeimantus:: ‘Yes, that is a probable explanation.’

Socrates:: ‘Consider then, our new city, and you will find one of those conditions realized in it; for you will grant that it may be justly called master of itself if the terms “temperate” and “master of itself” are to be applied to that wherein the better rules the worse?’

Adeimantus:: ‘I have considered, and find that you are right.’

Socrates:: ‘We may say further that of desires and pleasures and pains, the many and diverse will be found especially in children and women and slaves, and in the vulgar herd among nominal freemen.'

Adeimantus:: 'Yes.'

Socrates:: 'But the simple and orderly desires which are guided by reason, and which accompany intelligence and right belief, you will find in a small number of men, in those who have the best natures and have received the best education.'

Adeimantus:: 'True.'

Socrates:: 'Then do you not see this latter condition of things in your city, where the desires which reign in the vulgar herd are mastered by the desires and the wisdom residing in the cultivated minority?'

Adeimantus:: 'I do.'

Socrates:: 'Then if any city ought to be called master of pleasures and desires, and master of itself, it is this one?

Adeimantus:: 'Most certainly.'

Socrates:: 'And for all these reasons must it not be called temperate also?'

Adeimantus:: 'Yes, indeed.'

Socrates:: 'And further, in no other city as in this one are both rulers and ruled inspired with the same belief as to who ought to rule. Do you not think so?'

Adeimantus:: 'Certainly I do.'

Socrates:: 'Then in whom among such citizens will you say that temperance is to be found? In the rulers, or in the ruled?

Adeimantus:: 'In both, surely.'

Socrates:: 'You see, then, that it was a clever divination of ours to say that temperance is like a harmony?

Adeimantus:: 'Why, pray?

Socrates:: ‘Because temperance in its action is not like courage and wisdom. The wisdom and the courage which make the city wise and courageous reside each in a particular part, but temperance is spread through the whole alike, setting in unison of the octave the weakest and the strongest and the middle class—a unison of wisdom, if you would have that; and strength, if you would have that; of numbers also, and wealth, and any other such element. So that we may most justly say that this unanimity is temperance, the concord of the naturally worse and the naturally better as to which should rule in the city or in the individual.’

Adeimantus:: ‘I entirely agree with you.’

Socrates:: ‘Good. Then we have descried in the city three out of the four; at least so it appears. As for the last principle which completes the virtue possessed by the city, what will it be? Obviously it will be justice.’

Adeimantus:: ‘Obviously.’

Socrates:: ‘Now then, Glaucon, like hunters we must stand round the cover and watch carefully, lest by any chance justice escape us and vanish into obscurity; for it is quite plain that it is there somewhere. Do you look and make a zealous search, and possibly you may see it before I do, and point it out to me.’

Adeimantus:: ‘I wish I could. But I shall think you are treating me fairly enough if you let me follow, so that I can see what is pointed out to me.’

Socrates:: ‘Offer prayer with me, and come on.’

Adeimantus:: ‘I will do so. But. do you lead.’

Socrates:: ‘Truly, the ground is difficult and overgrown. It is dark too, and the cover is thick. Nevertheless on we must go.’

Adeimantus:: ‘Yes, we must.’

Socrates:: I looked about me and cried, ‘Joy, joy, Glaucon, we seem to be on the track, and I don’t think the game will altogether escape.’

Adeimantus:: ‘Good news.’

Socrates:: ‘Well, really, we are being stupid.’

Adeimantus:: ‘In what way?’

Socrates:: ‘Why, my good sir, it appears that the quarry has been rolling before our feet the whole time, and we have never seen it, but have made utter fools of ourselves. Just as people sometimes go about looking for a thing which they are holding in their hands, we have been gazing somewhere miles away instead of looking at the thing before us, and quite probably that is how it has escaped us.’

Adeimantus:: ‘What do you mean?’

Socrates:: ‘I mean, that we seem to have been mentioning it and hearing it mentioned all this time without realizing that we were in a way describing it ourselves.’

Adeimantus:: ‘A long preface, for one anxious to hear.’

Socrates:: ‘Well, listen, and hear whether there is anything in what I say. For at the beginning when we were founding our city, the principle which we then stated should rule throughout, or at least a form of it, was, I think, justice. We stated surely, and, if you remember, have often repeated our statement, that each individual should pursue that work in this city for which his nature was naturally most fitted, each one man doing one work.’

Adeimantus:: ‘Yes, we did.’

Socrates:: ‘But we have often said ourselves, and heard others saying, that to mind one’s own business and not be meddlesome is justice.’

Adeimantus:: 'Yes, we have.'

Socrates:: 'Well, then, my friend, this in some form or other is what justice seems to be, minding one's own business. Do you know how I infer this?'

Adeimantus:: 'Do tell me.'

Socrates:: 'We have examined, temperance and courage and wisdom, and I think that the remaining virtue in the city is that which enabled all these to find a place in it, and after they have appeared preserves them so long as it is present in the city. But we said that if we found the first three, the remaining one would be justice.'

Adeimantus:: 'Yes, inevitably.'

Socrates:: 'But, if we had to decide which of those virtues by its presence does most to make the city good, it would be hard to say whether it is the unanimity of rulers and ruled, or the preservation of lawful belief concerning what is and what is not to be feared, that makes its appearance among the soldiers, or the wisdom and guardianship of the rulers, which most contributes to the city's goodness; or whether, finally, it is not this principle abiding in child and woman, in slave and freeman and artisan, in ruler and ruled, that each minded his own business, one man one work, and was not meddlesome.'

Adeimantus:: 'It is, in truth, a hard question.'

Socrates:: 'Then apparently the principle of each man doing his own business in a city competes in promoting that city's virtue with its wisdom and temperance and courage?'

Adeimantus:: 'Certainly.'

Socrates:: 'But would you not affirm that the principle which competes with these in promoting a city's virtue is justice?'

Adeimantus:: ‘Most assuredly.’

Socrates:: ‘Consider now whether this point of view brings us to the same conclusion. Will you make the rulers in the city judge law-suits?’

Adeimantus:: ‘Surely.’

Socrates:: ‘And in their decisions will not their aim be merely to prevent either party having what belongs to others or being deprived of what is then own?’

Adeimantus:: ‘Yes, that will be their aim.’

Socrates:: ‘On the assumption that that is just?’

Adeimantus:: ‘Yes.’

Socrates:: ‘So from this point of view the possession and practice of what belongs to us and is our own would be acknowledged to be justice?’

Adeimantus:: ‘True.’

Socrates:: ‘Consider, now, whether you agree with me. Do you think it will do any notable harm to the city if a builder attempts a shoemaker’s work, or a shoemaker a builder’s, or if they take one another’s tools or pay, or even if the same man try to do both, and there is a general interchange in such professions?’

Adeimantus:: ‘No.’

Socrates:: ‘But I fancy when he that is by nature a craftsman or a money-maker of some kind is so elated by his wealth, or his numerous supporters, or his bodily strength, or some such qualities, that he essays to enter the warrior class; or when one of the warriors aspires to the counseling and guardian class when he is unworthy of it, and these take one another’s tools and privileges, or when the same man tries to combine all these offices, then, I fancy, you think with me that such change and meddling among those classes is death to the city.’

Adeimantus:: ‘Most certainly.’

Socrates:: ‘Our classes are three, and meddling and interchange among them is the greatest of injuries to the city, and might justly be described as the extreme of evil-doing.’

Adeimantus:: ‘It is exactly as you say.’

Socrates:: ‘Then will you not admit that the worst kind of evil-doing to one’s own city is injustice?’

Adeimantus:: ‘Surely.’

Socrates:: ‘This then is injustice; and conversely the opposite of this—when each class, money-makers, auxiliaries, and guardians, attends to what belongs to it, each doing its own work in the city—will be justice, and will make the city just.’

Adeimantus:: ‘I certainly think, it is as you say.’

Socrates:: ‘Don’t let us state it quite positively yet. If this conception is also admitted by us to be justice, when applied to each individual man, we shall then assent. For what need we say more? But if it is not, then we shall search for something else. Let us now complete the inquiry which we undertook in the belief that if we first managed to perceive justice in some bigger thing which possessed it, it would then be easier to see its nature in an individual. We thought that a city was a thing of this sort, and we therefore founded the best we could, knowing that justice would be found in the good city. Let us now apply to the individual the conception that has been revealed to us there, and if the result is consistent, so much the better. But if something different is revealed in the individual, then we shall go back to the city and test it there. And perhaps by looking at the two side by side, and rubbing them together, we may make justice blaze out, like fire from two sticks, and when it is revealed, we shall set it firmly in our minds.'

Adeimantus:: 'Well, there is method in your proposal, and we must follow it.'

Socrates:: 'Then, when to two things, a greater and a smaller, we give the same name, will they, m so far as they are called the same, be unlike or like?'

Adeimantus:: 'Like.'

Socrates:: 'Then, so far as the mere form of justice is concerned; the just man will in no way differ from the just city, but will be the same?'

Adeimantus:: 'He will.'

Socrates:: 'But it has been seen that a city is just when the three types of natures in it do each their own work, and that it is also temperate, courageous, and wise through other similar affections and conditions of those three lands.'

Adeimantus:: 'True.'

Socrates:: 'Then similarly, my friend, we shall expect that the individual has these same forms in his soul, and the same affections of them, if he is rightly called by the same name as the city.'

Adeimantus:: 'That is inevitable.'

Socrates:: 'Then, my good friend, we have stumbled upon a trifling little inquiry as to whether these three forms of natures exist in the soul or not.'

Adeimantus:: 'It certainly does not seem to me to be trifling. But perhaps, Socrates, the common saying is true, that the beautiful is difficult.'

Socrates:: 'It appears so. And if you want to know my opinion, Glaucon, I don't think that we shall ever settle this whole question accurately by our present methods. The road which leads to that result is longer and more toilsome, but perhaps we can manage to come up to the standard of our previous statements and inquiries.

Adeimantus:: ‘Shall we not be content with that? It will be quite good enough for me at this moment.

Socrates:: ‘Well, then, it will be quite sufficient for me also.’

Adeimantus:: ‘Don’t give up, then, but begin your inquiry.

Socrates:: ‘Well, are we not absolutely compelled to admit that there are in each one of us the same kinds and characteristics as there are in the city? For how else could they have got there? It would be ridiculous to imagine that among peoples who bear the reputation for being spirited, like the inhabitants of Thrace, Scythia, and the north generally, the spirited character in their states does not come from the individual citizens, or that it is otherwise with the love of learning which would be chiefly ascribed to this country, or with the love of riches, which people would especially attribute to the Phoenicians and the inhabitants of Egypt.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then we may take this as a fact, and one not hard to comprehend?’

Adeimantus:: ‘No, it is not.’

Socrates:: ‘But this is a hard question, whether in our actions we always use the same element, or whether there are different ones which are used for different purposes. Do we, that is, learn with one and feel anger with another of the elements within, us and with a third desire the pleasures of food and drink and propagation, and so on; whenever we have an impulse to action, do we employ the whole soul on each of these different occasions? These are the questions which are hard to determine satisfactorily.’

Adeimantus:: ‘I agree with you.’

Socrates:: ‘Then let us try this method of ascertaining whether these elements are identical with one another, or different.’

Adeimantus:: ‘What method?’

Socrates:: ‘It is obvious that the same thing will not at one and the same time, in the same part of it, and in the same relation, do two opposite things or be in two opposite states; so that if we find such conjunction of opposites in these elements, we may be sure that they are not one, but several.’

Adeimantus:: ‘Good.’

Socrates:: ‘Now consider what I say.’

Adeimantus:: ‘Speak on.’

Socrates:: ‘Can the same thing, at one and the same time, and in the same part of it, be at rest and in motion?’

Adeimantus:: ‘Certainly not.’

Socrates:: ‘Let us come to a more exact understanding. If we go too fast we may fall into ambiguities. If someone were to say of a man who was standing still, but moving his arms and his head, that the same man was at the same time at rest and in motion, we should say, I fancy, that this was not a proper description, but that one part of him was at rest and another in motion. Is not that the case?’

Adeimantus:: ‘It is.’

Socrates:: ‘Well, if our friend were to become still more subtle, and make the pretty point that peg-tops are at one and the same time at rest and in motion throughout, when they spin with their pegs fixed to the same place, and that the same is true of anything else which revolves in a fixed spot, we should agree, on the ground that the parts in respect of which they are at rest and in motion on these occasions are different. We should say rather that they have an axis and a circumference and in respect of the axis are at rest, inasmuch as they do not lean to one side, but in respect of the circumference they revolve. But if, while they are revolving, they at the same time incline the axis either to the right or the left, or forward or backward, then they are in no sense at rest.'

Adeimantus:: 'That is perfectly correct.'

Socrates:: 'Then none of those objections will frighten us, nor in any way persuade us that under any circumstances any one and the same thing could at one and the same time, in the same part of it, and in the same relation, be acted upon in two opposite ways, or be two opposite things, or produce two opposite effects?

Adeimantus:: 'No, I shall certainly not be persuaded.'

Socrates:: 'In any case, we don't want to be compelled to examine in detail all difficulties of this kind, and to waste our time in establishing their falsehood; and so we may proceed on the assumption that what we have said is right, agreeing that if at any time we have to change our opinion, all the consequences of our assumption shall be considered invalid?'

Adeimantus:: 'Yes, that is our best method.'

Socrates:: 'Now, would you say that assent and dissent, the seeking after an object and the refusal to take it, attraction and repulsion, and so on, are mutual opposites? Whether they are actions or passions makes no difference?'

Adeimantus:: 'Yes, they are opposites.'

Socrates:: 'Then, would you say thirst and hunger and the desires generally, including also willing and wishing, may be classed with the former of those general terms just mentioned? For example, would you not admit that the soul of him who desires seeks after that which he desires, whatever it may be, or attracts to himself that which he wishes to have, or, again, so far as he is willing that something should be given him, his soul longing for its accomplishment nods assent to this as though she were asked a question and were replying to herself?'

Adeimantus:: 'I should.'

Socrates:: 'Again, shall we not class not wishing and not willing and not desiring with repulsion and rejection, and all those opposed general terms?'

Adeimantus:: 'Surely.'

Socrates:: 'This being so, shall we say that there is a class of desires, and that what we call thirst and hunger are the most marked of those?'

Adeimantus:: 'Yes.'

Socrates:: 'The first is a desire for drink; the second, for food?'

Adeimantus:: 'Yes.'

Socrates:: 'Then will thirst, so far as it is thirst, be a desire in the soul for anything more than drink? Is thirst, that is to say, thirst of hot drink or of cold, or of much drink or of little, or, in a word, of drink of a particular kind? Or is the desire for cold drink the additional result of heat and thirst combined, and for hot drink the result of cold and thirst? And again, does the desire for much drink arise when the thirst is much owing to the presence of muchness, and for little drink when the thirst is little? That is, is the mere state of being thirsty ever a desire for anything besides its natural object, namely, drink, and similarly with hunger and the desire for food?'

Adeimantus:: 'In that way, each mere desire is a desire only for its mere natural object, while the desires for this or that kind of object are the result of additions.'

Socrates:: 'Well, then, let no one take us unaware and vex us with the objection that no man desires drink only but good drink, or food only but good food. For all men, they say, desire things that are good Therefore, since thirst is a desire, it will be a desire for something good—drink, or whatever it may be—and similarly with other desires?'

Adeimantus:: 'Yes, there might seem to be something in that objection.'

Socrates:: 'But surely, wherever you have terms which imply something else, the qualified terms, I think, imply a qualified, and the simple unqualified terms a simple.'

Adeimantus:: 'I don't understand.'

Socrates:: 'Do you not understand, that the greater implies, that is, is greater than, something?'

Adeimantus:: 'Certainly.'

Socrates:: 'Implies the less?'

Adeimantus:: 'Yes.'

Socrates:: 'And the much greater the much less? Does it not?'

Adeimantus:: 'Yes.'

Socrates:: 'And the sometimes greater the sometimes less, and the future greater the future less?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then does not "the more" in this way imply "the less," and "the double" "the half," and so on, "the heavier" "the lighter," and "the swifter" "the slower," and also "the hot" "the cold," and similarly with similar epithets?'

Adeimantus:: 'Assuredly.'

Socrates:: ‘Then does the same apply to the various kinds of knowledge? Mere knowledge implies the mere knowable, however we ought to describe the object of knowledge, but knowledge of a particular quality implies an object of a particular quality. For example, when a science of building houses arose, was it not distinguished from the other sciences and called the science of building?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And was that not because it was of a particular quality, like none of the others?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And did it not get this particular quality from the particular quality of its objects? And does not the same apply to the other trades and sciences?’

Adeimantus:: ‘It does.’

Socrates:: ‘Then you may take it that this was my meaning, if you now understand, that when you have terms that imply another, the simple imply the simple, the qualified the qualified. I don’t in the least mean that the relatives are of the same quality as their correlatives, that the science of the healthy and the diseased, for example, is healthy and diseased, or the science of the evil and the good is evil and good, but as soon as you had a science which was not of the mere knowable, but of an object of a particular quality, in this case healthy and diseased, then the science in its turn assumed a particular quality, and the result was that it was no longer called simply science, but the quality was added, and it was called medical science.’

Adeimantus:: ‘I understand, and I think you are right.’

Socrates:: ‘Well, then, will you not agree that thirst, in being what it is, is one of those things which imply another? Thirst, of course, implies’——

Adeimantus:: 'Yes, it implies drink.'

Socrates:: 'Then a particular quality of thirst implies a particular quality of drink, but thirst pure and simple does not imply much or little, or good or bad drink, or, in a word, any particular quality of drink, but thirst and nothing more implies drink and nothing more.'

Adeimantus:: 'Assuredly.'

Socrates:: 'Then the soul of the thirsty man, in so far as it is thirsty, wants only to drink, and longs and strives after this?'

Adeimantus:: 'Obviously.'

Socrates:: 'Then if there is anything which holds it back when it is thirsty, will it not be something in it distinct from that which thirsts and which drives it like a beast to drink? For surely, as we said, the same thing does not at one and the same time with the same part of itself and in the same relation do opposite things?'

Adeimantus:: 'No, certainly not.'

Socrates:: 'Just as, I fancy, it is incorrect to say of an archer that his hands are at one and the same time drawing the bow towards him and thrusting it away. We ought rather to say that one hand is thrusting it away, and the other drawing it towards him.'

Adeimantus:: 'Assuredly.'

Socrates:: 'Now, can we say that people are sometimes thirsty and yet decline to drink?'

Adeimantus:: 'Most certainly. that often happens with many people.'

Socrates:: 'Then what are we to say about them?' 'Must we not say that there is that' in their soul which orders them to drink, and there is that which hinders them from drinking, the latter being distinct from, and master of, the former?'

Adeimantus:: 'I certainly think so.'

Socrates:: 'May we say then that that which hinders in these cases, whenever it arises in the soul, is produced there by reasoning, while the impulses leading and dragging the soul are engendered by particular conditions and diseases?'

Adeimantus:: 'Apparently.'

Socrates:: 'Then we shall have reason, in affirming that these are two and distinct from one another. The first, that with which the soul reasons, we shall call the rational part; the second, that with which it loves, and hungers, and thirsts, and flutters round the other desires, we shall call the irrational and desiring part, the companion of various indulgences and pleasures.'

Adeimantus:: 'Yes, we have good cause to think so.'

Socrates:: 'Let us assume then that we have distinguished these two parts in the soul. Now is spirit, or that by which we feel indignant, a third part, or, if not, with which of these two is it naturally connected?'

Adeimantus:: 'Possibly, with the second, the desiring element.'

Socrates:: 'Well, I rely on a story which I once heard, how Leontius, the son of Aglaion, was coming up from the Peiraeus, close to the outer side of the north wall, when he saw some dead bodies lying near the executioner, and he felt a desire to look at them, and at the same time felt disgust at the thought, and tried to turn aside. For some time he fought with himself and put his hand over his eyes, but in the end the desire got the better of him, and opening his eyes wide with his fingers he ran forward to the bodies, saying, ‘There you are, curse you, have your fill of the lovely spectacle.”’

Adeimantus:: ‘Yes, I have heard the story myself.’

Socrates:: ‘But observe, that the story shows that anger sometimes fights against the desires, which implies that they are distinct principles.’

Adeimantus:: ‘It does.’

Socrates:: ‘And do we not often notice on other occasions, when a man is forced by his desires against his reason, that he abuses himself, and is indignant with that within him which is constraining him? In such a case there is strife between two principles, and the spirit appears as an ally of the reason. But I fancy that you will not assert that you have ever noticed either in yourself or in any one else the other phenomenon, the spirit siding with the desires when the reason decides that they are not to interfere with it.’

Adeimantus:: ‘No, assuredly not.’

Socrates:: ‘Well, when a man thinks he is in the wrong, what then? Is it not the case that the nobler he is the less is he capable of being angry because he is made to suffer hunger and cold, or anything else, at the hands of him whom he conceives to be inflicting a just punishment; in other words his spirit declines to be roused against his punisher?’

Adeimantus:: ‘True.’

Socrates:: ‘But what of a man who thinks he is wronged? Does he not then fume and chafe and fight on the side of what he believes to be just? Though he suffer hunger and cold and every kind of privation, he perseveres till he conquers, and never desists from his noble indignation, until he has either accomplished his purpose or perished, or until reason within him calls him back as a shepherd calls his dog, and he relents.'

Adeimantus:: 'Yes, it is much as you describe it. And indeed in our city we have made the auxiliaries subject to the rulers like sheep-dogs of the city's shepherds.'

Socrates:: 'You understand beautifully what I mean. But consider this further point.'

Adeimantus:: 'What?'

Socrates:: 'Our present view of the spirited element is the opposite of what we held a while ago. For we then thought that it was in some way of the nature of desire, but we now say that it is anything but that. Rather in the war of the soul it ranges itself on the side of the rational part.'

Adeimantus:: 'Certainly.'

Socrates:: 'Then is it distinct from this also, or is it a form of the rational element, so that there are not three kinds in the soul, but two—the rational and the desiring? Or, as the city was composed of three classes—money-making, auxiliary, and counseling—is there likewise in the soul also this third element of spiritedness, which is the natural auxiliary of the rational, so long as it is not corrupted by evil upbringing?'

Adeimantus:: 'It must be a third part.'

Socrates:: 'Yes, if it appears to be distinct from the rational, as it has been seen to be from the desiring element.'

Adeimantus:: 'But that is easily seen. You may observe that in children: from their earliest years they are full of spirit, but some of them seem to me never to acquire reason, and most of them only do so quite late.'

Socrates:: 'On my word, that is well said; and the truth of your remarks is confirmed by considering animals. And besides this evidence there is the case which we mentioned some time ago, to which Homer witnesses in the words:

> He chid his angry spirit and beat his breast.

For in this passage Homer clearly distinguishes between two principles, and depicts the one, which reasons concerning the better and the worse, rebuking the other for its unreasoning anger.'

Adeimantus:: 'You are perfectly right.'

Socrates:: 'Well, after a hard fight for it we have swum to shore, and are pretty well agreed that there are in a city and in the soul of each individual the same three kinds.'

Adeimantus:: 'We have.'

Socrates:: 'Then does it not now follow that the individual will be wise in the same way and by reason of the same element as the city?'

Adeimantus:: 'Surely.'

Socrates:: 'And the city will be courageous by reason of the same element and in the same way as the individual is courageous, and both will have all the other elements of virtue in the same way?'

Adeimantus:: 'Inevitably.'

Socrates:: 'Then finally, Glaucon, we shall say that a man is just in the manner in which a city was just.'

Adeimantus:: 'That, too, follows inevitably.'

Socrates:: 'But we have surely not forgotten that the city was just by reason of the three classes within it each doing their own work?'

Adeimantus:: 'I think we have not forgotten.'

Socrates:: 'Then we must bear in mind that each one of us will be just and doing his own work if the parts within him are doing severally their own work?'

Adeimantus:: 'Yes. Certainly we must bear that in mind.'

Socrates:: 'Then is it not befitting that the rational part should rule, inasmuch as it is wise and has foresight for the whole soul, and that the spirited part should be its subject and ally?'

Adeimantus:: 'Certainly.'

Socrates:: 'But is it not the case, as we said, that a blending of music and gymnastic will make these elements harmonious, inciting and nourishing the reason by noble words and instruction, and slackening the other by soothing admonition, taming it by harmony and rhythm?'

Adeimantus:: 'Undoubtedly.'

Socrates:: 'And these two so nurtured, truly taught and trained in their own offices, will be set over the desiring element, which of a truth makes the greatest part of each man's soul, and is by nature insatiably covetous. Over it they will keep guard lest it fill itself with the false pleasures of the body, and becoming great and strong no longer attend to its own work, but try to get the rule and mastery over those matters that do not belong to it, and so quite overturn the life of the whole.'

Adeimantus:: 'Certainly.'

Socrates:: 'And would not these two, also be the best guards of the whole soul and of the body against external enemies, the rational element giving counsel and the other fighting its battles, following its ruler, and bravely executing its purposes?'

Adeimantus:: 'Yes.'

Socrates:: 'And I fancy that we call the individual courageous in this part of him, when the spirited element preserves, in spite of pains and pleasures, the precepts of reason concerning what is and what is not to be feared?'

Adeimantus:: 'That is right.'

Socrates:: ‘And we call him wise by reason of that other small part, that in him which rules and issues these precepts, that which possesses in itself knowledge of what is advantageous to each and all of those three principles?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Further, do we not call him temperate by reason of the friendship and harmony of these elements, when the ruler and the two subjects are agreed that the rational element must rule, and there is no rebellion against it?’

Adeimantus:: ‘Certainly. temperance in a city or in an individual is nothing else than this.’

Socrates:: ‘Well, then, the individual will be just in virtue of our oft-repeated principle, and in that way?’

Adeimantus:: ‘Inevitably.’

Socrates:: ‘What then? Do we find justice at all dimmer to our eyes or different from what it was seen to be in the city?’

Adeimantus:: ‘I certainly do not think so.’

Socrates:: ‘Well, we can make perfectly sure, if there be any doubt lingering in our souls, by comparing our result with common notions.’

Adeimantus:: ‘To which do you refer?

Socrates:: ‘For example, if we were discussing this city, and the man who by nature and training is like to it, and had to decide whether such an one would appropriate gold or silver which had been left in his trust, do you think that any one would believe that he would do it more readily than men of another nature?’

Adeimantus:: ‘No one.’

Socrates:: 'And would he not also keep himself clear of sacrilege, and theft, and of being false to his friends or a traitor to his city?'

Adeimantus:: 'He would.'

Socrates:: 'And of course he will never be in any way guilty of bad faith in oaths or in any other compact?'

Adeimantus:: 'Surely not.'

Socrates:: 'And he is the last man who would be capable of adultery and neglect of parents and want of observance to the gods?'

Adeimantus:: 'Yes, assuredly.'

Socrates:: 'And is not the reason for all this that each of the elements within him keeps to its own work in regard to ruling and being ruled?'

Adeimantus:: 'That and nothing else.'

Socrates:: 'Then do you still seek justice elsewhere than in this power which produces men and cities of such a character?'

Adeimantus:: 'No, not I.'

Socrates:: 'Then that of which we dreamed has now its perfect fulfillment; I mean, the suspicion we expressed that at the very beginning of our construction of the city we stumbled by some divine providence upon a principle and type of justice?'

Adeimantus:: 'Yes; certainly.'

Socrates:: 'For in point of fact, Glaucon, there was an image of justice in the principle that he whom nature intended for a shoemaker should attend to shoemaking and nothing else, and that the carpenter should do carpentry, and so on; and that is why it helped us.'

Adeimantus:: 'Apparently.'

Socrates:: ‘And in truth justice, as it appears, is something of this kind. But it does not concern a man’s management of his own external affairs, but. his internal management of his soul, his truest self and his truest possessions. The just man does not allow the different principles within him to do other work than their own, nor the distinct classes in his soul to interfere with one another; but in the truest sense he sets his house in order, gaining the mastery over himself; and becoming on good terms with himself through discipline, he joins in harmony those different elements, like three terms in a musical scale—lowest and highest and intermediate, and any others that may lie between those—and binding together all these elements he moulds the many within him into one, temperate and harmonious. In this spirit he lives; whether he is money-making or attending to the wants of his body, whether he is engaged in politics or on business transactions of his own, throughout he considers and calls just and beautiful all conduct which pursues and helps to create this attitude of mind. The knowledge which superintends these actions is for him wisdom, while any conduct which tends to destroy this attitude is for him unjust, and the belief which inspires it ignorance.’

Adeimantus:: ‘That is most certainly true, Socrates.’

Socrates:: ‘Good. Then if we declare that we have discovered the just man and the just city, and justice which rules in them, I fancy that we shall not be thought to be speaking altogether falsely.’

Adeimantus:: ‘No, by heaven!’

Socrates:: ‘Then shall we make this declaration?’

Adeimantus:: ‘Yes.’

Socrates:: ‘Let it be done then. And now think we have to inquire into injustice?’

Adeimantus:: Clearly.’

Socrates:: ‘Must not it be a kind of quarrel between those three—a meddlesomeness and interference and rebellion of one part of the soul against the whole that it may gain a rule over it to which it has no right; while the whole is such by nature that that part ought to be a slave, and the other part, which is of the royal class, ought not? Such a state of affairs, I fancy, and the disturbance and confusion of these principles, we shall declare to constitute injustice and incontinence, and cowardice and ignorance, and, in a word, all wickedness.’

Adeimantus:: ‘Yes, precisely so.’

Socrates:: ‘Then, since injustice and justice are now revealed to us, is it not quite clear what it is to act unjustly and to be unjust, and what it is also to act justly?

Adeimantus:: ‘In what way?’

Socrates:: ‘Clearly, they do not differ from healthy and diseased conditions. As those are to the body, so are acting justly and acting unjustly to the soul.

Adeimantus:: ‘How?

Socrates:: ‘Surely healthy conditions produce health, and diseased conditions disease?

Adeimantus:: ‘Yes.

Socrates:: ‘Well, does not just action likewise produce justice, and unjust action injustice?

Adeimantus:: ‘Necessarily.

Socrates:: ‘Now to produce health is to put the various parts of the body in their natural relations of authority or subservience to one another, while to produce disease is to disturb this natural relation.

Adeimantus:: ‘Yes.

Socrates:: ‘Then to produce justice, is to put the parts of the soul in their natural relations of authority or subservience, while to produce injustice is to disturb this natural relation, is it not?

Adeimantus:: ‘Surely.’

Socrates:: ‘Then virtue, seemingly, will be a kind of health and beauty and good condition of the soul, vice a disease and ugliness and weakness.

Adeimantus:: ‘That is true.’

Socrates:: ‘Then do not fair practices conduce to the acquisition of virtue, ugly practices to the acquisition of vice?

Adeimantus:: ‘Necessarily.

Socrates:: ‘There now apparently remains for us to inquire whether it is profitable to act justly and follow fair practices and be just, and that whether the just man is recognized as such or not, or whether acting unjustly and being unjust is profitable, even if the unjust man is not punished, or reformed by correction.’

Adeimantus:: ‘But, Socrates, this inquiry seems to me ridiculous at this stage, now that we have reached those respective conclusions about justice and injustice. People think that when the constitution of the body is ruined life is not worth living, not with all the foods and drinks and wealth and dominion in the world; and are we to believe that, when the constitution of the very principle of our life is in confusion and ruin, life is then worth living, though a man do whatever he please—unless only he find some means of escaping from vice and injustice, and of acquiring justice and virtue?’

Socrates:: ‘Yes, it is ridiculous. Still, since we have got to a position where we can perceive the truth of this most clearly, we must not give up.’

Adeimantus:: ‘No, most certainly not.’

Socrates:: ‘Come here, then, and look with me on the different forms of vice as I conceive them, or as many of them as are worth observing.’

Adeimantus:: ‘Say on, I follow.’

Socrates:: ‘Well, I look out from the mountain top to which we have climbed in our argument, and see that there is one form of virtue but innumerable forms of vice, and among them four that are specially worthy of mention.’

Adeimantus:: ‘What do you mean?’

Socrates:: ‘There will probably be, as many varieties of sods forming specific kinds as there are similar varieties of political constitutions.’

Adeimantus:: ‘And how many are there?’

Socrates:: ‘Five varieties of constitution, and five of souls.’

Adeimantus:: ‘Tell us which they are.’

Socrates:: ‘I will. One variety of constitution will be that which we have described, though it may have two names. It will be called a monarchy when there is one man of surpassing excellence among the rulers; when there are more than one, it will be called an aristocracy.’

Adeimantus:: ‘True.’

Socrates:: ‘This, then, I designate as one form; for whether there are several rulers or only one will not make them disturb any fundamental law of the city, so long as they observe the nurture and education which we have described.’

Adeimantus:: ‘No, naturally not.’

## Book 5.

Socrates:: ‘Good and right, then, do I call such a city and constitution, and such a man; and the others, since this is right, I call bad and mistaken, whether they deal with the government of cities or the organization of the character of the individual, and they may be arranged in four varieties of vice.’

Adeimantus:: ‘What are they?’

Socrates:: I was going on to deal with them in order as they appeared to me to develop from one to the other, when Polemarchus, who was sitting some little way from Adeimantus, stretched out his hand, and taking hold of him by the garment high up near the shoulder, drew him to him, and leaning forward whispered something in his ear of which we only heard the following:

Polemarchus:: ‘Shall we let be, or what shall we do?’

Socrates:: Adeimantus, quite loud said;

Adeimantus:: ‘Certainly not.’

Socrates:: What in particular, are you not going to let be?’

Adeimantus:: ‘You.’

Socrates:: ‘Because of what particular remark of mine?’

Adeimantus:: ‘We think. that you are shirking and are cheating us out of a whole division of the subject, and a most important one, which you don’t want to go through. You thought that we should not notice that trifling remark of yours, that it would be obvious to every one that as concerns women and children friends have things in common.’

Socrates:: ‘Well, was I not right, Adeimantus?’

Adeimantus:: ‘Yes. But like the rest, this “right” needs explanation. We must know by what method this community is to be carried out. For there are many possibilities. Do not, therefore, pass over the plan which you propose. We have been waiting all this time expecting that you would certainly tell us of the conditions of begetting children, and how they will be reared after they are born, and would explain all this community of wives and children of which you talk. For we conceived that it would make a great or rather the whole difference to the constitution whether it was rightly or wrongly managed. But now that you are taking up another constitution without handling these questions satisfactorily, we came to the resolve which you heard, that we should not let you be till you had discussed these questions as you did the rest.'

Glaucon:: 'You may put me down, as voting for that resolution.'

Thrasymachus:: 'It's all right.' 'You may consider, Socrates, that we have passed it unanimously.'

Socrates:: 'What a deed you have done, in fastening upon me! What a long discussion about the constitution you are starting again from the very beginning! I was rejoicing in the thought that I had finished with it by this time, and quite content that what I said then should be accepted and allowed to pass. You don't know what a swarm of discussions you are rousing by reviving these topics now. I saw them and let them alone before, to save you endless trouble.'

Thrasymachus:: 'Why, do you imagine that we have come here to find an El Dorado, and not precisely to listen to discussions?'

Socrates:: 'No doubt, but of a reasonable length.'

Glaucon:: 'Yes, but, Socrates, to men of understanding their whole life is a reasonable time to listen to such discussions. But never mind about us. For yourself, do not weary of answering our questions on these subjects, and choose whatever method you think best to explain what kind of community our guardians will observe concerning the children and the women, and the nurture of the children while they are young in the period between their birth and their education. That, indeed, is considered the most troublesome business of all. Try, then, to tell us in what manner it must be arranged.'

Socrates:: 'It is no easy matter to discuss, my sanguine friend. There are many more points in it which will tax your confidence than in the subjects of our previous discussions. In the first place, the practical possibility of my proposals will not be believed, and, secondly, it will also be doubted whether on the assumption of their being completely carried out they are actually the most desirable And for these reasons I have some hesitation in having anything to do with them, for fear, my dear friend, that the argument may seem to be an idle dream.'

Glaucon:: 'Have no hesitation, for your audience are neither without understanding nor incredulous nor unfriendly.'

Socrates:: 'My good sir, are you really seeking to encourage me by those words?'

Glaucon:: 'I am.'

Socrates:: 'Well, their effect is precisely the opposite. If I were confident that I was speaking with knowledge, your encouragement would be excellent. For to speak with knowledge of the truth about matters dear to us and of the highest importance among men of understanding who are our friends is a thing that may be done with assurance and safety. But to bring forward proposals when one is still incredulous and inquiring, as I am doing now, that is a dangerous and alarming task. Not that I am: afraid of making myself ridiculous. To be so were childish. But I am afraid of slipping from the truth, and being overthrown just where a false step is most to be dreaded, and not only falling myself, but dragging my friends after me. And I bow to Nemesis, Glaucon, touching what I am about to say. For I do believe that to be an involuntary homicide is a less crime than to be a deceiver concerning noble and good and just laws. This venture, therefore, is better made among enemies than among friends. So you see how well you encourage me.'

Glaucon smiled and said;

Glaucon:: 'Well, Socrates, if we suffer anything amiss from the discussion, we acquit you and pronounce you guiltless of our blood and not our deceiver. So take courage and say on.'

Socrates:: 'Well, in cases of homicide he that is acquitted is free from guilt, according to the law. And if in that case, it is likely that he will be in this.'

Glaucon:: 'For these reasons, say on.'

Socrates:: 'We must go back, then, and say what perhaps should have been said in its proper place. However, it may be right after the men have played their part that the women should come on in their turn, especially when you demand it in this way. For men who are, by nature and education, such as we have described, there is, in my opinion, no right possession or use of children and women except along the lines on which we originally started them. We tried in our argument, if you remember, to make our men like guardians of a flock.'

Glaucon:: 'Yes.'

Socrates:: 'Then let us follow this up and give corresponding rules for birth and nurture, and see whether we approve the result or not.'

Glaucon:: ‘How?’

Socrates:: ‘In this way. Do we think that the females of watchdogs ought to watch as well as the males, ought to hunt with them, and generally share their occupations, or should they be kept indoors in the kennels, on the ground that breeding and rearing the puppies disables them for anything else, while the hard work and all the care of the flocks is reserved for the males?

Glaucon:: ‘They should share in everything. Only we treat the females as the weaker and the males as the stronger.’

Socrates:: ‘Can you, use any living creature for the same work as another unless you rear and train it in the same way?’

Glaucon:: ‘No.’

Socrates:: ‘Then if we employ women at the same tasks as men, we must give them the same instruction?’

Glaucon:: ‘Yes.’

Socrates:: ‘The men were given music and gymnastic.’

Glaucon:: ‘Yes.’

Socrates:: ‘Then we must assign to the women also these two arts, and the art of war in addition, and treat them in the same way.’

Glaucon:: ‘That follows from what you say.’

Socrates:: ‘Possibly, if our words are translated into action, these proposals may seem to involve many ridiculous breaches of etiquette.’

Glaucon:: ‘They certainly will.’

Socrates:: ‘Which of them do you find most ridiculous? Is it not obviously the notion of women exercising in the palaestra naked along with men, and not only young women, but positively the older also, just like those old men in the gymnasia who keep up their devotion to gymnastic though they are wrinkled and ugly?’

Glaucon:: ‘Yes, most certainly. It would appear ridiculous, at least under present conditions.’

Socrates:: ‘Well, as we have started the subject we must not be afraid of the gibes of fine gentlemen of all the different things they will say against such a change taking place in the gymnasia, in music, and not least, in the bearing of arms, and horse-riding.’

Glaucon:: ‘You are right.’

Socrates:: ‘But since we have begun the subject we must go on over the rougher ground of this law of ours, and request these jesters to stop minding their own business and to be serious. We shall remind them that it is not long since the Greeks thought it ugly and ridiculous to see men naked, as most barbarian races do now, and that when gymnastics were introduced first by the Cretans, and later by the Lacedaemonians, the witty men of the day had the opportunity of making fun of all these things. Do you agree with me?’

Glaucon:: ‘I do.’

Socrates:: ‘But I fancy when they found from experience that it was better to strip than to cover up the body, then too what had seemed ridiculous to the eye disappeared before the face of the arguments showing what was best; and this proved that he is a fool who thinks that anything but the bad is ridiculous, and tries to raise a laugh by regarding any spectacle, except that of folly and evil, as ludicrous, or indeed he who aims seriously at any standard of beauty which he may set up for himself, except the good.’

Glaucon:: ‘Most certainly.’

Socrates:: ‘But must we not first come to an agreement as to whether these proposals are practical or not, and allow any one, whether he is a jester or a serious person, to raise the question whether female human nature is capable of sharing with the male in all his occupations, or in none of them, or whether it is capable of some and not of others, and to ask in the last case to which of these classes warfare belongs? Would not this naturally be the best beginning, and lead to the best conclusion?’

Glaucon:: ‘Much the best.’

Socrates:: ‘Then, shall we on behalf of these other people put the question to ourselves, that the other side may not be besieged without having defenders?

Glaucon:: ‘There is nothing to hinder us.’

Socrates:: ‘Then shall we say on their behalf: “Socrates and Glaucon, there is no need for others to raise an objection against you. For in the beginning of your settlement of the city, you yourselves admitted that each should, as nature provides, do his own work, one person one work.”’

Glaucon:: ‘I think we did. How could we do otherwise?’

Socrates:: ‘“But is not a woman by nature very different from a man?”‘

Glaucon:: ‘Certainly she is different.’

Socrates:: ‘“And ought not different tasks to be assigned to different individuals in accordance with the nature of each?”‘

Glaucon:: ‘Yes.’

Socrates:: ‘“Then are you not mistaken and inconsistent now in maintaining, as you do, that men and women should do the same things, seeing that they have widely different natures?” Will you be able to offer any defense to that, my wonderful friend?’

Glaucon:: ‘It is certainly not easy just at the moment. But I shall have to ask you, as I do now, to interpret our argument also, whatever it is.’

Socrates:: ‘This, Glaucon, with many other similar difficulties, is what I have foreseen all this time. For that was why I was afraid, and hesitated to touch on the law concerning the possession and nurture of women and children.’

Glaucon:: ‘I don’t wonder. By Zeus, no, it is not an easy task.’

Socrates:: ‘It is not. But the truth is, whether a man falls into a small swimming-bath or into the middle of the mighty ocean, he has to swim all the same.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Well, then, we must strike out and try to get safe out of the argument, in the hope of a dolphin taking us up, or of some other impossible means of salvation.’

Glaucon:: ‘It looks like it.’

Socrates:: ‘Come, then, let us see whether we can possibly find a way out. We admit that different natures ought to do different things, and that the natures of a man and of a woman are different, but now we say that these different natures should do the same things. Is that the accusation against us?’

Glaucon:: ‘It is.’

Socrates:: ‘A noble thing, Glaucon, is the power of the art of controversy.’

Glaucon:: ‘Why do you say so?’

Socrates:: ‘Because, many people seem to me to fall into it quite against their will, and to think that discussion which is really contention, because they cannot examine the subject of their argument by analyzing its various forms, but will urge their contradiction of what has been said in reliance on the mere sound of the word, dealing with one another by contention, and not by scientific argument.’

Glaucon:: ‘Yes, that happens with very many people. But does it touch us at this moment?’

Socrates:: ‘Most certainly it does, for we seem, quite against our will, to be dealing with controversial arguments.’

Glaucon:: ‘In what way?’

Socrates:: ‘When we insist that what are not the same natures ought not to have the same pursuits, we cling to the verbal point most bravely and contentiously, but we have never inquired at all of what kind were the sameness and the difference and with reference to what we were then distinguishing them, when we proposed to give different pursuits to different natures, and the same pursuits to the same natures.’

Glaucon:: ‘No, we did not inquire.’

Socrates:: ‘In the same way, we might evidently ask ourselves whether bald and hairy men had the same or opposite natures; and, agreeing that they have opposite natures, might forbid hairy men to be shoemakers if bald men are, or forbid bald men if hairy men are.’

Glaucon:: ‘Well, that would be ridiculous.’

Socrates:: ‘But would it not be ridiculous, simply because, in that proposition, we did not mean same and different in general? Our rule was only directed against that particular form of likeness and difference which concerns those particular pursuits. We meant, for example, that the soul possessed of medical capacity and a doctor have the same nature. Do you agree with me?'

Glaucon:: 'I do.'

Socrates:: 'But a doctor and a carpenter have different natures.'

Glaucon:: 'Of course.'

Socrates:: 'Then, if we find either the male or the female sex excelling the other in any art or other pursuit, then we shall say that this particular pursuit must be assigned to one and not to the other; but if we find that the difference simply consists in this, that the female conceives and the male begets, we shall not allow that that goes any way to prove that a woman differs from a man with reference to the subject of which we are speaking, and we shall still consider that our guardians and their wives ought to follow the same pursuits.'

Glaucon:: 'And quite rightly.'

Socrates:: 'Is not our next step to invite the supporters of the contrary opinion to show us in reference to what art or what pursuit among all those required for the service of the city, the nature of men and women is not the same, but different?'

Glaucon:: 'That is certainly just.'

Socrates:: Perhaps others might make the same reply as was made by you a little while ago, that it is not easy to give a satisfactory answer at the moment, but that it would not be difficult after consideration.'

Glaucon:: 'They might.'

Socrates:: 'Then shall we request our objector to follow us, in the hope that we may prove to him that there is no occupation in the organization of the city which is peculiar to women?'

Glaucon:: ‘Certainly.’

Socrates:: ‘“Come, then,” we shall say to him, “answer this. When you say that one man has a natural talent for anything, and another is naturally unfitted for it, do you mean that the first learns it easily, while the second learns it with difficulty? that the first, after a little study, would find out much for himself in the subject which he has studied; but the second, in spite of much study and practice, would not even keep what he had learned? that in the one the mind would be well served by the bodily powers, in the other it would be thwarted? Are not these the only signs by which you meant to determine in any case natural talent or the want of it?”‘

Glaucon:: ‘No one, will name any others.’

Socrates:: ‘Then, do you know any human occupation in which the male sex does not in all these particulars surpass the female? Need I bore you by referring to weaving and the making of pastry and preserves, in which, indeed, the female sex is considered to excel, and where their discomfiture is most laughed at?’

Glaucon:: ‘What you say is true. Speaking generally, the one sex is easily beaten by the other all round. There are indeed many cases of women being better than men in many different employments, but, as a general rule, it is as you say.’

Socrates:: ‘Then, my friend, there is not one of those pursuits by which the city is ordered which belongs to women as women, or to men as men; but natural aptitudes are equally distributed in both kinds of creatures. Women naturally participate in all occupations, and so do men; but in all women are weaker than men.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Shall we, then, assign all occupations to men and none to women?’

Glaucon:: ‘Of course not.’

Socrates:: ‘But we shall say, I fancy, that one woman is by nature fit for medicine, and another not; one musical, and another unmusical?’

Glaucon:: ‘Surely.’

Socrates:: ‘And is not one woman a lover of gymnastic and of war, and another unwarlike and no lover of gymnastic?’

Glaucon:: ‘I should think so.’

Socrates:: ‘And one a lover and another a hater of wisdom; one spirited, another spiritless?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then one woman will be capable of being a guardian and another not. For did we not select just this nature for our men guardians?’

Glaucon:: ‘We did.’

Socrates:: ‘Then for the purposes of guarding the city the nature of men and women is the same, except that women are naturally weaker, men naturally stronger?’

Glaucon:: ‘Apparently.’

Socrates:: ‘Then we must select women of the necessary character to share the life of men of like character and guard the city along with them, inasmuch as they are capable and of a kindred nature?’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then must we not assign the same occupations to the same natures?’

Glaucon:: ‘Yes.’

Socrates:: ‘So we are come round to what we said before, and allow that there is nothing unnatural in assigning music and gymnastic to the wives of the guardians?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Then our legislation has not been an impracticable dream, seeing that we have made our law in accordance with nature? Present conditions which depart from this are evidently much more a departure from nature.’

Glaucon:: ‘Evidently.’

Socrates:: ‘Now were we not inquiring whether our proposals are practicable and desirable?’

Glaucon:: ‘We were.’

Socrates:: ‘And we are agreed that they are practicable?

Glaucon:: ‘Yes.’

Socrates:: ‘Then we must next come to an agreement on their desirability?’

Glaucon:: ‘Obviously.’

Socrates:: ‘Then surely if women are to become fit to be guardians, we shall not have one education to make guardians of the men and another for the women, especially when education will have the same nature to work upon?’

Glaucon:: ‘No.’

Socrates:: ‘What is your opinion in a question like this?

Glaucon:: ‘Like what?’

Socrates:: ‘How do you conceive to yourself one man as better and another as worse? or do you think that all are alike?’

Glaucon:: ‘Certainly not.’

Socrates:: 'Then, in this city which we were founding, do you think that our guardians, who have received the education we have described, will be better men than the shoemakers who have been trained in shoemaking?'

Glaucon:: 'The question is ridiculous.'

Socrates:: 'I understand. Then are not these the best of all the citizens?'

Glaucon:: 'Much the best.'

Socrates:: 'Further, will not these women be the best of the women?'

Glaucon:: 'Yes, much the best also.'

Socrates:: 'Then is anything better for a city than that it should contain the best possible men and women?'

Glaucon:: 'Nothing.'

Socrates:: 'But will not music and gymnastic, employed as we have described, bring about this result?'

Glaucon:: 'Surely.'

Socrates:: 'Then we have laid down laws for the city which are not only practicable, but also desirable?'

Glaucon:: 'Yes.'

Socrates:: 'Then we must make the wives of our guardians strip, for they will clothe themselves with excellence instead of garments, and we must make them take their share in war and the other duties of guarding the city, and let them do nothing else. Only of these we must the lighter to the women, because of the weakness of the sex. And the man who laughs at naked women, when their exercise has the best as its aim, plucks from his wisdom the unripe fruit of laughter, and has no notion apparently at what he laughs or what he does. For in truth the common saying will ever be the fairest saying, that the useful is beautiful and the harmful ugly.'

Glaucon:: ‘Most certainly.’

Socrates:: ‘This, then, is one wave which, we may say, has been surmounted in our discussion of the law for women. We have, without being swamped, managed to reach the conclusion that our men and women guardians must follow all pursuits in common: rather the argument somehow comes to an agreement with itself that its proposals are practical and advantageous.’

Glaucon:: ‘Certainly. it is a small wave that you are surmounting.’

Socrates:: ‘You will say that it is no great one, when you see the next.’

Glaucon:: ‘Say on, and let me see it,’

Socrates:: ‘This new law, follows, I fancy, the one we have just had, and all those that went before.’

Glaucon:: ‘What is it?’

Socrates:: ‘That these women should be all of them wives in common of all these men, and that no woman should live with any man privately, and that their children too should be common, and the parent should not know his own offspring nor the child its parent.’

Glaucon:: ‘This, is much more formidable than the other. It is much harder to believe in its being practicable or advantageous.’

Socrates:: ‘I don’t think, so far as the question of advantage is concerned, there could be much dispute as to its being the greatest blessing to have both wives and children common, if it were possible. But I fancy that there might be keen controversy as to whether the proposal is practicable or not.’

Glaucon:: ‘Both points might very easily be disputed.’

Socrates:: ‘Then we shall have to face an alliance of arguments. I was expecting that I should run away from one if you agreed as to the advantage of the proposal, and then I should be left with the question whether it was practicable or not.’

Glaucon:: ‘Well, you have not managed to run away, but have been caught; prepare, therefore, to defend both points.’

Socrates:: ‘I must pay the penalty. But grant me this favor. Let me keep holiday, like those lazy-minded men who are wont to feast themselves on their own thoughts when they are travelling alone. Such men, you know, do not wait to discover the means of attaining the object of their desires. They let that question alone to save themselves the weariness of deliberating about what is practicable and what is not. They suppose that they have what they desire, and then proceed to arrange the remainder of the business, and amuse themselves by enumerating all that they will do when their desire is realized, so making their already lazy minds even lazier. I, too, now am yielding to laziness, and I wish to defer the first question as to the practicability of these proposals and consider it later. In the meantime, if you will allow me, I shall assume their practicability, and examine what arrangements the rulers will make when these proposals are put into practice, and show that their realization will be of the greatest possible benefit to both city and guardians. I shall try thoroughly to discuss these points with you first, and leave the others till later, if you will allow me.’

Glaucon:: ‘I will, so begin your discussion.’

Socrates:: ‘I imagine, that if our rulers are worthy of the name, and if their auxiliaries are the same, that the latter will be willing to carry out their orders, and the former in giving their orders will themselves obey the laws, or where we leave them discretion, will be faithful to their spirit.'

Glaucon:: 'Naturally.'

Socrates:: 'Then you, the lawgiver, as you have selected the men, will select the women, choosing as far as possible those of a similar nature, and place them together. Both sexes will live together, with common houses and common meals, no one possessing any private property; and associating with one another in the gymnasia and in the rest of their daily life, they will be led, I imagine, by an inherent necessity to form alliances. Do you not think that this will be inevitable?'

Glaucon:: 'Yes. not by geometric but by lovers' necessity, which, perhaps, is stronger than the other in its power to persuade and constrain the mass of men.'

Socrates:: 'You are right. But next, Glaucon, promiscuous unions or anything of that kind would be a profanation in a state of happy citizens, and the guardians will not allow it.'

Glaucon:: 'No, it would not be just.'

Socrates:: 'Then clearly we shall next see to making the marriages as sacred as possible, and this sanctity will attach to those which are most advantageous.'

Glaucon:: 'Most certainly.'

Socrates:: 'How then will they be most advantageous? Tell me this, Glaucon. I see that you have in your house hunting dogs and a great many game birds. Tell me, I conjure you, have you paid any attention to their unions and breeding?'

Glaucon:: 'In what respect?'

Socrates:: ‘Firstly, though they are all well bred, are there not some which are, or prove themselves to be, the best?’

Glaucon:: ‘There are.’

Socrates:: ‘Then do you breed from all alike, or are you anxious to breed as far as possible from the best of them?’

Glaucon:: ‘From the best of them.’

Socrates:: ‘Then do you breed from those that are very young or very old, or as far as possible from those that are in their prime?’

Glaucon:: ‘From those in their prime.’

Socrates:: ‘And if you did not breed in this way, are you of opinion that the stock of birds and dogs would greatly deteriorate?’

Glaucon:: ‘I am.’

Socrates:: ‘What is your opinion in regard to horses and other living creatures? Would it be different with them?’

Glaucon:: ‘The idea is absurd.’

Socrates:: ‘Good heavens, my dear friend, what surpassing excellence we need in our rulers, if the same principles apply to the human race!’

Glaucon:: ‘They certainly do. What then?’

Socrates:: ‘Because, they will have to administer a great deal of medicine. You know that for cases where medicine is not needed, and the constitution will respond to a diet, we think a quite ordinary doctor good enough; but when medicine has to be administered, we know that a much more courageous doctor is needed.’

Glaucon:: ‘True. But what is your point?’

Socrates:: ‘This. It seems that our rulers will have to administer a great quantity of falsehood and deceit for the benefit of the ruled. For we said, if you remember, that all such practices were useful in the form of medicine.’

Glaucon:: ‘Yes, and we were right.’

Socrates:: ‘And the rightness of it seems to find special application in marriages and the begetting of children.’

Glaucon:: ‘In what way?’

Socrates:: ‘From our admissions, it follows that the best of both sexes ought to be brought together as often as possible, the worst as seldom as possible, and that we should rear the offspring of the first, but not the offspring of the second, if our herd is to reach the highest perfection, and all these arrangements must be secret from all save the rulers if the herd of guardians is to be as free as possible from dissension.’

Glaucon:: ‘You are perfectly right.’

Socrates:: ‘We must then have statutory festivals, at which we shall bring together the brides and bridegrooms. There should be accompanying sacrifices, and our poets must compose strains in honour of the marriages which take place. But the number of marriages we shall place under the control of the rulers, that they may as far as possible keep the population at the same level, having regard to wars and disease and all such ravages, and also taking care to the best of their power that our city become neither great nor small.’

Glaucon:: ‘You are right.’

Socrates:: ‘They must invent, I fancy, some ingenious system of lots, so that those less worthy persons who are rejected when the couples are brought together may on each occasion blame their luck, and not the rulers.’

Glaucon:: ‘Certainly.’

Socrates:: ‘And surely to our young men who acquit themselves well in war or other duties we may give, along with other rewards and prizes, a more unrestricted right of cohabitation in order that there may be a colorable excuse for such fathers having as many children as possible.’

Glaucon:: ‘You are right.’

Socrates:: ‘Then the children as they are born will be taken in charge by the officers appointed for the purpose, whether these are men or women, or both. For of course offices also are common to men and women.’

Glaucon:: ‘Yes.’

Socrates:: ‘The children of good parents, I suppose, they will put into the rearing pen, handing them over to nurses who will live apart in a particular portion of the city; but the children of inferior parents and all defective children that are born to the others they will put out of sight in secrecy and mystery, as is befitting.’

Glaucon:: ‘Yes, they must, if the race of guardians is to be pure.’

Socrates:: ‘And will not these officers also superintend the rearing of the children, bringing the mothers to the nursery when their breasts are full, and taking every precaution to prevent any woman knowing her own child, and providing wet-nurses if the mothers are not enough; and will they not take care that the mothers do not give too much time to suckling the children, and assign night watches and all troublesome duties to nurses and attendants?’

Glaucon:: ‘As you describe it, child-bearing will be a very easy matter for the wives of the guardians.

Socrates:: ‘So it ought to be. Let us now discuss the next point in our proposals. We said that children must be born from parents in their prime.

Glaucon:: 'True.

Socrates:: 'Then do you agree with me that on an average a woman is in her prime for twenty years, and a man for thirty?

Glaucon:: 'Which twenty, and which thirty?

Socrates:: 'For a woman, the proper time is to begin at twenty years and bear children for the city until she is forty; for a man the proper time to begin is when he has seen "the swiftest prime of his running go by, and to beget children far the state until fifty-five.

Glaucon:: 'Yes, in both cases that is the period of their prime both in body and mind.

Socrates:: 'Therefore if a man above or below these ages meddles with the begetting of children for the commonwealth, we shall declare this to be a transgression both impious and unjust; he is raising up a son for the state who, though his birth be secret, will not be born the child of the sacrifices and prayers which the priests and priestesses and the whole city will offer, when on each occasion of marriage they pray that the children may be ever better and more useful than their good and useful parents; but he will be born in darkness, the child of dire incontinence.

Glaucon:: 'You are right.'

Socrates:: 'And the same law will apply, if a man who is still of an age to be a father meddles with a woman of marriageable age when the ruler has not joined them. We shall say that he is giving to the city a child that is a bastard, unauthorized and unholy.

Glaucon:: 'You are perfectly right.'

Socrates:: 'Then I fancy that when the men and women have passed the age of having children we shall, of course, leave them at liberty to associate with whomsoever they please; except that a man must not associate with his daughter or his mother, or his granddaughter or grandmother; and the women we shall allow to associate with any one but a son or a father, or grandson or grandfather; and all this only after we have exhorted them to be very careful that no child, if one should be so conceived, should see the light; but if one should by any chance force its way to the light, they must dispose of it on the understanding that such an offspring is not to be reared.'

Glaucon:: 'These are certainly reasonable proposals. But how will they distinguish one another's fathers and daughters, and the relations you have just mentioned?'

Socrates:: 'They will not do so. But all the children that are born in the tenth month, and also in the seventh, after a man's bridal day, will be called by him, if male his sons, and if female his daughters, and they will call him father, and similarly he will call the offspring of his generation grandchildren, and they again will call him and his fellow-bridegrooms and brides grandfathers and grandmothers; and, lastly, those born in the time when their fathers and mothers were having children will be called brothers and sisters, so that in accordance with what we said a moment ago, they will not associate with one another; but the law may allow the union of brothers and sisters if the lot falls in that way, and the priestess of Apollo approves.'

Glaucon:: 'Quite right.'

Socrates:: 'Such, then, Glaucon, is the community of wives and children for the guardians of your city. Its consistency with the rest of the constitution and its pre-eminent desirability we must go on to establish from the argument. Do you agree?'

Glaucon:: 'Yes, by all means.'

Socrates:: ‘Then is not the first step in our search agreement that we should ask ourselves what is the greatest good that we can mention for the equipment of our city, at which the lawgiver must aim in his legislation, and what the greatest evil; and then we may inquire whether the institutions we have described fit into our outline of the good and are contrary to our outline of the evil?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Can we mention any greater evil to a city than that which rends it asunder and makes it not one city but many? or any greater good than that which binds it together and makes it one?’

Glaucon:: ‘We cannot.’

Socrates:: ‘Then does not communion in pleasure and pain bind the city together, when, as far as may be, all the citizens rejoice and grieve alike over the same births and the same deaths?’

Glaucon:: ‘Certainly.’

Socrates:: ‘On the other hand, is not individuality in these feelings a dissolving force, when one part of the citizens are smitten with grief and the other transported with joy over the same experiences of the city or its inhabitants?’

Glaucon:: ‘Surely.’

Socrates:: ‘And does not this state of things result when such words as “mine” and “not mine,” “another’s” and “not another’s,” are not pronounced in the city in concert?’

Glaucon:: ‘Yes, indeed.’

Socrates:: ‘Then that city is best governed, whichever it may be, in which the largest number of men agree in applying these words, “mine” or “not mine,” to the same thing?’

Glaucon:: 'Very much so.'

Socrates:: 'And is it not this that is nearest the condition of a single individual? For consider, when any one of us hurts his finger, the whole fellowship of body and soul which is bound into a single organization, namely, that of the ruling power within it, feels the hurt, and is all in pain at once, whole and hurt part together. And so we say that the man has a pain in his finger. And in regard to any part of the human body whatever, may not the same account be given of the pain felt when a part is hurt, and of the pleasure felt when it is at ease?'

Glaucon:: 'Yes. And to return to your question, the life of the best governed city comes very near to this condition.'

Socrates:: 'Then I fancy that when an individual citizen has any experience, whether good or bad, such a city will most certainly declare that experience its own, and the whole city will share his joy or his sorrow.'

Glaucon:: 'That must certainly be the case if the city has good laws.'

Socrates:: 'It will now be time for us, to return to our own city and examine whether in it we shall find the conclusions of our argument most strikingly realized, or whether in this point some other city surpasses it."

Glaucon:: 'Yes, we must do so.'

Socrates:: 'Well, then, ill this city, as in the rest, there are rulers and people, are there not?'

Glaucon:: 'Yes.'

Socrates:: 'And do not these all call each other citizens?

Glaucon:: 'Surely.

Socrates:: 'But in other cities, what do the people call the rulers besides citizens?

Glaucon:: ‘In many cities they call them masters, but in democratic cities simply rulers.

Socrates:: ‘What of the people in our city? What do they call the rulers besides citizens?

Glaucon:: ‘Saviors and helpers.’

Socrates:: ‘And what do these call the people?

Glaucon:: ‘Wage payers and supporters.

Socrates:: ‘But what do the rulers in other cities call the people?

Glaucon:: ‘Slaves.’

Socrates:: ‘And what do the rulers call each other?

Glaucon:: ‘Fellow-rulers.’

Socrates:: ‘And in our city?

Glaucon:: ‘Fellow-guardians.

Socrates:: ‘Then can we say of a rule, in other cities that he may address one of his fellow-rulers as a kinsman and another as a stranger?

Glaucon:: ‘Yes, many might.

Socrates:: ‘Then does he not think and speak of the kinsman as belonging to him, and of the stranger as not belonging?

Glaucon:: ‘Yes.

Socrates:: ‘But what of your guardians? Could any of them think of or address one of his fellow-guardians as a stranger?

Glaucon:: ‘Certainly not, for in every one he meets he will think he has a brother or sister, or father or mother, or son or daughter, or grandchild or grandparent.

Socrates:: ‘Excellent. But answer me this also. Will your law prescribe for them only names of kinship, or must all their actions be in accordance with these names? In their behavior towards their fathers must they not observe all that the law prescribes for this relation—reverence, filial care, and the proper obedience to parents—or else suffer at the hands of God and man? For he who acts otherwise profanes heaven and wrongs man. Will not those sayings be sung by all the citizens, and sound in their ears from their earliest childhood with reference to those who are pointed out to them as fathers and other relatives?'

Glaucon:: 'They will. It would be ridiculous if with their lips alone they uttered the names whilst they neglected the acts of friendship.'

Socrates:: 'Then in this city above all others, when any one meets with good fortune or with bad they will join in uttering the words of which I have just spoken, saying "It is well with mine" or "It is ill with mine."'

Glaucon:: 'Very true.'

Socrates:: 'Did we not say that upon this belief and its expression followed a community in pleasures and pains?'

Glaucon:: 'We did, and we were right.'

Socrates:: 'Then will not our citizens most truly have community in the same thing, that to which they will apply the name "mine," and having such community, will they not most truly have community of pleasure and pain?'

Glaucon:: 'Certainly.'

Socrates:: 'And besides the general arrangements of the state, is not the guardians' community of wives and children a cause of this?'

Glaucon:: 'Most certainly it is.'

Socrates:: 'But you remember that when we likened a well established city to the relation of a body and its members in its feelings of pleasure and pain, we agreed that this was the greatest good that could come to it.'

Glaucon:: ‘And we were right.’

Socrates:: ‘Then we have proved the auxiliaries’ community of wives and children to be a cause of the greatest good that a city can have?’

Glaucon:: ‘Certainly we have.’

Socrates:: ‘Then in this we are also consistent with our former remarks. For we said, did we not, that if they were to be guardians in reality they must not have houses or land or any other possession of their own, but must receive what they need for sustenance from the other citizens as wages for their guardianship, and lay it out in common?

Glaucon:: ‘We were right.’

Socrates:: ‘Then am I correct in saying that these regulations, together with our former statements, will do still more to make them true guardians, and prevent the disruption of the city which would result if each man gave the name of “mine” not to the same but to different things; if all took what they could get for themselves, and dragged it off to their different private houses; if each called a different wife and different children his own, and thus implanted in the city the individual pleasures and griefs of individuals: rather they will have one single belief concerning what is their own and be all concerned in the same purpose, and so will all be, as far as is possible, simultaneously affected by pleasure and pain?’

Glaucon:: ‘That is perfectly true.’

Socrates:: ‘Further, will not lawsuits and prosecutions almost have disappeared if their own persons are their only private property and everything else is common? Will they not, therefore, be free from all those quarrels that arise among men from the possession of money, or children, or kinsmen?’

Glaucon:: ‘It is quite inevitable that they should.’

Socrates:: ‘Further, no actions for forcible seizure or for assault will rightly arise among them; for we shall declare, I suppose, that it is honorable and just for equals to defend themselves against equals, so compelling them to keep themselves in condition.’

Glaucon:: ‘That is right.’

Socrates:: ‘Yes, and here is a further reason why this law is right. When any man is angry with another, if he may vent his anger in this way he is less likely to make a serious quarrel of it.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Further, we shall authorize the elder to rule over and chastise all the younger.’

Glaucon:: ‘Clearly.’

Socrates:: ‘Also a younger man will never dare to strike or in any other way do violence to an older unless at the command of the guardians. That we may reasonably expect. And I fancy that he will not do him dishonor in any other way. For two guardians will be strong enough to prevent him—fear and shame—the shame that forbids him to lay hands on his parents, and the fear that the others will come to the rescue of the injured man, whose sons and brothers and fathers they are.’

Glaucon:: ‘Yes, that will be the result.’

Socrates:: ‘Then in every way our laws will make these men dwell at peace with one another?’

Glaucon:: ‘Yes, to a large extent.’

Socrates:: ‘Then if they are free from dissension, there is no fear of the rest of the city quarrelling either with them or with one another?’

Glaucon:: ‘No, certainly not.’

Socrates:: 'I am almost ashamed to go on and mention the petty evils which they will escape. The poor will no longer need to flatter the rich; they will be free from all the perplexities and worries of bringing up children and making an income which are entailed in the upkeep of a household—the borrowing and repudiation, the scraping together of money to give to their wives and servants to manage for them. The nature and extent of men's sufferings over these matters are obvious, and ignoble too, not deserving mention.'

Glaucon:: 'Yes, they are obvious even to the blind.'

Socrates:: 'Then they will be rid of all those troubles, and their life will be more blessed than the blissful life of Olympian victors.'

Glaucon:: 'How?

Socrates:: 'Well, the happiness of Olympian victors consists in but a Small portion of the blessings of our guardians. For the guardians victory is nobler and their public maintenance more complete. For the victory they win is the salvation of the whole city, and sustenance and all that life requires is the crown given to them and to their children. Their own city gives them privileges in their lifetime, and after death a fitting burial.'

Glaucon:: 'Yes, these are noble gifts.'

Socrates:: 'But do you remember, that a little while ago we were troubled by someone's objecting that we were not making our guardians happy, who with power to have all the wealth of the citizens had actually nothing? We replied, did we not, that we should examine this question later if it came in our way, but that at the moment we were making our guardians real guardians and making the city as happy as we could, not confining ourselves to one class in the city and making that happy?'

Glaucon:: ‘I remember.’

Socrates:: ‘Then, since the life of the auxiliaries is seen to be far nobler and better than that of Olympian victors, can we possibly think it on a level with the life of shoemakers or any other craftsmen, or with the life of farmers?’

Glaucon:: ‘I think not.’

Socrates:: ‘No, but we may justly say now, what I said then, that if our guardians try to be happy in such a way that they cease to be guardians, if they will not be satisfied with a life so moderate and secure, a life which, as we say, is the best, if an insensate and childish notion about happiness possesses their souls and impels them, because of the power they possess, to make everything in the city their own, then they will know how truly wise Hesiod was when he said “the half is greater than the whole.”

Glaucon:: ‘Yes, if they take my advice they will remain true to the life we have described.

Socrates:: ‘Then do you agree, to this community of women with men in education, in the care of the children and guardianship of the other citizens, and that they must both remain in the city and go out to war, guard and hunt with the men like dogs, and as far as possible take their full share in everything, and that by so doing their actions will be most desirable and not contrary to the natural relations of male and female or their natural community?’

Glaucon:: ‘I agree.’

Socrates:: ‘Then, have we now only left for consideration whether the establishment of this community is as possible among men as it is among other living creatures, and in what way it is possible?’

Glaucon:: ‘That is the question with which I was going to interrupt you. You have forestalled me.’

Socrates:: ‘We need not speak about war, for it is obvious, I fancy, what will be the manner of their wars.’

Glaucon:: ‘What?’

Socrates:: ‘Both sexes will go to war together, and will take with them such of the children as are strong enough, that, like the children of other craftsmen, they may have a sight of what they will have to do when they are grown up. Besides looking on, they will have to give the general help and service required in war, and assist their fathers and mothers. Have you not noticed this in the various crafts, that the children of potters, for example, have to spend a long time in looking on and helping before they start making pots?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And ought they to be more careful in training their children in experience of, and acquaintance with, their duties than are the guardians?’

Glaucon:: ‘No, that would be ridiculous.’

Socrates:: ‘And, besides, every creature fights more bravely in the presence of its offspring?’

Glaucon:: ‘That is so. But, Socrates, there will be considerable danger in the case of those defeats which are common in war, that both they and their children will fall, and the rest of the city be unable to recover.’

Socrates:: ‘That is true. But, in the first place, do you think that we should always try to avoid the possibilities of danger?’

Glaucon:: ‘Certainly not.’

Socrates:: ‘Then if we must have danger, had we not better have it when success will mean improvement?’

Glaucon:: ‘Obviously.’

Socrates:: ‘But do you think it unimportant whether the men who are to be warriors should, or should not, see warfare when they are children, and not worth some risk?’

Glaucon:: ‘No, it certainly is important for the purpose you mention.’

Socrates:: ‘We must arrange, then, that the children should see war, and contrive that they shall do so safely. In that way all will be right, will it not?’

Glaucon:: ‘Yes.’

Socrates:: ‘Well, in the first place, will not their fathers know and understand, as far as men may, which expeditions are dangerous, and which are not?’

Glaucon:: ‘That is probable.’

Socrates:: ‘And they will take the children to the latter, but be careful not to take them to the former kind?’

Glaucon:: ‘Rightly so.’

Socrates:: ‘And, no doubt, they will set rulers over them, and those not the meanest of the citizens; men of experience and mature age shall be their guides and tutors?’

Glaucon:: ‘That is only proper.’

Socrates:: ‘Still we may object that many things fall out quite contrary to expectation.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then in view of such contingencies, my friend, our children must from the first be given wings, in order that, in case of necessity, they may fly away and escape.’

Glaucon:: ‘What do you mean?’

Socrates:: ‘We must set them on horseback, in their earliest years, and when we have had them taught to ride, must take them to view the fighting mounted not on spirited chargers, but on the fleetest and most docile horses we can find. For in this way they will get the best view of the work for which they are destined, and, in case of necessity, will most securely make their escape, following in the train of their grown-up tutors,’

Glaucon:: ‘I think you are right.’

Socrates:: ‘To come now to war regulations, how should you have your soldiers disposed to one another and to their enemies? Am I right in my ideas?’

Glaucon:: ‘Tell me what they are.’

Socrates:: ‘If any of them deserts his rank, throws away his arms, or does any cowardly action of that sort, must he not be degraded to a craftsman or a farmer?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And him who is taken alive by the enemy, shall we not present to his captors to use their catch as they please?’

Glaucon:: ‘Yes.’

Socrates:: ‘But when a man has done bravely and distinguished himself, do you not think that, in the first place, he ought to be crowned on the field by each in turn of the youths and children who are serving with -he army?’

Glaucon:: ‘Certainly I do.’

Socrates:: ‘And shaken by the hand.’

Glaucon:: ‘Yes, that also.’

Socrates:: ‘But I fancy that in this you will no longer agree with me.’

Glaucon:: ‘In what?’

Socrates:: ‘In the suggestion that he should kiss and be kissed by each in turn.’

Glaucon:: ‘I am for that, most strongly of everything. And I make this addition to the law, that, as long as the campaign lasts, no one whom he wishes to kiss may say him nay, in order that if any soldier be in love, whether with male or female, he may be more eager to carry off the prize of velour.’

Socrates:: ‘Excellent. And we have already mentioned that there are more marriages arranged for a brave man than for the others, and more frequent selections of such men than of the others, in order that as many children as possible may be obtained from such a father.’

Glaucon:: ‘Yes, we have.’

Socrates:: ‘For that matter, we have it on Homer’s authority that it is just to honour brave youths in this way. For Homer says that Ajax when he had distinguished himself in battle received as a reward “whole chines of beef,” implying that this was a proper way of honouring a brave man in the prime of his manhood, a reward which was a mark of honour, and at the same time would increase his physical strength.’

Glaucon:: ‘You are perfectly right.’

Socrates:: ‘Then on this point we shall follow Homer. At sacrifices, and on all similar occasions, we shall honour the brave according to their degree of merit, not only with hymns and the rewards we have just mentioned, but also with “special seat and special meat and fuller goblets,” that we may while honouring our brave men and women, also discipline them.’

Glaucon:: ‘Your remarks are excellent.’

Socrates:: ‘Good. And when men are killed in a campaign, shall we not say, in the first place, that he who has made a glorious end belongs to the golden race?’

Glaucon:: ‘Most certainly we shall.’

Socrates:: ‘And on the death of men of this race shall we not say with Hesiod that

As holy spirits they dwell on earth and guard
Humanity, kind warders off of evil?

Glaucon:: 'Yes, we shall.'

Socrates:: 'And shall we not inquire of the god how to order the sepulture of sacred and divine persons, and with what special ceremonies, and bury them with the rites the god advises?'

Glaucon:: 'Surely we shall.'

Socrates:: 'And for all time to come shall we not render service and worship at their tombs, as at the tombs of demigods? And shall we ordain the same rites for any of those who have been judged of surpassing excellence of life when they die of old age, or from any other cause?'

Glaucon:: 'That is but just.'

Socrates:: 'Further, how will our soldiers deal with their enemies?'

Glaucon:: 'To what does your question refer?'

Socrates:: 'Well, in the first place, take the practice of enslavement. Do you think it just that Greek cities should enslave Greeks? or should they make it their rule, and enforce the same in other cities, to spare all of the Greek race, fearing their own enslavement by the barbarians?'

Glaucon:: 'That is beyond all comparison the better course.'

Socrates:: 'And do you agree that they must not hold Greeks in slavery, and must advise the rest of Greece to follow their example?'

Glaucon:: 'Certainly. Their energies would thus be directed more against the barbarians and less against their countrymen.'

Socrates:: 'Further, is it well after victory to strip the slain of anything except their arms? Does not this give cowards a pretext for keeping out of the fighting line on the excuse that, when they are stooping over the dead, they are engaged in necessary work; and have not many armies been lost by this practice of spoiling?'

Glaucon:: 'Yes.'

Socrates:: 'Do you not think it mean and avaricious to spoil a dead body, and the sign of a small feminine mind, when your foe is dead and flown away, leaving only that with which he has fought, to think that his body is your enemy? Are men who do so any better, in your opinion, than dogs who worry the stones that are thrown at them and do not touch him who throws them?'

Glaucon:: 'Not a bit better.'

Socrates:: 'Then we must let alone the spoiling of the dead or prevention of the removal of the fallen?

Glaucon:: 'Yes, assuredly we must let that well alone.'

Socrates:: 'Nor, of course, must we carry the arms to the temples to dedicate them there—certainly not the arms of Greeks, if we have any thought for the goodwill of the rest of Greece. Rather we shall be afraid of polluting the temples by bringing to them the spoils of our kinsmen, unless, indeed, the god instructs us otherwise.'

Glaucon:: 'That is very right.'

Socrates:: 'Consider now the practices of ravaging Greek territory or burning homesteads. What attitude will your soldiers adopt to those practices in warfare?'

Glaucon:: 'I should like to hear your opinion on the subject.'

Socrates:: 'I think, that they would refrain from both these practices, and would be content with taking the yearly harvest. Shall I give you my reasons?'

Glaucon:: 'Please do.'

Socrates:: ‘It appears to me that war and sedition, as they are two in name, are also two in reality. For the words are applied to differences arising in two things—namely, in what is akin or related, and what is foreign or alien. Sedition is the name given to the enmity of what is akin; war that given to the enmity of what is alien.’

Glaucon:: ‘That is a very just mode of speaking.’

Socrates:: ‘Then see if this is also justly spoken. I declare the Greek race to be akin and related to themselves, but foreign and alien to the barbarians.’

Glaucon:: ‘And you say well.’

Socrates:: ‘Then when Greeks and barbarians fight, we shall say that they are natural enemies, warring against one another, and this enmity is to be called war; but when Greeks fight with Greeks, we shall declare that naturally they are friends, and that when anything of this kind occurs, Greece is sick and attacked by sedition, and this kind of enmity is to be called sedition.’

Glaucon:: ‘Yes, I agree to view the matter in this way.’

Socrates:: ‘Now observe, what happens in the case of what is ordinarily called sedition. When anything of this kind occurs and a city is divided against itself, if one faction ravages the territory or burns the homesteads of the other, the sedition is thought to be sinful, and both parties are looked upon as unpatriotic. If they were not they would never have dared to mangle the land which is their nurse and mother. But it is considered reasonable that the victors should carry off the crops from their adversaries, but that they should feel that they are not always going to be at war, but will some day be reconciled.’

Glaucon:: ‘Yes, this feeling betokens a far more civilized condition than the other.’

Socrates:: ‘Well, then, will not the city of which you are founder be Greek?’

Glaucon:: ‘It must be.’

Socrates:: ‘Then its citizens will be good and civilized?’

Glaucon:: ‘Very much so.’

Socrates:: ‘And patriotic Greeks, too, will they not, who will consider all Greece as their own country, and share in the common festivals with the rest of Greece?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Then will they consider a difference with Greeks to be a difference with kinsmen, and therefore sedition? They will certainly not call it a war.’

Glaucon:: ‘No.’

Socrates:: ‘And will they not prosecute their quarrel in the hope of being eventually reconciled?’

Glaucon:: ‘Certainly.’

Socrates:: ‘They will therefore correct them in a friendly spirit, and chastise them without any intention of enslaving or destroying them, since they are their correctors, not their enemies?’

Glaucon:: Yes.’

Socrates:: ‘Then none who are Greeks will ravage Greece or burn homesteads. They will never consider all the inhabitants of a city, men, women, and children, to be their foes, but only those few who are responsible for the quarrel. And for all those reasons, since the majority in any city are their friends, they will not consent to ravage their land or destroy their houses. They will prosecute their quarrel only until the guilty parties are compelled by the sufferings of the innocent to give satisfaction for their offence.’

Glaucon:: ‘I agree, that our citizens should adopt this behavior towards their opponents, and they should believe to barbarians as Greeks now behave to one another.’

Socrates:: ‘Then shall we prescribe this law to the guardians, that they must neither ravage territory nor burn homesteads?’

Glaucon:: ‘Yes, we will; and we will assume that this and the former enactments are excellent. But really, Socrates, if we allow you to go on in this way, I think you will never come to the question which you postponed some time ago before you entered on all these topics—the question whether this constitution is realizable, and if so, in what way it could ever come into being. For, as far as your contention is concerned—that if it could, nothing but advantage would result to the city where it was found—I not only agree with you, but can offer some additional arguments which you omit. They would fight most valiantly against their enemies, as they would be very unlikely to desert one another, acknowledging each other as brothers, fathers, or sons, and calling each other by these names. And if their womankind fought with them—whether in the same ranks or posted behind as a reserve to strike terror into their enemies, and to give assistance wherever it might be wanted—then I know that they would be absolutely invincible. Also, I see all the advantages which they would enjoy at home, which you have omitted. Now, since I acknowledge that they would have all those advantages, and thousands more, were this constitution realized, you need not go on describing it in fuller detail, but let us now try to persuade ourselves on this point: Is the city realizable? If so, how? And we may leave the other question alone.

Socrates:: ‘What a sudden attack you have made upon my argument, and what little mercy you have on my hesitation! Perhaps you are not aware that, after I have just managed to escape those two waves, you are bringing down on me the greatest and the most formidable of the three. When you see and hear what it is, you will certainly forgive me for my natural hesitation and my fear of stating or trying to inquire into an argument so paradoxical.'

Glaucon:: 'The more you talk like that, the less we shall excuse you from stating how this constitution can be realized. So begin without delay.'

Socrates:: 'Well, first of all, we must remember that it is a search after the nature of justice that has brought us to this point.'

Glaucon:: 'We must. What about it?'

Socrates:: 'Nothing. Only if we discover what justice is like, shall we expect that the just man must in no way differ from this conception, but be in every respect the same as justice is? or shall we be content if he comes very close to it, and partakes of it more than any one else?'

Glaucon:: 'Yes, we shall be content with that.'

Socrates:: 'It was in order to have a standard, that we were inquiring what justice itself is like, and what the perfectly just man would be like, if he should come into existence, and were inquiring similarly as to injustice and the perfectly unjust man. We wanted to be able to see how those two men appeared to us to enjoy happiness or its opposite, so that we might be compelled to acknowledge concerning ourselves that he who resembles them most closely will also have a lot most closely resembling theirs. We had no desire to prove that these standards could be realized.'

Glaucon:: 'Yes, that is true.'

Socrates:: 'Now, do you think any les well of an artist who has painted a pattern of what the most beautiful man would be like, with everything correct in the composition, because he cannot prove that such a man might possibly exist?’

Glaucon:: ‘No, certainly I do not.’

Socrates:: ‘Well, then, were not we two fashioning in argument a pattern of a good city?’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then do you think any less of our words because we cannot prove that it is possible to found a city of the manner we have described?’

Glaucon:: ‘Surely not.’

Socrates:: ‘That is the truth of the matter. But if to please you I must exert myself and show in what especial way and under what conditions it can be most nearly realized, you must make me these same admissions with a view to this demonstration.’

Glaucon:: ‘What admissions?’

Socrates:: ‘Can anything be done as it is spoken, or is it nature that action should lay less hold of truth than speech, though not every one thinks so? Do you agree or not?’

Glaucon:: ‘I do.’

Socrates:: ‘Then in that case do not compel me to show that what we have decided in our argument could in all respects be reproduced in experience. If we manage to discover how a city could be organized in any close correspondence to our description, then you must allow that we have discovered that your commands could be realized. Will you not be content with that? I certainly should be.’

Glaucon:: ‘Yes, I will.’

Socrates:: 'Then, next, apparently we must try to discover and demonstrate what evil practice in the cities of to-day prevents them from being organized in this way, and what is the smallest change by which a city might arrive at this manner of constitution. We shall hope confine ourselves to a single change, or, if that is impossible, to two, or if that will not suffice, to changes as few in number, and small in their effect, as is possible.'

Glaucon:: 'Most certainly.'

Socrates:: 'Well, there is one change, which I think we could prove would bring about the revolution. It is certainly neither a small nor an easy change, but it is possible.

Glaucon:: 'What is it?'

Socrates:: 'Now, I am at the very topic which we likened to the greatest wave. Spoken,, however, it shall be, even though it is likely to deluge me with laughter and ridicule, like a wave breaking in merriment. Consider then what I am about to say.'

Glaucon:: 'Say on.'

Socrates:: 'Unless, philosophers bear kingly rule in cities, or those who are now called kings and princes become genuine and adequate philosophers, and political power and philosophy are brought together, and unless the numerous natures who at present pursue either politics or philosophy, the one to the exclusion of the other, are forcibly debarred from this behavior, there will be no respite from evil, my dear Glaucon, for cities, nor, I fancy, for humanity; nor will this constitution, which we have just described in our argument, come to that realization which is possible for it and see the light of day. It is this which has for so long made me hesitate to speak. I saw how paradoxical it would sound. For it is given to few to perceive that no other constitution could ever bring happiness either to states or individuals.'

Glaucon:: 'After venturing on a statement like that, Socrates, you may expect that many most redoubtable assailants will wait for no more, but will pull off their coats and, snatching the first weapon that comes to hand, rush at you in tremendous eagerness, ready to do all kinds of extraordinary deeds. Unless you can keep them off by your argument and escape them, you will learn to your cost what flouting means.'

Socrates:: 'Have you not brought all this upon me?'

Glaucon:: 'I have, and I was right to do so. Still I shall not betray you, but defend you by what means I can. I can give you sympathy and encouragement, and perhaps answer you a little more carefully than another might. That is the sort of assistance you will get, so you must endeavor on those terms to prove to the skeptics that what you say is true.'

Socrates:: 'I must, especially when you offer me such a valuable alliance. Now I think that if we are in any way to escape the opponents you mention, it is essential that we should define to them what we mean by "philosophers" when we venture to say that they ought to rule, because, when the distinction is made, a defense will be possible if it is shown that some persons are by nature fitted to embrace philosophy and take the lead in a city, while the others are not fitted to embrace it, but only to follow their leader.'

Glaucon:: 'Definition would be opportune.'

Socrates:: 'Come, then, follow after me in the hope that in some way or other we may expound our notion satisfactorily.'

Glaucon:: 'Lead on.'

Socrates:: ‘Must I remind you, or do you remember that if we say that a man is a lover of anything, if the expression is rightly used, it must be shown, not that he loves one part of it and not another, but that he cares for the whole of it?’

Glaucon:: ‘I need to be reminded apparently, for I do not exactly remember.’

Socrates:: ‘Now, Glaucon, you are the last person who should say that. An amorous man ought not to forget that a boy-loving amorous person is in some way or other stirred and attracted by all who are in their bloom. He thinks they all deserve his attention and caresses. Is not that the way of you gentlemen with the fair? A snub-nosed boy you praise and call charming, another’s hooked beak you call kingly, a third, who is between the two extremes, you describe as beautifully proportioned; dark boys are manly to look upon, fair are the children of the gods. Where do you think the name of “honey-pale” comes from, if not from the excuses of a lover who could put up with paleness when he found it in the cheek of youth? In a word, you make every kind of excuse and invent every conceivable name sooner than reject any that are in the flower and bloom of life.’

Glaucon:: ‘You choose to cite me as an example of how amorous persons behave. but I agree for the argument’s sake.’

Socrates:: ‘Further, do you not observe lovers of wine behaving in the same way, gladly accepting any wine on any excuse?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And you find the same, I imagine, in lovers of honour or ambitious men. If they can’t be generals, they are glad to be subalterns. If they cannot win the honour of the great and good, they are content to be honored by the mean and contemptible, since they have an indiscriminate appetite for honour.'

Glaucon:: 'That is perfectly true.'

Socrates:: 'Then is this true, or not? If we say that a man has an appetite for anything, shall we assert that he has an appetite for the whole class that the term includes, not for one part of it to the exclusion of another?'

Glaucon:: 'Yes, for the whole class.'

Socrates:: 'Then shall we not also say that the lover of wisdom or the philosopher has an appetite for wisdom, not for some to the exclusion of other wisdom, but for all?'

Glaucon:: ' True.'

Socrates:: 'Then the man who grumbles at his lessons, especially when he is young and cannot yet distinguish between what is profitable and what is not, we shall not call fond of learning or a philosopher, any more than we say that a man who is nice about his food is hungry or has an appetite for food; him we call, not a lover of food, but a bad feeder.'

Glaucon:: 'Yes, and we shall be right.'

Socrates:: 'But the man who tastes eagerly every kind of learning, who sets himself readily to his lessons and can never have enough, him we shall justly call a lover of wisdom and a philosopher, shall we not?'

Glaucon:: 'Of such people you will have many and strange examples. For all lovers of sights seem to me to be included because of their joy in learning; and lovers of sounds, too, are the most astonishing people to class as philosophers. They would not willingly attend philosophic discussions or any such occasions, but as though they had hired out their ears to listen to any and every chorus they run about at the Dionysia, not missing a single performance in town or country. Shall we give the name of philosophers to all these, and to others who have a similar taste for learning, and to the masters of the petty crafts?

Socrates:: ‘By no means. We shall say that they are counterfeit philosophers.’

Glaucon:: ‘Then whom do you mean by the term true philosophers?’

Socrates:: ‘Those, who love to see the truth.’

Glaucon:: ‘Yes, that is certainly right. But what do you mean by that?’

Socrates:: ‘It is not easy to explain to any one else, but I fancy that you will agree with me in this.’

Glaucon:: ‘In what?’

Socrates:: Since beautiful is opposite to ugly, these are two.’

Glaucon:: ‘Surely.’

Socrates:: ‘Then since they are two, each is one?’

Glaucon:: ‘Yes.’

Socrates:: ‘And the same holds of just and unjust, good and bad, and all forms. Each in itself is one, but by reason of their community with actions and bodies, and with each other, they appear everywhere, and each seems many.’

Glaucon:: ‘You are right.’

Socrates:: ‘In this way, then, I make my distinction. On one side put those we have just mentioned, lovers of sights and lovers of crafts and men of action, and then on the other those with whom the argument is concerned, who alone are rightly called philosophers.’

Glaucon:: ‘What do you mean?’

Socrates:: ‘Well, the lovers of sounds and of sights admire beautiful sounds and colors and figures and all things fashioned out of such, but their understanding is incapable of seeing or admiring the nature of real beauty.'

Glaucon:: 'That is certainly the case.'

Socrates:: 'Then will not those who are capable of approaching the real beauty, and of seeing it as itself, be few in number?'

Glaucon:: 'Yes, indeed.'

Socrates:: 'But if a man recognizes that there are beautiful things, but disbelieves in real beauty, and cannot follow should another lead him to the knowledge of it, do you think that such an one leads a waking or a dreaming life? For, consider, is not a man dreaming, whether he is asleep or awake, when he thinks a likeness of anything to be not a likeness, but the reality which it resembles?'

Glaucon:: 'I certainly, should say that such a man was dreaming.'

Socrates:: 'But what of him who, contrariwise, recognizes a certain real beauty, and is able to discern both it and the objects which participate in it, and does not take the participating objects for it or it for them, do you think he leads a waking or a dreaming life?'

Glaucon:: 'A waking life, most certainly.'

Socrates:: 'Then may we not justly say that his understanding is knowledge because he knows, while the other's is belief because he only believes?'

Glaucon:: 'Certainly.'

Socrates:: 'Then what shall we do if this person is angry with us because we say that he believes but does not know and if he disputes the truth of our statement? Shall we be able to appease him and gently persuade him, without letting him know that he is barely sane?'

Glaucon:: 'Yes, we must.'

Socrates:: ‘Come, then, consider what we shall say to him. Shall we make inquiries of him in this way, and say that we do not grudge any knowledge he may have, but shall be very glad to sec that he knows something? “But tell me this,” we shall say, “does he that knows, know something or nothing?” Do you answer me for him.’

Glaucon:: ‘I shall answer, that he knows something.’

Socrates:: ‘Something which is, or something which is not?’

Glaucon:: ‘Something which is. For how could that which is not be known?’

Socrates:: ‘Then are we sure of this, in however many ways we look at it, that what is completely, is completely knowable, and what in no way is, is in every way unknowable?’

Glaucon:: ‘Perfectly sure.’

Socrates:: ‘Good. Then if there be something so constituted as both to be and not to be, will it not lie between what absolutely is and what in all ways is not?’

Glaucon:: ‘It will.’

Socrates:: Then knowledge is set over that which is, and ignorance of necessity over that which is not; and over this that is between, must we not now seek for something between ignorance and knowledge, if there is such a thing?’

Glaucon:: ‘Certainly.’

Socrates:: ‘But do we say that belief is anything?’

Glaucon:: ‘Surely.’

Socrates:: A power distinct from knowledge, or identical with it?’

Glaucon:: ‘Distinct.’

Socrates:: ‘Then belief is set over one thing and knowledge over another, each according to its own power?’

Glaucon:: 'Yes.'

Socrates:: Then is it not the nature of knowledge, being set over that which is, to know how it is? But first, I think we had better make this distinction.'

Glaucon:: 'What?'

Socrates:: 'We shall say that powers are a certain general class of existences, by means of which, indeed, we and every other thing can do what we can. Sight and hearing, for example, I call powers. Perhaps you understand what I have in mind.'

Glaucon:: 'Yes, I understand.'

Socrates:: 'Then listen to my opinion about them. In a power I see no color or figure, or any such attributes as many other things have and in reference to which I distinguish them to myself as differing from one another. In a power I look only to that over which it is, and to what it effects, and on this principle I used the term power in each case; and any powers which are set over the same thing, and have the same effect, I call the same; if they are over different things and have different effects, I call them different. What is your practice? Do you do the same?'

Glaucon:: 'Yes.'

Socrates:: 'Then come back to this point, my excellent friend. Do you call knowledge a power, or, if not, in what class do you place it?'

Glaucon:: 'It is a power, and the strongest of all powers.'

Socrates:: 'Further, shall we call belief a power, or place it in some other class?'

Glaucon:: 'Certainly not the latter. For that by which we are able to believe, is nothing else than belief.'

Socrates:: 'But a little time ago you admitted that knowledge and belief are not the same.'

Glaucon:: 'How could any sensible man identify the infallible with the fallible?'

Socrates:: 'Good. Then clearly we have agreed that belief is distinct from knowledge?'

Glaucon:: 'We have.'

Socrates:: 'Then each of them has by nature a distinct power over distinct things?'

Glaucon:: 'Inevitably.'

Socrates:: 'But knowledge surely is set over that which is, to know how it is?'

Glaucon:: 'Yes.'

Socrates:: 'While the part of belief, we assert, is to believe?'

Glaucon:: 'Yes.'

Socrates:: 'Does it believe the same thing as knowledge knows; and can what is known and what is believed be the same; or is that impossible?'

Glaucon:: 'Its impossibility follows from our admissions. If different powers are by nature set over different objects, and if belief and knowledge are both powers, each, as we assert, distinct from the other, it is incompatible with this that what is known and what is believed should be the same.'

Socrates:: 'Then if that which is, is known, what is believed will be something different from that which is?

Glaucon:: 'It will.'

Socrates:: 'Then will belief believe that which is not? Or is it impossible even to believe that which is not? Consider. Does not he who believes fix his belief on something? or is it possible to believe and yet to believe nothing?

Glaucon:: 'That is impossible.'

Socrates:: ‘Then will he who believes, believe some one thing?’

Glaucon:: ‘Yes.’

Socrates:: ‘But that which is not, would be most accurately described not as one thing, but as nothing, would it not?

Glaucon:: ‘Certainly.’

Socrates:: ‘Then do we not necessarily assign ignorance to not being and knowledge to being?

Glaucon:: ‘That is right.’

Socrates:: ‘Then belief will believe neither being nor not being?

Glaucon:: ‘No.’

Socrates:: ‘And neither ignorance nor knowledge can be belief?’

Glaucon:: ‘Naturally not.’

Socrates:: ‘Then is belief something beyond these, surpassing knowledge in certainty or ignorance in uncertainty?

Glaucon:: ‘No.

Socrates:: ‘Rather, ‘do you think belief darker than knowledge and brighter than ignorance?

Glaucon:: ‘Yes, very much so.’

Socrates:: ‘Then does it lie within the limits of the two?

Glaucon:: ‘Yes.

Socrates:: ‘Then belief is between these two?

Glaucon:: ‘Just so.

Socrates:: ‘Then did we not say a little while ago that if we found anything which was and was not at the same time, it would lie between what absolutely is and what thoroughly is not, and that set over it would be neither knowledge nor ignorance, but that which was found to be between ignorance and knowledge?

Glaucon:: 'Yes, and we were right.

Socrates:: 'But have we not now found something between these two, which we call belief?'

Glaucon:: 'We have.'

Socrates:: 'Then apparently we have still left to find that which partakes of both being and not being and which could not rightly be described as either absolutely, and if we find it, we shall with justice be able to say that this is what is believed, so assigning extremes to extremes and mean to mean. Is not that the case?'

Glaucon:: 'It is.'

Socrates:: 'Then this having been established, I shall say, That worthy who thinks that there is no real beauty and no Form of real beauty eternal and invariable, but recognizes many beautifuls, let him speak and answer—this lover of sights who will let no one say that the beautiful, and the just, and so on are one. "Of all these many beautifuls, "O most excellent sir," we shall say, "is there any that will not appear ugly? or of the justs any that will not appear unjust? or of the holies any that will not appear unholy?"

Glaucon:: 'No, they must appear somehow both beautiful and ugly, just and unjust, and so on with them all.'

Socrates:: 'What of the many doubles? May they not appear halves just as much as doubles?'

Glaucon:: 'They may.'

Socrates:: 'And so with the things which we call great and small, and light and heavy, can one of those opposites be attributed to them any more than the other?'

Glaucon:: ‘No, at any moment every one of them may have both attributed to it.’

Socrates:: ‘Then is each of those many more really that which one may assert it to be than it is not?’

Glaucon:: ‘This is like the puzzles one hears at dinner, and the children’s riddle about the eunuch and his throw at the bat, where there is a catch about the eunuch and the bat, and what he threw at it, and what it was sitting on. For there is a puzzle here too, and none of the many can be fixedly conceived as either being or as not being, or as both being and not being, or as neither.’

Socrates:: ‘Then do you know what to do with them, or have you any better place to put them than between being and not being? For they will not appear in greater darkness than that which is not, by exceeding it in not being, nor in greater light than that which is, by exceeding it in being.’

Glaucon:: ‘Perfectly true.’

Socrates:: ‘Then we have apparently discovered that the multitude’s multitudinous formulae concerning the beautiful and so on tumble about somewhere between what is not and what absolutely is?’

Glaucon:: ‘We have.’

Socrates:: ‘But we agreed, if any such thing should be discovered, that we should have to call it the object of belief, not the object of knowledge, this shifting intermediate world being apprehended by the intermediate faculty.’

Glaucon:: ‘We did.’

Socrates:: ‘Then we shall say that those who look at many beautifuls, but do not see real beauty, and are unable to follow another’s guidance to it, and who see many justs but not real justice, and so on, these throughout believe but know nothing of what they believe?’

Glaucon:: 'The conclusion is inevitable.'

Socrates:: 'But what are we to say of those who look at all the invariable unchanging realities? Do they not know rather than believe?'

Glaucon:: 'That conclusion too is inevitable.'

Socrates:: 'Then may we not also say that they will admire and love the objects of knowledge, while the others love the objects of belief? For do you not remember that we said that these loved and admired beautiful sounds and colors and the like, but real beauty they will not tolerate as being anything?'

Glaucon:: 'I remember.'

Socrates:: 'Then we shall not be wrong in calling them lovers of belief rather than lovers of wisdom or philosophers? Will they be very angry with us if we say that?'

Glaucon:: 'No, not if they take my advice. for it is not right to be angry at the truth.'

Socrates:: But shall we call those who admire in each case the reality that is, not lovers of belief, but philosophers?'

Glaucon:: 'Most assuredly.'

## Book 6.

Socrates:: ‘The philosophers and the non-philosophers, Glaucon. have gone through a somewhat lengthy argument, and have after some difficulty at last revealed their respective natures.’

Glaucon:: ‘Yes, in a short argument it would not perhaps have been easy.’

Socrates:: ‘I think not, and I still think that it could be better set forth if we had only to speak on this one point and had not to discuss all the many remaining questions which are before us in our inquiry as to the difference between the just and the unjust life.’

Glaucon:: ‘What, then, have we to discuss after this?’

Socrates:: ‘What but what comes next in order? As those are philosophers who are able to grasp that which is always invariable and unchanging, while those are not who cannot do this but are all abroad among all sorts of aspects of many objects, which of these ought to be leaders of the city?

Glaucon:: ‘What would be a reasonable answer to that question?’

Socrates:: We must make guardians whichever of the two appear able to guard the laws and institutions of the city.’

Glaucon:: ‘Rightly so.’

Socrates:: ‘But can there be any question whether a blind or a sharp-sighted watchman should guard a thing?’

Glaucon:: ‘There cannot.’

Socrates:: ‘Then are they any better than blind who are always and in every case without the knowledge of that which really is, who have no distinct pattern in their soul, and cannot look away, like painters, to the perfect truth, and contemplate the standard which they have yonder with the greatest care, before they prescribe the earthly notions concerning things beautiful and just and good, when such prescription is necessary, and who cannot guard and preserve them when once prescribed?’

Glaucon:: ‘No, assuredly they are not much better than blind.’

Socrates:: ‘Then shall we appoint them guardians rather than those who have come to know every reality, and who are at the same time no whit behind the others in experience or any other part of virtue?

Glaucon:: ‘It would be ridiculous, to choose any one else if they do not fall behind in other ways. For this very thing in which they excel is about the most important of all.

Socrates:: ‘Then shall we discuss in what manner the same persons will be able to fulfill both requirements?

Glaucon:: ‘Certainly.

Socrates:: ‘That is, as we said at the beginning of this argument, we must first of all have a thorough knowledge of their nature, and I fancy that if we agree satisfactorily on that point, we shall agree also that the same persons may fulfill these requirements, and that they and they alone ought to be leaders of our city.

Glaucon:: ‘In what way?

Socrates:: ‘Concerning philosophic natures we may surely agree to this, that they are lovers of whatever learning will reveal to them anything of that reality which always is, and is not driven to and fro by generation and decay.

Glaucon:: ‘We may.

Socrates:: ‘And to this also, that they are lovers of all that reality, and willingly resign no part of it, whether great or small, esteemed or slighted, like the lovers of honour or the amorous whom we described a little while ago.

Glaucon:: 'You are right.'

Socrates:: 'Consider, now, whether those who are to be such as we described must have in their nature this further quality.

Glaucon:: 'What is that?

Socrates:: 'Truthfulness; that is, a determination never voluntarily to receive what is false, but to hate it and to love the truth.

Glaucon:: 'That is probable.

Socrates:: 'It is not only probable, my friend, but absolutely inevitable that he who is naturally amorous of anything should look with affection on all that is akin and related to the beloved object.

Glaucon:: 'You are right.'

Socrates:: 'And can you find anything more akin to wisdom than truth?

Glaucon:: 'Surely not.'

Socrates:: Then is it possible that the same nature should be a lover of wisdom and a lover of falsehood?'

Glaucon:: 'Certainly not.

Socrates:: 'Then he that is really a lover of learning must from his earliest years strive with all his heart after all truth?'

Glaucon:: 'I quite agree.'

Socrates:: 'But we know that whenever any man's desires flow in full current towards any one object, like a stream that has had a channel dug for it, towards all other objects they flow the more feebly?'

Glaucon:: ' Certainly.'

Socrates:: 'Then when the current of a man's desires has set towards the sciences and all learning, I fancy they will be concerned with the pleasure of the mind itself in itself, and will desert the pleasures that come through the body, if he is not feignedly but truly a philosopher?'

Glaucon:: 'That is certainly inevitable.'

Socrates:: 'Such a man, moreover, will be temperate and in no way covetous; for he is the last man in the world to pursue with eagerness those aims for the sake of which men love wealth and lavish expenditure.'

Glaucon:: 'Yes.'

Socrates:: 'Further, when you would decide between the philosophic and the non-philosophic nature, you must consider this point also.'

Glaucon:: 'What is that?'

Socrates:: 'You must look out for any secret inclination to meanness. For surely smallness is the most inapt quality for a mind destined ever to reach out after the divine and the human in its wholeness and its totality.'

Glaucon:: 'Very true.'

Socrates:: 'And do you fancy that an understanding endowed with loftiness and the power of looking out over all time and all being can attach any great importance to our human life?'

Glaucon:: 'That is impossible.'

Socrates:: 'Then will such an one regard death as anything to be feared?'

Glaucon:: 'Certainly not.'

Socrates:: 'But a cowardly and mean nature will probably have no participation in true philosophy?'

Glaucon:: 'No, I think not.'

Socrates:: ‘Further, can a man of well-balanced mind, who is neither covetous nor mean, nor a coward, nor a boaster, be by any possibility hard to deal with or unjust?’

Glaucon:: ‘No.’

Socrates:: ‘Then in looking for the philosophic and the non-philosophic soul you will examine in early youth whether the mind is just and gentle, or unsociable and. savage?’

Glaucon:: Certainly.’

Socrates:: ‘And this again you will not neglect, I fancy.’

Glaucon:: ‘What?’

Socrates:: ‘Whether the mind is ready or slow to learn. Do you expect that any one will have a proper affection for that which he practices with pain and in which he makes small progress with great exertions?’

Glaucon:: ‘No, that would be impossible.’

Socrates:: ‘What if he could retain nothing that he had learned, being full of forgetfulness? Could he be other than empty of knowledge?’

Glaucon:: No.’

Socrates:: ‘And if he labors to no profit, do you not think that in the end he will be compelled to hate himself and his unprofitable practice?’

Glaucon:: ‘ Surely.’

Socrates:: ‘Then let us not include a forgetful soul among those that are really philosophical, but demand rather that the philosophical soul shall be of retentive memory.’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Further, we shall say that the unmusical and the ungracious nature tends only to excess?’

Glaucon:: ‘Yes.’

Socrates:: 'But do you think truth akin to excess or to measure?'

Glaucon:: 'To measure.'

Socrates:: Then let us seek for an understanding endowed also with natural measure and grace, whose innate disposition will bear it easily to the Form of every reality.'

Glaucon:: 'Yes, let us.'

Socrates:: 'Now, then, do you think that the qualities we have enumerated are in any way unnecessary for the soul or inconsistent if it is to participate sufficiently and perfectly in that which is?'

Glaucon:: 'No, they are absolutely necessary.'

Socrates:: 'Then can you find any fault in a profession which cannot be adequately practiced by any who are not naturally of retentive memory, ready learners, lofty-minded, and gracious, lovers and kinsmen of truth, justice, courage, and temperance?

Glaucon:: 'Momus himself, could find no fault with it.'

Socrates:: 'Then, when such characters are perfected by education and mature years, would you not entrust the city to their sole charge?

Adeimantus:: 'No one, Socrates, could possibly object to what you say. But here is more or less the experience of those who from time to time hear what you now say: they think that through their want of skill in asking and answering questions the argument leads them a little astray at every question, and when all those littles are added together at the end of the discussion they become aware that the lapse is immense and quite subversive of their original position. Just as a clever draught player will in the end of the game shut up an unskillful player in a comer so that he can't move, so they feel that by the end of the argument they are shut in a corner and can't speak at this other kind of draughts which is played with arguments for counters. For they are not in the least more inclined to think that the truth is with you. I speak with reference to our present condition. Any one would agree that at each question you ask he cannot oppose you with words, but as a matter of fact he sees that of those who devote themselves to philosophy—not those who study it in youth as a means to general culture and then give it up, but those who spend a considerable time on it—the most are very queer creatures if not rascally knaves, and the best of them seem from this profession which you praise to have achieved the result that they are useless to their country.'

Socrates:: When I heard his remarks I replied;

'Then do you consider these accusations false?'

Adeimantus:: 'I don't know, but I should like to hear your opinion.'

Socrates:: 'You may hear that I think them true.'

Adeimantus:: 'Well, how can it be right to say that states will have no respite from evil till philosophers rule in them, when we admit that they are useless to their cities?'

Socrates:: 'Your question, must be answered by a similitude.'

Adeimantus:: 'And I suppose that you are not accustomed to speak in similitudes?'

Socrates:: Never mind that. Would you mock me after getting me into an argument so hard of demonstration? But hear my simile that you may see the more how greedy I am of making them. The best of these men suffer in relation to their cities a fate so hard that there is no one thing that can be compared with it. We must defend them and describe their fate by a simile compounded from many sources, as painters paint goat-stags and the like by fusing creatures together. Conceive something of this kind happening on board ship, on one ship or on several. The master is bigger and stronger than all the crew, but rather deaf and shortsighted. His seamanship is as deficient as his hearing. The sailors are quarrelling about the navigation. Each man thinks that he ought to navigate, though up to that time he has never studied the art, and cannot name his instructor or the time of his apprenticeship. They go further and say that navigation cannot be taught, and are ready to cut in pieces him who says that it can. They crowd round the solitary master, entreating him and offering him every inducement to entrust them with the helm. Occasionally when they fail to persuade him and others succeed, they kill those others and throw them overboard, overpower the noble master by mandragora or drink or in some other way, and bind him hand and foot. Then they rule the ship and make free with the cargo, and so drinking and feasting make just such a voyage as might be expected of men like them. Further, they compliment any one who has the skill to contrive how they may persuade or compel the master to set them over the ship, and call him a good seaman, a navigator, and a master of seamanship; any other kind of man they despise as useless. They have no notion that the true navigator must attend to the year and the seasons, to the sky and the stars and the winds, and all that concerns his craft, if he is really going to be fit to rule a ship. They do not believe that it is possible for any one to acquire by skill or practice the art of getting control of the helm, whether there is opposition or not, and at the same time to master the art of steering. If ships were managed in that way, do you not think that the true navigator would certainly be called a star-gazer and a useless babbler by the crews of ships of that description?

Adeimantus:: Yes, certainly.’

Socrates:: ‘Now, I fancy, that if you examine the simile you will not fail to see the resemblances to cities in their attitude towards true philosophers, and you will understand what I mean.’

Adeimantus:: ‘Yes, certainly.’

Socrates:: ‘Then propound this parable to your friend, who is astonished that philosophers are not honored in cities, and try to persuade him that it would be much more astonishing if they were.’

Adeimantus:: ‘Yes, I will.’

Socrates:: ‘Show him that you are right in saying that the best of the students of philosophy are useless to the world; but bid him blame for this uselessness not the good philosophers, but those who do not use them. For it is not natural that the navigator should entreat the sailors to be ruled by him, or that the wise should wait at rich men’s doors. The author of that sneer spoke false. The truth established by nature is that he who is ill, whether he be rich or poor, ought to wait at the doctor’s door, and every man who needs to be ruled at the door of him who can rule. The ruler, if he is really good for anything, ought not to request his subjects to be ruled. But under present political conditions you will not be wrong in likening the rulers to the sailors we have just described, and those whom they call useless talkers in the air to the true navigators.’

Adeimantus:: ‘You are right.’

Socrates:: ‘For these reasons and under these conditions it is difficult for the best of professions to win ‘teem from those who follow contrary courses. But far the greatest and most serious scandal to philosophy arises from its professed followers, whom the accuser of philosophy describes when, as you say, he declares that most of those who woo philosophy are rascally knaves, and the best of them are useless; which statement of yours I admitted to be true. Did I not?'

Adeimantus:: 'Yes.'

Socrates:: 'Then have we explained the uselessness of the good philosophers?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then shall we next explain why the majority are necessarily rascals, and try to show, if we can, that this is not the fault of philosophy either?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then let us listen and speak in turn, first reminding ourselves of our description of the natural character essential to him who is to turn out a noble, good man. Truth, if you remember, was first of all his leader. He has to follow her at all times and in all ways, or be a braggart and have no part in true philosophy.'

Adeimantus:: 'Yes, that was what we said.'

Socrates:: 'But is not this one point we have mentioned very inconsistent with our present ideas about him?'

Adeimantus:: 'Yes.'

Socrates:: 'Then shall we not make a reasonable defense when we say that the true lover of learning naturally strove toward what is, and would not abide by the many particulars that are believed to be, but went forward, undiscouraged, and did not cease from his passion until he grasped the nature of each reality that is, with that part of his soul which is fitted to lay hold of such by reason of its affinity with it; whereby being come near to and married with true being, and begetting reason and truth, he came to knowledge and true life and nourishment, and then, and only then, ceased from the travail of his soul?'

Adeimantus:: 'That defense is as reasonable as possible.'

Socrates:: 'Well, will this man have any love of falsehood, or will he on the contrary hate it?'

Adeimantus:: 'He will hate it.'

Socrates:: 'Yes, I fancy we shall never declare that when truth was leader an evil chorus followed in her train.'

Adeimantus:: 'Surely not.'

Socrates:: 'No, a sound and just disposition attended her, and after went temperance.'

Adeimantus:: You are right.'

Socrates:: 'Then why need I begin again and marshal all the attendant train of the philosophic nature, insisting on their necessity? For you remember that, akin to those, came courage, loftiness of spirit, readiness of learning, and memory. Then you interposed and said that every one would be forced to agree to what we were saying, but that if he left the argument and cast his eyes on the men to whom it referred, he could say that of those he saw some were useless, and most were thorough villains. We are examining the reasons for this misrepresentation, and are now considering why the majority are villains, and for that reason we have again referred to and been forced to define the nature of the true philosophers.'

Adeimantus:: That is so.'

Socrates:: 'Then, we must observe the corruptions of this nature, and see how in many men it is destroyed; only a small number escape; these are they who are described not as rascals, but as useless. Next we must observe the natures that imitate the philosophic and establish themselves in its profession, and see what manner of souls these are who presume to a pursuit too high and too good for them, who by their varied blunders have brought on philosophy everywhere and all the world over the reputation you describe.’

Adeimantus:: ‘What are the corruptions to which you refer?’

Socrates:: ‘I shall try to describe them to you if I can. But I fancy that any one will grant us this, that natures such as we have described, endowed with all the qualities which we have just prescribed for him who is to be a complete philosopher, are few and far between among mankind. Do you agree with me?

Adeimantus:: ‘Most certainly.’

Socrates:: ‘Then consider how many and how great are the causes of destruction to those rare souls.’

Adeimantus:: ‘ What are they? ‘

Socrates:: ‘One you will be extremely surprised to hear. Each of those very qualities which we praised as belonging to the philosophic nature destroys the soul possessing them and draws it away from philosophy—I mean courage, temperance, and the rest.’

Adeimantus:: ‘That certainly sounds strain.’

Socrates:: ‘Not only those, but all things which are called good destroy and pervert the soul—beauty, riches, strength of body, powerful connections in a city, and all similar things. You understand the general type of the things I mean?’

Adeimantus:: ‘I do, but I should like to grasp your meaning more precisely.’

Socrates:: ‘Well, grasp the notion of them as a whole, and what has been said about them will become perfectly clear and not seem paradoxical.’

Adeimantus:: 'What do you mean me to do?'

Socrates:: 'In the case of all seeds or growing things, whether plants or animals, we know, that any one which does not receive its proper nutriment, climate, or habitat, fails in its proper virtues the more strikingly the stronger it is; for evil is of course more contrary to good than to what is not good.'

Adeimantus:: 'Surely.'

Socrates:: 'Then I fancy it is according to reason that the best of natures deteriorates more seriously from uncongenial nutriment than an inferior nature?'

Adeimantus:: 'It is.'

Socrates:: 'Then, Adeimantus, shall we not also say that similarly the most richly endowed natures, if they receive a bad upbringing, become surpassingly evil? Or do you fancy that great crimes and unmixed wickedness come from a feeble nature and not rather from a noble nature ruined by education, while a weak nature will never be the author of great good or great evil?'

Adeimantus:: 'Yes, it is as you say.'.

Socrates:: 'Then I think that this nature which we have ascribed to the philosopher, if it receives proper instruction, must of necessity develop and attain to all virtue; but if it is not sown and planted in proper soil and does not get its nutriment therefrom, its course will be the very opposite, unless one of the gods comes to the rescue. Or do you hold the opinion of the public that there are any appreciable number of young men corrupted by sophists, or that it is individual sophists who corrupt them? Are not those who say this themselves the greatest sophists, who most carefully educate and fashion to the character they want both young and old, men and women?'

Adeimantus:: 'When, pray?'

Socrates:: ‘When,’ I answered, ‘they sit down together in large numbers in the assemblies or the law courts, or the theatres or camps, or any other place where crowds come together, and proceed with great noise and confusion to find fault with some of the things that are being said or done and to praise others, their fault-finding and their praise being equally extravagant, shouting and clapping their hands till the rocks and the place in which they are join with them and echo back redoubled the uproar of their condemnation and their praise. Amid such a scene where, think you, is a young man’s heart? What private education will hold out and not be swamped by such a volume of condemnation and praise, and swept down stream wherever such a current takes it, till he calls beautiful and ugly what they do, acts as they do, and becomes like them?’

Adeimantus:: ‘ It is quite inevitable, Socrates.’

Socrates:: ‘Yes, and we have not yet mentioned the mightiest compulsion.’

Adeimantus:: ‘What is that?’

Socrates:: ‘The practical inducements offered by these educators and sophists when their words have no effect. Do you not know that they punish the disobedient with dishonor, fines, and death?’

Adeimantus:: ‘Yes, assuredly they do.’

Socrates:: ‘And do you think that any other sophist could prevail, or any individual’s arguments which had a contrary tendency?’

Adeimantus:: ‘No.’

Socrates:: ‘No, the very attempt would be utter folly. For there is not, and never has been, nor ever will be, a character produced by education whose virtue has prevailed and stood out against the instruction of the many—not humanly speaking, my friend, for with God, as they say, all things are possible. For you must certainly know that while the constitution of states is what it is, if anything is preserved and made what it ought to be, you will not be wrong in ascribing that salvation to divine providence.’

Adeimantus:: ‘I am quite of that opinion.’

Socrates:: ‘Then go on to be of this opinion also.’

Adeimantus:: ‘What?’

Socrates:: ‘That each of those salaried individuals whom the public call sophists and regard as their rivals, teaches nothing but those beliefs which the multitude express in their assemblies, and this they call wisdom. T+ is as though a man who is keeper of a huge and powerful beast had got to know its tempers and its desires, how best to approach and how best to handle it, when it has its sulkiest and when its mildest moods and what causes them, on what occasions it is in the habit of uttering its various cries, and what sounds will soothe or provoke it. Now, suppose him, after he had got to know all these things from long experience of the animal, to call this knowledge wisdom, and systematizing it into an art to take to teaching. He has no true knowledge as to which of these beliefs and desires is beautiful or ugly, good or bad, just or unjust. He employs all these ‘s in accordance with the opinions of the mighty beast, calling things that please it good, things that displease it bad. Other reason for his use of these terms he has none, but calls what is compulsory just and good. He has never perceived, nor could he teach another, the vast difference which really exists between the nature of the compulsory and the good. In heaven’s name, do you not think that a man like that would make a strange instructor?’

Adeimantus:: 'I do.'

Socrates:: 'Well, do you think he differs at all from one who thinks that careful attention to the whims and pleasures of great promiscuous crowds is wisdom, whether in painting or music, or finally in politics? This is certain, that if a man mixes with the many and offers for their approval a poem or other work of art, or a public service, and makes them his arbiters of taste more than is absolutely necessary, the fatal necessity is laid upon him of doing whatever they approve. But have you ever heard any of them offering any evidence that is not ridiculous to show that what they approve is really good and beautiful?'

Adeimantus:: 'No, and I don't expect to hear any.'

Socrates:: 'Then having observed so much, remember this. Is it possible that the multitude will endure, or believe in, the existence of beauty itself, or of any reality itself? They only admit the existence of many beautifuls, and many particulars.'

Adeimantus:: 'It is certainly impossible.'

Socrates:: 'Then a multitude cannot be philosophical?'

Adeimantus:: 'No.'

Socrates:: 'And it is inevitable that the philosophers should incur their censure?'

Adeimantus:: 'It is.'

Socrates:: 'And the censure of those individuals who mix with the mob and try to please it?'

Adeimantus:: 'Clearly.'

Socrates:: 'Then considering this, do you see any chance of salvation for a philosophic nature, by which it may abide in its profession and reach its goal? Consider our previous admissions. We agreed that readiness to learn and a good memory and courage and loftiness of soul were marks of this nature.'

Adeimantus:: 'Yes.'

Socrates:: 'But will not such an one from his earliest years be first in everything, especially if he has a body to match his mind?'

Adeimantus:: 'Surely.'

Socrates:: 'Then, I fancy, his kinsmen and his fellow-citizens will wish to employ him, when he grows older, in their own affairs?'

Adeimantus:: 'Yes.'

Socrates:: 'Then they will lay at his feet their supplications and honors, making sure of securing his future power by timely flattery?'

Adeimantus:: 'That is certainly what ordinarily happens.'

Socrates:: 'Then what do you think he will do in such circumstances, especially if he happens to belong to a great city, and is one of her rich and noble citizens, and is also beautiful to look upon and tall? Will he not be filled with impossible ambitions, and think that he will be capable of ruling both Greeks and foreigners, and so highly exalt himself, and be full of self-importance and conceit without sense?'

Adeimantus:: 'Yes, certainly.'

Socrates:: 'And if, when he is sinking into this condition, someone comes to him and quietly tells him the truth, that there is no mind in him, and that he needs it, but cannot get it without serving for it, do you think that amid such evil influences it will be easy for him to listen?

Adeimantus:: 'Far from it.'

Socrates:: 'But if, by reason of his natural goodness, and the affinity of what is said with his nature, he does somehow understand and let himself be turned round and drawn to philosophy, how do you imagine those others will behave when they think that they are losing his help and companionship? Will they not do anything, leaving nothing unsaid and nothing undone, from private intrigue to public prosecution, to prevent him from being persuaded, and to disable his adviser from persuading him?’

Adeimantus:: ‘That is quite inevitable.’

Socrates:: ‘Then is it possible that he will become a philosopher?

Adeimantus:: ‘Certainly not.’

Socrates:: ‘You see, then, that I was not wrong in saying that the very elements of the philosophic nature become, as a result of bad training, in a certain sense a cause of the desertion of the pursuit of philosophy, as do such so-called good things as riches and all outward pomp and state?’

Adeimantus:: ‘No, you were quite right.’

Socrates:: ‘This, then, my fine fellow, is the course of destruction. It is in this way that the best of natures is so often spoiled for the best of vocations. And, as we say, this appears seldom enough. From these men come those who commit the greatest crimes against cities and individuals, as from them come benefactors also when the current sets that way. But a little nature never does anything great either to city or to individual man.’

Adeimantus:: ‘ Very true.’

Socrates:: ‘So those to whom philosophy most belongs have deserted her, and lead a false and alien, life, leaving her desolate and unwed, and other unworthy suitors have swooped down upon this defenceless ward, and disgraced and brought reproach upon her—the reproach of which you speak when you say that of her associates some are worthless, but most are deserving of heavy punishment.’

Adeimantus:: 'Yes, certainly, that is what is said.'

Socrates:: 'And quite naturally too. For other feeble creatures see this territory bare of inhabitants, but rich with noble names and titles, and as escaped prisoners betake themselves to the temples, so they eagerly escape from their handicrafts and betake themselves to philosophy whenever they show themselves particularly smart at their own little trade. For though philosophy is in this plight, nevertheless there is still left to her a reputation outshining that of the other arts. And this many covet whose natures are imperfect, and whose trades and handicrafts, as they have disfigured their bodies, so, too, have battered and mutilated their souls, by reason of their sordidness. That is what must happen, is it not?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then do you think, that they are different to look upon from a little bald tinker who has come into money, and has just had his chains knocked off, had a bath, put a new coat on his back, and has got himself up as a bridegroom, who means to take advantage of the poverty and loneliness of his master's daughter to marry her?'

Adeimantus:: 'No, not very different.'

Socrates:: 'And what children can we expect of such parents? They will be bastards and weaklings, will they not?'

Adeimantus:: 'Inevitably.'

Socrates:: 'Then when those who are unworthy of instruction unworthily approach and associate with her, what thoughts and beliefs will be their children? Will they not be such as really deserve to be called sophisms—nothing that is genuine or has part in true thought?'

Adeimantus:: 'Most certainly.'

Socrates:: 'Then, Adeimantus, a very small band is left of those who worthily associate with philosophy: possibly a noble and well-nurtured character saved by exile, which in the absence of corrupting influences has been true to its own nature and stayed by philosophy, or a great soul born in a small city, and so despising and looking beyond politics; and possibly one or two noble natures might come to philosophy from some other art which they rightly despised. Then, again, the bridle of our comrade Theages might have constraining power. For Theages has all the endowments that might have induced him to desert philosophy except bodily health, and his feebleness of body keeps him from a political life. Of my own safeguard, the heavenly sign, we need not speak. For few, if any, before my time have had that. Now those who have become members of this small band, and have tasted the sweetness and blessedness of their prize, can all discern the madness of the many and the almost universal rottenness of all political actions. The philosopher sees that he has no ally with whose aid he might go and defend the right with a chance of safety. He is like a man in a den of wild beasts. Share their injustice he will not. He is not strong enough to hold out alone where all are savages. He would lose his life before he could do any benefit to the city or his friends, and so be equally useless to himself and to the world. Weighing all these considerations he holds his peace and does his own work, like a man in a storm sheltering behind a wall from the driving wind of dust and hail. He sees other men filled with lawlessness, and is content if by any means he may live his life here unspotted by injustice and evil deeds till with fair hope he take his departure in peace and goodwill.

Adeimantus:: 'Well, he will certainly have accomplished not the least of things when he takes his departure.'

Socrates:: ‘Yes, but not the greatest unless he finds a constitution suited to him. For in a suitable constitution he will grow more himself, and succor both his own and the public fortunes. I think, then, that we have sufficiently discussed the reasons why philosophy is slandered, and shown their injustice. Have you anything to add?’

Adeimantus:: ‘Not on that point. But which of our present-day constitutions do you call suited to philosophy?’

Socrates:: ‘None. That is my complaint—that no present-day constitution is worthy of the philosophic nature, which is therefore warped and changed. As a seed from abroad sown in a foreign soil loses its type under the new influence and passes into the native species, even so this nature cannot now preserve its own powers, but degenerates into an alien character. But if it should find the constitution that is best, even as it is best, then it will show that it is truly divine, while all else, natures and institutions alike, are human. You will now, of course, ask what this constitution is?

Adeimantus:: ‘You are wrong. I was not going to ask that question, but whether it is the city which we have just been founding, or another?’

Socrates:: ‘It is the same in all points but one. But even at the time we said that there would also have to be in the city some power possessing the same understanding of the constitution as you, the legislator, had when you prescribed its laws.’

Adeimantus:: ‘We did.’

Socrates:: ‘Yes, but not distinctly enough, in fear of these topics and the long and difficult demonstration of them which your insistence has realized, since even what remains is by no means our easiest subject.’

Adeimantus:: ‘What is that?’

Socrates:: 'In what way a city may handle philosophy without being destroyed by it; for all great things are perilous, and it is true, as the proverb says, that beautiful things are hard.'

Adeimantus:: 'Nevertheless, let this be made clear and the demonstration so completed.'

Socrates:: 'Not want of will, but want of ability may hinder me. You will see my zeal with your own eyes. Consider now the zeal and hardihood of my words when I say that a city must deal with this pursuit in just the opposite way from that now followed.'

Adeimantus:: 'How?

Socrates:: 'At present, those who engage in philosophy at all are mere striplings just past their boyhood; before they enter upon housekeeping and business they dally with the hardest part of the subject (by the hardest part I mean dialectic), and then take themselves off. And they, forsooth, are regarded as accomplished in philosophy, and in later years, if they do consent on invitation to listen to others who study philosophy, they esteem it a great condescension, thinking that it ought to be regarded as an occasional pastime. Towards old age all but a very few of them give out altogether even more effectually than the sun of Heraclitus, for they never take fire again.'

Adeimantus:: 'Then what is the proper course?'

Socrates:: 'Just the opposite. When they are striplings and children they should partake in culture and training which is fit for striplings, and give good heed to their bodies while they are growing up to manhood, so preparing them to serve philosophy. When the years advance in which the soul begins to reach maturity, their mental exercise must be keener. But when their physical strength begins to wane, and is past political and military duties, then, and not till then, should they range the sacred fields at will and do nothing else unless casually, if they are to live happily and after death to crown the life they have lived with a fitting destiny in the world below.’

Adeimantus:: ‘Truly, Socrates.’ think you speak with enthusiasm. But I fancy that many of your hearers oppose you with even more enthusiasm, and are not in the least likely to agree, Thrasymachus among the first of them.’

Socrates:: ‘Don’t try to make bad blood between Thrasymachus and me, when we have so lately become friends—not that we were enemies before; for we shall in no way relax our endeavors until we persuade Thrasymachus, and the rest with him, or do them some good for that life when they shall be born again and enjoy similar discourses to these.’

Adeimantus:: ‘That will not be long.’

Socrates:: ‘No, no time at all compared to eternity. But that most people should not agree to what we are saying need not surprise us, for they have never yet seen our proposals in practice. Phrases they have seen somewhat resembling these patched and pieced into consistency, not falling into spontaneous harmony like ours. But a man fashioned into the most perfect possible conformity and likeness to virtue in word and in deed, ruling in a city like to himself, that they have never seen, neither once nor many times. Do you think so?’

Adeimantus:: ‘No, certainly not.’

Socrates:: ‘Nor, my wonderful friend, have they listened enough to noble and free discourses, where truth is sought after intently in every way for the sake of knowledge, and a wide berth is given to smart controversial arguments which seek only after seeming and controversy, whether in public trials or private gatherings.’

Adeimantus:: ‘No, to the first they have not listened.’

Socrates:: ‘It was for these reasons, and because we foresaw these results, that on that former occasion, though we were afraid, yet truth constrained us and we said that neither city nor constitution, no, nor yet an individual man, will ever be perfect, until fortune grants that some necessity encompass the philosophers, those few who are not evil but who are now called useless, so that whether they will or not they take charge of the city, and find the city obedient to them, or until upon those who now hold dominions and kingdoms or upon their sons some breath of heaven sends a true love of true philosophy. To suppose that either or both of these alternatives is impossible I maintain to be quite unreasonable. If they are, then we may be justly ridiculed as speaking what are merely idle dreams. Is it so?

Adeimantus:: ‘It is.’

Socrates:: ‘But if some compulsion to take charge of a city has ever, in the infinite time that is past, descended upon those who are pre-eminent in philosophy, or if it exists now in some barbarian region far removed from our vision, or if it ever arises in the future, then we are ready to contend in argument that the constitution we have described has arisen, exists, and will arise when the Muse of philosophy becomes mistress of a city. That she should do so is not impossible, nor are the things we describe impossible. But we admit that they are hard.’

Adeimantus:: ‘Yes, I agree with you.’

Socrates:: ‘But the many, you will say, do not agree?

Adeimantus:: ‘Perhaps.’

Socrates:: ‘My good friend, do not condemn the many so severely. They will change their opinion if you are kind to them, and do not quarrel with them, but wipe away the reproach of philosophy by showing them whom you mean by philosophers, and by defining, as we did lately, their nature and practice. Then they will not think that you mean what they now imagine. Do you think that any one who is considerate and gentle can be angry with one who will not quarrel, or feel malicious towards one who will not bear malice? I will anticipate your answer, and say that a few may be as rude as that, but not most people.'

Adeimantus:: 'Yes, I entirely agree with you.'

Socrates:: 'Then agree with me in this also, that the unkind disposition of the many towards philosophy is the fault of those outsiders who have burst in like drunken revelers where they have no right, who abuse and wrangle with one another, and spend their whole time in personalities and in behavior that is entirely unfitting to philosophy.

Adeimantus:: 'It certainly is.'

Socrates:: 'For, Adeimantus, he that truly keeps his understanding bent on the realities has no time to look down at the affairs of men, to fight and become full of malice and hate. Such men rather look upon and behold a world of the definite and uniform, where doing or suffering injustice is unknown, and all is governed by order and reason. This they imitate, and become as far as possible like to it. Or do you think it in any way possible that a man should not imitate that with which he lovingly associates?'

Adeimantus:: 'No, it is impossible.'

Socrates:: 'Then the philosopher associating with what is divine and ordered becomes ordered and divine as far as mortal may, though there will always be someone to pick holes?

Adeimantus:: 'Most certainly.

Socrates:: ‘Then, if some necessity comes upon him, not only to mould himself, but to put into practice in men’s characters, and to realize in individual and city his heavenly vision, do you think that he will be a bad craftsman of temperance and justice and the whole virtue of the people?

Adeimantus:: ‘No, certainly not.’

Socrates:: ‘Then if the many come to understand that our words concerning him are true, will they still quarrel with the philosophers, and still be incredulous when we say that a city will never know happiness unless its draughtsmen are artists who have as their pattern the divine?

Adeimantus:: ‘They will not be angry if they understand. But what is the manner of this draughtsmanship?

Socrates:: ‘They will take as their canvas, a city and human character, and first they will make their canvas clean—not at all an easy matter. But you know that it is just here that they will be different from all others. They will not consent to lay a finger on city or individual, or draft laws, until they are given, or can make for themselves, a clean canvas.

Adeimantus:: ‘And they will be right.’

Socrates:: ‘Then after this, do you think they would sketch the outline of the city?’

Adeimantus:: ‘Surely.’

Socrates:: ‘Then I fancy in their work their eyes will turn from model to picture, and from picture to model. They will look at natural justice and beauty and temperance and all the other virtues, and produce the human copy after their likeness, so combining and mixing from various institutions the color and likeness of true manhood, taking hints from that realization of it in men which Homer has called godly and godlike?’

Adeimantus:: ‘You are right.’

Socrates:: ‘Sometimes I fancy they will rub out, sometimes they will make their drawing again, until they have made human character as dear to God as human character can be.’

Adeimantus:: ‘Certainly.’ it will be the fairest of drawings.’

Socrates:: ‘Then, are we now beginning to persuade those who you said were rushing furiously upon us that such a painter of constitutions is to be found in the man whom we were then praising to them. They were angry when we proposed to hand over cities to him; when they hear our present explanation, will they be any milder?’

Adeimantus:: ‘Much milder, if they are sensible.’

Socrates:: ‘But what ground for objection can they have? Can they say that philosophers are not lovers of what is and of truth?’

Adeimantus:: ‘That would be too ridiculous.’

Socrates:: ‘Or that their nature, as we have described it, is not akin to that which is best?’

Adeimantus:: ‘No.’

Socrates:: ‘Then can they say that such a nature, set among appropriate institutions, will not become more perfectly good and philosophical than any other? Will they prefer those whom we have discarded?’

Adeimantus:: ‘No, surely not.’

Socrates:: ‘Then will they still be furious when we say that until the race of philosophers become masters of a city there will be no cessation of evils for city or citizens, nor will the constitution which we are picturing in word receive fulfillment in deed?'

Adeimantus:: 'Perhaps, they will be less so.'

Socrates:: 'If you please, let us not only say "less," but that they are perfectly pacified and convinced, that we may at least shame them into agreement.'

Adeimantus:: 'Certainly.'

Socrates:: 'Well, let us suppose that they are so far convinced. Will any one further object that kings or rulers would not by any chance have sons whose natures are philosophical?'

Adeimantus:: 'No one.'

Socrates:: 'But can it be said that though they are born philosophical their corruption is quite inevitable? That their salvation is difficult, we ourselves agree. But can any one contend that in all time no one of them all will ever be saved?

Adeimantus:: 'No.'

Socrates:: 'But, though only one arises and has a city obedient to him, that is enough to perfect all those things of which we now despair?'

Adeimantus:: 'It is.'

Socrates:: 'For if he is ruler, and lays down the laws and institutions which we have described, it is surely not impossible that the citizens should consent to carry them out?'

Adeimantus:: 'By no means.'

Socrates:: 'Then is it anything extraordinary and impossible that others should approve?'

Adeimantus:: 'I think not.'

Socrates:: ‘And I fancy that we have already sufficiently shown that these proposals, if they are practicable, are certainly desirable?’

Adeimantus:: ‘We have.’

Socrates:: ‘Then this seems to be our position in regard to this legislation. Our proposals are desirable if they could be realized, and their realization is difficult but not impossible.’

Adeimantus:: ‘That is our position.’

Socrates:: ‘Then since we have with difficulty brought this question to a conclusion, we must discuss what remains, namely, in what manner and by means of what studies and institutions the saviors of the constitution will come to exist in our city; and, further, at what ages they are to enter upon their various studies and duties?’

Adeimantus:: ‘Yes, we must.’

Socrates:: ‘I got nothing, out of my wisdom in leaving aside some time ago the troublesome question of the possession of wives, and the birth of children, and the establishment of the rulers, because I knew that the perfectly true arrangement is unpopular and difficult of realization. For none the less the necessity of discussing these questions has now come upon me. The question of the wives and children we have finished, but we must now pursue from the beginning the question of the rulers. We said, if you remember, that they must show themselves lovers of their city. They were to be tested in pleasures and pains, and were to show that no toils or fears or any other change made them unfaithful. He that failed was to be rejected, but he that always emerged unsullied, like gold tried in the fire, was to be made ruler, and privileges and rewards were to be his in life and after death. That was more or less what we said, though the argument (for fear of raising the question now before us) kept turning aside and veiling its face.'

Adeimantus:: 'That is perfectly true. I remember.'

Socrates:: hesitated, my friend, to speak what I have now already ventured. But let me venture to say this also, that we must make our most perfect guardians philosophers.'

Adeimantus:: 'Yes, let that be said.'

Socrates:: 'Consider now how few you will naturally have; for of that nature which we describe as necessary to them, the elements very seldom choose to appear together. In most cases the philosophic nature is torn asunder.'

Adeimantus:: 'In what way?'

Socrates:: 'Readiness to learn, memory, sagacity, quickness, and such qualities, together with spirit and high-mindedness, are, as you know, not often found along with the disposition to live soberly a quiet and steadfast life. Men with these gifts are carried by their sharpness hither and thither, and all steadiness goes from them.'

Adeimantus:: 'That is true.'

Socrates:: 'Then, on the other hand, those steadfast characters who do not lightly change, who are trusted and employed with confidence, and who in war are not easily moved to fear, retain their immobility in their studies. They are as slow to move and slow to learn as though they were torpid, and are full of sleep and yawns whenever they have to toil at anything of the kind.'

Adeimantus:: 'That is so.'

Socrates:: 'But we declare that the guardians must partake of both these sets of qualities in full and fair degree, or else have no portion in the special education, nor in honour nor office.'

Adeimantus:: 'You are right.'

Socrates:: 'Then do you think that this will happen very rarely?'

Adeimantus:: 'Surely.'

Socrates:: 'We must test this nature in the toils and fears and pleasures we have described, and we may now say also what we then omitted; we must exercise it in many studies, and observe whether it is able to endure even the greatest studies, or whether it will flinch as others flinch in other trials.'

Adeimantus:: 'Yes, it is good that we should make such observations. But what do you mean by "the greatest studies"?'

Socrates:: 'You surely remember, that we drew conclusions concerning the respective definitions of justice and temperance, and courage and wisdom, by distinguishing three elements in the soul?'

Adeimantus:: 'If I did not remember that, I should not deserve to hear what remains.'

Socrates:: 'Well, do you remember what had preceded that?'

Adeimantus:: 'What?'

Socrates:: 'We said that if we were to perceive them in the best possible way, there was another longer route to be taken by which we should find them revealed to us, but that it was possible to give a demonstration on a level with our previous arguments. You said this would do; and so we said then what, in my opinion, was not quite accurate—whether it was accurate enough for you is for you to say.'

Adeimantus:: 'Well, I certainly thought that you gave us good measure, and so did the others.'

Socrates:: ‘But, my friend, short measure in such cases or in any case is never good measure; for there can be no imperfect measure of anything. But occasionally some people fancy that enough has been done, and that there is no need for further inquiry.’

Adeimantus:: ‘Yes, people often take that attitude from laziness.’

Socrates:: ‘But, surely, that is an attitude not at all wanted for a guardian of a city and its laws?’

Adeimantus:: ‘That is likely enough.’

Socrates:: ‘Then, my friend, our guardian must go round by the longer route, and work as hard at study as at gymnastic; otherwise, as we were saying, he will never reach the completion of the study which is the greatest of all and which concerns him most closely.’

Adeimantus:: ‘Then are not these the greatest? Is there any still greater than justice and the virtues we have discussed?

Socrates:: ‘Certainly there is, and further, we must not be content with a sketch of these virtues, which is all we have seen as yet. We should not neglect their most perfect elaboration. Is it not ridiculous to make every effort after preciseness and accuracy in other matters of little importance, and yet not to demand the greatest accuracy in subjects of the greatest importance?’

Adeimantus:: ‘Yes, indeed. But as to what you call the greatest study, and what you conceive to be its subject, do you suppose that any one will let you off without asking what they are? ‘

Socrates:: ‘Certainly not, please ask. As a matter of fact, you have heard it quite often, but now you either don’t understand, or want to bother me again by your persistency I expect that that is the explanation. For you have often heard that the Form of the good is the greatest study, and is that by whose use just things and the rest become helpful and useful. Now you certainly know that I was going to say this, and also that we have no proper knowledge of the Form of the good. And if we don't know it, though we should have the fullest knowledge possible of all else, you know that that would be of no use to us, any more than is the possession of anything without the good. Or do you think there is any advantage in universal possession if it is not good, or in understanding the whole world except the good, and understanding nothing that is good and beautiful?'

Adeimantus:: 'By heaven, not.'

Socrates:: 'Then this, too, you know, that the many think the good is pleasure, and the more enlightened think it is intelligence?'

Adeimantus:: 'Surely.'

Socrates:: 'Also, my friend, that those latter can't reply when we ask "what intelligence?" and are forced in the end to say 'intelligence of the good"?'

Adeimantus:: 'Yes, it is a ridiculous answer.'

Socrates:: 'Surely it is, if they reproach us for not knowing the good, and then repeat the word "good' as though we did know it. For they say that it is intelligent of good, as though we understood what they mean when they solemnly utter the word "good."'

Adeimantus:: 'That is perfectly true.'

Socrates:: 'Then what of those who make pleasure the good? Are they any less astray than the others? Are not they, too, compelled to acknowledge that there are bad pleasures?'

Adeimantus:: 'Most certainly.'

Socrates:: 'Then the result is that they acknowledge the same thing to be both good and bad. Is not that the case?

Adeimantus:: 'Certainly.'

Socrates:: 'Then is it not evident that there are many and formidable difficulties in the subject?'

Adeimantus:: ' Surely.'

Socrates:: 'Further, is it not evident that many people will choose what seems just and beautiful, and will be content to do and have and express what so seems, even though it actually is not, just and beautiful? But seeming good never yet contented any man. Here all seek the reality and the semblance is treated by every one with contempt.'

Adeimantus:: 'Certainly.'

Socrates:: 'This, then, is that which every soul pursues, the motive of all its actions. That it is something, the soul divines, but what it is, she can never in her perplexity fully comprehend. She has no steady confidence concerning it, as she has about other things, and therefore she loses any advantage she might have got from these. Concerning a subject so great and so important, can we say that the best men in our city, those to whom we shall entrust everything, ought to be unenlightened?'

Adeimantus:: 'Certainly not.'

Socrates:: 'I think, in any case, that if a man does not know how particular instances of justice and beauty are also good, these just and beautiful things will find in him a worthless guardian. For I divine that no man will know them thoroughly until he has acquired this knowledge.'

Adeimantus:: 'You divine excellently.'

Socrates:: 'Then will our constitution be set in proper order if such a guardian, one who has this knowledge, directs it?'

Adeimantus:: ‘Inevitably. But for yourself, Socrates, do you say that the good is knowledge, or pleasure, or something else?’

Socrates:: ‘Yes, that is like you. You have made it perfectly clear all this while that you wouldn’t be content with other people’s opinions on these matters.’

Adeimantus:: ‘Well, Socrates, it does not seem to me right to be ready to repeat other people’s opinions and never your own when you have given so much time to these subjects.’

Socrates:: ‘Well, do you think it right to make pretensions to knowledge where one has none?’

Adeimantus:: ‘No, certainly not to make pretensions to knowledge; but it is right that you should be prepared to state what you think, as being what you think.

Socrates:: ‘But have you not observed, that beliefs which are not founded on knowledge are all ill-favored? The best of them are blind. Do you think that men who unintelligently believe what is true are any better than blind men going the right road?

Adeimantus:: ‘No better.’

Socrates:: ‘Then do you want us to look at ill-favored, blind, and crooked things when we might hear shining and beautiful things from others?’

Glaucon:: ‘Now, by heavens, Socrates, don’t stop as if you were at the end. We shall be quite content if you discuss the good in the same way as you have discussed justice, and temperance, and the other virtues.

Socrates:: ‘Well, yes, my friend, I shall be quite content myself. But I am afraid that I shall not manage it, and if I have the courage to try, my awkwardness will be laughed at. But, my very good friends, let us leave for the moment the question of what the good actually is. To reach what is now in my mind seems too ambitious for our present attempt. But I am ready to state what seems to me to be an offspring of the good, and extremely like it, if the proposal pleases you; if not, I will leave it alone.

Glaucon:: 'Please state it, and you will render your account of the parent another time.

Socrates:: 'I wish, I could pay and you could collect the parent sum, and I did not have to put you off with the increase like this. Still, take this increase and offspring of the good itself. But be careful that I do not unwittingly deceive you by giving you a false account of the increase.

Glaucon:: 'We shall take as good care as we can. Will you only state it?

Socrates:: 'Yes. But we must first come to an agreement by my reminding you of what we said before and have often stated elsewhere.'

Glaucon:: 'What?'

Socrates:: 'We say, and make the distinction in our thought, that there are many beautifuls and many goods, and so on.'

Glaucon:: 'Yes.'

Socrates:: 'And on the other hand, we set up also a real beauty and a real good, and so on with all the things we before set up as many, and we put each now under one Form, holding that there is but one Form of each, and we call that "that which each is."'

Glaucon:: 'That is so.'

Socrates:: 'The first we say are seen but are not thought, while the Forms are thought but are not seen.'

Glaucon:: 'Most certainly:'

Socrates:: 'With what in ourselves do we see what is seen?'

Glaucon:: ‘With sight.’

Socrates:: ‘And do we not also, hear what is heard with nearing, and perceive with the other senses all sensible objects?’

Glaucon:: ‘Surely.’

Socrates:: ‘Now, have you noticed, how the fashioner of the senses has made the power of seeing and being seen in much the most marvelous way?’

Glaucon:: ‘I don’t know that I have.’

Socrates:: ‘Well, look at it like this. Is there anything of another kind which is required for hearing and sound if the one is to hear and the other to be heard, so that in the absence of this third thing, hearing will not hear and sound not be heard?’

Glaucon:: ‘Nothing.’

Socrates:: ‘And I fancy, that there are not many other faculties, if there are any, which require anything of this sort. Can you name any?’

Glaucon:: ‘No.’

Socrates:: ‘But do you not observe that the power of sight and being seen requires this?’

Glaucon:: ‘In what way?’

Socrates:: ‘Surely when there is sight in the eyes, and the man who has sight tries to use it, and there is color in the visible objects, still you know that unless a quite different third thing which exists just for this end is also present, sight will see nothing, and color will be invisible.’

Glaucon:: ‘To what do you refer?’

Socrates:: ‘It is what you call light.’

Glaucon:: ‘You are right.’

Socrates:: ‘Then the sense of sight and the power of being seen are joined together by a yoke nobler in no small degree than the bond which unites other yoke-fellows, inasmuch as light is not ignoble”

Glaucon:: ‘It is very far from being that.’

Socrates:: ‘Then whom of the gods in heaven can you name as the author of this, whose light makes our sight see in the fairest manner, and makes what is seen be seen?

Glaucon:: ‘Him whom you and all others would name. For your question clearly refers to the sun.

Socrates:: ‘Then is not sight by its nature in this relation towards this god?

Glaucon:: ‘ In what relation?

Socrates:: ‘Neither sight itself, nor that in which it arises, which we call the eye, is the sun.

Glaucon:: ‘No, of course not.

Socrates:: ‘But I fancy that of all the organs of the senses it is most like the sun.

Glaucon:: ‘Very much so.’

Socrates:: ‘And does it not possess the power which it has, by the sun’s dispensation, as an effluence from it?’

Glaucon:: ‘Certainly.

Socrates:: ‘Then the sun is not sight, is it; but, being the cause of sight, it is seen by the same?

Glaucon:: ‘That is so.’

Socrates:: ‘Then you may say, that this is my statement concerning the offspring of the good, that which the good has produced analogous to itself, which in the visible world bears the same relation to sight and what is seen, as in the intelligible the good bears to mind and what is thought.

Glaucon:: ‘How? Explain to me still further.

Socrates:: ‘You know, that when a man turns his eyes not to those objects on whose colors the light of day is shining, but to those where the lights of night shine, his eyes grow dim and appear almost blind, as though pure sight were not in them?

Glaucon:: 'Yes, certainly.'

Socrates:: 'But when they look at objects on which the sun is shining, I fancy that these same eyes see distinctly, and it becomes manifest that sight is in them?

Glaucon:: 'Surely.

Socrates:: 'Now consider the soul in this same manner. When it is stayed upon that on which truth and being are shining, it understands and knows and is seen to have reason. But when it is stayed on that which is mingled with darkness, that which is coming into being and passing away, then it believes and grows confused as its beliefs waver up and down, and has the appearance of being without reason.'

Glaucon:: 'Yes, it has.'

Socrates:: 'This, then, which imparts truth to the things that are known and the power of knowing to the knower, you may affirm to be the Form of the good. It is the cause of knowledge and truth, and you may conceive it as being known, but while knowledge and truth are both beautiful, you will be right in thinking it other and fairer than these. And as in the other world it is right to think light and sight sun-like, but not right to think them the sun, so here it is right to think both knowledge and truth like the good, but not right to think either of them the good. The state or nature of the good must be honored still more highly.'

Glaucon:: 'You speak of an incalculable beauty.' if it gives knowledge and truth, and itself excels them in beauty. Surely you do not mean that this is pleasure?'

Socrates:: 'Do not blaspheme. Rather consider its image in this further aspect.'

Glaucon:: ‘How?’

Socrates:: ‘I fancy that you will say that the sun gives to visible objects not only the power of being seen, but also their generation and growth and nourishment, not being itself generation.’

Glaucon:: ‘Of course not.’

Socrates:: ‘Then you may say of the objects of knowledge that not only their being known comes from the good, but their existence and being also come from it, though the good is not itself being but transcends even being in dignity and power?’

Glaucon said very comically;

Glaucon:: ‘By Apollo, a miraculous transcendence.’

Socrates:: ‘Well, it is your fault, you compelled me to say what I think about it.’

Glaucon:: ‘Don’t stop, please, or at any rate complete the simile of the sun if you have still anything to say.’

Socrates:: ‘Yes, I still have many things to say.’

Glaucon:: ‘Well, don’t omit the smallest thing.’

Socrates:: ‘I fancy, that I shall omit much. But nevertheless I shall not, if I can help it, omit anything which can be brought forward now.’

Glaucon:: ‘Do not.’

Socrates:: ‘Consider, then, that, as we say, the Sun and the Good are two; the one is king of the intelligible class and sphere, the other of the visible. I do not say king of heaven, lest you should think I was playing with words. Now, have you those two classes, visible and intelligible?’

Glaucon:: ‘I have.’

Socrates:: ‘Now, take a line divided into two unequal segments, and divide each segment in the same proportion, and suppose the first segment to belong to the visible, and the second to the intelligible. The different segments will represent in their comparative clearness and obscurity—in the visible sphere, the first segment images. By images I mean, firstly shadows, secondly, reflections in water, and in things that are close-grained, smooth, and bright, and all similar things, if you understand.

Glaucon:: 'Yes, I understand.'

Socrates:: 'Make the second segment that whereof this first is an image, ordinary living creatures, everything that grows and everything that is made.'

Glaucon:: 'I have done so.'

Socrates:: 'Then will you also, consent to say that, in respect of truth and falsehood, the section has been made so that the copy stands in the same relation to that of which it is a copy, as that which is believed to that which is known?'

Glaucon:: 'Yes, certainly I will.'

Socrates:: 'Then consider further how the intelligible segment must be divided.'

Glaucon:: 'How?'

Socrates:: 'Thus. In the one subdivision the soul is forced to conduct her search from hypotheses, using as images the things which were in the first segment the objects of imitation, proceeding not to a beginning but to an end; while in the other, that which leads to a beginning that has no hypothesis, she starts from a hypothesis, without using the images used in the first, and conducts her inquiry simply and solely by the Forms themselves.'

Glaucon:: 'I have not quite understood what you say.'

Socrates:: 'Then have it again. You will understand the more easily for what has been already said. I fancy that you know that those who study geometry and calculation and similar subjects, take as hypotheses the odd and the even, and figures, and three kinds of angles, and other similar things in each different inquiry. They make them into hypotheses as though they knew them, and will give no further account of them either to themselves or to others on the ground that they are plain to every one. Starting from these, they go on till they arrive by agreement at the original object of their inquiry.'

Glaucon:: 'Yes, that I know.'

Socrates:: 'Then you know that they use the visible squares and figures, and make their arguments about them, though they are not thinking about them, but about those things of which the visible are images. Their arguments concern the real square and a real diagonal, not the diagonal which they draw, and so with everything. The actual things which they model and draw, which again have their shadows and images in the water, these they now use as images in their turn, seeking to see those very realities which cannot be seen except by the understanding.'

Glaucon:: 'That is true.'

Socrates:: 'Therefore I described this class as intelligible; but I said that the soul is compelled to use hypotheses in its investigation of it, and does not go to a beginning, since it is unable to step out of and beyond hypotheses, but uses as images those originals from which images were made by the objects lower down, and which in comparison with those remoter objects are esteemed and honored as distinct and clear.'

Glaucon:: 'I understand, that you speak of the subject of geometrical investigations and the kindred arts.'

Socrates:: 'Then by the other segment of the intelligible you may understand me to mean that which the mere reasoning process grasps by the power of dialectic, treating its hypotheses not as first principles, but as literally hypotheses, that is, as stepping-stones and starting-points, until it comes as far as that which is not hypothesis, to the first principle of everything. This it grasps, and then reversing its procedure takes hold of that which takes hold of this first principle, until it so completes its descent. It never uses the help of any sensible object at all, but using only the Forms themselves it descends to them, and with Forms it ends.'

Glaucon:: 'I understand. Not quite satisfactorily, for I think you are describing an arduous task; but I see that you wish to distinguish that part of the real and the intelligible which is considered by the science of dialectic, as truer than that which is the object of what are called the arts. These have their hypotheses as first principles, and though their students are obliged to study them with the understanding, not with the senses, still, inasmuch as they do not make their inquiries with reference to a first principle, but by starting from hypotheses, you think that they do not exercise intelligence on these subjects, although with a first principle they are intelligible. This faculty in geometricians and such people you seem to call understanding and not intelligence, on the ground that understanding lies somewhere between belief and intelligence.'

Socrates:: 'Your demonstration is quite satisfactory. Now assume with me that corresponding to these four segments there are four states which arise in the soul. To the highest segment assign intelligence, to the second understanding, to the third faith, and to the last imagining. Then arrange these proportionately, and consider them to have such a degree of clearness as their objects have of truth.'

Glaucon:: ‘I understand, and agree and arrange them as you propose.’

## Book 7.

Socrates:: Then after this, liken our nature in its education and want of education, to a condition which I may thus describe. Picture men in an underground cave-dwelling, with a long entrance reaching up towards the light along the whole width of the cave; in this they lie from their childhood, their legs and necks in chains, so that they stay where they are and look only in front of them, as the chain prevents their turning their heads round. Some way off, and higher up, a fire is burning behind them, and between the lire and the prisoners is a road on higher ground. Imagine a wall built along this road, like the screen which showmen have in front of the audience, over which they show the puppets.’

Glaucon:: ‘I have it.’

Socrates:: ‘Then picture also men carrying along this wall all kinds of articles which overtop it, statues of men and other creatures in stone and wood and other materials; naturally some of the carriers are speaking, others are silent.’

Glaucon:: ‘A strange image and strange prisoners.’

Socrates:: ‘They are like ourselves. For in the first place do you think that such men would have seen anything of themselves or of each other except the shadows thrown by the fire on the wall of the cave opposite to them?’

Glaucon:: ‘How could they, if all their life they had been forced to keep their heads motionless?’

Socrates:: ‘What would they have seen of the things carried along the wall? Would it not be the same?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then if they were able to talk with one another, do you not think that they would suppose what they saw to be the real things?’

Glaucon:: ‘Necessarily.’

Socrates:: ‘Then what if there were in their prison an echo from the opposite wall? When any one of those passing by spoke, do you imagine that they could help thinking that the voice came from the shadow passing before them?’

Glaucon:: ‘No, certainly not.’

Socrates:: ‘Then most assuredly, the only truth that such men would conceive would be the shadows of those manufactured articles?’

Glaucon:: ‘That is quite inevitable.’

Socrates:: ‘Then consider, the manner of their release from their bonds and the cure of their folly, supposing that they attained their natural destiny in some such way as this. Let us suppose one of them released, and forced suddenly to stand up and turn his head, and walk and look towards the light. Let us suppose also that all these actions gave him pain, and that he was too dazed to see the objects whose shadows he had been watching before. What do you think he would say if he were told by someone that before he had been seeing mere foolish phantoms, while now he was nearer to being, and was turned to what in a higher degree is, and was looking more directly at it? And further, if each of the several figures passing by were pointed out to him, and he were asked to say what each was, do you not think that he would be perplexed, and would imagine that the things he had seen before were truer than those now pointed out to him?’

Glaucon:: ‘Yes, much truer.’

Socrates:: ‘Then if he were forced to look at the light itself, would not his eyes ache, and would he not try to escape and turn back to things which he could look at, and think that they ware really more distinct than the things shown him?’

Glaucon:: ‘Yes.’

Socrates:: ‘But, if someone were to drag him out up the steep and rugged ascent, and did not let go till he had been dragged up to the light of the sun, would not his forced journey be one of pain and annoyance; and when he came to the light, would not his eyes be so full of the glare that he would not be able to see a single one of the objects we now call true?’

Glaucon:: ‘Certainly, not all at once.’

Socrates:: ‘Yes, I fancy that he would need time before he could see things in the world above. At first he would most easily see shadows, then the reflections in water of men and everything else, and, finally, the things themselves. After that he could look at the heavenly bodies and the sky itself by night, turning his eyes to the light of the stars and the moon more easily than to the sun or to the sun’s light by day?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then, last of all, I fancy he would be able to look at the sun and observe its nature, not its appearances in water or on alien material, but the very sun itself in its own place?’

Glaucon:: ‘Inevitably.’

Socrates:: ‘And that done, he would then come to infer concerning it that it is the sun which produces the seasons and years, and controls everything in the sphere of the visible, and is in a manner the author of all those things which he and his fellow-prisoners used to see?’

Glaucon:: 'It is clear that this will be his next conclusion.'

Socrates:: 'Well, then, if he is reminded of his original abode and its wisdom, and those who were then his fellow-prisoners, do you not think he will pity them and count himself happy in the change?'

Glaucon:: 'Certainly.'

Socrates:: 'Now suppose that those prisoners had had among themselves a system of honors and commendations, that prizes were granted to the man who had the keenest eye for passing objects and the best memory for which usually came first, and which second, and which came together, and who could most cleverly conjecture from this what was likely to come in the future, do you think that our friend would think longingly of those prizes and envy the men whom the prisoners honour and set in authority? Would he not rather feel what Homer describes, and wish earnestly;

> To live on earth a swain,
> Or serve a swain for hire.

or suffer anything rather than be so the victim of seeming and live in their way?'

Glaucon:: 'Yes, I certainly think that he would endure anything rather than that.'

Socrates:: 'Then consider this point. If this man were to descend again and take his seat in his old place, would not his eyes be full of darkness because he had just come out of the sunlight?'

Glaucon:: 'Most certainly.'

Socrates:: 'And suppose that he had again to take part with the prisoners there in the old contest of distinguishing between the shadows, while his sight was confused and before his eyes had got steady (and it might take them quite a considerable time to get used to the darkness), would not men laugh at him, and say that having gone up above he had come back with his sight ruined, so that it was not worth while even to try to go up? And do you not think that they would kill him who tried to release them and bear them up, if they could lay hands on him, and slay him?'

Glaucon:: 'Certainly.'

Socrates:: 'Now this simile, my dear Glaucon, must be applied in all its parts to what we said before; the sphere revealed by sight being contrasted with the prison dwelling, and the light of the fire therein with the power of the sun. If you will set the upward ascent and the seeing of the things in the upper world with the upward journey of the soul to the intelligible sphere, you will have my surmise; and that is what you are anxious to have. Whether it be actually true, God knows. But this is how it appears to me. In the world of knowledge the Form of the good is perceived last and with difficulty, but when it is seen it must be inferred that it is the cause of all that is right and beautiful in all things, producing in the visible world light and the lord of light, and being itself lord in the intelligible world and the giver of truth and reason, and this Form of the good must be seen by whosoever would act wisely in public or in private.'

Glaucon:: 'I agree with you, so far as I am capable.'

Socrates:: 'Come, then, and agree with me in this also; and don't be surprised that they who have come thus far are unwilling to trouble themselves with mortal affairs, and that their souls are ever eager to dwell above. For this is but natural if the image we have related is true.'

Glaucon:: 'It is.'

Socrates:: ‘Then do you think it at all surprising, if one who has come from divine visions to human miseries plays a sorry part and appears very ridiculous when, with eyes still confused and before he has got properly used to the darkness that is round him, he is compelled to contend in law courts or elsewhere concerning the shadows of the just or the images which throw those shadows, or to dispute concerning the manner in which those images are conceived by men who have never seen real justice?’

Glaucon:: ‘No, it is anything but surprising.’

Socrates:: ‘Yes, a sensible man would remember that the eyes may be confused in two ways, and for two reasons—by a change from light to darkness, or from darkness to light. He will consider that the same may happen with the soul, and when he sees a soul in trouble and unable to perceive, he will not laugh without thinking; rather he will examine whether it has come from a brighter light and is dim because it is not accustomed to the darkness, or whether it is on its way from ignorance to greater brightness and is dazzled with the greater brilliance; and so he will count the first happy in its condition and its life, but the second he will pity, and if he please to laugh at it, his laughter will be less ridiculous than that of him who laughs at the soul that has come from the light above.’

Glaucon:: ‘You speak with great fairness.’

Socrates:: ‘Then, if these things be true, we must think thus on the subject before us—that education is not what certain of its professors declare it to be. They say, if you remember, that they put knowledge in the soul where no knowledge has been, if men put sight into blind eyes.’

Glaucon:: ‘Yes, they do.’

Socrates:: ‘But our present argument, shows that there resides in each man’s soul this faculty and the instrument wherewith he learns, and that it is just as if the eye could not turn from darkness to light unless the whole body turned with it; so this faculty and instrument must be wheeled round together with the whole soul away from that which is becoming, until it is able to look upon and to endure being and the brightest blaze of being; and that we declare to be the good. Do we not?'

Glaucon:: 'Yes.'

Socrates:: 'Education, then, will be an art of doing this, an art of conversion, and will consider in what manner the soul will be turned round most easily and effectively. Its aim will not be to implant vision in the instrument of sight. It will regard it as already possessing that, but as being turned in a wrong direction, and not looking where it ought, and it will try to set this right.'

Glaucon:: 'That seems probable.'

Socrates:: 'Now most of the virtues which are commonly said to belong to the soul seem to resemble the bodily virtues. They seem to be really implanted by habit and exercise where they have not previously existed. But the virtue of wisdom evidently does in reality belong to something much more divine, which never loses its power, but which from conversion becomes useful and advantageous, or again useless and harmful. Or have you never noticed how shrewd are the little eyes of the souls of those men who are reputed vicious but clever, and how sharply they see through the things to which they are directed? Their soul's vision is not feeble, but is forced to serve evil, and therefore the more sharply it sees, the more evil things it does.'

Glaucon:: 'Certainly.'

Socrates:: 'Now suppose, that from their earliest years such natures had been under the knife and had had cut off from them those growths, heavy as lead, which partake of the nature of becoming, which gluttony with its greeds and pleasures has fastened upon them and which drag downwards their soul’s vision; if they had been released from those encumbrances and turned round to the things that are true, the very same souls in those very same men would see them as sharply and keenly as they see the things towards which they are now directed.’

Glaucon:: ‘That would be but natural.’

Socrates:: ‘And is this not also natural and inevitable from our previous remarks, that the city would never be properly governed either by men who are uneducated and without experience in truth, or by men who are allowed to spend all their lives in the process of education? The first have no single mark in their lives at which they should aim in all that they do for themselves or for the state; the second will not act without compulsion, imagining that they have been transplanted to the islands of the blest without waiting for death.’

Glaucon:: ‘True.’

Socrates:: ‘Then it will be our task as founders, to compel the best natures to proceed to that study which we declared a little while ago to be the highest, to perceive the good, and to make that ascent we spoke of; and when they have done so, and looked long enough, then we must not allow them the liberty which they now enjoy.’

Glaucon:: ‘What is that?’

Socrates:: ‘The liberty, of staying there, and refusing to descend again to the prisoners and to share with them in toils and honors, whether they be mean or exalted.’

Glaucon:: ‘What! are we to do them an injustice, and force on them a worse life when a better is possible for them?’

Socrates:: ‘You have forgotten again, my friend, that it is not the law’s concern that any one class in a state should live surpassingly well. Rather it contrives a good life for the whole state, harmonizing the citizens by persuasion and compulsion, and making them share with one another the advantage which each class can contribute to the community. It is the law which produces such men in the city; not in order to leave each man free to turn where he will, but that it may itself use them to bind the city together.’

Glaucon:: ‘True, I had forgotten.’

Socrates:: ‘Consider further, Glaucon, that we shall not really do an injustice to the philosophers who arise in our city, but can speak justly when we proceed to compel them to watch over and care for the others. “It is quite reasonable,’ we shall say, “that the philosophers who arise in other cities should not share in their toils. For there they are spontaneous growths, and their city’s constitution has only hampered them, and it seems fair that the self-sown plant which is debtor to no man for its culture should not be eager to pay the price of its culture to anybody. But you we have begotten for the city as well as for yourselves to be like leaders and kings in a hive. You have received a better and more thorough education than those other philosophers, and are more capable of participating in both public life and philosophy. You must, therefore, descend by turns to dwell with the rest of the city, and must be accustomed to see the dark objects; for when you are accustomed, you will be able to see a thousand times better than those who dwell there, and you will know what each of the images is, and of what it is an image, because you have seen the truth of what is beautiful and just and good. And so your and our city will become a waking reality, and not a dream like most existing cities, which are peopled by men fighting about shadows and quarrelling for office as though that were a notable good. Whereas the truth surely is this, that that city wherein those who are to rule are least anxious for office must have the best and most stable constitution, and where you have the contrary disposition in your rulers you will have the contrary result.”

Glaucon:: ‘Certainly.’

Socrates:: ‘Then do you fancy that our nurselings when they hear this will disobey us, and will refuse to take their turn in sharing in the labors of the city, while for the most of their time they dwell with one another in the world of light?’

Glaucon:: ‘Impossible. It is a just demand, and they are just. And assuredly each of them will take up office as a compulsory duty, reversing the attitude of those who now rule in cities.’

Socrates:: ‘Yes, that is so, my friend. If you can discover a life for those who are to rule, better than ruling, then for you a well-governed city is possible. For there alone the rulers will be those who are truly rich, not in money, but in the proper wealth of the happy man, a good and wise life. But this is impossible where men who are poor and hungry for goods of their own undertake public affairs, imagining that it is from these that their good is to be snatched; for then office becomes a thing to be fought for, and such a civil and intestine war destroys the combatants, and the whole state with them.’

Glaucon:: ‘Most true.’

Socrates:: ‘Then, do you know, any life where political office is despised except the life of true philosophy?’

Glaucon:: ‘No, certainly not.’

Socrates:: ‘Office must not be wooed by those who love her, or you will have rival lovers fighting?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then are there any whom you can compel to undertake the guardianship of the state except those who are wisest in what pertains to the best government of the city, and who also possess honors of a different kind and a nobler life than that of the statesmen?

Glaucon:: ‘None.’

Socrates:: ‘And now, do you wish us to consider the manner in which such men will arise in the state, and how they will be brought up to the light, just as certain heroes are said to have ascended from Hades to the gods above?’

Glaucon:: ‘Of course I do.’

Socrates:: ‘And this would seem to be not the mere spinning of a coin, but the conversion of a soul from a day as dark as night to the true ascent which leads towards being, which we shall declare to be true philosophy.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then must we not consider what study has this effect?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then what study, Glaucon, will draw the soul away from becoming to being? As I ask, this occurs to me. Did we not say that these rulers when young had to be warrior athletes?’

Glaucon:: ‘We did.’

Socrates:: ‘Then the study of which we are in search must have this further quality?’

Glaucon:: ‘What?’

Socrates:: ‘It must be not without use to warriors.’

Glaucon:: ‘Certainly, if possible.’

Socrates:: ‘Now in our former plan they were trained in music and gymnastic?’

Glaucon:: ‘Yes.’

Socrates:: ‘But gymnastic surely has to do with the becoming and perishing, for it presides over the increase and decay of the body?’

Glaucon:: ‘Evidently.’

Socrates:: ‘Then this will not be the study we seek?’

Glaucon:: ‘No.’

Socrates:: ‘Then will it be music as we formerly described it?’

Glaucon:: ‘But that, if you remember, was the counterpart of gymnastic. It trained the guardians by the influence of habit, and gave them not knowledge but a kind of harmoniousness by means of harmony, and rhythmical grace by means of rhythm. On its literary side it had another set of similar characteristics, both in its fables and in those of its tales which were true. There was in it no study leading to anything of the kind which you are seeking.’

Socrates:: ‘You remind me most accurately. It had, in truth, nothing of the kind. But, my wonderful Glaucon, what will fulfill our requirements? For the crafts, we surely agreed, are mechanical?’

Glaucon:: ‘Surely. But is there any kind of study left, outside of music and gymnastic and the crafts?’

Socrates:: ‘If we have nothing left to choose outside of those, see if we can choose something of universal application.’

Glaucon:: ‘What?’

Socrates:: ‘Well, this common study, for example, which is used by all crafts, all modes of thought and sciences, and which every one must begin by learning.’

Glaucon:: ‘What is it?’

Socrates:: 'This trifling study, of distinguishing the one and the two and the three. I give it the general name of arithmetic and calculation. Is it not the case that every art and science is compelled to take some share in this?'

Glaucon:: 'Most certainly.'

Socrates:: 'The art of war along with them?'

Glaucon:: 'Inevitably.'

Socrates:: 'Yes. Palamedes, whenever he occurs in tragedy, is always exposing Agamemnon as a most ridiculous general. He says that he, Palamedes, invented number and then marshaled the ranks of the army at Ilium and counted the ships and everything else as though they had been uncounted before, and as though apparently Agamemnon didn't know how many feet he had, since he could not count. So what sort of a general do you think he could have been?'

Glaucon:: 'A strange one, if that was true.'

Socrates:: 'Then shall we not decide, that the ability to calculate and count is a study essential for a man in war?

Glaucon:: 'Most essential, if he is to understand anything about drill, or even if he is to be a man at all.'

Socrates:: 'Are you struck with the same feature in this study as I am?'

Glaucon:: 'What?'

Socrates:: 'It seems to be one of those studies we are seeking, which naturally lead to knowing, though nobody uses it rightly, a study which wholly draws us towards being.'

Glaucon:: 'What do you mean?'

Socrates:: 'I shall try, to make plain my opinion on the matter. I distinguish to myself certain things as leading and others as not leading in the direction of which we are speaking. You must consider them along with me and agree or disagree. Then we shall see more clearly whether it is as I divine.’

Glaucon:: ‘Explain, then.’

Socrates:: ‘I will explain, that there are some things in sensation which do not stimulate the intelligence to inquiry because the judgment of sensation upon them is satisfactory, and others which positively insist upon the intelligence inquiring into them, because sensation gives no satisfactory result.’

Glaucon:: ‘Obviously, you mean objects seen at a distance and painting in perspective.’

Socrates:: ‘You have not quite taken my meaning.’

Glaucon:: ‘What then do you mean?’

Socrates:: ‘The not stimulating, are those which do not at once pass over into a contrary perception. I class as stimulating those which do so pass, where the perception, whether it be of a near or distant object, indicates no one thing more than its contrary. You will understand more clearly what I mean in this way. Here, say, are three fingers, the little finger, the middle finger, and the third.’

Glaucon:: ‘Yes.’

Socrates:: ‘You may conceive that I am speaking of them as seen from close at hand. Now, will you please consider this question about them?’

Glaucon:: ‘What?’

Socrates:: ‘Each of these surely appears equally a finger, and so far as that is concerned, it makes no difference whether the one we are looking at is the middle or one of the extremes, whether it is black or white, thick or thin, and so on. For in all these points the ordinary mind is not compelled to ask of the intelligence, “Then what is a finger?" For sight has not at any stage suddenly informed the mind that the finger is the opposite of a finger.’

Glaucon:: ‘No, certainly not.’

Socrates:: ‘Then, such an experience naturally does not stimulate or arouse the intelligence.’

Glaucon:: ‘Naturally not.’

Socrates:: ‘But, on the other hand, does sight see adequately the bigness or the smallness of the fingers, and does it make no difference whether any one of them is in the middle or on the outside? The same question may be asked of the perception of thickness and thinness or softness find hardness in the sensation of touch. And are not the communications of the other senses similarly defective? Is not this the procedure with each of them? In the first place, is not the perception which deals with the hard also compelled to deal with the soft, so that it announces to the soul that it perceives the same thing to be hard and soft?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then in such cases. must not the soul be at a loss as to what information the perception is conveying by “hard,” since it calls the same thing also soft, and what the perception of light and heavy by “light” and "heavy,” if it tells of the heavy as light and of the light as heavy?’

Glaucon:: ‘Yes.’ these are strange communications for the mind to receive, and call for inquiry.’

Socrates:: ‘Then naturally in such cases, the mind summons calculation and intelligence to its aid, and tries to consider whether each of the matters announced is one or two?’

Glaucon:: ‘Surely.’

Socrates:: ‘And if two, does not each of these two appear distinct from the other, and one?

Glaucon:: ‘Yes.’

Socrates:: ‘Then if each is one and both together are two, the mind will understand the two as separate; for if they were not separate, it would not have understood them as two, but as one?’

Glaucon:: ‘True.’

Socrates:: ‘Now, sight also, we say, saw big and little, only not separate, but as a confused something. Is that not so?’

Glaucon:: ‘Yes.’

Socrates:: ‘But in order to make this dear the intelligence was compelled in its turn to see big and little, but in the opposite way from sight, not confused, but distinct.’

Glaucon:: ‘True.’

Socrates:: ‘Then is it not from some such reason that it first occurs to us to ask, “Then what is ‘the big’ and ‘the little?’

Glaucon:: ‘Assuredly.’

Socrates:: ‘And thus we distinguish on the one hand what is thought, and on the other what is seen?’

Glaucon:: ‘Most true.’

Socrates:: ‘Then this is what I was trying to express a moment ago when said that some things stimulate the understanding and some do not, and defined as stimulating those things which strike upon the senses along with their opposites; those which do not, as not rousing the intelligence.’

Glaucon:: ‘I now understand, and I agree.’

Socrates:: ‘Well, then, to which of those do number and the one seem to belong?’

Glaucon:: ‘I cannot make up my mind.’

Socrates:: ‘Come! draw an inference from our previous remarks. If the one, itself and by itself, is seen or apprehended by any other of the senses adequately, then like the finger we spoke of, it will not have the quality of drawing towards being. But if some contradiction is always seen along with it, so that it seems no more one than the opposite of one, then this will necessitate the critic, and the soul will necessarily in this case be at a loss, and will have to make search, setting the intelligence within it in motion, and to ask, “What then is the one itself?” and so the studying of the one will be of those things which lead on and turn us round to the sight of that which is.

Glaucon:: ‘Yes, and the seeing of the one has this quality in a marked degree, for we see the same thing at the same time as one and infinite in number.’

Socrates:: ‘Then if this is the case with the one, is it not the same with all number?’

Glaucon:: ‘Surely.’

Socrates:: ‘But calculation and arithmetic are throughout concerned with number?’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then they are seen to lead towards truth?’

Glaucon:: ‘Yes, in a pre-eminent degree.’

Socrates:: ‘Then here apparently we have one of the studies which we are seeking. For this study is essential to a warrior for his drill, and to a philosopher, because he must rise above becoming and lay hold on being if he is ever to become a reasonable arithmetician.’

Glaucon:: ‘That is so.’

Socrates:: ‘But our guardian is both warrior and philosopher?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then it will be fitting, Glaucon, to prescribe this study by law, and to persuade those who are to share in the highest affairs of the city to take to calculation, and embrace it in no amateur spirit. They must go on until they arrive by the help of sheer intelligence at a vision of the nature of numbers, practicing it not like merchants and peddlers for the sake of buying and selling, but for the purposes of war, and of an easier conversion of the soul itself from becoming to truth and being.’

Glaucon:: ‘Most excellent words.’

Socrates:: ‘Further it strikes me, now that we have mentioned the study of calculation, how elegant it is and in what manifold ways it helps our desires if it is pursued not for commercial ends but for the sake of knowledge.’

Glaucon:: ‘In what way?’

Socrates:: ‘In this way which we have just been mentioning. It powerfully draws the soul above, and forces it to reason concerning the numbers themselves, not allowing any discussion which presents to the soul numbers with bodies that can be seen or touched. You know how it is with skilled mathematicians? If any one in an argument attempts to dissect the one, they laugh at him, and will not allow it. If you cut it up, they multiply it, taking good care that the one shall never appear not as one but as many parts.’

Glaucon:: ‘That is perfectly true.’

Socrates:: ‘Then what, Glaucon, if you were to say to them, “My wonderful friend, what sort of numbers are you discussing in which the one answers your claims, in which each ‘one’ is equal to every other ‘one’ without the smallest difference and contains within itself no parts?” How do you think they would reply?’

Glaucon:: ‘I fancy by saying that they are talking about those numbers which can be apprehended by the understanding alone, but in no other way.’

Socrates:: ‘Do you see, then, my friend, that this study may fairly be thought necessary for us, since we find that it necessitates that the soul shall apply intelligence itself to truth itself?’

Glaucon:: ‘Yes, indeed. it does that in a very marked degree. ‘

Socrates:: ‘Further, have you ever noticed that those who have a natural capacity for calculation are, generally speaking, naturally quick at all kinds of study; while men of slow intellect, if they are trained and exercised in arithmetic, if they get nothing else from it, at least all improve and become sharper than they were before?

Glaucon:: ‘That is so.’

Socrates:: ‘And I fancy you will not easily find many studies which are more trouble to learn and practice than this one?’

Glaucon:: ‘No.’

Socrates:: ‘Then for all these reasons we must not neglect the study, but those who have the best natures must be trained in it?’

Glaucon:: ‘I agree.’

Socrates:: ‘Then let that be one point settled. Secondly, let us examine whether the study which borders on arithmetic suits us.’

Glaucon:: ‘What is that? Do you mean geometry?’

Socrates:: ‘Just that.’

Glaucon:: ‘Obviously, so much of it as applies to warlike operations is suitable. In pitching camp, occupying positions, closing up or deploying an army, and generally in executing other maneuvers on the field of battle or on the march, it will make a difference whether a man is a geometrician or not.’

Socrates:: ‘Yes, but for such purposes quite a little geometry and calculation is sufficient. For the greater and the more advanced portion we must consider whether it tends to the other result, to making it easier to perceive the Form of the good. All things have this tendency, we say, if they compel the soul to turn towards that region which contains that most blissful sphere of being which it is most necessary for the soul to see.’

Glaucon:: ‘You are right.’

Socrates:: ‘Then if it compels us to behold being, it is suitable; if to behold becoming, it is unsuitable?’

Glaucon:: ‘That is our statement.’

Socrates:: ‘But none who have even a slight acquaintance with geometry, will deny that the nature of this science is in exact contradiction to the arguments used in it by its professors.’

Glaucon:: ‘In what way?’

Socrates:: ‘Well, they talk in most ridiculous and beggarly fashion; for they speak like men of business, and as though all their demonstrations had a practical aim, with their talk of squaring and applying and adding, and so on. But surely the whole study is carried on for the sake of knowledge.’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Then must we not admit this further point?’

Glaucon:: ‘What?

Socrates:: 'That it is for the knowledge of that which always is, not of that which at some particular place and time is becoming and perishing.'

Glaucon:: 'That may well be agreed. For geometrical knowledge is of that which always is.'

Socrates:: 'Then, my fine fellow, it will draw the 's towards truth and complete the philosophic understanding, making us raise upwards what now we wrongly direct downwards?'

Glaucon:: 'Yes, it will do that as far as may be.'

Socrates:: 'Then you must prescribe, as far as may be, that those in your City Beautiful shall in no way neglect geometry. Its accidental advantages also are by no means unimportant.'

Glaucon:: 'Which?

Socrates:: 'Those you mentioned, which concern war. And, for that matter, in all forms of study where we wish to ensure ready understanding, we know perfectly well that there is all the difference in the world between one who has studied geometry and one who has not.'

Glaucon:: 'Yes, certainly, all the difference.'

Socrates:: 'Then shall we decide upon this as a second study for our young men?'

Glaucon:: 'Yes.'

Socrates:: 'Then shall we put astronomy, third? Do you agree?'

Glaucon:: 'Certainly I do. An attentive observation of the times of months and years is suitable not only for agriculture and navigation, but also for generalship no less.'

Socrates:: 'You are a charming fellow. You seem to be afraid that the multitude will think you are prescribing useless studies. And indeed it is no simple matter, but quite difficult, to believe that in these studies some instrument in each man's soul, which was being destroyed and blinded by other pursuits, is here purged and rekindled—a salvation more precious than that of thousands of eyes. For with this instrument alone is truth perceived. Now those who agree with us in this will most vehemently approve of your proposals, but those who have never perceived this truth will naturally think that you are talking nonsense. For they cannot see any other advantage in those studies worth mentioning. So make up your mind with which party you are arguing, or whether you are not concerned with one or the other of them but will carry on the argument chiefly for your own satisfaction, though you have no objection if any one else gets any advantage from it.'

Glaucon:: 'I choose the latter alternative, to speak and ask and answer chiefly for my own satisfaction.'

Socrates:: 'Fall back, then, for we made a mistake a moment ago in deciding what came next to geometry.'

Glaucon:: 'In what way?'

Socrates:: 'After plane geometry, we took solids already in revolution before solids by themselves. But it is right after the second increase to take the third, and that is surely concerned with cubic increase and bodies with depth?

Glaucon:: 'It is. But those problems, Socrates, seem to be still unsolved.

Socrates:: 'There are two reasons for that. They are difficult, and are only feebly investigated, because no city holds them in honour; and, besides, their investigators need a superintendent; without him they will come to no solutions. To find such a man is hard enough; but when you have found him, as things are at present the investigators in the science would be too conceited to obey him. But if the whole city should co-operate with the superintendent and pay honour to the study, then they would obey, and the real nature of those problems would be brought to light as the result of steady and vigorous investigation. For even now, though the public despise and discourage the subject, and its investigators do not understand it? usefulness, nevertheless in spite of all these obstacles it makes progress, such is the charm of the study; and it would be in no way surprising if its problems were explained.

Glaucon:: 'Yes, there is an extraordinary charm about the subject. But tell me more clearly what you meant a moment ago. You defined geometry, I think, as the investigation of the plane?'

Socrates:: 'Yes.'

Glaucon:: 'Then at first, you put astronomy next to it, but afterwards you drew back?'

Socrates:: 'Yes, in my hurry to get through everything quickly I only go more slowly. The inquiry into the dimension of depth comes next; but I left it out because it is so ridiculously investigated, and after geometry named astronomy, which is the motion of solids.'

Glaucon:: 'You are right.'

Socrates:: 'Then, let us put astronomy fourth, on the supposition that the study that is now neglected will exist if the city takes it up.'

Glaucon:: 'That is reasonable. You rebuked me a moment ago, Socrates, for my inept praise of astronomy. But now I can praise it from the point of view from which you pursue it. For it seems perfectly obvious to me that astronomy, at any rate, compels the soul to look on high, and from things here leads it yonder.’

Socrates:: ‘Possibly, it is obvious to every one but myself. For I don’t think as you do.’

Glaucon:: ‘But how then?

Socrates:: ‘In the way in which those who would lead us to philosophy now pursue the study, it seems to me simply to make men look downwards.’

Glaucon:: ‘What do you mean?’

Socrates:: ‘You seem to me, to display a fine assurance in your conception of the nature of the study which deals with things above. Apparently you would think that a man was using his reason and not his eyes, if he learnt something by gazing at a carved ceiling with his head bent back. Possibly you are right to think so, and I am a simple fool. But I cannot think of any other study as one that makes the soul look on high except that which is concerned with being and the unseen. If any one attempts to learn anything which is perceivable—his open mouth may yawn upwards or his closed mouth purse downwards, it makes no difference. He, I declare, will never learn. For such things do not admit of knowledge, and his soul is looking downwards and not up, though you may stretch him on his back on the ground or float him in the sea for his studies.’

Glaucon:: ‘I am justly punished. You were right to rebuke me. But what then did you mean by saying that astronomy ought to be studied on a system very different from the present one, if its students were to learn anything of value for our purposes?’

Socrates:: ‘This. These ornaments of the heavens, since they adorn a visible sky, should be thought to be the most beautiful and to have the most perfect nature amongst visible things, but to fall far short of those true adornments, those movements wherewith pure velocity and pure retardation, in true number and in all true figures, are moved in relation to each other, and wherewith they also move that which is within them, which matters are to be apprehended by reason and understanding, but not by sight. Do you disagree?'

Glaucon:: 'Certainly not.'

Socrates:: 'Then, we must use the adornments of heaven as models in our study of those true ornaments, as though we had come across diagrams drawn and elaborated with surpassing skill by Daedalus or some other artist or draughtsman. For surely any competent geometrician on seeing such diagrams would think that they were most beautifully executed, but would consider it ridiculous to examine them seriously with any hope of finding in them the truths of equality or duplicity or any other ratio.'

Glaucon:: 'How could it help being ridiculous?'

Socrates:: 'Then, do you fancy that he who is really an astronomer will not feel the same when he contemplates the motions of the stars? He will think that heaven and what it contains have been composed by heaven's creator with the utmost beauty that the composition of such things allows; but in respect to the relations of night and day, of days and months, and months and years, and of the other stars to sun and moon and to each other, do you not think that he will regard with astonishment the man who considers that these objects, bodily and visible as they are, are ever invariable and never decline from their courses, and will think it absurd to make enormous efforts to apprehend the truth of these matters?'

Glaucon:: 'Well, I certainly think so now, as I listen to your words.'

Socrates:: ‘Astronomy, then, like geometry, we shall pursue by the help of problems, and leave the starry heavens alone; if we hope truly to apprehend it, and turn the natural intelligence of the soul from uselessness to use.’

Glaucon:: ‘The task you prescribe, is far beyond the present methods of astronomical study.’

Socrates:: ‘Well, I fancy, that our other prescriptions will be in the same manner if we are of any use as legislators. Now, have you any suitable study to suggest?’

Glaucon:: ‘No, not at this moment.’

Socrates:: ‘Motion presents, not one, but several forms, I imagine. The wise will perhaps be able to name the full list. But even I can distinguish two.’

Glaucon:: ‘What are they?’

Socrates:: ‘One we have had, the other is its counterpart.’

Glaucon:: ‘What is it?’

Socrates:: ‘Apparently, as the eyes are fixed on astronomy, so are the ears on harmonics, and these are sister sciences as the Pythagoreans say, and we, Glaucon, agree with them. Do we not?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then, since the subject is complicated, let us inquire of them what they say on these matters, and whether they have any other information to give us. And throughout we shall look after our special interest.

Glaucon:: ‘What is that?’

Socrates:: ‘That those, whom we are to bring up, shall not attempt to study anything in those sciences which is imperfect and which does not always reach to that point at which all things ought to arrive, as we have just been saying about astronomy. Do you not know that the same sort of thing happens in harmonics? Men expend fruitless labor, just as they do in astronomy, in measuring audible tones and chords.'

Glaucon:: 'Yes, by heaven, and what fools they make of themselves, talking of "densities" and what not, and straining their ears as if they were trying to catch a sound which was somewhere in the neighborhood; and some declare that they can hear another note between two already distinguished, and this is the smallest interval, and should be made the unit of measurement; and others disagree and say that it is not a new note, and both parties put their ears before their reason.'

Socrates:: 'You are talking of those fine fellows, who persecute and torture the strings, racking them upon pegs. But I shall not weary you with my simile by telling you of the blows they inflict with the plectrum and the accusations they bring, and of the strings' denials and blusterings. I leave that, and declare that I don't mean these people, but the Pythagoreans, whom we have just said we should question about harmonics. For they behave like astronomers; they try to find the numbers in audible consonances, and do not rise to problems, to examining what numbers are and what numbers are not consonant, and for what reasons.'

Glaucon:: 'That would be a more than human inquiry.'

Socrates:: 'In any case, it is useful in the search for the beautiful and the good, but if it is pursued in any other way, it is useless.'

Glaucon:: 'That is likely enough.'

Socrates:: 'Now I imagine, that if the inquiry into all those studies which we have described comes to the consideration of their community with and relations to one another, and considers how these different sciences are akin, then our labors will contribute to the purposes we have in view, and we shall not toil in vain; but on any other assumption we shall.’

Glaucon:: ‘I venture to prophesy the same, but you describe a very long task, Socrates.’

Socrates:: ‘Do you say that of the prelude, or of what? Do we not know that all these studies are but the prelude of the real melody which is to be studied? You surely don’t think that men who are clever in these sciences are dialecticians?’

Glaucon:: ‘By heavens, no. at least only a very few of those I have met.’

Socrates:: ‘But, do you think that men who are unable to give and receive reasons ever know anything of what we say they ought to know?’

Glaucon:: ‘There again I answer no.’

Socrates:: ‘Then, Glaucon, is this not at last the real melody played by dialectic? It is intelligible, and its copy is the power of sight which we described as at length endeavoring to look at the real animals, then at the real stars, and finally at the real sun. So too when any one tries by dialectic through the discourse of reason unaided by any of the senses to attain to what each reality is, and desists not until by sheer intelligence he apprehends the reality of good, then he stands at the real goal of the intelligible world, as the man in our simile stood at the goal of the visible.’

Glaucon:: ‘Assuredly.’

Socrates:: ‘Then do you not call this progress dialectic?’

Glaucon:: ‘Yes.’

Socrates:: ‘Then, the release of the prisoners from bondage, the turning round from the shadows to the images and the light, the ascent from the cave to the sunlight, and that stage in the world above when they are still unable to look at animals and plants and the light of the sun, but can look at the divine reflections in water and the shadows of real things, instead of the shadows of images thrown by a light which is itself but an image compared with the sun—this is accomplished by all that pursuit of those arts which we have mentioned. It leads what is best in the soul up to the vision of what is best in things that are, just as in our simile the clearest organ of the body was led up to the vision of the brightest object in the bodily and visible world.’

Glaucon:: ‘I accept your statements. All the same, they certainly seem to me hard to accept, though in another sense it is ‘hard not to accept them. Nevertheless let us assume that the truth is as you state it; we need not be content with what we hear now, but must return to the subject often in the future. And now let us proceed to the real melody, and describe it as we have described the prelude. Tell us, therefore, what is the character of the power of dialectic, into what forms is it divided, and, finally, what are its methods. For these probably would lead to that point where a rest from the way and an end of his journeying awaits the traveler.’

Socrates:: ‘Dear Glaucon, you will not yet be able to follow me—though not from any want of zeal on my part—but you would see no longer an image of that of which we are speaking, but the very truth—at least as it appears to me. Whether it is actually so or not need not trouble us further now, but, that there is something of this sort to see, we must insist, must we not?’

Glaucon:: ‘Yes.’

Socrates:: ‘And also that the power of dialectic alone would reveal it, and only to one who has experience of the studies we have described, and that in no other way is this possible?’

Glaucon:: ‘Yes, on that we may insist.’

Socrates:: ‘In any case, no one will object to our saying that It is some further method which endeavors in every case systematically to apprehend concerning each reality that which it is. But all the other arts are concerned with beliefs and desires of men, or are directed towards becomings and compositions, or towards the care of growing or composite things. And as for the exceptions which we declared to partake in a measure of being, the art of geometry and those which follow it, we sec that these dream about being. They cannot behold it with waking eyes so long as they use hypotheses and leave them uncivilized, without being able to give an account of them. For if a man’s first principle is one he does not know, and his final conclusion and the intermediate stages are compounded out of that which he does not know, what possibility is there of such an agreement ever becoming knowledge?’

Glaucon:: ‘None.’

Socrates:: ‘Then the dialectical method alone, proceeds in this way, destroying its hypotheses to get to the first principle of all and make itself secure. It finds the eye of the soul embedded in what is really a swamp of barbarism and gently draws and raised it upwards, using the arts which we have enumerated as handmaids in the work of conversion. These we have often from force of habit called knowledge, but they need another name, implying more brightness than belief, and more obscurity than knowledge. I think we previously called this understanding—but we are not, I think, disputing about a name. The subjects which we are considering are too important for that.'

Glaucon:: 'No, we are not.'

Socrates:: 'But will words which manifest somehow the quality of clear speaking in the soul be enough?'

Glaucon:: 'Yes.'

Socrates:: 'Then it will suffice, if as formerly we call the first division knowledge, the second understanding, the third faith, and the fourth conjecture, the last two together belief and the first two intelligence; and say that belief deals with becoming as intelligence with being; also that as being is to becoming, so is intelligence to belief; and as intelligence is to belief, so is knowledge to faith and understanding to conjecture. The proportion of the objects to which these apply, and the division of the spheres of the believed and the intelligible, we may leave alone, Glaucon, to avoid arguments many times as long as those we have had already.'

Glaucon:: 'Well, as far as I can follow you, I certainly agree on those points.'

Socrates:: 'Then do you call a dialectician him who always takes account of the reality? And will you not say that he who cannot do this, in so far as he cannot give account to himself or to another, has no intelligence on that subject?'

Glaucon:: 'Certainly I should.'

Socrates:: 'Then it is the same in regard to the good. Unless a man can abstract the Form of the good from all else and distinguish it by analysis, unless he makes it run the gauntlet of every proof, and is eager to try it by the test not of seeming but of reality, and finally, unless be emerges from it all with his principle not overthrown, then will you not say that he does not know the real good any other good, and if by any chance he grasps any image of it, he does so in belief but not by knowledge: he dreams and drowses through his present life, and, before ever awaking here, goes to his final slumber in Hades?’

Glaucon:: ‘Yes, assuredly, I shall stoutly maintain all those statements.

Socrates:: ‘Then certainly if you ever had the actual rearing of those children of yours whose training and education you are now discussing, you would not allow them, I imagine, to be mere irrational quantities, if they are to rule in the city and control affairs of state?’

Glaucon:: ‘Certainly not.’

Socrates:: ‘Then will you ordain that they must pay special attention to this branch of education which will teach them to ask questions and give answers most scientifically?

Glaucon:: ‘With your help, I shall.

Socrates:: ‘Now, do you not think, that we have placed dialectic like a coping-stone on the top of our studies, and that there is no other study which deserves to be put above it, and that the series is at last complete?

Glaucon:: ‘I do.’

Socrates:: ‘You are left, then, with a question of distribution, the question, namely, as to the persons to whom, and the manner in which, we shall assign these studies?’

Glaucon:: ‘Obviously.’

Socrates:: ‘Do you remember the sort of men we chose in our former selection of the magistrates?’

Glaucon:: ‘Of course I do.’

Socrates:: ‘Then thus far, consider that such natures are the ones to be selected. We must give preference to the steadiest, the bravest, and, as far as possible, the best looking. But, further, we have not only to look out for men of noble and sturdy morals, they must also have natural gifs suitable for our scheme of education.'

Glaucon:: 'Then what do you determine these to be?'

Socrates:: 'They must have keenness for their studies, my excellent friend, and find no difficulty in learning; for the soul plays the coward far more readily in severe study than in gymnastics. The exertion comes more home to it, being peculiar to itself, and not shared by the body.'

Glaucon:: 'True.'

Socrates:: 'The man of our search must also have a good memory, an unchangeable purpose, and an unflagging love of work. How else do you imagine that a man will consent to crown his bodily labors by all this study and practice?'

Glaucon:: 'No one but a man of exceptional natural abilities would do it.'

Socrates:: 'Yes, the reason for men's mistaken view, and for the disgrace under which philosophy now suffers, is, as we said before, that men apply themselves to it without considering their unworthiness. But it should be the privilege only of the genuine sons of philosophy, not of bastards.'

Glaucon:: 'What do mean?'

Socrates:: 'In the first place, he that is to study philosophy must not be lame in his love of work—zealous in the one half of it, and lazy in the other. And that is the description of a man who is fond of gymnastics and of hunting, and loves all bodily labors, but does not love study, is not fond of listening to others or of inquiring for himself, but hates any labor of that kina. And he whose love of work has taken the opposite direction is also halt.'

Glaucon:: 'That is most true.'

Socrates:: ‘Similarly, in reference to truth, shall we not class as deformed a soul which, though it hates the lie told on purpose, and cannot endure it in itself, and is very angry when other people are deceitful, nevertheless is quite complacent to involuntary falsehood, and is not angry when it is found in a state of ignorance, but wallows in it like a bestial hog?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Then by reference to temperance, and courage, and high-mindedness, and all t; " elements of virtue we must most carefully distinguish between the true-born and the bastard. For if an individual or a city does not know how to observe carefully all these matters, they unwittingly employ cripples and bastards as friends or rulers in any of these services for which they have occasion.

Glaucon:: ‘Yes, that is certainly the case.’

Socrates:: ‘Then we must take all these precautions most carefully. Because if to this weighty study and severe discipline we bring men sound of limb and of sound mind, and train them therein, justice herself will find no fault with us, and we shall preserve the city and the constitution; but if we bring men of another stamp, the event will be in all respects the opposite, and we shall swamp philosophy in another flood of ridicule.’

Glaucon:: ‘That would be disgraceful.’

Socrates:: ‘Certainly. But probably I made myself ridiculous just now?’

Glaucon:: ‘In what way?’

Socrates:: ‘I forgot, that we are playing, and I spoke too earnestly. For as I spoke I glanced at philosophy, and seeing her so undeservedly spurned and contemned, I think I got angry, and said what I said too severely, as though had lost my temper with those who are responsible for it.’

Glaucon:: ‘No, by heaven, that did not strike me as I listened to you.’

Socrates:: ‘But it did me as I spoke. But do not let us forget this point, that though in our former selection we chose old men, that will not now be possible. For we cannot agree with Solon that any one can learn much when he is old. An old man can sooner run than learn. All severe and frequent toil belongs to youth.’

Glaucon:: ‘Inevitably.’

Socrates:: ‘Calculation, then, and geometry, and all those preliminary studies which must pave the way for dialectic, should be set before our guardians when they are boys, and in such a fashion as will not seem compulsory.’

Glaucon:: ‘Why so?

Socrates:: ‘Because, the free man should learn no study under bondage. And while enforced bodily labors do no harm to the body, study forced on the mind will not abide there.’

Glaucon:: ‘True.’

Socrates:: ‘Then, my excellent friend, train your children in their studies not by compulsion but by games, and you will be better able to see the natural abilities of each.’

Glaucon:: ‘What you say is reasonable.’

Socrates:: ‘Do you remember that we declared that even in battles the children must be taken on horseback to look on, and must be taken near the fighting line if safety allowed, and have their taste of blood like puppies?’

Glaucon:: ‘I remember.’

Socrates:: ‘Then he, who in all those toils and studies and alarms proves himself the readiest on every occasion will be put on a select list.’

Glaucon:: ‘At what age?’

Socrates:: ‘When they are released from the necessary gymnastics. For in the two or three years occupied in those it will be impossible to do anything else. For weariness and sleep are foes to study. And at the same time the proficiency shown in gymnastics will be one of our tests, and that not the least important.’

Glaucon:: ‘Surely.’

Socrates:: ‘Then after this, from their twentieth year those who have been selected shall have special privileges, and the studies which they have come across at random in their education as children, they must now bring together so that they will have a general view of their kinship with one another and with the nature of Being.’

Glaucon:: ‘Yes, such knowledge alone is abiding in those who possess it.’

Socrates:: ‘And it is also, the best test of a dialectical or non-dialectical nature. For the power of seeing things as a whole distinguishes the dialectician.’

Glaucon:: ‘I agree.’

Socrates:: ‘Then you will have to watch these tests, and see who best come up to our requirements, and are persevering in their studies, and persevering in battle and the other duties the law imposes upon them; and then when they are past thirty you must select those out of “the selected.” and give them greater privileges, and by testing their power in dialectic examine which of them can do without his eyes and his other senses and approach in truth to real being. And this is a task requiring the greatest care, my friend.’

Glaucon:: ‘Why specially so?’

Socrates:: ‘Do you not see, how serious is the evil from which dialectic is suffering at the present time?’

Glaucon:: ‘What?’

Socrates:: ‘Surely, it is filled with lawlessness.’

Glaucon:: ‘Yes, certainly.’

Socrates:: ‘Then are you at all surprised that this should happen to its students; and can you not forgive them?’

Glaucon:: ‘Why particularly?’

Socrates:: ‘Suppose, a child, brought up in wealthy surroundings as a member of a widely connected d distinguished family to which he thought he belonged, and surrounded by flatterers, and suppose that when he came to manhood he discovered that he was not the son of his self-styled parents, but could not find his real father and mother, can you divine the differences in his behavior towards his flatterers and towards his spurious parents in the periods before and after his knowledge of his substitution? Or will you listen to my divination?’

Glaucon:: ‘I will.’

Socrates:: ‘I divine then, that so long as he does not know the truth he will reverence his supposed father and mother and other relations more than his flatterers; he will devote his attention to the former rather than to the latter, will see that they lack nothing, and be careful not to trespass against them in word or deed, and not to disobey them on important questions.’

Glaucon:: ‘Probably.’

Socrates:: ‘But when he discovers the facts, I suspect that his reverence and respect will gradually be transferred from his supposed parents to his flatterers, that he will follow the suggestions of the latter more than he did before, will regulate his life by their standard, and openly associate with them, and, unless he has an exceptionally generous nature, will entirely neglect his former father and his other reputed relatives?

Glaucon:: 'You describe just what would happen. But how does this simile apply to students of reasoning?'

Socrates:: 'In this way. You know that from our childhood we have beliefs concerning things just and beautiful. We have been brought up in them; they have been like parents to us, and we obey and honour them.'

Glaucon:: 'Yes.'

Socrates:: 'Now opposed to those are certain pleasurable pursuits which flatter our soul and strive to draw it after them, but can induce no man of any strength of character to follow them. Such men honour the beliefs of their fathers, and follow after them.'

Glaucon:: 'That is so.'

Socrates:: 'Then, suppose that at this stage a question comes before the man as to what is the beautiful. He gives the answer he has heard from the lawgiver, and the argument proves him wrong. This happens again and again, and in all kinds of ways, till he is reduced to the opinion that what he has believed in is no more beautiful than ugly; and he comes to the same opinion about just and good, and the things he held in highest reverence. When this has happened, what kind of honour or obedience do you think he will pay these principles?'

Glaucon:: 'It is inevitable, that he will no longer honour or obey them in the same way.'

Socrates:: 'Then, when he does not think those principles so deserving of reverence, or so near to him as he did formerly, and cannot find the true principles, can he naturally turn to any but the flattering life?'

Glaucon:: ‘No.’

Socrates:: ‘Then I fancy he will seem to have given up lawfulness for lawlessness.

Glaucon:: ‘Inevitably.’

Socrates:: ‘Then, the fate of those who study dialectic is natural, and deserves, as I said, our full forgiveness?’

Glaucon:: ‘Yes, and our pity.’

Socrates:: ‘Then if your thirty-year-olds are not to become objects of this pity, will you not have to take great precautions how you meddle with dialectic?’

Glaucon:: ‘Most certainly.’

Socrates:: ‘Then is not this one precaution we can always observe: we can prevent them from tasting dialectic while they are young? For I fancy that you must have seen young lads at their first taste of dialectic; how they treat it as a game, and use it only for purposes of contradiction? They imitate those who refute them, and refute others in their turn, delighting, like puppies, in dragging about and pulling to pieces with words whoever happens to be near them.’

Glaucon:: ‘Yes, they are wonderful.’

Socrates:: ‘Then when they have refuted many people, and been refuted by many, they quickly and decisively come to a rejection of all their previous opinions, and thus both they and the whole cause of philosophy are discredited in the eyes of the world.’

Glaucon:: ‘Most true.’

Socrates:: ‘But an older man, will not want to catch this madness. He will imitate him who wishes to converse and consider the truth, rather than the jester who employs it for amusement and contradiction. He will have greater discretion, and will make the pursuit more instead of less honorable.'

Glaucon:: 'You are right.'

Socrates:: 'And have not all our previous remarks been meant to ensure that those to whom arguments are to be allowed shall be of orderly and steady natures, and to prevent the approach of the casual and the unfit which prevails now?'

Glaucon:: 'Certainly.'

Socrates:: 'Then for the acquisition of dialectic, is it sufficient if the student perseveres in constant and intense study to the exclusion of everything else, in the same way as he was disciplined in bodily exercises, but for twice the number of years?'

Glaucon:: 'Do you mean six or four?'

Socrates:: 'It is of no consequence. Say five. And after that you will have to force them down into the cave again, and compel them to take command in war and in such offices as pertain to the young, in order that they may not come short of others in practical experience. And still in these pursuits also you must test them and see whether they abide steadfastly every kind of temptation, or whether they give way in anything.'

Glaucon:: 'What time do you give for this?'

Socrates:: 'Fifteen years. And when they are fifty, those who have come safely through, and have always triumphed throughout in word and deed, must at last be taken to the goal; they must be compelled to look upon that which gives light to all, and turn the gleam of their soul upon it and see the real good; then using that as the pattern for the rest of their life, they must take their turn in ordering city and individuals and their own lives; the most of their time they will spend in philosophy, but when their turn comes, they will endure the toil of directing politics and being rulers for the sake of their city, regarding such action not as anything noble but as a compulsion laid upon them; and so each generation, having trained up others like to themselves whom they can leave to be the city's guardians, will depart to the islands of the blest and dwell there. The city shall establish monuments and sacrifices to them, if the Pythian allows, honouring them as demigods, if not as happy and divine.'

Glaucon:: 'You have finished off your ruling men most beautifully, Socrates, like a sculptor.'

Socrates:: 'And the ruling women also, Glaucon, for don't imagine that anything I have said applies any more to men than to women, so long as we have women of adequate natural gifts.'

Glaucon:: 'You are right, since they will share alike with the men in all things, as we described.'

Socrates:: 'Well, then, do you agree that our words concerning city and constitution are not mere pious prayers; that our proposals are difficult, but are somehow practicable, and that in no other way than we have described; when those who are truly philosophers, either one or more of them, become rulers in a state and despise the present objects of men's ambitions, thinking them worthless and mean; when holding precious the right and the prizes which it gives, and giving the chiefest and most essential place to justice, they serve and foster it, and so set their own city to rights?'

Glaucon:: 'How?'

Socrates:: 'They must send into the country, all in the city who are more than ten years old, and so get the children out of the moral influences of their parents, and train them in their own customs and laws, which are those we have enumerated. And will not a city and constitution, such as we have described, be thus most quickly and easily established, and enjoy happiness, and greatly benefit the nation in which it is found?’

Glaucon:: ‘Surely. and I think, Socrates, that you have described well how, if ever, it would come into being.’

Socrates:: ‘Then is not our discourse concerning this city, and the man who is like to it, now at last complete? For surely it is obvious what sort of nature we shall demand of him?’

Glaucon:: ‘It is. and as for our subject, I think it is completed.’

## Book 8.

Socrates:: ‘Good. We have agreed, then, Glaucon, that in the city whose constitution is to be perfect, wives and children and all education will be in common; so will warlike and peaceful occupations; and those who have shown themselves best in philosophy and war are to be their kings.’

Glaucon:: ‘We have.’

Socrates:: ‘We have also agreed to the proposal that when the rulers are established they shall assemble the soldiers, and settle them in dwellings such as we prescribed, dwellings common to all, and with nothing private for any one. And besides this we also, if you remember, came to an agreement about the manner of their holding property.’

Glaucon:: ‘Yes, I remember, that we thought that no one should possess any of those things which now constitute ordinary people’s property; rather they were to be like warrior athletes and guardians, and to receive yearly sustenance for their needs from the other citizens as salary for their guardianship, and were to look after themselves and the rest of the city.’

Socrates:: ‘Your account is correct. But come, we completed that subject, so let us go back to where we started this digression, and resume our old path.’

Glaucon:: ‘That is not difficult. You were practically at the point at which you are now. You were saying that we had completed our discussion of the city, and that you ranked as good the city so described and the man who was like it, even though you could apparently have told us of a still more beautiful city and man. But in any case, you said that since this city was right, all others were faulty. Of the other constitutions you said, I remember, that there were four forms worth considering, whose mistakes ought to be noticed; there were also men corresponding to them, all of whom we were to observe, in order that we might come to an agreement as to which was the best and which the worst man, and thus might consider whether the best was the happiest and the worst the most miserable or not. And while I was asking you which you meant by the four constitutions, Polemarchus and Adeimantus interrupted, and then you took up the discussion which has brought us to this point.'

Socrates:: 'Most accurately remembered.'

Glaucon:: 'But now, like a wrestler, get back to your original grip. Now that I am asking you the same question, try to tell us what you were then going to say.'

Socrates:: 'I will if I can.'

Glaucon:: 'In any case, I am anxious to hear for myself which are the four forms of government you meant.'

Socrates:: 'There is no difficulty in your hearing. The forms of government, of which I speak, and which have distinct names, are these. There is the one which most people praise, the well-known Cretan and Lacedaemonian constitution; second in the list, and second in esteem, is a constitution fraught with many evils, called oligarchy. Set over against it and next in order, comes democracy; then tyranny the glorious, the chiefest of them all, is the fourth and final disease of a city. Do you know any other form of constitution which belongs to a distinct and manifest class? For the family governments and the sovereignties which are bought with money and other such constitutions are more or less intermediates to those four. They are found among barbarians and Hellenes alike.

Glaucon:: 'Yes, you hear of many extraordinary forms.'

Socrates:: 'But do you realize, that the specific types of men and of constitutions must be equal in number? Or do you imagine that constitutions grow at random "from tree or stone," and not from those characters of the men in the cities which preponderate and draw the rest of the city after them?'

Glaucon:: 'I certainly do not think they have any other source than that.'

Socrates:: 'Then if the characters of cities are five, the dispositions of soul in individuals will be five also?'

Glaucon:: 'Of course.'

Socrates:: 'We have already described the man who is like aristocracy, and declared him to be just and good?'

Glaucon:: 'We have.'

Socrates:: 'Then must we not now go through the worse men—first, the contentious and ambitious man, who corresponds to the Laconian constitution, and after him the oligarchic and the democratic and the tyrannic man, that we may see the most unjust and set him over against the most just, and so may complete our inquiry of how pure justice stands to pure injustice in respect to the happiness and misery of him who possesses them, and so either be convinced by Thrasymachus and pursue injustice, or by the argument which is now coming into view and follow justice?'

Glaucon:: 'By all means let us do as you propose.'

Socrates:: We began by examining characters in constitutions before we examined them in individuals, because that was the more luminous method. Should we now, therefore, first examine the ambitious constitution—I call it that because I know of no other name in use; we must call it either timocracy or timarchy; after that shall we consider the man corresponding to it; then oligarchy and the oligarchic man; and after that shall we first look at democracy, and then observe the democratic man; and, fourthly, go into the tyrannically governed city and see it, and in turn look into the tyrannic soul, and then endeavor to give a competent decision on the question we have proposed?’

Glaucon:: ‘That would ensure reasonable observation and judgment.’

Socrates:: Come, then, let us try to explain how timocracy will arise out of aristocracy. Is it not a universal fact, that a change in any constitution originates in those who hold office when dissension arises actually within the governing power; while so long as they are of one mind, however few they may be, the city cannot be changed?’

Glaucon:: ‘That is so.’

Socrates:: ‘How then, Glaucon, will our city be changed, and how will the auxiliaries and the rulers come to dissension with each other and among themselves? Or shall we, like Homer, pray the Muses to tell us how first dissension befell, and shall we say that treating us with jest and banter as though we were children they assume a lofty tragic style and an appearance of seriousness?

Glaucon:: ‘How?’

Socrates:: ‘In some such words as these: “That a city so constituted should change is difficult; but since decay is the lot of everything that has come into being, even this constitution will not abide for ever, but will be dissolved. And its dissolution will be as follows: To all living things, not only to plants that grow in the earth, but also to animals that live upon its surface, come times of fertility or barrenness of soul and body as often as their revolutions complete for each species the circumferences of circles, which are short for the short-lived, and long for the long-lived. Now those whom you have trained to be leaders of the city, in spite of their wisdom will not be able by calculation and perception to manage the production of offspring in your race so that it shall either be good or not be at all, but it will escape them, and they will some time or other beget children wrongly. For a divine creature there is a period comprehended by a perfect number; but for a human creature the number is the first in which multiplications of roots and squares (which contain three distances and four limits of numbers that make like and unlike, wax and wane) make all things consistent and rational with one another. Of which numbers, three multiplied by four and by five, and raised to the fourth power, produces two harmonies: the one is a square so many times a hundred; the other a rectangle on the one side of a hundred squares of rational diameters of five diminished by one or of irrational by two, on the other of a hundred cubes of three. This complete geometrical number is lord over better and worse births; and when your guardians, through their ignorance of it, join brides and bridegrooms at inopportune seasons, their children will not have good natures or enjoy good fortune. The best of them will be appointed by their predecessors, but when they come into their fathers' powers, they will be unworthy, and, although guardians, will begin to neglect us. First of all music will be esteemed too lightly by them and then gymnastic, and so your young men will come to forget the Muses. Beginning in this way, they will show themselves indifferent guardians in the task of assaying your different races, which are the same as Hesiod's gold and silver and bronze and iron. So iron will be mixed with silver and bronze with gold, and inequality and inharmonious discrepancy will arise, results which always produce war and strife wherever they occur. Such we must declare to be the ancestry of sedition wherever she arises."'

Glaucon:: 'And we must declare their answer to be correct.'

Socrates:: 'Of course, the Muses' answer must be.'

Glaucon:: 'Then what will the Muses say after that?'

Socrates:: 'When sedition had arisen, the two pairs of races began to pull different ways, the iron and bronze to money-making and possession of land and houses and gold and silver; the others, the gold and silver, since they were not in want but rich by nature, led their souls towards virtue and the old constitution. After violent conflict they came to a compromise, and distributed land and houses for private enjoyment. Those whom formerly they had protected as free men, friends and supporters, they then enslaved and treated as serfs and servants, reserving to themselves war and the duty of guarding the others.'

Glaucon:: 'I think.' that this is the origin of that revolution.'

Socrates:: 'Then, will not this constitution be midway between an aristocracy and an oligarchy?'

Glaucon:: 'Certainly.'

Socrates:: 'Such, then, will be the revolution. But after revolution, how will it be governed? Is it not obvious that in some respects it will imitate the earlier constitution, and in others oligarchy, inasmuch as it lies between them, and that it will also have some features of its own?'

Glaucon:: 'Yes.'

Socrates:: 'Then in reverence towards rulers, in the abstention of its warrior element from husbandry, handicrafts, and other forms of money-making, in the establishment of common meals, and in bestowing attention on gymnastic and the exercise of war, in all these matters will it not imitate the easier constitution?'

Glaucon:: 'Yes.'

Socrates:: 'But will it not have many features of this kind peculiar to itself? It will distrust the wise as rulers, for its wise men will now be of mixed character, not simple and sincere as before; it will prefer spirited and more straightforward men, made more for war than for peace, will have a great admiration for military tricks and stratagems, and will always be engaging in war?'

Glaucon:: 'Yes.'

Socrates:: 'Further, these men will be avaricious like the citizens in oligarchies, with a fierce secret passion for gold and silver. They will have storehouses and treasuries of their own where they will store their wealth in secret. They will be ringed round with dwellings, mere private nests where they may squander a lavish expenditure on their wives and whomsoever they please.'

Glaucon:: 'Very true.'

Socrates:: 'Further, they will be sparing of their money, reverencing it as men do whose money-getting is in secret, but their desires will make them enjoy spending other men's money. They will pluck the fruits of pleasure in secret, running away from the law, like boys running away from their father. Compulsion and not persuasion will have controlled their education, because they have neglected the true Muse, who is accompanied by reason and philosophy, and have honored gymnastic above music.'

Glaucon:: 'You describe, a constitution compounded throughout of good and evil.'

Socrates:: 'Yes, it is a compound. But one single feature is conspicuous in it, which arises from the prevalence of the spirited element, and that is rivalry and ambition.'

Glaucon:: 'That is certainly the case.'

Socrates:: 'Such, then, would be the origin and character of this constitution. We must merely sketch it in outline without giving an exhaustive and accurate description, because even a sketch will be enough to give us sight of the most just and the most unjust man. A description that included all constitutions and all types of character, and omitted no detail, would be impossibly long.'

Glaucon:: 'You are right.'

Socrates:: 'Then who is the man corresponding to this constitution? What will be his origin and character?'

Adeimantus:: 'I fancy that in his emulous nature he will come somewhere near our friend Glaucon.'

Socrates:: 'Perhaps. But I think that his nature is unlike Glaucon's in these respects.'

Adeimantus:: 'In which?'

Socrates:: 'He must be harder, and rather less musical, with an appreciation for music and for speeches, but no orator. He will be inclined to be cruel to slaves, not having the properly educated man's contempt for them. To free men he will be civil, to his rulers zealously obedient. Loving rule and honour, he will claim them not for speech or any such qualification, but for warlike deeds and warrior qualities. He will be a lover of gymnastic and of hunting.'

Adeimantus:: 'Yes, that is the character produced in that constitution.'

Socrates:: 'Again, will he not despise money when he is young, but as he gets older become more and more fond of it by reason of his participation in the character of the avaricious man, and because, since he has abandoned his best guardian, his virtue is not unalloyed?'

Adeimantus:: Who is that guardian?'

Socrates:: ‘Reason conjoined with music. That alone, when it has entered into a man, abides with him through life, and is the savior of his virtue.

Adeimantus:: ‘A fair speech.’

Socrates:: ‘Then such, is the character of the timocratic young man, and he is like the timocratic city.’

Adeimantus:: Certainly.’

Socrates:: ‘He arises, in some such way as this. He is the son of a good father, who, as sometimes happens, lives in an ill-governed city, and avoids political honors and office and litigation and all those things in which the active politician delights, and who is content to be got the better of if only he is not bothered.’

Adeimantus:: ‘Then how does the son become what he is?’

Socrates:: ‘Firstly, he hears his mother complaining that her husband is not one of the rulers, and that in consequence other women are set above her. Then she sees that her husband does not trouble himself much about money, and does not fight and wrangle in lawsuits or in the assembly but takes all these matters very calmly, and she perceives that he is always attending to himself, treating her neither with marked reverence nor marked disrespect. All these things make her angry, and she tells her son that his father is unmanly and utterly casual, and treats him to all the many varied complaints which women love to make on such matters.’

Adeimantus:: ‘Yes, they are numerous enough and characteristic of women.’

Socrates:: ‘Then you know, that even the servants of such men, who are supposed to be friends of the family, sometimes say the same sort of things to the children if they see the father refusing to proceed against a man who owes him money or has done him an injustice; they exhort the son to take vengeance on them all when he is grown up, and to be more of a man than his father. And outside of his family he sees and hears the same sort of thing: those who mind their own business in the city are called simpletons and held of no account, while those who do not are praised and honored. The young man sees these things and hears this talk, and yet also hears his father's words, and from an intimate position sees his father's ways of life, and contrasts them with the ways of other men, and so is pulled by the two forces this way and that. His father waters and makes to grow the reasoning element in his soul, while the others nourish the desiring and the spirited elements. In the end, inasmuch as he is not naturally a bad man, but has known bad company, he arrives under the impulsion of these two forces at a middle position, and gives over the rule within him to the middle element, the contentious and spirited, and becomes a lofty-minded and ambitious man.

Adeimantus:: 'An excellent description of his origin.'

Socrates:: 'There, then, we have the second city and the second man.'

Adeimantus:: 'We have.'

Socrates:: 'Then shall we now talk like Aeschylus, of "another man against another city set," though perhaps in accordance with our plan we should take the city first?'

Adeimantus:: 'Yes.'

Socrates:: 'Then oligarchy, I suppose, will be the next constitution?'

Adeimantus:: 'What kind of government do you mean by oligarchy?'

Socrates:: ‘The constitution, which rests on property valuation, where the rich rule, and a poor man is debarred from office.’

Adeimantus:: ‘I understand.’

Socrates:: ‘Then must we first declare how the change from timocracy to oligarchy comes about?’

Adeimantus:: ‘Yes.’

Socrates:: ‘Well, surely that is clear even to a blind man.’

Adeimantus:: ‘How?’

Socrates:: ‘That treasure house, where each man stores his gold is the ruin of timocracy. For they begin by discovering ways of spending their money, and stretch the laws till they and their wives flout them.’

Adeimantus:: ‘That is probable.’

Socrates:: ‘Then I fancy they watch and try to outrival one another till they make the whole population like themselves?’

Adeimantus:: ‘Probably.’

Socrates:: ‘From that point, they make steady progress in money-making, and the more they honour money the less they honour virtue. Is there not this strife between wealth and virtue; they always incline in opposite ways in the scales of the balance?

Adeimantus:: ‘Most certainly.’

Socrates:: ‘Then when in a city wealth and the wealthy are honored, virtue and the good are slighted?’

Adeimantus:: ‘Obviously.’

Socrates:: ‘But men devote themselves to anything that is honored, and neglect anything that is slighted?’

Adeimantus:: ‘Yes.’

Socrates:: 'Then in process of time, from men who love victory and honour they become lovers of money-getting and of money; they give their praise and admiration to the rich man, and elect him to rule over them, but the poor man they slight?'

Adeimantus:: 'Certainly.'

Socrates:: 'Then they lay down a law which is the distinguishing feature of an oligarchic constitution. They prescribe a sum of money varying in amount as the oligarchy is more or less extreme, and proclaim all disqualified for office whose means do not amount to the prescribed sum. Either the proposal is put through by force of arms, or by threats and terrorism they manage to get an oligarchic constitution established without actual conflict. Is not that so?'

Adeimantus:: 'Yes.'

Socrates:: 'Then this is more or less the way in which it is established?'

Adeimantus:: 'Yes. But what is the character of the constitution? and what are the defects which we declared it to have?'

Socrates:: 'Well, the first is this, its distinguishing feature is bad. For, consider, if any one appointed captains of ships on the principle of property qualifications and refused a ship to a poor man were he ever so skilful a navigator'—

Adeimantus:: 'They would make a poor kind of cruise. That's plain.'

Socrates:: 'And does not the same apply to the government of anything else?'

Adeimantus:: 'I fancy so.'

Socrates:: ‘Is a city an exception? or does it hold of a city as well?’

Adeimantus:: ‘Anything but an exception, inasmuch as, of all things, a city’s government is the most difficult and most important.’

Socrates:: ‘Then oligarchy will have this one great defect?

Adeimantus:: ‘Apparently.’

Socrates:: ‘But is this any less a defect?’

Adeimantus:: ‘Which?’

Socrates:: ‘Such a city must of necessity be not one but two—the city of the rich and the city of the poor—rich and poor dwelling within the same walls, and always conspiring against one another.’

Adeimantus:: ‘No, by heavens, that is not less.’

Socrates:: ‘And this again is not very pleasing: in all probability they will be unable to carry on a war because they are forced either to arm the common people and use them—and then they will stand more in fear of them than of the enemy—or if they don’t do this, to prove themselves even in their fighting to be truly a government of few. And to add to their difficulties their love of money will make them unwilling to pay war taxes.’

Adeimantus:: ‘No, that is not pleasing.’

Socrates:: ‘Further, do you think it right (we attacked the practice before) that in this constitution the same men will play many parts, be farmers and money-makers and warriors?’

Adeimantus:: ‘No, certainly not.’

Socrates:: ‘But now consider whether of all those evils this is not the greatest—and it is an evil which becomes possible for the first time in this city.’

Adeimantus:: ‘What is that?’

Socrates:: ‘It is possible for a man to part with all that he has and for another to get possession of his goods; and then when his property is gone for him to live in the city, playing no part therein, being neither money-maker, craftsman, knight, nor hoplite, but dubbed pauper and penniless.’

Adeimantus:: ‘Yes, this is the first city where that is possible.’

Socrates:: ‘In oligarchic states such things are not forbidden. If they were, there would not be plutocrats or paupers,’

Adeimantus:: ‘That is true.’

Socrates:: ‘Then consider this. All the time that this man was rich and was spending his money, did the city benefit thereby in any of those departments we have mentioned? Or while he had the appearance of a ruler, was he in reality neither ruler nor servant of the city—only a spender of what he had?

Adeimantus:: ‘Yes. He seemed to be a ruler, but was nothing but a spender.’

Socrates:: ‘May we say this of him—that as a drone is produced in a cell to plague the hive, so is he produced in a household; a drone to plague the city?’

Adeimantus:: ‘Certainly, Socrates.’

Socrates:: ‘Further, Adeimantus, has not God created the drones that fly without stings, but the drones that walk he has created, some stingless, but some with terrible stings; to the stingless drones belong those who die paupers in their old age, to those with stings all who are called criminals?’

Adeimantus:: ‘Very true.’

Socrates:: ‘Then it is obvious that in a city where you see paupers there are also concealed somewhere about thieves and cut-purses, and temple-robbers, and contrivers of all such evils.’

Adeimantus:: ‘It is obvious.’

Socrates:: ‘Then do you not see paupers in oligarchic cities?’

Adeimantus:: ‘Except for the rulers you see almost no one else.’

Socrates:: ‘Then we do not imagine, do we, that there are also many criminals in these cities, armed with stings, whom the government deliberately keeps in check by force?’

Adeimantus:: ‘Yes, but we do.’

Socrates:: ‘Then shall we say that such men are produced in that city through want of education, and bad nurture, and bad government?’

Adeimantus:: ‘We shall.’

Socrates:: ‘Then this will be the character of the oligarchic city, and these, and possibly more than these, the evils it possesses?’

Adeimantus:: ‘Yes, more or less.’

Socrates:: ‘Then let that, complete for us this constitution which we call an oligarchy which elects its rulers on a property qualification. Next, let us examine the man that resembles it, how he is produced, and what, when produced, he is like.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then does this truly describe the change from that timocratic to an oligarchical man?’

Adeimantus:: ‘What?’

Socrates:: ‘He has a son who at first is zealous for his father and follows in his footsteps, but then he sees him suddenly broken upon the city as a ship is broken on a reef, so that he and all his possessions go to the bottom—he has been general or held some other high office; sycophants get up a prosecution against him, and he is put to death or banished or disgraced, and all his fortune confiscated.

Adeimantus:: ‘That is likely enough.’

Socrates:: ‘Then seeing and suffering such things, my friend, and having lost his possessions, he suddenly, I fancy, becomes afraid; he drives ambition and the spirited element headlong from its throne in his soul; poverty makes him humble, and he turns greedily to money-making, and by hard work and careful saving he accumulates a fortune. Do you not conceive that such a man then seats the desiring and moneymaking element upon that throne, and makes it a mighty king within him, setting crowns upon its head and adorning it with chains of office and swords of state?’

Adeimantus:: ‘I do.’

Socrates:: But the reasoning and the spirited elements, I imagine, he makes squat upon the ground beneath it, one here and the other there, and enslaves them. So that the first is allowed to reason of or consider nothing but how money may breed more money, while the second may admire or honour nothing but wealth and the wealthy, and be zealous for nothing but the acquisition of money and anything that may lead thereto.’

Adeimantus:: ‘There is no other way, in which a young man who loves honour can become so swiftly and thoroughly a lover of money.’

Socrates:: ‘Then is this man, oligarchic?’

Adeimantus:: ‘In any case the man who preceded him was like the constitution which preceded oligarchy.’

Socrates:: ‘Well, let us consider if he would be like oligarchy.’

Adeimantus:: ‘Yes, let us.’

Socrates:: ‘In the first place, then, will he not be so in the very high place he gives to money?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘And, further, surely in that he is niggardly and a hard worker, satisfying only his necessary desires, and refraining from any other expenditure. His other desires he regards as frivolous, and keeps in subjection.’

Adeimantus:: ‘Yes.’

Socrates:: ‘He is somewhat squalid in appearance, and there is nothing which he does not turn to his profit; he is a man to make a fortune and get the praise of the multitude for it. Would not he be like the constitution we have described?’

Adeimantus:: ‘I certainly think so. In any case, both he and the city give high honour to money.’

Socrates:: ‘Yes, for I fancy that he has not spent much thought on education?’

Adeimantus:: ‘I think not, for if he had, he would not have made a blind god the ruler of his chorus, and given him highest honour.’

Socrates:: ‘Good. Now consider this point. Shall we not say that owing to his lack of culture drone-like desires grow up within him, some pauper and some criminal, and only his care for other things holds them forcibly in check?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then, do you know where to look if you want to see these men’s evil deeds?’

Adeimantus:: ‘Where?’

Socrates:: ‘Look to their guardianship of orphans, or any occasion that may come to them of securing a large impunity for injustice.’

Adeimantus:: ‘That is true.’

Socrates:: ‘And does not this show that in his other transactions, where his reputation depends on his preserving an appearance of justice, he controls other evil desires within him by a self-constraint that is virtuous after a fashion? He does not persuade them that this is the better course, nor does he assuage them by reason but by necessity and fear, because he is afraid to lose what he has already.’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then, in good truth, my friend, in most of these men, when they have to spend other people’s money, you will discover desires which are of kin to the drone.’

Adeimantus:: ‘That you certainly will.’

Socrates:: ‘Then such a man would not be without discord in himself; he would not be one man but two. Yet on the whole his better desires would control the worse.’

Adeimantus:: ‘That is so.’

Socrates:: ‘And for this reason, I fancy, he would be more respectable than many men, but the true virtue of a simple and harmonious soul would be far beyond him.’

Adeimantus:: ‘I think so.’

Socrates:: ‘And surely when matched with his fellow-citizens in any contest for victory or other honorable rivalry the niggardly man is a poor antagonist. He won’t spend money to win glory in such contests, because he is afraid of arousing his spendthrift desires and summoning them to fight and strive for victory along with him. So like a true oligarch he makes war with a small part of his forces, and is usually beaten and keeps his money.

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then can we any longer disbelieve, that the niggardly and money-making man is set over against the oligarchic city, being like to it?’

Adeimantus:: ‘Certainly not.’

Socrates:: ‘We have next to consider, apparently, how democracy arises, and what is its nature when it has arisen, in order that we may then come to know the character of the democratic man, and set him up for judgment.’

Adeimantus:: ‘That is our most consistent course.’

Socrates:: ‘Then does not the change from oligarchy to democracy, come about in some such way as this, as the result of the uncontrolled pursuit of that which oligarchy has made its good, namely, the necessity of becoming as rich as possible?’

Adeimantus:: ‘How?’

Socrates:: ‘I imagine that since the position of the rulers in that city depends upon their great wealth, they will not be prepared to pass laws forbidding their dissolute young men to spend and waste their substance; for they hope by buying up their possessions and by lending them money on them to become richer and more esteemed than ever.’

Adeimantus:: ‘That is certainly the case.’

Socrates:: ‘Then is it not now obvious that it is impossible in this city to honour wealth, and at the same time to preserve proper discipline among the citizens? One or the other must be neglected.’

Adeimantus:: ‘Yes, that is fairly obvious.’

Socrates:: ‘In oligarchies, therefore, by their negligence and tolerance of evil living the citizens have sometimes driven men of no common stamp to poverty?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘And then, I imagine, these men settle in the city with their stings and their weapons, some of them debtors, some disenfranchised, some both, and hate and plot against the men who have got possession of their goods, and long for revolution?’

Adeimantus:: ‘That is so’.’

Socrates:: ‘Meanwhile the money-makers fix their eyes on the ground and pretend not to see them, and go on stabbing with their money any one of the other citizens who fails in the struggle, levying their interest till it exceeds by many times the parent sum, and so make the drone and the beggar common in the city?’

Adeimantus:: ‘Yes, they certainly will be common.’

Socrates:: ‘And when this evil in the city is beginning to break into a flame, they are not prepared to extinguish it either in the way we mentioned, by laying down restrictions as to how a man may dispose of his money, or in this way, by using another law which will solve such difficulties.’

Adeimantus:: ‘What is that?’

Socrates:: ‘It follows the one we have described, and compels the citizens to give heed to virtue. For if any one would ordain that the greater number of voluntary contracts should not be enforceable, the money-making in the city would be less shameless, and there would be a scantier crop of those evils we have just described.’

Adeimantus:: ‘Yes, much scantier.’

Socrates:: ‘These, then, are the reasons which inspire this treatment of the ruled by the rulers in this city; while as for themselves and their families, are not their young men luxurious and idle in body and in mind, lazy, and able to offer but weak resistance to pleasures and pains?'

Adeimantus:: 'What else?'

Socrates:: 'And they themselves, with no thought but for the making of money, and as little concerned about virtue as are the poor?'

Adeimantus:: 'Yes.'

Socrates:: 'Then these things being so, when rulers and ruled meet one another—it may be in the public highways or other places of meeting, at festivals or on a campaign; they may be fellow-sailors or fellow-soldiers, and see one another in the face of danger—in these circumstances will the poor be despised by the rich? Will it not rather often happen that the poor man, sturdy and bronzed with the sun, will be set in battle next a rich man who has lived an indoor life, and has more fat about him than ought to be; he will see him puffing and despairing, and come to the conclusion, will he not, that these men are rich, because they, the poor, are cowards, and so when they meet together by themselves one man will say to another, "The men are in our hands, for they are good for nothing"?'

Adeimantus:: 'I am quite sure, that they will do so.'

Socrates:: 'Then just as a sickly body needs to receive only a small shock from without to make it actually ill, and sometimes is at strife with itself even without external impulsion, even so does the city, which is like it in condition, fall ill and make war on itself on the slightest excuse, when assistance is called in from without by one or the other party from an oligarchical or a democratic city: or does it not sometimes break into civil strife even without external assistance?'

Adeimantus:: 'That is certainly the case.'

Socrates:: 'Then a democracy, I fancy, comes into being when the poor have gained the day; some of the opposite party they kill, some they banish, with the rest they share citizenship and office on equal terms; and, as a general rule, office in the city is given by lot.

Adeimantus:: 'Yes, that is the establishment of democracy, whether it is effected by actual force of arms, or by the other party yielding from fear.

Socrates:: 'Then in what fashion will they live? and what will be the nature of such a constitution? For, obviously, a man of similar character will turn out to be democratic.'

Adeimantus:: 'Obviously.'

Socrates:: 'Then, first and foremost, they are free, the city is crammed with liberty and freedom of speech, and there is permission to do there whatever any one desires?'

Adeimantus:: 'So they say.'

Socrates:: 'Then clearly where the permissive principle rules, each man will arrange his own life to suit himself?'

Adeimantus:: 'Clearly.'

Socrates:: 'Then this constitution, I fancy, will be distinguished by the wonderful variety of men in it?'

Adeimantus:: Surely.'

Socrates:: 'It will turn out to be the fairest of constitutions. Like a garment of many colors of every shade and variety, this constitution will be variegated with every character, and be most fair to look upon; and possibly, just as children and women admire many-colored things, so many people will judge this city to be fairest of all.'

Adeimantus:: 'Most certainly they will.'

Socrates:: 'And, it certainly is, my wonderful friend, a handy place to look for a constitution.'

Adeimantus:: 'What do you mean?'

Socrates:: ‘The permissive principle allows it all kinds of constitutions, and it seems as if the man who wanted to found a city, as we have just been doing, ought to step into the democratic city and choose the style that suited him. You may go to this universal provider of constitutions, make your choice, and found your city.’

Adeimantus:: ‘Well, he will certainly find no lack of patterns.’

Socrates:: ‘In this city, there is no necessity to rule even if you are capable of ruling, or to be ruled if you don’t want, or to be at war because the rest of the city is, or where the rest of the city is at peace, to observe peace if you don’t wish to; if there is a law forbidding you to be a magistrate or a judge, that is no reason why you should not be both magistrate and judge if you have a mind to. Is that not a life of heavenly pleasure for the time?’

Adeimantus:: ‘Perhaps.’ for the time.’

Socrates:: ‘And is not the placid good temper of some of their condemned criminals beautiful? Under this constitution, when they have been sentenced to death or exile, they let it make no difference, but stay on and stroll about the streets; and have you never noticed how the culprit saunters round, and no one pays any attention or sees him, just as though he were a spirit from the departed?’

Adeimantus:: ‘Yes, and such a number of them too.’

Socrates:: ‘Then think of the considerateness of the city, its entire superiority to trifles, its disregard of all those things we spoke of so proudly when we were founding our city; we said that, except from altogether extraordinary natures, no one could turn out a good man unless his earliest years were given to noble games, and he gave himself wholly to noble pursuits. Is it not sublime how this city tramples all such things under foot, and is supremely indifferent as to what life a man has led before he enters politics? If only he asserts his zeal for the multitude, it is ready to honour him.'

Adeimantus:: 'Yes, it is perfectly splendid.'

Socrates:: 'Then these and others of a like kind will be the marks of a democracy. It will be, apparently, a pleasant constitution, with no rulers and plenty of variety, distributing its peculiar kind of equality to equals and unequals impartially.'

Adeimantus:: ' Yes, what you say is notorious.

Socrates:: 'Consider now, who is the individual resembling it; or, as in the case of the constitution, shall we first consider how he originates?'

Adeimantus:: 'Yes.'

Socrates:: 'Is it not in this manner? I fancy he would be the son of that thrifty and oligarchic man, and be brought up under his father's eye and in his father's way of life, would he not?'

Adeimantus:: 'Surely.'

Socrates:: 'Like his father, holding down by force those desires within him which are prodigal and not money-making? They are called the unnecessary desires?'

Adeimantus:: 'Obviously.'

Socrates:: 'Then, in order to avoid any obscurity in our argument, shall we first distinguish the necessary and the unnecessary desires?'

Adeimantus:: 'Please.'

Socrates:: 'Then should we not rightly call necessary those which cannot be denied and those whose gratification does us good? Our nature must seek after both those kinds. Is not that so?'

Adeimantus:: ‘Yes, certainly.’

Socrates:: ‘Then we may justly give these the title of necessary?’

Adeimantus:: ‘We may.’

Socrates:: ‘Further, those of which we may get rid by dint of youthful training, and whose presence, moreover, does no good, and those which actually do harm, should we do well to call unnecessary?’

Adeimantus:: ‘We should.’

Socrates:: ‘Shall we select an example of each class as they exist, in order that we may have a general idea of them?’

Adeimantus:: ‘Yes, we had better.’

Socrates:: ‘Then would not the desire for eating within the limits of health and good condition, that is, the desire merely of bread and meat, be necessary?’

Adeimantus:: ‘I think so.’

Socrates:: ‘The desire for bread, I fancy, is necessary for both reasons: it does good, and it can’t be done without while life lasts?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And the desire for meat is necessary in so far as it contributes to a-good condition of body?’

Adeimantus:: ‘ Certainly.’

Socrates:: ‘What of desire that goes beyond those limits, desire for other foods than those we have mentioned? Most men, by dint of early discipline and training, can get rid of it. It is bad for the body, and bad for the insight and temperance of the soul. Would it not rightly be called unnecessary?’

Adeimantus:: ‘Yes, most rightly.’

Socrates:: 'Then may we not say that such desires are spendthrift, while those we mentioned before are profit-making, inasmuch as they are profitable for work?'

Adeimantus:: 'Yes.'

Socrates:: 'And shall we say the same of sexual and other desires?'

Adeimantus:: 'Yes.'

Socrates:: 'And by that epithet of "drone" we used a moment ago, did we not mean the man who is full of such pleasures and desires, and who is ruled by the unnecessary desires, while he who is ruled by the necessary is the niggardly and oligarchic man?'

Adeimantus:: 'Surely.'

Socrates:: 'Let us now return, to the change from the oligarchic to the democratic man. This seems to me its usual course.'

Adeimantus:: 'What?'

Socrates:: 'When a young man who has been brought up as we described a moment ago, in an uncultured and niggardly atmosphere, has once tasted the drones' honey, and keeps company with fierce and terrible beasts of prey, men who can fashion pleasures of all kinds and tones and varieties, then you may picture the beginning of the revolution within him, the oligarchy in his soul turning into a democracy.'

Adeimantus:: 'That must be so.'

Socrates:: 'As revolution broke out in the city when one of its factions was helped by an alliance of kindred spirits from without, does not the revolution begin similarly in the young man when one faction of the desires within him gets help from a kindred and similar class of desires without?'

Adeimantus:: 'Most assuredly.'

Socrates:: ‘And I fancy there will be a counter alliance to support the oligarchic element within him; possibly it may come from his father, possibly from the advice and scoldings of the rest of his family; and then arise sedition and counter sedition, and strife within and against himself?’

Adeimantus:: ‘Surely.’

Socrates:: ‘It has sometimes happened, I fancy, that the democratic element yields to the oligarchic; some of the desires are either destroyed or banished, a semblance of reverence is established in the young man’s soul, and order is restored?’

Adeimantus:: ‘Yes, that sometimes happens.’

Socrates:: ‘But in time other desires kindred to those that had been banished were nourished in secret, because his father did not know how to bring him up, and they became many and strong?’

Adeimantus:: ‘Yes, it often happens so.’

Socrates:: ‘These turned to the same bad company as before, and their secret intercourse bred a swarm of children?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘Then in the end, I imagine, they seized the acropolis of the young man’s soul, finding it empty of learning or fair practices or true thoughts, the best guardians and protectors in the hearts of men whom the gods love?’

Adeimantus:: ‘Yes, that they are.’

Socrates:: ‘Since these were wanting, false and braggart thoughts and beliefs, I fancy, ran up and seized upon that place within him?’

Adeimantus:: ‘Most certainly.’

Socrates:: ‘Then does he not turn again to the land of those Lotus-eaters and openly take up his abode there? And if his relations offer any help to the niggardly principle in his soul, these braggart thoughts hut the gates of the palace wall within him, and will not allow the allies entry, nor admit in embassy wise words of wise seniors. They fight that principle and master it; reverence they name simple folly, and drive it out, a dishonored fugitive; temperance they call cowardice, and expel with insult and contempt; moderation and an orderly expenditure they pretend to be boorishness and meanness, and calling a crowd of useless desires to help them, drive them over the frontier?’

Adeimantus:: ‘That is very true.’

Socrates:: ‘Having made this clearance they purify the soul of which they are in possession with solemn rites of initiation, and when that is done they bring back insolence and lawlessness and profligacy and shamelessness, crowned with garlands and in bright array, accompanied by a thronging chorus singing their praises and heaping flatteries upon them; calling insolence good breeding, lawlessness liberty, profligacy magnificence, and shamelessness bravery. Is it not in some such way as this, that the young man deserts an upbringing in necessary desires for the freedom and license of those that are unnecessary and useless?’

Adeimantus:: ‘That is very clearly the case.’

Socrates:: ‘Then in his life henceforth I fancy he divides his expenditure of money, trouble, and time equally between necessary and unnecessary pleasures. He may be fortunate, and not have been driven past all bounds in that divine rage; perhaps, also, when he is older, and the worst of the tumult is over, he may receive back again some of the exiles, and not give himself over wholly to the invaders. Then he will establish a fashion of equality between pleasure and pleasure in this life. Each as it comes has the authority of the lot behind it, and, until he is satisfied, he surrenders to it the rule over himself and then passes it on to another. He dishonors none, and encourages all alike.'

Adeimantus:: 'Certainly.'

Socrates:: 'But, he will not receive nor suffer within the ramparts the true reasoning of any one who asserts that some pleasures spring from the desires that are good and noble, but others from those that are evil, and that the former should be fostered and honored, and the latter disciplined and enslaved. To all such remarks he shakes his head, and says that all are alike and deserving of equal honour.'

Adeimantus:: 'Yes, that is exactly how that sort of man behaves.'

Socrates:: 'And this is his life. Day after day he gratifies the pleasures as they come—now fluting down the primrose path of wine, now given over to teetotalism and banting; one day in hard training, the next slacking and idling, and the third playing the philosopher. Often he will take to politics, leap to his feet and do or say whatever comes into his head; or he conceives an admiration for a general, and his interests are in war; or for a man of business, and straightway that is his line. He knows no order or necessity in life; but he calls life as he conceives it pleasant and free and divinely blessed, and is ever faithful to it.'

Adeimantus:: 'That is a perfect description, of the life of a man to whom all laws are equal.'

Socrates:: 'Yes, I fancy that this man has within him all sorts and conditions of men; he is the fair man of many colors, like the democratic city. His is the life that many men and many women envy; almost all constitutions and ways of behavior are contained within it.'

Adeimantus:: 'Yes, that is he.'

Socrates:: 'Then may we put this man over against the democratic, city and justly call him democratic?'

Adeimantus:: 'We may.'

Socrates:: 'Then there still remain to us, the fairest constitution and the fairest man—tyranny and the tyrant?'

Adeimantus:: 'Just so.'

Socrates:: 'Come now, dear friend, what is the nature of tyranny? As to its origin, it is fairly obvious that it is a transformation of democracy.'

Adeimantus:: 'That is obvious.'

Socrates:: 'Does not democracy become tyranny in the same sort of way as oligarchy becomes democracy?'

Adeimantus:: 'How?'

Socrates:: 'The oligarchies set a good before themselves and made it the principle of oligarchy, that good being wealth. Is not that so?'

Adeimantus:: 'Yes.'

Socrates:: 'But the excess of wealth, and the neglect of all else but money-making, destroyed oligarchy?'

Adeimantus:: 'True.'

Socrates:: 'And does not the excess of the good as conceived by democracy dissolve it in its turn?'

Adeimantus:: 'What good is that?'

Socrates:: 'Liberty. In a democratic city men will tell you that liberty is their fairest possession, and that therefore theirs is the only city where a man who has a free nature can rightly dwell.'

Adeimantus:: ‘Yes, that is a sentiment you hear very often.’

Socrates:: ‘Now, does not the excess of this quality, as I was saying a moment ago, and the neglect of everything else for it, subvert this constitution, and make men ready to want a tyranny?’

Adeimantus:: ‘In what way?’

Socrates:: ‘The democratic city is athirst for the wine of liberty, and they that are set over it to fill its cup with that wine may be evil; and so I fancy it takes more of unmixed liberty than is proper and gets drunk, and then if its rulers are not absolutely obliging in giving it liberty in plenty, it chastises them and accuses them of being wicked oligarchs.’

Adeimantus:: ‘Yes, that it does.’

Socrates:: ‘Those that are obedient to the rulers, it reviles as willing slaves and nobodies, but bestows honour and praise in public and in private on rulers who are like their subjects, and subjects who are like their rulers. In such a state will not liberty inevitably go beyond all bounds?’

Adeimantus:: ‘Surely.’

Socrates:: ‘And lawlessness, my friend, will make its way down into private homes, and end by implanting itself in the very animals.’

Adeimantus:: ‘How does that show itself?’

Socrates:: ‘Well, the father, for example, accustoms himself to become like his child and to fear his sons, and the son in his desire for freedom becomes like his father and has no fear or reverence for his parent. Metic is like citizen, and citizen like metic, and stranger like both.’

Adeimantus:: ‘Yes, that happens.’

Socrates:: ‘And there are other trifles of this kind. The schoolmaster fears and flatters his pupils, and the pupils despise both their schoolmasters and their tutors. And altogether, the young act like their seniors, and compete with them in speech and in action; while the old men condescend to the young and become triumphs of versatility and wit, imitating their juniors in order to avoid the appearance of being sour or despotic.’

Adeimantus:: ‘Very true.’

Socrates:: ‘But, my friend, the last stage of this wealth of liberty exhibited by such a city is reached when men and women, who have been sold as slaves, are every whit as free as those who bought them. And we almost forgot to mention the wonderful equality of law and the liberty that prevails in the mutual relations of men and women.’

Adeimantus:: ‘Well, in the words of Aeschylus, “shall we utter what is on our lips?”‘

Socrates:: ‘Certainly, and that is what I am doing. No one who has not seen it would believe how much freer is the life of the domestic animals in this state than elsewhere. Why, the very dogs take the proverb literally, and are like their mistresses; and there arise also horses and asses who have learnt a wonderfully free and glorious way of walking, and run into every one they meet in the streets unless he gets out of their way; and everything else in the state is equally full of liberty.’

Adeimantus:: ‘No need to tell me that. I often suffer from such animals when I am going into the country.’

Socrates:: ‘But do you observe, that the main result of all these things, taken together, is that it makes the souls of the citizens so sensitive that they take offence, and will not put up with the faintest suspicion of slavery that any one may introduce? For, finally, you know they set entirely at naught both unwritten and written laws, so afraid are they of any kind of master?

Adeimantus:: 'Yes, I know that.'

Socrates:: 'Then this, my friend, with all its beauty and youthful insolence, is the government from which, in my opinion, springs tyranny.'

Adeimantus:: 'It is insolent enough. But what is the next stage in the process?'

Socrates:: 'That disease that appeared in oligarchy and destroyed it, appears in this city likewise, gains in size and strength, profiting by the permission accorded to it, and enslaves democracy. In truth, any kind of excessive action is wont to lead to excessive reaction. This is true of the weather, of plants and of bodies, and not least of constitutions.'

Adeimantus:: 'That is likely enough.'

Socrates:: 'Excessive liberty, then, is lively to give place to nothing else than excessive slavery, born in individual and state?'

Adeimantus:: 'Probably.'

Socrates:: 'Then probably, tyranny arises from no other constitution than democracy, severest and most cruel slavery following, I fancy, the extreme of liberty.'

Adeimantus:: 'Yes, that is reasonable.'

Socrates:: 'But I imagine, that was not what you wanted to know; you were asking, rather, what is the disease which is found both in oligarchy and democracy, and which enslaves the latter?'

Adeimantus:: 'You are right.'

Socrates:: 'I was referring, to that class of idle and dissolute men; some of them are desperately brave and leaders of the whole, the rest are more cowardly and follow.

We compared them to drones, the first to stinged, the second to stingless?'

Adeimantus:: 'Yes, and we were right.'

Socrates:: 'Now those two classes, when they arise, make a disturbance in the whole constitution, just as phlegm and bile disturb the body; and he who is a good doctor and lawgiver of a city must take as careful precautions against them as the wise bee-keeper does against drones. His first care must be not to let them get into the city; and his second, if he is frustrated in the first, to cut them out as quickly as possible, combs and all.'

Adeimantus:: 'Yes, by heaven, that he must assuredly do.'

Socrates:: 'Now shall we proceed in this way?' 'It will give us a more discerning view of our problem.'

Adeimantus:: 'In what way?'

Socrates:: 'Let us divide the democratic city in our argument into three parts, as it is divided in fact. The class we have described makes one, and that, you know, by reason of the permissive principle, flourishes as much here as in the oligarchic city.'

Adeimantus:: 'That is so.'

Socrates:: 'But it is much fiercer in the democracy.'

Adeimantus:: 'How?'

Socrates:: 'In the oligarchy it is not held in honour, but is excluded from office; it has therefore nothing to exercise itself upon, and no opportunity of becoming strong. But in a democracy, you know, this class practically rules the state. The fiercest of them speak and act, and the rest crowd buzzing round the platform and won't hear of any opposition, so that almost everything in this constitution is managed by the drones.'

Adeimantus:: ‘It is indeed.’

Socrates:: ‘Another class of this nature may always be distinguished in the crowd.’

Adeimantus:: ‘What is that?’

Socrates:: ‘Of all the men engaged in making money, those that are of a most orderly nature usually become the richest, do they not?’

Adeimantus:: ‘Probably.’

Socrates:: ‘Then from them, I imagine, honey oozes for the drones in greatest profusion and readiness?’

Adeimantus:: ‘Well, no one could squeeze honey from the poor.

Socrates:: Then these rich men, I fancy, are called the drones’ garden?’

Adeimantus:: ‘Something like that.’

Socrates:: ‘The people would form a third class including all who work with their hands and take no part in affairs, who have got but few possessions. And in a democracy this class, when it is assembled, is the most numerous and most powerful.’

Adeimantus:: ‘It is. But it won’t come to the assembly often unless it gets a share of the honey.’

Socrates:: ‘And therefore it always gets a share, so long as the leaders can manage to plunder the propertied classes, divide the spoil among the people, and yet keep the biggest share for themselves.’

Adeimantus:: ‘Yes, those are the terms on which it shares.’

Socrates:: Those who are plundered, I fancy, are forced to defend themselves, in speeches before the people and in any other way they can contrive?’

Adeimantus:: ‘Surely.’

Socrates:: ‘And then even if they have no thought of revolution, they are accused by their opponents of plotting against the public and of being oligarchs.’

Adeimantus:: ‘Surely.’

Socrates:: ‘And in the end, when they see the public doing their best to injure them, not from wanton malice but because it is ignorant and is led away by their detractors, then indeed, whether they like it or not, they become oligarchs in good earnest. Not that they do this deliberately. This evil also is engendered by the drone’s sting.’

Adeimantus:: ‘That it certainly is.’

Socrates:: ‘Thereupon follow impeachments, and judgments, and contests between man and man?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘And is it not the invariable custom of the public to put one man in high presidency over them, and to foster and strengthen him till he becomes great?’

Adeimantus:: ‘It is.’

Socrates:: ‘This then is clear, that when a tyrant is begotten he springs from this root of presidency, and from nowhere else.’

Adeimantus:: ‘Yes, that is clear.’

Socrates:: ‘Then what is the beginning of the change from president to tyrant? Is it not obviously when the president begins to follow the story which is told concerning the temples of Zeus Lycaeus in Arcadia?’

Adeimantus:: ‘What is that?’

Socrates:: ‘That he who tasted the human flesh which had been cut up with the other sacrifices must of necessity become a wolf. Have you heard the legend?

Adeimantus:: ‘I have.’

Socrates:: 'And he who is president of the people finds a mob more than ready to obey him, and does not keep his hands from the blood of his kindred. He heaps unjust accusations on them—a favorite device—hales them before the courts, and murders them, with unholy tongue and mouth tasting his brothers' blood. He exiles and kills and throws out hints of cancelled debts and divided land. After this, is there not a fateful necessity upon him either to be slain by his enemies or to be a tyrant, and become a wolf instead of a man?'

Adeimantus:: 'Yes, a powerful necessity.'

Socrates:: 'This, then, is the man who makes war upon the propertied classes?

Adeimantus:: 'It is.'

Socrates:: 'Does he become a full-blown tyrant when he has been banished and has forced his return in the face of his enemies' opposition?'

Adeimantus:: 'Clearly.'

Socrates:: 'But if these are unable to procure his banishment or death by accusing him to the city, they then conspire to murder him in secret?'

Adeimantus:: 'That happens often enough.'

Socrates:: 'Thereupon all who have gone thus far hit upon the tyrant's special request of which we have heard so much—they ask the public for a guard for their person, that the people's champion may be preserved to them.'

Adeimantus:: 'That they do.'

Socrates:: 'And the people, I fancy, give it; they fear for him, and are confident for themselves?'

Adeimantus:: 'Yes, indeed.'

Socrates:: 'And when this comes to the notice of a man who has money, and along with his money a name for being a hater of the people, then, my friend, to quote the words of the oracle given to Croesus:

> By Hermus' pebbled shore he flees.
> Stays not, and feels no shame to run in fear.'

Adeimantus:: 'If he did, he would not get another chance of feeling shame.'

Socrates:: 'No, I fancy that if he is caught, he is killed?'

Adeimantus:: 'Inevitably.'

Socrates:: 'But as for our president himself he obviously does not fall "a glorious victim." but after casting down many rivals takes his stand upon the chariot of the state; he is no longer a president, but a finished and perfect tyrant.'

Adeimantus:: 'What else?'

Socrates:: 'Shall we now, describe the happiness of this man and of the city in which such a mortal finds himself?'

Adeimantus:: 'Certainly. let us do so.'

Socrates:: 'In the early days, has he not a smile and a welcome for every man he meets; he denies that he is a tyrant, and is full of promises to the individual and to the public; he grants release from debts, distributes lands to the public and to his party, and pretends to be gracious and good-natured to all?'

Adeimantus:: 'That he must do.'

Socrates:: 'But soon he disposes of his enemies without the city, coming to a compromise with some and killing others, and when he is no longer troubled by them, then, I fancy, he begins to stir up one war after another in order to keep the public in need of a general?'

Adeimantus:: 'That is likely enough.'

Socrates:: 'He also hopes, does he not, that the taxes they have to pay will impoverish them, so that they will be compelled to give their minds to getting their daily bread, and not to conspiring against him?‘

Adeimantus:: ‘Obviously.’

Socrates:: ‘And if there are, as I fancy there may be, some whom he suspects of harboring free thoughts and of being prepared not to submit to his rule, does he not hope to find an excuse for surrendering them to the enemy, and so destroying them? Do not all those reasons compel the tyrant to be always stirring up war?’

Adeimantus:: ‘Inevitably.’

Socrates:: ‘And compel him also, because of his actions, to be pre pared to be more and more disliked by the citizens?’

Adeimantus:: ‘Surely.’

Socrates:: ‘And is it not inevitable that of those who have helped to establish him in power, and who are in positions of influence, some, that is to say, the bravest of them, will speak freely both against him and against each other, and express their dissatisfaction with the course of events?’

Adeimantus:: ‘Probably.’

Socrates:: ‘And the tyrant, if he hopes to rule, must weed out all such persons, until he has left no one of any account, whether friend or foe?’

Adeimantus:: ‘Clearly.’

Socrates:: ‘He must have a sharp eye also for the man who is courageous or high-minded or wise or wealthy; and it is his great happiness to have to be the enemy of all such whether he likes it or not, and plot against them until he purges the city of their presence.’

Adeimantus:: ‘Surely a noble purification.’

Socrates:: 'Yes, just the reverse of medical purgation. For doctors remove the worst and leave the best; he does the opposite.'

Adeimantus:: 'Apparently he must do it, if he is to rule.'

Socrates:: 'Yes, he is bound by a most blessed necessity, which ordains that he shall live with a crowd of worthless creatures, and be hated by them, or not live at all.'

Adeimantus:: 'That it does.'

Socrates:: 'And as by these actions he becomes more and more unpopular with the citizens, will he not need a more numerous and loyal bodyguard?'

Adeimantus:: 'Surely.'

Socrates:: 'But who will these loyal persons be? and where will he get them?'

Adeimantus:: 'They will come flying in numbers without the asking, if he pays them.'

Socrates:: 'By the dog, you seem to be talking of a kind of drone imported from abroad, and most miscellaneous in character.'

Adeimantus:: 'You are right.'

Socrates:: 'And whom will he get from the city itself? Or will he not go so far as that?'

Adeimantus:: 'So far as what?'

Socrates:: 'As to rob the citizens of their slaves, set them free, and enroll them in his bodyguard.'

Adeimantus:: 'Certainly he will, for they will be his most loyal adherents.'

Socrates:: 'What a glorious and blessed thing, is a tyrant as you describe him, if these are his friends and faithful followers when he has got his former associates out of the way.'

Adeimantus:: 'Yes, these are his friends.'

Socrates:: 'Then, he enjoys the admiration of those followers and the company of the new-made citizens, but decent men hate and avoid him.'

Adeimantus:: 'What else could they do?'

Socrates:: 'It is not without reason, that tragedy in general is thought wise, and Euripides a master of tragedy.'

Adeimantus:: 'Why?'

Socrates:: 'Because he made that remark which betrays a deep understanding, that tyrants are wise by reason of the companionship of the wise, and by "the wise" he obviously meant the tyrant's associates.'

Adeimantus:: 'He also praises tyranny as equal to godhead, and there are many other similar statements made by Euripides and other poets.'

Socrates:: 'And yet, those tragic poets, since they are wise, will excuse us and those who follow our constitution, though we intend to refuse them entrance into our city because they are praisers of tyrants.'

Adeimantus:: 'Yes, I think the best of them will excuse us.'

Socrates:: 'They go round all the other cities, I fancy, get together great crowds, and hire men with beautiful, sonorous, and persuasive voices, and all that they may draw the constitutions to tyranny and democracy.'

Adeimantus:: 'That is very true.'

Socrates:: 'In return for these services, moreover, they get reward and honour, mostly, of course, from tyrants, but also from democracies. But as they climb higher up the hill of constitutions, their honour becomes less and less, until they have to stop for want of breath.'

Adeimantus:: 'Certainly.'

Socrates:: ‘But we have digressed from our subject. Let us turn again to the tyrant’s army, that beautiful, numerous, many-colored, and ever-changing body, and consider how it will be supported.’

Adeimantus:: ‘It is clear, that he will sell all the sacred property in the city’s temples, and spend the whole of the money, and so be able to demand lighter taxes from the public.’

Socrates:: ‘What will he do when this source of revenue is exhausted?

Adeimantus:: ‘Clearly, he and his drink-mates, his comrades and his mistresses, will live on the paternal inheritance.’

Socrates:: ‘I understand. The public that begat the tyrant will support him and his companions?’

Adeimantus:: ‘It will be sternly compelled to do so.’

Socrates:: ‘But what do you say to this? Suppose the public begin to grumble, and say that it is not just that a grown-up son should be supported by his father—the other way about is the right way—and that they did not give him birth and set him where he is in order that when he grew to greatness they should become slaves of their own slaves and support him and their slaves and other rabble; they hoped under his presidency to be freed from the rich and the so-called gentlemanly party in the city; and they now therefore order him and his companions to leave the city, as a father might drive his son and his rabble of boon companions from the house.’

Adeimantus:: ‘Then, by Zeus, the public will learn what a monster they have begotten, and welcomed, and made to grow, and what kind of match it is for them. They will find that they are weak, and those they are trying to drive out are strong.’

Socrates:: ‘What do you mean?’ ‘Will the tyrant dare to put compulsion on his parent, and to beat him if he resists?’

Adeimantus:: ‘Yes, after he has managed to disarm him.’

Socrates:: ‘The tyrant as you describe him, is a parricide and a cruel guardian of the aged, and now at last, apparently, we have come to acknowledged tyranny; the public, as they say in the proverb, in trying to escape from the smoke of servitude to free men has fallen into the fire of the dominion of slaves: instead of the plentiful and unseasonable liberty which it once enjoyed, it has clothed itself with the hardest and bitterest servitude to slaves?’

Adeimantus:: ‘Yes, that is exactly the course of events.’

Socrates:: ‘Well, then, shall we not be right in saying that we have given an adequate description of the change from democracy to tyranny, and of the nature of tyranny when that change is accomplished?’

Adeimantus:: ‘Yes, a perfectly adequate one.’

## Book 9.

Socrates:: 'Then now at last, the tyrannical man is left for us to consider, his change from the democratic man, his character after the change is accomplished, and his mode of life, whether miserable or blessed?;

Adeimantus:: 'Yes, he is left.'

Socrates:: 'Do you know, what I still feel to be missing?

Adeimantus:: 'What?'

Socrates:: 'I don't think that we have adequately specified the number and nature of the desires. And till this defect is remedied, there will be more obscurity than there ought to be in our investigation.'

Adeimantus:: 'Well, it is not too late.'

Socrates:: 'No, certainly not. Will you consider what it is that I want to understand about the desires? It is this. Of the unnecessary pleasures and desires, some seem to me to be unlawful. They are probably innate in every one, but if disciplined by law and by the better desires, with the assistance of reason, they may in some men be entirely eradicated, or at least left few and weak, while in other men they are stronger and more numerous.'

Adeimantus:: 'And what are those desires?'

Socrates:: 'Those that are active during sleep. When the rest of the soul, the reasoning, gentle, and ruling part of it, is asleep, then the bestial and savage part, when it has had its fill of food or wine, begins to leap about, pushes sleep aside, and tries to go and gratify its instincts, you know how in such a state it will dare everything, as though it were freed and released from all shame or discernment. It does not shrink from attempting incestual intercourse, in its dream, with a mother or with any man or god or beast. It is ready for any deed of blood, and there is no unhallowed food it will not eat. In a word, it falls short of no extreme of folly or shamelessness.’

Adeimantus:: ‘That is very true.’

Socrates:: But I fancy that a man who is of healthy body and sound mind, before he goes to sleep, stirs up the reasoning part within him and feasts it on noble arguments and problems, and so comes to peace and understanding with himself. The desiring element he neither starves nor surfeits in order that it may go to sleep and not trouble the best part with its joy or with its sorrow, but may leave it undisturbed, alone by itself, to inquire into and stretch out after the apprehension of what it does not know, whether of things past or present or future. In the same way also he soothes the spirited element, and will not go to sleep with his spirit stirred into activity in anger against any man. These two elements he sets at rest, and the third, in which thought abides, he arouses, and so takes his repose. In such case you know that he comes nearer to grasping truth than at any other time, and the visions of his dreams are never unlawful.’

Adeimantus:: ‘I think it is absolutely as you say.’

Socrates:: ‘In what we were saying we have gone rather beyond the immediate point. What we want to be sure of is this, that a terrible, fierce, and lawless class of desires exists in every man, even in those of us who have every appearance of being decent people. Its existence is revealed in dreams. Consider whether you agree with me and think I am right.’

Adeimantus:: ‘I agree.’

Socrates:: ‘And remember how we described the man of the people. His origin, if you recollect, lay in an early training under a parsimonious father, one who honored only the moneymaking desires, and slighted those that are unnecessary and that would not exist but for purposes of amusement and display. Is that right?'

Adeimantus:: 'Yes.'

Socrates:: 'He associates with a smarter set of men, who are full of the desires we have just described, and plunges into all their insolent kind of conduct in disgust at his father's parsimony. But he has a better nature than his corrupters, and so is drawn both ways until he settles down to a compromise between the two modes of life. He takes his pleasure from either side in what he conceives as moderation, and leads a life which is neither mean nor lawless, having, from an oligarch, become a man of the people.'

Adeimantus:: 'That was and is, my opinion concerning such a man.'

Socrates:: 'Now suppose, this man in his turn grown old, with a. young son who has been trained in his father's ways of life.'

Adeimantus:: 'Yes.'

Socrates:: 'Now suppose, further, that he is subjected to the same influences as his father was, and is drawn into entire unlawfulness, which his seducers call entire liberty; suppose, too, that his father and his other relatives come to the assistance of these middle desires, while his companions rally to the help of the other side. When these terrible magicians and tyrant-makers have given up hope of securing their hold on the young man in any other way, they contrive to implant within him a love that shall preside over the idle desires which consume whatever is given them—some winged and mighty drone. Do you think love in such men could be anything else?'

Adeimantus:: 'No, nothing but that.'

Socrates:: ‘Then the other desires buzz round it. They have their fill of incense and myrrh, and garlands and wine, and all the pleasures that run riot in these assemblies. Feeding and fattening the drone to the utmost of their power, they implant in him the sting of longing; when this is done, this president of the soul has madness as his bodyguard and runs amuck: if he finds within the man any beliefs or desires that make pretence of decency and have still some sense of shame, he kills them or drives them beyond his borders, until he has made a clearance of temperance, and introduced madness to fill its place.’

Adeimantus:: ‘Your description of the origin of the tyrannical man is perfect.’

Socrates:: ‘Then, was it not because of this that Love has always been called a tyrant?’

Adeimantus:: ‘Probably.’

Socrates:: ‘Has not a drunken man also a tyrannical spirit, my friend?’

Adeimantus:: ‘He has.’

Socrates:: ‘He who is mad and deranged, moreover, aspires to rule both men and gods alike, and imagines that he is quite capable of doing it?’

Adeimantus:: ‘He does.’

Socrates:: ‘Then, my wonderful friend, whenever you find a man whom’ nature or an evil life, or both, have made drunken and lustful and mad, there you have a tyrannical man, in the strictest sense, come into being.’

Adeimantus:: ‘Most certainly.’

Socrates:: ‘This apparently is the origin of the tyrannical man. Now, how does he live?’

Adeimantus:: ‘As they say about riddles, I give it up. Tell me yourself.

Socrates:: ‘I will. The next stage, I fancy, with those in whose souls a tyrant love dwells ruling all therein, is a time of feasting and rioting and reveling and mistresses, and all such follies.’

Adeimantus:: ‘Inevitably.’

Socrates:: ‘Then does not every day and night produce a thick crop of terrible desires whose wants are many?’

Adeimantus:: ‘Yes, thick it is.’

Socrates:: ‘Then any revenue there may be is speedily consumed?’

Adeimantus:: ‘Surely.’

Socrates:: ‘And the next step is borrowing and encroachment on his capital?’

Adeimantus:: ‘It is.’

Socrates:: ‘When all resources are becoming exhausted, is it not inevitable that the crowded greedy nest full of desires will begin to clamor; and these men are driven by the goads of other desires, but above all by Love himself, whose spears-men and bodyguard all the others are, and they run riot, looking for any one with money whom they can rob by cheating or by force?’

Adeimantus:: ‘Most certainly.’

Socrates:: ‘The man is compelled to plunder from every source or be racked by pains and aches?’

Adeimantus:: ‘He is.’

Socrates:: ‘As the new pleasures that arose within him were set above the old and stole their share, will not the man likewise set himself above his father and mother, who are his elders, rob them, and divide his parents’ goods when he has spent his own?’

Adeimantus:: ‘Yes, certainly.’

Socrates:: ‘But if they won’t make their money over to him, will he not try to cheat and deceive his parents?’

Adeimantus:: ‘Yes.’

Socrates:: ‘And if he fails in that, he will take to robbery and force?

Adeimantus:: ‘I think so.’

Socrates:: ‘But, my wonderful friend, if the old man and woman resist and show fight, will he then desist and abstain from any tyrannical deed?’

Adeimantus:: ‘Well, I have not much hope for that man’s parents.’

Socrates:: ‘Good heavens, Adeimantus, when it is a choice between a mistress whom he has loved for a day, and who has no claim upon him, and his mother, whom he has loved all his life, and who has every claim upon him, or between a fair youth to whom he is bound by no ties, the friend of a day, and his aged father, whose youth is gone, who is bound to him by the closest ties and is the oldest of his friends, do you really think that he will beat his parents, and make them the slaves of persons such as those, if he brings such under his roof?’

Adeimantus:: ‘Yes, assuredly he will.’

Socrates:: ‘How divinely blessed it seems to be, to have a tyrannical son.’

Adeimantus:: ‘It is indeed.’

Socrates:: ‘Well, when he is coming to an end of his father’s and mother’s goods and has now a great swarm of pleasures gathered within him, will he not first begin to busy himself with the walls of other people’s houses, or with the cloaks of evening pedestrians, and after that take to cleaning out a temple or two? And all this time the old beliefs which he had as a boy about right and wrong, and accounted just, will be held in subjection by those which are but newly released from slavery, who form Love’s bodyguard and rule with him. Once they were let loose in sleep when he dreamed, in the time when he was still under laws and a father and had a democratic government in his soul. But when Love established his tyranny over him, he became for always, and in waking reality, the man he used occasionally to be in his dreams. And now he will stick at no frightful murder, no unhallowed food or dreadful deed, but Love dwells tyrannically within him in all lawlessness and anarchy. He is sole ruler, and will lead the man in whom he dwells as in a city, into any kind of daring, by which he will support himself and his rabble following, the immigrants whom the man’s evil companions have introduced, and the native born whom evil ways of life have released and set free. Is not that the life of such a man?’

Adeimantus:: ‘It is.

Socrates:: ‘And if the number of such men in a city is small, and the rest of the population is law-abiding, they emigrate and become some other tyrant’s bodyguard or serve as mercenaries, if war is going on anywhere. But if the times are times of peace and security, then they stay in the city and commit petty crimes.’

Adeimantus:: ‘What kind of crimes do you mean?’

Socrates:: ‘Well, they are thieves, burglars, cutpurses, pickpockets, temple robbers, kidnappers. Sometimes, if they have a ready tongue, they take to corrupt practices, and give false witness and take bribes.

Adeimantus:: ‘Well, these are small evils, if there are only a few of them.’

Socrates:: ‘Yes, because small is small in comparison with great, and all those crimes, in their effect on a city’s wretchedness and misery, don’t, as they say, come near a tyrant. For when a city comes to contain many such men, and others who will follow their lead, and they find out how numerous they are, it is then that, helped by the folly of the public, they produce a tyrant, him who of them all has the greatest and mightiest tyrant within himself.’

Adeimantus:: ‘Naturally, for he will be the most tyrannical.’

Socrates:: ‘All this if men yield without a struggle. But if the city will not submit to him, then as he once chastised his father and mother, so he will now, if he can, chastise his fatherland. He will import a new band of followers, and will have and hold enslaved his once loved fatherland, or motherland, as the Cretans call it. And this is where the desire of this man ends.’

Adeimantus:: ‘Truly, it is.’

Socrates:: ‘Then this, is the character revealed by these men in private life before they obtain power. Firstly, for their company they associate with men who flatter them and will do anything to please them; or if they want a favor from any man, they will take to cringing themselves; to gain their end they will cut any figure that is required, and be more than kin; once the favor is granted, they are strangers again.

Adeimantus:: ‘That is very true.’

Socrates:: ‘So they live their life long, no man’s friend, but always one man’s master or another’s slave. True liberty and friendship the tyrannic nature never tastes.’

Adeimantus:: ‘True.’

Socrates:: ‘May we not rightly call such men faithless?’

Adeimantus:: ‘Surely.’

Socrates:: ‘And as unjust as men may be, if the definition of justice we arrived at some time ago was correct?’

Adeimantus:: ‘It certainly was that.’

Socrates:: ‘Then let us sum up the worst of men. He is surely the man who expresses in waking reality the character we attributed to a man in his dreams?’

Adeimantus:: ‘Certainly.’

Socrates:: ‘And this man is found in him who being in his own nature most tyrannical wields solitary rule, and the longer he leads a tyrant’s life, the more surely does he become the man we have described.’

Glaucon, taking his turn in the conversation said;

Glaucon:: ‘That is inevitable.’

Socrates:: ‘Now, will he who stands revealed the wickedest of men, be shown to be also the most miserable? And will he who has borne tyrant rule longest and most triumphantly have been in truth the longest and most emphatically miserable? Though the multitude will always have varying opinions about him.’

Glaucon:: ‘It is inevitable, that things should be as you say.’

Socrates:: ‘Then, will not the tyrannical man and the city governed by a tyrant be set over against one another as alike, a man of the people against a democratic city, and so on with the others?’

Glaucon:: ‘Surely.’

Socrates:: ‘Then in respect to virtue and happiness, the same relations will hold between man and man as between city and city, will they not?’

Glaucon:: ‘Certainly.’

Socrates:: ‘How does the city governed by a tyrant compare in virtue with the kingly city as we originally described it?’

Glaucon:: ‘They are exact opposites. The one is the best of cities, the other the worst.’

Socrates:: ‘I shall not ask which is which, for that is obvious. Do you give the same decision regarding their happiness or misery, or not? Don’t let us be dazzled by gazing at the individual tyrant or a few of his followers. We must enter the city and examine the whole of it. So let us creep in and take a look all round, and then give our opinion.’

Glaucon:: ‘Your claim is perfectly just. It is obvious to any man that there is no more wretched city than that governed by a tyrant, none happier than the royal city.’

Socrates:: ‘Now if I make the same claim concerning the individual man, shall I not be right in demanding that he alone shall give his judgment on them whose thought can enter in and discern each man’s heart, who is not like a child dazzled by what he sees from the outside—the circumstance and pomp of tyranny which is assumed for the benefit of the outside world—but who can look through right to the heart? May I not also claim that it is right for all of us to listen to the man who is able to judge, who has lived under the same roof with the tyrant, who has been by his side while he lived his ordinary family life at home and has observed his behavior to the different members of his family (among whom, if anywhere, he may be seen stripped of his stage trappings), and who has seen him also in public dangers; and may we not summon him who has seen all this to declare to us how the tyrant compares with the others in respect of happiness and virtue?’

Glaucon:: ‘That also is perfectly fair.’

Socrates:: ‘Shall we, then, pretend, that we are among those who are able to judge, or have met with such, in order that we may have someone to answer our questions?’

Glaucon:: ‘Certainly.’

Socrates:: ‘Come now, consider the question in this way. Keep in your mind the likeness of man and city, and so, examining them point by point, enumerate the characteristics of each in turn.’

Glaucon:: ‘To which do you refer?

Socrates:: ‘Well, to begin with a city. Do you call the tyrant-governed city free or a slave?’

Glaucon:: ‘As much a slave as it could possibly be.’

Socrates:: ‘Then do you see therein masters and freemen?’

Glaucon:: ‘Yes, a few. But almost all therein, and certainly all the best element, is in dishonourable and wretched servitude.’

Socrates:: ‘Then if the man is like the city, must not the same disposition be found in him, and will not his soul be full of extreme slavery and lack of freedom, and all the most respectable elements in it be slaves, and a small part, and that the most wicked and the most mad, be master?’

Glaucon:: ‘That is inevitable.’

Socrates:: ‘Well, will you call such a soul free or a slave?’

Glaucon:: ‘I call it a slave, of course.’

Socrates:: ‘But does not the slave city which is governed by a tyrant have least power of doing what it wants?’

Glaucon:: ‘Much the least.’

Socrates:: ‘Then the tyrant-governed soul will have least power of doing what it wants, or what the whole soul wants? It will ever be dragged about by a madness of desire, and be full of confusion and remorse?’

Glaucon:: ‘Surely.’

Socrates:: ‘Must the tyrant-governed city be rich or poor?’

Glaucon:: ‘Poor.’

Socrates:: ‘Then the tyrannical soul also must be always poverty-stricken and unsatisfied?’

Glaucon:: ‘Yes.’

Socrates:: ‘Moreover, must not such a city and such a man be full of fear?’

Glaucon:: ‘Yes, very much so.’

Socrates:: ‘And in any other city, do you think that weepings and gnashings of teeth, lamentation and pain, will be more abundant?’

Glaucon:: ‘No.’

Socrates:: ‘Or more abundant in any individual than in this tyrannical man who is maddened by desires and lusts?’

Glaucon:: ‘Certainly not.’

Socrates:: ‘And it was your view of all those facts, and others like them, I imagine, that made you judge this city the most wretched of cities?’

Glaucon:: ‘Was I not right?’

Socrates:: ‘You certainly were. But in view of these same facts, what have you to say of the tyrannical man?’

Glaucon:: ‘That he is by far the most miserable of all men.’

Socrates:: ‘In making that remark you are no longer right.’

Glaucon:: ‘How is that?’

Socrates:: ‘In him we have not yet come to the most miserable.’

Glaucon:: ‘Then when shall we?’

Socrates:: ‘This man will seem to you perhaps eve;: ore miserable.’

Glaucon:: ‘What man?’

Socrates:: ‘He, who, being of tyrannical nature, does not lead his life in private, but is unfortunate, and is led by circumstances to be a tyrant.’

Glaucon:: ‘From what we have said before, I conjecture, that you are right.’

Socrates:: ‘Yes, but it is not enough to fancy such things. You must examine them very carefully by the method we have agreed upon. For our inquiry is concerned with the greatest of questions—a good and an evil life.’

Glaucon:: ‘You are perfectly right.’

Socrates:: ‘Then consider whether there is anything in what I say. It seems to me that in our inquiry on this matter we must get light from the following sources.’

Glaucon:: ‘From which?’

Socrates:: ‘By examining each of those rich individuals in cities who own a great number of slaves; for they have this point of similarity with tyrants, that they are rulers of many. No doubt the tyrant has the best of it in point of numbers?’

Glaucon:: ‘He has.’

Socrates:: ‘You know, I suppose, that they live unconcernedly, and are not afraid of their servants?’

Glaucon:: ‘Well, is there anything for them to fear?’

Socrates:: ‘Nothing, but do you see why that is?’

Glaucon:: ‘Yes. The whole city gives assistance to each individual.’

Socrates:: ‘Excellent. But supposing one of the gods were to take a man who possesses fifty slaves or even more, and were to lift him and his wife and children out of the city and put him down, with all his property and his slaves, in a desert place where there would be no free men to come to his assistance, do you not suppose that he would be in the most terrible fright in apprehension lest he and his children and his wife should be killed by their servants?'

Glaucon:: 'In the worst of frights.'

Socrates:: 'Would he not then be compelled to pay court to some of those his slaves, to make them many promises, and to set them free, quite against his desire, and so to stand revealed as his own servants' toady?'

Glaucon:: 'He would certainly have to do so or die.'

Socrates:: 'And supposing the gods were to plant around him large colonies of neighbors who wouldn't tolerate any man claiming to be another's master, and who punished with the severest penalties any such person they might lay hands on?'

Glaucon:: 'In that case, I imagine that he would be in an even greater extremity of evil, ringed round by none but enemies.'

Socrates:: 'Is not this the prison-house in which the tyrant is bound? He has the nature we have described, full of thronging and diverse fears and lusts. He has a greedy soul, and yet he is the only man in the city who may not travel or go to see the things which all free men want to see. He lives hidden away in his house for all the world like a woman, thinking with envy of any of the other citizens who travel abroad and see things worth seeing.'

Glaucon:: 'Assuredly.'

Socrates:: 'Greater then by evils such as these is the harvest of the man, who having an evil constitution in his own soul, which tyrannical condition you have just judged to be most miserable of all, does not live as a private individual, but is compelled by some chance to be a tyrant, and when he cannot master himself, must try to rule others. You might as well compel a man with his body diseased and unable to control itself to have no private life, but to pass his days in public gymnastic contests and battles.

Glaucon:: 'Your comparison is exact and perfectly true, Socrates.'

Socrates:: 'Then, my dear Glaucon, is not his condition altogether miserable, and does not the tyrant lead a life still harder than that which you pronounced hardest of all?

Glaucon:: 'Certainly.'

Socrates:: 'Then in good truth, and for all that any one may think, he who is really a tyrant is really a slave, the humblest cringer and servant, and a toady of the sorriest rascals. His desires he never satisfies, but to any man who can see his whole soul he appears in the barest want and truly poor. All his life long he is full of fear, a mass of convulsive movements and pains, if he is like the constitution of the city over which he rules. And he is, is he not?

Glaucon:: 'Yes.'

Socrates:: 'And besides all these things, shall we further assign to this man what we talked of before? It is inevitable that because of his rule he should be and should go on becoming more and more envious, faithless, unjust, friendless, impious, the welcomer and fosterer of every vice, and that with all these qualities he must be himself the most unfortunate of men, and must make his neighbors like him.'

Glaucon:: 'No sensible man will dispute your assertion.'

Socrates:: 'Well, now, the time has come, and, like the judge in the final contest, you must give your decision as to who in your opinion is first in happiness and who second, and give all the five their places in order, the royal man, the timocratic, oligarchic, democratic, and tyrannical.'

Glaucon:: 'The decision is easy. For I place them as though I were judging tragic choruses, in the order in which they came upon the stage, with respect to virtue and vice, happiness and its opposite.'

Socrates:: 'Shall we hire a herald, or shall I announce myself that the son of Ariston has judged the best and justest man to be the happiest, and declared him to be the most kingly, bearing kingly rule over himself, while the worst and most unjust man he judges to be the most miserable, and declares him to be that man, whoever he is, who being in himself most tyrannical is also tyrant of his city.'

Glaucon:: 'Yes, announce that.'

Socrates:: 'May I add, that this holds whether their characters are known to or hidden from all gods and men?'

Glaucon:: 'Yes, do.'

Socrates:: 'Good. We may take that as one demonstration. Now see whether you think there is anything in this second one.'

Glaucon:: 'What is it?'

Socrates:: 'Since the soul of each individual, is, like the city, divided into three forms, it will admit, I think, of yet another demonstration.'

Glaucon:: 'What is it?'

Socrates:: 'It is this. Belonging to these three forms there appear to me to be three pleasures, one special pleasure attaching to each particular form, and so with desires and principles of rule.'

Glaucon:: 'What do you mean?'

Socrates:: 'There is, first, that by which a man learns, secondly, that by which he is angry. The third contains such varied forms within it that we could find no one special name for it, but named it after the greatest and strongest thing in it. For we called it the desiring form because of the intensity of the desires concerned with food and drink and sex and so on; and we also called it money-loving, because such desires are usually satisfied with the help of money.'

Glaucon:: 'And we were right.'

Socrates:: 'And if we were further to say that its pleasure and love is in gain, would not that be our best way of getting a satisfactory general expression to use in our argument, so that we should know what we were talking about when we referred to this part of the soul; and if we named it the money-loving or the gain-loving form, should we not be right?'

Glaucon:: 'I certainly think so.'

Socrates:: 'Further, did we not say that the spirited element is ever wholly bent on mastery and victory and fame?'

Glaucon:: 'We did.'

Socrates:: 'Then should we be right in calling it the victory-loving and the honour-loving form?'

Glaucon:: 'Quite right.'

Socrates:: 'And, lastly, as to the part with which we learn, it is obvious to every one that it is for ever straining to know where the truth lies, and cares for money and reputation less than the others.'

Glaucon:: 'Yes, much less.'

Socrates:: 'Will it be right if we call it learning-loving and philosophic?'

Glaucon:: ‘Surely.’

Socrates:: ‘And men’s hearts, are ruled, are they not, some by this last element, others by one of the other two, as the case may be?’

Glaucon:: ‘That is so.’

Socrates:: ‘Then it is for these reasons that we say that of men also there are three primary classes—the lovers of wisdom, the lovers of victory, and the lover of gain?’

Glaucon:: ‘Exactly so.’

Socrates:: ‘Then there are also three kinds of pleasures, one for each of the three?’

Glaucon:: ‘Yes.’

Socrates:: ‘Now do you know, that if you were to ask three such men, each in turn, which of these lives is the most pleasant, each would extol his own life most highly? The money-maker will say, will he not, that, compared with the pleasures of gain, the pleasures of honour or of learning are worthless except in so far as they bring in money?’

Glaucon:: ‘True.’

Socrates:: ‘And is not the lover of honour the same? Does he not consider that the pleasures of money-making are rather vulgar, and those of learning, on the other hand, except in so far as learning brings honour, mere smoke and nonsense?’

Glaucon:: ‘That is so.’

Socrates:: ‘Then how shall we imagine that the philosopher regards the other pleasures in comparison with the pleasure of knowing where the truth lies and of being always in a state akin to knowledge when he is learning? For him there can be no comparison, can there?

He will call the others in good truth compulsory pleasures. He has no need for them, but they are forced upon him.

Glaucon:: ‘Should we not make quite certain of that?

Socrates:: ‘Well, when the discussion concerns the pleasures, and in fact the whole life, of each type of man, and the question at issue is not their relative nobility or disgracefulness, their goodness or badness, but simply and solely which is most pleasant and least painful, how can we know which of the three speaks most truly?’

Glaucon:: ‘I can’t say.’

Socrates:: ‘Well, look at the matter in this way. What is wanted for a judgment that is to turn out to be right? Is it not experience and insight and reason? Can you have any better test than these?’

Glaucon:: ‘Of course not.’

Socrates:: ‘Now, consider. There are those three men. Which of them has had most experience of all these pleasures? Do you think that the gain-lover learns the nature of truth and acquires more experience of the pleasure of knowledge than the philosopher has of the pleasure of gain?’

Glaucon:: ‘The cases are very different. For the latter must of necessity start in childhood by testing both the other kinds; whereas there is no compulsion on the gain-lover to learn the nature of reality and taste the sweetness of this pleasure or to have any experience of it. Nay, if he had the best will in the world, he would find it no easy matter.’

Socrates:: ‘Then the philosopher, far excels the gain-lover in his experience of both pleasures?’

Glaucon:: ‘Yes.’

Socrates:: ‘And the lover of honour also? Or has he less experience of the pleasures of honour than the other has of the pleasure derived from wisdom?

Glaucon:: ‘No, honour comes to them all if they accomplish their several aims. For the rich man is honored by many. So is the brave and the wise man. So that all have experience of the pleasure which comes from being honored and know its nature; but it is impossible for any one but the philosopher to taste the pleasure contained in the vision of being.’

Socrates:: ‘Then so far as experience is concerned, he will judge best of the three men?’

Glaucon:: ‘Far the best.’

Socrates:: ‘And his experience alone will involve insight?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And, lastly, as to the necessary instrument of judgment, it is not the instrument of the gain-lover or of the honour-lover, but of the philosopher?’

Glaucon:: ‘What is that instrument?’

Socrates:: ‘Surely we said that judgment must be made by means of reasoning?’

Glaucon:: ‘Yes.’

Socrates:: ‘But reasoning is this man’s especial instrument?’

Glaucon:: ‘Surely.’

Socrates:: ‘Now, if what is being judged were best judged by means of wealth and profit, the praise and blame of the gain-lover would necessarily be the truest?’

Glaucon:: ‘Necessarily.’

Socrates:: ‘Or if by means of honour and victory and courage, the praise of the honour- and victory-lover would be truest?’

Glaucon:: ‘Obviously.’

Socrates:: ‘But since they are best judged by means of experience and insight and reason—?’

Glaucon:: ‘It is inevitable, that the praise of the philosopher and lover of reason should be truest.’

Socrates:: ‘Then of these three pleasures, will not that be the pleasantest which belongs to the part of the soul wherewith we learn, and pleasantest also the life of him amongst us in whom this part rules?’

Glaucon:: ‘How else? The wise man’s praise is decisive, and he praises his own life.’

Socrates:: ‘What life and what pleasure does the judge declare to come second?’

Glaucon:: ‘Obviously the pleasure of the warrior and the honour-lover, for that is nearer him than the pleasure of the moneymaker.’

Socrates:: ‘Then the gain-lover’s apparently comes last?’

Glaucon:: ‘Of course.’

Socrates:: ‘Then that makes twice running, and the just man has twice conquered the unjust. And now a third time in this Olympian conflict to Zeus the Savior and Zeus the Olympian! Observe that the pleasure of the others beside that of the wise man is not altogether true or pure, but a sort of shadow picture, as I seem to have heard some wise man say. Now this will be the chiefest and most decisive of our falls.’

Glaucon:: ‘It will. But what do you mean?’

Socrates:: ‘If you will answer as I ask, I shall discover.’

Glaucon:: ‘Then ask.’

Socrates:: ‘Tell me then. Do we not say that pain is the opposite of pleasure?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And do we say that there is such a thing as feeling neither pleasure nor pain?

Glaucon:: ‘We do.’

Socrates:: It is a mean between the two, and is a kind of rest of the soul from these feelings. Is not that how you describe it?’

Glaucon:: ‘It is.’

Socrates:: ‘Now, do you remember, how sick persons talk when they are ill?’

Glaucon:: ‘How?’

Socrates:: ‘They say that there is nothing more pleasant than being well, but before they fell ill they never noticed how very pleasant it was.’

Glaucon:: ‘I remember.’

Socrates:: ‘Do you not also hear men who are in great pain saying that there is nothing pleasanter than respite from torment?’

Glaucon:: ‘I do.’

Socrates:: ‘But there are many other similar circumstances, I imagine, in which you find men who are suffering pain extolling as the greatest of pleasures not joy, but the absence of pain and relief from their condition.’

Glaucon:: ‘Well, perhaps in those circumstances this state of rest becomes pleasant and desirable.’

Socrates:: ‘And when a man leaves off feeling pleasure, the respite from pleasure will be painful.’

Glaucon:: ‘Perhaps.’

Socrates:: ‘Then this state of rest which we asserted a moment ago to lie between the two, will be both pleasure and pain at times?’

Glaucon:: ‘Apparently.’

Socrates:: ‘But is it possible that what is neither one nor the other should become both?’

Glaucon:: ‘I don’t think so.’

Socrates:: ‘Further, are not both pleasure and pain as they arise in the soul a kind of movement?’

Glaucon:: ‘Yes.’

Socrates:: ‘And has not that which is neither painful nor pleasant just been shown to be rest, and to lie between these two?’

Glaucon:: ‘It has.’

Socrates:: Then is it possible to be right in thinking the absence of suffering pleasant, or the absence of joy terrible?’

Glaucon:: ‘It is impossible.’

Socrates:: ‘Then this state of rest, compared to suffering is not but appears to be pleasure, and compared to pleasure is not but appears to be suffering? In comparison with the reality of pleasure there is nothing solid in these visions; only a kind of magic?’

Glaucon:: ‘That is certainly the result of the argument.’

Socrates:: ‘And consider pleasures, which do not come out of pains—for I don’t want you to imagine in this instance that, in the nature of things, pleasure is cessation from pain, and pain cessation from pleasure.’

Glaucon:: ‘What instance, and what kind of pleasure do you mean?’

Socrates:: ‘There are many of them, but you will get the best example if you consider the pleasures of smell. For they arise in extraordinary intensity in a moment without any preceding pain, and on their cessation leave no pain behind them.’

Glaucon:: ‘That is perfectly true.’

Socrates:: ‘Then do not let us believe that the release from pain is pure pleasure, or from pleasure pure pain.’

Glaucon:: ‘No.’

Socrates:: ‘Nevertheless, those so-called pleasures which make their way to the soul through the body, or at least the most and the greatest of them, are of this class, releases from pain.’

Glaucon:: ‘They are.’

Socrates:: ‘And is it the same with anticipatory pleasures and pains which arise from expectation of pleasure and pain in the future?’

Glaucon:: ‘It is.’

Socrates:: ‘Do you know the nature of such feelings, and what they are like?’

Glaucon:: ‘What?’

Socrates:: ‘Do you conceive, that the above, the below, and the middle exist in nature?’

Glaucon:: ‘I do.’

Socrates:: ‘And do you imagine that a man who was being lifted from the below to the middle would not think that he was being carried above? And if he stood in the middle, and looked down to the place he came from, could he think that he was anywhere but in the above, if he had not seen the real above?’

Glaucon:: ‘Upon my word, I don’t think that in those circumstances he could suppose anything else.’

Socrates:: ‘If he were carried back again, would he not suppose that he was being carried below, and suppose truly?’

Glaucon:: ‘Surely.’

Socrates:: ‘And all this would be the result of his lack of experience of the true above and middle and below?’

Glaucon:: ‘Obviously.’

Socrates:: ‘And would it surprise you that those also who lack experience of truth have unsound doctrines on many subjects, and as regards pleasure, pain and the intermediary state are so situated that when they come in contact with pain their suppositions are true, and they do really feel pain; but when they change from pain to the intermediary state, then they have an intense conviction that they are experiencing satisfaction and pleasure? Like men who contrast black with grey, because they have not seen white, so they contrast pain with want of pain, because they have not experienced pleasure, and are deceived.’

Glaucon:: ‘No, by Zeus. I should be much more surprised if that were not the case.’

Socrates:: ‘Consider the question in this light. Are not hunger and thirst and so on what may be called emptinesses; they are empty conditions of the body?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And is not ignorance and folly likewise an emptiness—an empty condition of the soul?’

Glaucon:: ‘Assuredly.’

Socrates:: ‘Then will not he who receives food and strengthens his mind be filled?’

Glaucon:: ‘Surely.’

Socrates:: ‘But which is the truer filling, to be filled with what is less or with what is more real?’

Glaucon:: ‘Obviously with what is more real.’

Socrates:: ‘And which class of things do you think has greater participation in pure being, the class containing bread and drink and meat and food generally, or the class containing true belief and knowledge and mind and, in short, all virtue? Decide in this way. Do you think that what is connected with the unchanging and immortal and with truth and which takes from these its character and its origin, is more real than what is connected with the ever-changing and the mortal, and which takes from these its character and its origin?'

Glaucon:: 'That which is connected with the unchanging far excels the other.'

Socrates:: 'Does the being of the unchanging partake of being any more than of knowledge?'

Glaucon:: 'Certainly not.'

Socrates:: 'Or more than of truth?'

Glaucon:: 'Once again—no.'

Socrates:: 'Less participation in truth means less participation in being, does it not?'

Glaucon:: Inevitably.'

Socrates:: 'Then, speaking generally, do not those kinds of things which are concerned with the care of the body partake less of truth and being than those concerned with the care of the soul?'

Glaucon:: 'Very much less.'

Socrates:: 'And do you not think similarly of the relation of the body itself with the soul?'

Glaucon:: 'I do.'

Socrates:: 'Then that which is filled with things that more really are, and which is itself more real, is more really filled than that which is filled with what less really is, and which is itself less real, is it not?'

Glaucon:: 'Surely.'

Socrates:: 'Now, if to be filled with what nature demands is pleasant, that which is more really filled with more real things will make a man rejoice more really and truly with true pleasure; while that which receives what is less real will be filled less really and certainly, and will receive more untrustworthy and less true pleasure.’

Glaucon:: ‘That is quite inevitable.’

Socrates:: ‘Then they who have no experience of insight and virtue, but spend their whole time in reveling and such-like, are carried apparently from the middle to below and back again, and wander so all their life from one to the other; but never once have they gone beyond and seen or been carried to the true above, nor have they been really filled with what is real, nor tasted steadfast and pure pleasure. Like beasts of the field their eyes look ever downward, their heads are bent to the ground and to the table, and so like beasts they guzzle and satisfy their lusts, and in their greedy struggle for such pleasures they butt and kick with horns and hoofs of iron, and kill each other because they cannot be satisfied, inasmuch as what they are trying to fill is not the real and continent part of themselves, nor is what they are putting into it real.’

Glaucon:: ‘Truly perfect, Socrates, is your utterance regarding the life of the vulgar.’

Socrates:: ‘Then must not the pleasures they live among be mixed with pains, images and shadow outlines of the true pleasure, and take their color from the contrast of their setting? Thus both pleasures and pains have an appearance of intensity, and implant in the foolish mad desires for themselves, and are the objects of strife, like the image of Helen which Stesichorus says the men at Troy fought over in their ignorance of the truth?

Glaucon:: ‘It is quite inevitable, that their life should be more or less like that.’

Socrates:: ‘Further, must not the same sort of thing, hold good of the spirited element if any man follow it with his whole heart, pursuing after a surfeit of honour and victory to the neglect of reason and understanding; satisfying his love of honour by envy, or his love of victory by violence, or his spirit by bad temper?'

Glaucon:: 'Yes, the same must hold of that also.'

Socrates:: 'But may we not take heart, and say even of those desires which are concerned with the love of gain and the love of victory, that if they follow after knowledge and reason, and pursuing pleasures in their company, accept those which insight points out, they will then, because they are following truth, receive the truest pleasures that they are capable of receiving, and those also that are their own> since that which is best for each thing is also most truly its own?

Glaucon:: 'Yes, its very own.'

Socrates:: 'Then when the whole soul follows without dissension the philosophic part, not only may each part do its own work throughout and be just, but each may gather its own pleasures, the best and the truest of which it is capable?'

Glaucon:: 'Exactly so.'

Socrates:: 'But when one of the other two gets the upper hand, the result is that it does not contrive to gain its own pleasure, but even forces the others to pursue after a pleasure which is foreign to them and untrue?'

Glaucon:: 'Yes.'

Socrates:: 'And will not this be especially the behavior of the elements farthest removed from philosophy and reason?'

Glaucon:: 'It will.'

Socrates:: 'And is not that farthest removed from reason which is farthest removed from law and order?'

Glaucon:: ‘Obviously.’

Socrates:: ‘But have not the lustful and tyrannical desires been shown to be the farthest removed?’

Glaucon:: ‘Very much the farthest.’

Socrates:: ‘While the kingly and orderly desires are nearest?’

Glaucon:: ‘Yes.’

Socrates:: ‘In that case, I imagine, the tyrant will be farthest from true and intimate pleasure, and the king nearest?’

Glaucon:: ‘Inevitably.’

Socrates:: ‘And the tyrant, will lead the most unpleasant, the king the most pleasant of lives?’

Glaucon:: ‘That is quite inevitable.’

Socrates:: ‘Now do you know, how much more unpleasant the tyrant’s life is than the king’s?’

Glaucon:: ‘Tell me.’

Socrates:: ‘There are apparently three pleasures, one genuine and two bastard, and the tyrant in his flight from law and reason goes to the very extremes of the bastard pleasures and beyond them, and lives with a bodyguard of slave-pleasures, and it is not very easy to say how great his inferiority is, but perhaps it may be expressed in this way.’

Glaucon:: ‘How?’

Socrates:: ‘The tyrant is third removed from the oligarchic man, is he not? For the man of the people came between them.’

Glaucon:: ‘Yes.’

Socrates:: ‘Then if what we have said is true, he will live with an image of pleasure the third remove in truthfulness from that of the oligarch.’

Glaucon:: ‘Yes.’

Socrates:: But taking the aristocratic and kingly man as one, the oligarchical is in his turn third from the kingly man.’

Glaucon:: ‘Yes, third.’

Socrates:: ‘Then the tyrant, is removed from true pleasure three times three?’

Glaucon:: ‘Apparently.’

Socrates:: ‘The image of tyrannical pleasure, according to the number of the distance, will be in two dimensions, it seems?’

Glaucon:: ‘Yes.’

Socrates:: ‘But if we square and cube it is obvious how great the interval becomes.’

Glaucon:: ‘Obvious, no doubt, to an arithmetician.’

Socrates:: ‘Then if conversely any one wants to say how far the king is removed from the tyrant in truth of pleasure, he will find on completing the multiplication that he lives seven hundred and twenty-nine times more pleasantly, and the tyrant the same number of times more miserably.’

Glaucon:: ‘You have made a marvelous calculation, of the difference of the two men, the just and the unjust, in respect of pleasure and pain.

Socrates:: ‘Yes, but it is true as well, and also a suitable number for men’s lives, since days and nights and months and years are suitable.’

Glaucon:: ‘That they certainly are.’

Socrates:: ‘Now if the good and just man by so much surpasses the evil and unjust man in pleasure, is it not incalculable how greatly he will conquer him in grace of life and beauty and virtue?’

Glaucon:: ‘Incalculable indeed.’

Socrates:: Good. Now since we have come to this point in our argument, let us refer to the original statements which brought us here. It was stated, if you remember, that injustice is profitable to the perfectly unjust man, who is reputed to be just. Was not that the statement?’

Glaucon:: ‘It was.’

Socrates:: ‘Now, let us join argument with the author of this statement, since we have come to an agreement concerning the respective effects of unjust and just conduct.’

Glaucon:: ‘In what way?’

Socrates:: ‘We shall mould in words an image of the soul, and he who said these things will realize what he has said.’

Glaucon:: ‘What kind of an image?’

Socrates:: ‘An image, like one of those old-time natures we hear of in fable—Chimaera or Scylla or Cerberus, or the many others which are said to have combined several forms in one nature.

Glaucon:: ‘Yes, there are these stories.’

Socrates:: ‘Fashion me, therefore, one form of a many-colored and many-headed beast. There is a ring of heads both of tame and wild beasts, and it can change them and produce them out of itself at will.’

Glaucon:: ‘That is clever molder’s work. Still, words are easier to work in than wax and such materials, so you may suppose it done.’

Socrates:: ‘Then give me two more forms, one of a lion and one of a man. But the first form of all is to be the largest, and the second, second largest.’

Glaucon:: ‘That, is easier, and is done.

Socrates:: ‘Now join these three into one so that somehow or other they have a common nature.

Glaucon:: ‘They are joined.’

Socrates:: ‘Now outside mould round about them an individual image—that of a man—so that to him who cannot see within, but looks only at the outer shell, the whole appears one living creature, and that a man.

Glaucon:: ‘That is done.’

Socrates:: ‘Now to him who says that injustice pays this man, and that just conduct is not to his advantage, let us declare that he is really saying that it pays him to feast and make strong the many-formed monster and the lion and the lion’s belongings, and to starve and weaken the man, so that he is dragged about wherever either of these takes him, and cannot teach them to become used to or fond of one another, but must let them bite and fight and devour one another.

Glaucon:: ‘Yes, that is exactly what the praise of injustice comes to.

Socrates:: ‘On the other hand, would not he who declares that justice pays say that we ought to do and say such things as will make the man within have strongest control over the whole man and look after the many-headed monster like a gardener, fostering and nursing the tame heads, and with the help of the lion nature preventing the wild ones from sprouting; he will care for all in common, and will help them by making them friendly to each other and to himself?’

Glaucon:: ‘Yes, that is just what the praiser of justice says.’

Socrates:: ‘Then from every point of view, the praiser of justice would speak truly, and the praiser of injustice falsely. Whether we look to pleasure or good report or advantage, he who praises justice speaks with truth, but as for him who blames it, there is no soundness or knowledge in his blame.'

Glaucon:: 'I think not. none whatever.'

Socrates:: 'Well, let us be gently persuasive (for his mistake is not of his own will), and ask him: "My dear good sir, may we not say that men's opinions on what is noble and disgraceful have the following origin: the noble actions are those which put the wild-beast parts of the soul under the control of the man, or perhaps we should say of the divine element, while those which enslave the human to the wild part are disgraceful?" Will he agree or not?'

Glaucon:: 'He will, if he takes my advice.'

Socrates:: 'Then will this argument allow that it can profit any man to get gold unjustly; for the result is something like this—he gets the money, but on condition of enslaving the best part of himself to the vilest? Now if he had got the money by selling his son or his daughter as a slave, and that into the hands of cruel and evil men, it would not have paid him to get mountains of gold on these terms: and if he enslaves the divinest part of himself to the most ungodly and the most abominable, and has no pity upon it, is he not then a miserable wretch, and does he not buy his gold on terms of far more terrible death than Eriphyle, who got her necklace at the price of her husband's life?'

Glaucon:: 'Yes, far more terrible.' 'I will answer you for him.'

Socrates:: 'And do you suppose that this is the reason why licentiousness has always been condemned, because it means that that dangerous, that great and many-formed monster is given more freedom than he ought to have?'

Glaucon:: 'Obviously.'

Socrates:: ‘And are not obstinacy and bad temper condemned because the lion and the serpent elements are increased and strengthened unfittingly?

Glaucon:: ‘Certainly.’

Socrates:: ‘And are not luxury and softness condemned because of their relaxing and slackening effect on that same element when they implant cowardice in it?

Glaucon:: ‘Of course.’

Socrates:: ‘And toadying and meanness, because the mean man subordinates this same spirited element to the mob-like beast, and accustoms it from early years to be flouted for the sake of money and the beast’s insatiable greed. and to become a monkey and not a lion?’

Glaucon:: ‘Yes.’

Socrates:: ‘And why do you think that mechanical work and work with one’s hands are matters of reproach? Is it not because in some people the element of the best is naturally weak, unable to rule the monsters within them, and only capable of learning how to pamper them?’

Glaucon:: ‘Apparently.’

Socrates:: ‘Well, then, is it not in order that even these men may be ruled by something resembling the principle that rules in the best man, that we say they must be the slaves of that best man in whom the divine dwells; not that we agree with the opinion Thrasymachus had of the governed, and suppose that the slave ought to be ruled to his hurt, but we think that it is better for every man to be ruled by divinity and insight? It is best, of course, when he possesses that within him, but if he does not, it had better be put over him from without, and then all men, being guided the same principle, will be equals and friends as far as may be.’

Glaucon:: ‘Yes, that is right.’

Socrates:: ‘And the law, by being an ally of all in the city, makes it quite plain that it approves something of this kind. So does the way in which children are ruled. We do not allow them to be free until we have set up a constitution in them, as you might in a city, and until by nourishing the best in them we have provided a guardian to bear rule within them which is like and can take the place of our ruling principle, and then we give them their liberty.’

Glaucon:: ‘Yes.’

Socrates:: ‘Then under what conditions, Glaucon, or for what reasons can we say that there is profit in injustice, or licentiousness, or disgraceful conduct, when by them a man acquires more money or more power of any kind, and with it becomes a worse man?’

Glaucon:: ‘Under no conditions.’

Socrates:: ‘Then how will it profit him who acts unjustly to avoid discovery and punishment? If a man is not found out, does he not become still more wicked, while if he is discovered and punished the beast in him is laid to rest and tamed; the humane part is liberated, and the whole soul is set in the direction of the best nature, and so along with insight acquiring temperance and justice achieves a condition more precious than the condition of the body which with health acquires strength and beauty; in proportion as soul is more precious than body?’

Glaucon:: ‘That is certainly the case.’

Socrates:: ‘Then will not the man of understanding live with all his powers strained to this end? First of all, will he not reverence such studies as will fashion his soul after this pattern, and spurn all others?’

Glaucon:: ‘Obviously.’

Socrates:: ‘And, secondly, as for the condition and nourishment of his body, he will not give that over to the pleasure of the beast and of unreason and turn his life in that direction; nor yet will health be his idea); nor will he set great store in being strong or healthy or beautiful, unless with these he can also be temperate; but he will always make manifest that for him harmony of body has its purpose in unison of soul.’

Glaucon:: ‘Yes, that he will, if he is to be truly musical.’

Socrates:: ‘And will he not for the same purpose, observe order and unison in the acquisition of wealth? He will not be dazzled by what the crowd call blessedness, and heap up the mass of his wealth beyond all bounds, and so possess boundless evils?’

Glaucon:: ‘I think not.’

Socrates:: ‘No, he will fix his eyes on the constitution within him, and keep watch that nothing therein is shaken by excess or poverty of bodily substance, and in adding to or spending that substance he will observe this guiding principle to the best of his power.’

Glaucon:: ‘Certainly he will.’

Socrates:: ‘And in regard to honors also, he will keep his eyes on the same end; some, which he thinks will make him a better man, he will gladly participate in and taste, but in public and in private he will fly from those which he thinks will disturb the condition of his soul.

Glaucon:: ‘If that is his concern, he will not want to be a politician.

Socrates:: ‘Yes, by the dog, he will, at least in his own city; not perhaps in the country of his birth, unless some divine chance falls out.

Glaucon:: ‘I understand. You speak of the city whose foundation we have been describing, which has its being in words; for there is no spot on earth, I imagine, where it exists.

Socrates:: ‘No, but perhaps it is laid up in heaven as a pattern for him who wills to see, and seeing, to found a city in himself. Whether it exists anywhere or ever will exist, is no matter. His conduct will be an expression of the laws of that city alone, and of no other.’

Glaucon:: ‘That is likely enough.’

## Book 10.

Socrates:: 'There are a great many things about the city, which make me think in how extraordinarily sound a manner we have founded it; but I feel this most especially when I think about poetry.'

Glaucon:: 'To what do you refer?'

Socrates:: 'To our refusal to admit all imitative poetry. Now that we have distinguished the different elements of the soul, it appears, I think, to be more obvious than ever that this refusal should be absolute.'

Glaucon:: 'What do you mean?'

Socrates:: 'Between ourselves—and don't denounce me to the tragic poets and all the other imitators—all such things seem to pollute the understanding of those who hear them, unless they possess a knowledge of their real nature; that is an antidote.'

Glaucon:: 'What makes you say this?'

Socrates:: 'It must be uttered, though a certain love and reverence for Homer which I have had from my childhood would forbid my speaking. For surely of all those noble tragic poets he is the master and the leader. Still I must not honour a man more than I honour truth, but must utter what I have to say.'

Glaucon:: 'Yes, certainly.'

Socrates:: 'Then listen, or rather answer.'

Glaucon:: 'Ask your question.'

Socrates:: 'Could you tell me the general nature of imitation? For I don't myself quite understand what it sets out to be.'

Glaucon:: 'Then it is likely, is it not, that I shall understand?'

Socrates:: ‘There would be nothing out of the way if you did. Dull eyes have often beaten sharp ones.’

Glaucon:: ‘So they have. But if I had any opinion, I should not be at all eager to express it in your presence. So do you consider yourself.’

Socrates:: ‘Shall we begin the inquiry according to our ordinary method? We have been in the habit, if you remember, of positing a Form, wherever we use the same name in many instances, one Form for each “many.” Do you understand?’

Glaucon:: ‘I do.’

Socrates:: ‘And shall we take whatever “many” you please. For example, if this will do. there are many beds and tables.’

Glaucon:: ‘Surely.’

Socrates:: ‘But for these articles there are two Forms, one of a bed and one of a table?’

Glaucon:: ‘Yes.’

Socrates:: ‘And have we not also been in the habit of saying, that it is by looking at the Form that the manufacturer of each article makes the beds or the tables which we use, and so with other things? For no manufacturer manufactures the actual Form, does he?’

Glaucon:: ‘Certainly not.’

Socrates:: ‘Now consider this manufacturer. What would you call him?’

Glaucon:: ‘Whom?’

Socrates:: ‘He who by himself makes all things which are made by all the different craftsmen.’

Glaucon:: ‘A marvelous clever fellow!’

Socrates:: ‘Wait a little, and you will soon say that with more reason. For this same craftsman is not only able to make all manufactured articles, but he makes all things that grow from the earth and fashions all living creatures, himself with the rest of them, and, not content with that, fashions earth and heaven, and gods and all things in heaven, or in Hades under the earth.’

Glaucon:: ‘What a perfectly marvelous genius!’

Socrates:: ‘Do you not believe me?’ ‘Tell me. Do you think there is no such manufacturer at all, or do you think that a man might be in a certain manner a maker of all these things and in another manner not? Don’t you see that you yourself could make all these things in a certain manner?’

Glaucon:: ‘And what is that manner?’

Socrates:: ‘It is not hard, but a frequent and easy mode of manufacture. It is most easily done perhaps if you take a mirror and turn it round to all sides. You will soon make a sun and stars, the earth, yourself, and other living creatures, manufactured articles and plants, and everything we have just described.’

Glaucon:: ‘Yes, make them in appearance, but surely not as they are in truth.’

Socrates:: ‘Your remark is excellent, and just what the argument wants. For the painter also, I imagine, is one of these manufacturers. Is he not?

Glaucon:: ‘Surely.

Socrates:: ‘But you will say, I fancy, that what he makes, he does not make truly. Though the painter also makes a bed in a manner, does he not?’

Glaucon:: ‘Yes, he, like the other, makes a bed in appearance.

Socrates:: ‘What of the carpenter? But did you not say that he makes, not the Form which we asserted to be that which a bed is, but a particular bed?

Glaucon:: ‘Yes, I said so.

Socrates:: ‘Now, if he does not make what is, he will not make the real, but something which is of the same nature with but is not the real. And if any one were to say that the work of the carpenter or of any other craftsman was perfectly real, he would probably not be speaking the truth, would he?’

Glaucon:: ‘No, at least not in the opinion of persons acquainted with this kind of reasoning.’

Socrates:: ‘Then let us not be surprised if the manufactured article is also somewhat indistinct as compared with truth.’

Glaucon:: ‘No.

Socrates:: ‘Shall we then, ‘take these as examples in our search after the nature of the imitator?

Glaucon:: ‘If you please.’

Socrates:: ‘Now there are these three beds, first the bed which exists in nature, which we should say, I fancy, was made by God Should we not?’

Glaucon:: ‘By God, I fancy.’

Socrates:: ‘And one made by the carpenter?

Glaucon:: ‘Yes.’

Socrates:: ‘And one made by the painter?

Glaucon:: ‘Yes, let us suppose so.’

Socrates:: ‘Painter, carpenter, and God, these three are set over the three classes of beds.’

Glaucon:: ‘Yes, these three.’

Socrates:: ‘And God, whether because he so willed or because there was some necessity upon him not to make more than one bed in nature, made that one which is the reality of a bed and only that. But two or more such beds were never produced by God, and never will be.’

Glaucon:: ‘How is that?

Socrates:: ‘Because, if God should make even no more than two, then yet another would be revealed whose Form the first two would express, and this, and not the two, would be the reality of a bed.’

Glaucon:: ‘You are right.’

Socrates:: ‘And God, I imagine, knew this, and wished to be really maker of a bed that really was and not only a particular manufacturer of a particular bed, and therefore produced this one natural bed.’

Glaucon:: ‘Probably.’

Socrates:: ‘Then shall we call him the “nature maker” of this thing, or something of that kind?’

Glaucon:: ‘Yes, that is only just, when his making of this and all other things is nature’s making of them.’

Socrates:: ‘What of the carpenter? Do you call him a manufacturer of a bed?’

Glaucon:: ‘Yes.’

Socrates:: ‘And you call the painter also a manufacturer and maker of the same kind of thing?’

Glaucon:: ‘Certainly not.’

Socrates:: ‘Then what is he of a bed?’

Glaucon:: ‘I think, that he would be most fairly described as an imitator of what the other two manufacture.

Socrates:: ‘Good. You call him an imitator who is concerned with that which is begotten three removes from nature?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And the tragedian, since he is an imitator, will be then one whose nature is third from the king and from the truth, and all the other imitators will be like him?’

Glaucon:: ‘That seems probable.’

Socrates:: ‘Then we are agreed as to the imitator. But tell me this about the painter. Do you think that he tries to imitate each reality in nature, or the works of the manufacturers?’

Glaucon:: ‘The works of the manufacturers.’

Socrates:: ‘To imitate them as they are, or as they appear? You must make this further distinction.’

Glaucon:: ‘What do you mean?’

Socrates:: ‘This. Does a bed really differ from itself when you look at it from the side or from straight in front or from any other point of view, or does it remain the same but appear different? And so with other things.’

Glaucon:: ‘The second alternative is right. It appears, but is not different.’

Socrates:: ‘Now consider this point. Which of these two governs the drawing of any subject? Is drawing an attempt to imitate the real as it is, or the appearance as it appears? Is it an imitation of an appearance or of a truth?’

Glaucon:: ‘Of an appearance.’

Socrates:: ‘Imitation, then, is far from the truth, and apparently it manages to make all things just because it attacks only a small part of each, and that an image. The painter, for example, will paint us, we say, a shoemaker, a carpenter, and all other workmen, though he has no knowledge whatever of their crafts. But nevertheless, if he is a good painter, he may paint a carpenter and show the thing at some distance, and so cheat children and stupid men into thinking it is really a carpenter.'

Glaucon:: 'Surely.'

Socrates:: 'Well, my friend, I imagine that we must come to this conclusion about all these matters. When any one announces to us that he has met a man who knows all handicrafts, and who of all the things known by each separate individual has a more exact knowledge than any of them, to such a person we must reply that he is more or less of a fool, and has apparently met with a wizard and imitator, and been cheated into thinking the man possessed of universal wisdom, all because he could not distinguish knowledge and lack of knowledge and imitation.'

Glaucon:: 'Very true.'

Socrates:: 'And after this, we must examine tragedy, and Homer its leader, since people tell us that tragedians know all arts and all things human that relate to virtue and vice and things divine. For a good poet, they say, if he is to make a beautiful poem on his subject, must do so with knowledge of that subject, or fail altogether. We must then inquire whether these persons have met with the imitators and been cheated, and, on seeing their productions, have failed to perceive that they are three removes from being, and can easily be made without knowledge of the truth—for their productions are appearances and not realities—or whether there is something in what they say, and good poets really have knowledge of those subjects of which their descriptions are approved by common opinion.'

Glaucon:: 'Yes, this must certainly be investigated.'

Socrates:: ‘Now, do you suppose that if any man could make both the object of imitation and the image, that he would trouble to set himself down to the manufacture of images, and would put this power in the forefront of his life as his best possession?’

Glaucon:: ‘Not.’

Socrates:: ‘But, I imagine, if he had true knowledge of those things which he also imitates, he would be much more zealous in the doing than in the imitation of them, and would try to leave many beautiful deeds as memorials behind him. He would much rather be the hero whose praises are sung than the poet who sings them.’

Glaucon:: ‘I think so. The honour and benefit are far greater.’

Socrates:: ‘Well, on other questions we may give up the idea of calling Homer or any other poet to account, by asking whether any of them had medical knowledge, and was not merely an imitator of medical discourses; where are the people whom any poet, ancient or modern, is said to have restored to health, as Asclepius did; what students of medicine they have left behind them to match the descendants of Asclepius.

And so with the other arts we may refrain from such questions, and let be. But when Homer tries to tell of the mightiest and most noble things, of wars and generalship and government of cities and the education of man, then it is only fair we should question him, and inquire: “My dear Homer, if, as you say, you are not thrice removed from truth concerning virtue, a manufacturer of an image, and what we have called an imitator; if you are but twice removed, and can know what practices make men better individuals and better citizens, can you not mention a city to which you gave a better government, such as Lycurgus gave to Lacedaemon, and many other persons to many cities great and small? Does any city name you a good lawgiver and its benefactor? So Italy and Sicily name Charondas, and we Solon. “Who so names you?” Will he be able to mention one?’

Glaucon:: ‘I think not. Why, even the devotees of Homer don’t say that.’

Socrates:: ‘But is there an account of any war in that time which was well waged under the command or advice of Homer?’

Glaucon:: ‘No.’

Socrates:: ‘Well, is there mention of many inventions, contrivances of use in handicrafts or in any other branch of action, which would show that he was a clever practical man, like Thales of Miletus, or Anarcharsis the Scythian?’

Glaucon:: ‘No, nothing of the kind.’

Socrates:: ‘Well, if there is no mention of public services, do we hear that Homer in his lifetime was guide and educator to certain individuals, who loved him for the inspiration of his society, and who handed down to those who came after them a Homeric way of life? Such was Pythagoras. For that master was greatly loved for such reasons, and his successors even up to the present day talk of the Pythagorean manner of life, and seem somehow to be quite distinct from other people.’

Glaucon:: ‘No, we do not hear of anything of that kind. For if the stories about Homer are true, Socrates, his companion Creophylus would as an example of education be even funnier than his funny name. For they say that Homer was very much neglected in his lifetime, not to speak of what happened afterwards.’

Socrates:: ‘Yes, so they say. But consider, Glaucon, if Homer had really been able to educate men and make them better, if he had attained not merely to imitation but to knowledge of these subjects, would he not have made many disciples and been honored and loved by them? Why, Protagoras of Abdera and Prodicus of Ceos and many others can by their private intercourse inspire their followers with the belief that they will be unable to rule either their households or their city unless these masters superintend their education, and for this wisdom of theirs they are so devotedly loved, that their disciples almost insist on carrying them about shoulder high. Now if Homer had been able to help men to be virtuous, would the men of the time have allowed him and Hesiod to wander about singing their songs; would they not have laid hold of them as more precious than gold, and compelled them to dwell at home with them; or if they had not succeeded in that, would they not have taken the direction of their education into their own hands and followed them wherever they went until they had got adequate instruction?'

Glaucon:: "I think, Socrates, that what you say is most certainly true.'

Socrates:: 'Then may we lay down that, beginning with Homer, all the poets are imitators of images of virtue and of all the other subjects on which they write, and do not lay hold of truth; rather, as we said a moment ago, the painter will produce what seems to be a shoemaker, though he himself has no understanding of shoemaking, and his spectators have none, but judge only by color and form?'

Glaucon:: 'Certainly.'

Socrates:: 'And so, I imagine, we shall say that the poet also by means of words and sentences reproduces the colors, as it were, of the several arts, having only enough understanding to imitate; and he too has his spectators who judge by words and think if any one in meter and rhythm and musical mode describes shoemaking or generalship or any other subject, that what is said is good. Such is the great magical power which these things possess. For when the works of the poets are stripped of the colors that music gives them, and are spoken simply and by themselves, I fancy that you know what they look like. I dare say you have noticed?

Glaucon:: 'I have.'

Socrates:: 'Might we not compare them, to faces with the freshness of youth but without real beauty when they suffer change and have lost their early bloom?

Glaucon:: 'Certainly.'

Socrates:: 'Come, then, consider this. The maker of the image, the imitator, we say, has no understanding of what is, but only of what appears; is it not so?

Glaucon:: 'Yes.'

Socrates:: 'But let us not leave the question half stated, but consider it adequately.'

Glaucon:: 'Speak on.'

Socrates:: 'Will a painter, say, paint reins and bridle?'

Glaucon:: 'Yes.'

Socrates:: 'But a saddler and a smith will make them?'

Glaucon:: 'Certainly.'

Socrates:: 'Does the painter know what the reins and the bridle ought to be like? Or is it the case that not even the smith and the saddler, who made them, know that, but only the horseman, the man who knows how to use them?'

Glaucon:: 'Very true.'

Socrates:: 'And shall we not say the same about everything?'

Glaucon:: 'What?'

Socrates:: 'That there are three arts concerned with each thing—one that uses, one that makes, and one that imitates?

Glaucon:: 'Yes.'

Socrates:: 'Then are the virtue and beauty and correctness of every manufactured article and living creature and action determined by any other consideration than the use for which each is designed by art or nature?'

Glaucon:: 'No.'

Socrates:: 'Then it is quite inevitable that the user of each thing should have most experience of it, and should be the person to inform the maker what are the good and bad points of the instrument as he uses it. For example, the flute-player informs the flute-maker about the flutes which are to serve him in his fluting; he will prescribe how they ought to be made, and the maker will serve him.'

Glaucon:: 'Surely.'

Socrates:: 'Then he who knows gives information about good and bad flutes, and the other will make them, relying on his statements?'

Glaucon:: 'Yes.'

Socrates:: 'Then the maker of any article will have a right belief concerning its beauty or badness, which he derives from his association with the knower, and from listening, as he is compelled to do, to what the knower says; but the user has knowledge?

Glaucon:: 'Certainly.'

Socrates:: 'Now will the imitator have knowledge derived from use as to whether or not the subjects which he paints are beautiful and right, or will he have right belief derived from compulsory intercourse with the man who knows and from being told how he ought to depict them?'

Glaucon:: ‘Neither.’

Socrates:: ‘Then the imitator will neither know nor have right belief concerning the beauty or the defects of the subjects of his imitation?’

Glaucon:: ‘Apparently not.’

Socrates:: ‘Then the poetic imitator will be charming in his wisdom on the subjects of his poetry?’

Glaucon:: ‘Not so very charming.’

Socrates:: ‘For all that he will imitate without knowing wherein each thing is bad or good; but he will probably imitate what appears to be beautiful to ordinary and ignorant people?

Glaucon:: ‘Certainly.’

Socrates:: ‘Then apparently we have come to a thorough agreement on this, that the imitative man has no knowledge of any value on the subjects of his imitation; that imitation is a form of amusement and not a serious occupation; and that those who write tragic poetry in iambics and hexameters are all imitators in the highest degree?’

Glaucon:: ‘Certainly.’

Socrates:: ‘By Zeus, is not this imitation concerned with something that is third from the truth?’

Glaucon:: ‘Yes.’

Socrates:: ‘And what is it in man on which it exercises such effect as it has?’

Glaucon:: ‘What kind of thing do you mean?’

Socrates:: ‘Something of this sort. You know that the same magnitude seen from a distance and from near at hand does not appear to us to be the same?’

Glaucon:: ‘No.’

Socrates:: ‘And the same thing appears bent when seen in water and straight when taken out of it, or both concave and convex, owing to a perversion of the vision by colors, and there is quite evidently a general confusion on this matter in our soul. It is this affection of our nature on which drawing in perspective relies to try all its magic arts upon us; and so it is in jugglery, and many other similar contrivances.’

Glaucon:: ‘True.’

Socrates:: ‘And have not measurement and counting and weighing been shown to render most charming assistance in these difficulties? For the rule in our minds of the apparently larger or smaller or more or heavier, they substitute the rule of that which has counted or measured, or, if you like, weighed?’

Glaucon:: ‘Surely.’

Socrates:: ‘And this will be the work of the reasoning element in the soul?’

Glaucon:: ‘It will.’

Socrates:: ‘But when this element has made its measurements several times, and announces of any two things that one is greater or less than the other, or that they are equal, you have opposite conclusions about the same things appearing simultaneously.’

Glaucon:: ‘Yes.’

Socrates:: ‘Now did we not say that it was impossible for the same element to come simultaneously to opposite conclusions about the some things?

Glaucon:: ‘We did, and rightly.’

Socrates:: ‘Then that in the soul whose judgments disagree with the measurements, will not be the same as that whose judgments are in accordance with them?

Glaucon:: ‘No.’

Socrates:: ‘But that which relies on Calculation and measurement will be the best element in the soul?’

Glaucon:: ‘Of course.’

Socrates:: ‘Then that which opposes it will be one of the beggarly elements in us?’

Glaucon:: ‘Inevitably.’

Socrates:: ‘This was the point which I wanted to settle when I said that drawing and in fact all imitation produces its own work quite removed from truth, and also associates with that element in us which is removed from insight, and is its companion, and is friend to no healthy or true purpose.’

Glaucon:: ‘Certainly,’

Socrates:: ‘Then imitation is a beggar wedded to a beggar and producing beggarly children?’

Glaucon:: ‘Apparently.’

Socrates:: ‘Does this apply only to visual imitation, or also to imitation by sound, which we call poetry?’

Glaucon:: ‘Naturally to that also.’

Socrates:: ‘Well, let us not rely on the natural analogy in painting but turn to that actual element of the understanding with which poetic imitation associates and see whether it is bad or good.’

Glaucon:: ‘Yes, we must.’

Socrates:: ‘Let us put it in this way. Imitation, we say, imitates men acting compulsorily or voluntarily, thinking that in the event they have done well or ill, and throughout either feeling pain or rejoicing. Is there anything else besides that?’

Glaucon:: ‘Nothing.’

Socrates:: ‘Now in all this process, is a man in one and the same disposition of mind? Or just as in seeing he was in a state of dissension, and had in himself simultaneous and opposing beliefs about the same things, so likewise in conduct is he not also at dissension and war with himself? And I may remind you that there is no need for us now to come to an agreement on this; for in the previous discussion on all these points we came to an agreement that our soul is full of countless simultaneous oppositions of this kind.’

Glaucon:: ‘We were right.’

Socrates:: ‘We were. But I think we must now discuss what we then omitted.’

Glaucon:: ‘What is that?’

Socrates:: ‘We said at that time, if you remember, that a reasonable man, if he meets with a misfortune, like the loss of a son or anything else which he holds very dear, will bear it much more easily than other people.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Now let us consider this point. Will he feel no sorrow at all; or if that is an impossibility, will he show some sort of moderation in his grief?’

Glaucon:: ‘The second alternative is nearer the truth.’

Socrates:: ‘Now tell me this about him. Do you fancy that he will fight and contend with his grief better when he is under the observation of his fellows, or when he is alone by himself in solitude?

Glaucon:: ‘Much belter, when he is under observation.’

Socrates:: ‘Yes. When he is alone I imagine he will utter many cries of which he would be ashamed if there were any one to hear him, and do many things which he would not allow any one to see him doing.’

Glaucon:: 'That is so.'

Socrates:: 'Now is not that which encourages him to resist, reason and law, while that which draws him to his sufferings is the affliction itself?'

Glaucon:: 'True.'

Socrates:: 'And since there is in the man impulsion in contrary directions in regard to the same thing at the same time, we must say that the impulsions are two.'

Glaucon:: 'Surely.'

Socrates:: 'And the one is ready to obey the law and follow its guidance?'

Glaucon:: 'Yes.'

Socrates:: 'Now the law says that it is best to take misfortunes as quietly as possible and not to grieve, because the good and evil in such matters are not certain, and to take them hardly makes things no better for the future; because no human affairs are worth taking very seriously; and, finally, because grief is a hindrance to that state of mind to which we should come in our troubles as quickly as possible.'

Glaucon:: 'To what do you refer?'

Socrates:: A man should take thought, on what has come to pass, and as we regulate our play by the fall of the dice, so he should regulate his affairs in the light of what has fallen out, as reason ordains will be best. We should not be like children who, when they have stumbled, go on holding the injured part and shrieking, but should always accustom the soul to turn as quickly as possible to the healing and restoring of that which is fallen and diseased, making lamentation to disappear before medicine.

Glaucon:: 'That certainly would be the most correct attitude to misfortune.'

Socrates:: ‘Now the best part in us, we say, wishes to follow this reasoning.’

Glaucon:: ‘Obviously.’

Socrates:: ‘Then shall we not say that that element which impels us to recall our affliction and to lament, and which can never have enough of such things, is unreasoning and idle and a lover of cowardice?’

Glaucon:: ‘Yes, we shall.’

Socrates:: ‘Now the one, the complaining element, lends itself to much and diverse imitation, but the prudent and quiet character, which is always at one with itself, is not easily imitated, nor when imitated is it easily understood, especially in crowded audiences when men of every character flock to the theatre. For them it is the imitation of a disposition with which they are not familiar.’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then obviously it is not this character in the soul towards which the imitative poet is by nature set, or which his wisdom is bent on pleasing, since he is to win a great reputation with the common people, but rather the peevish and diverse character, because it is such a good object of imitation?’

Glaucon:: ‘Obviously.’

Socrates:: ‘Then we may now justly lay hold of the poet and set him over against the painter; for he resembles him in producing what has little value for truth, and also in associating with a similar part of the soul, which is not the best. And so we may now with justice refuse to allow him entrance to a city which is to be well governed, because he arouses and fosters and strengthens this part of the soul and destroys the reasoning part. Like one who gives a city over into the hands of villains, and destroys the better citizens, so we shall say that the imitative poet likewise implants an evil constitution in the soul of each individual; he gratifies the foolish element in it, that which cannot distinguish between great and small but thinks that the same things are sometimes great and sometimes small, and he manufactures images very far removed from the truth.'

Glaucon:: 'Certainly.'

Socrates:: 'But we have not yet stated our mightiest accusation against imitation. For its power of corrupting even the good, all but a few, is surely most terrible of all.'

Glaucon:: 'Surely, if it does actually do that.'

Socrates:: 'Listen and consider. Take the best of us listening to Homer or any other of the tragic poets, when he is imitating a hero in grief and spinning out a long melancholy lamentation or imitating men singing and disfiguring themselves in grief: you know that he gives us pleasure, and we give ourselves up to following him; we sympathize and are seriously impressed, and praise as a good poet whoever most affects us in this way.'

Glaucon:: 'I know we do.'

Socrates:: 'But when an intimate sorrow comes to any of us, you notice that we pride ourselves on the opposite kind of behavior, on being able to bear it with quiet and endurance, as though this were playing a man's part, and the other behavior, which we then praised, were playing a woman's.'

Glaucon:: 'Yes.'

Socrates:: 'Then is the praise rightly given?' 'Is it right to look at a man being what we ourselves should not wish to be without shame, and so far from feeling disgust, to enjoy and praise the performance?'

Glaucon:: 'No, by Zeus, it does not seem reasonable.'

Socrates:: ‘That is right, if you look at it in that way.’

Glaucon:: ‘In what way?’

Socrates:: ‘If you consider that the element, which in our own intimate misfortunes is held down by force and stinted of its fill of weeping and lamentation, those things which it is its nature to desire, is the very part which the poets satisfy and please; while what by nature is best in us, for "t of being adequately trained either by reason or by habit, relaxes its watch over the weeping element. The sorrows which it beholds are not its own, and if another man with pretensions to virtue grieves more than he might, there is no disgrace for it in praising and pitying him, but there is, it thinks, the actual profit of the pleasure, and therefore it will not consent to lose that pleasure by despising the whole poem. For it is given to few, I fancy, to reflect that other men’s sorrows contribute to our own. For if we feed the element of pity on others’ misfortunes and make:, it strong, it is not easy to control it in our own.’

Glaucon:: ‘Very true.’

Socrates:: ‘And does not the same argument apply to the humorous? You may take an extraordinary pleasure in hearing at a representation of comedy or in a circle of friends jests which you would be ashamed to make yourself, and will not hate them for their vileness; but are you not doing just what you did in tragic performances? It was by reason, again, that you held down that in you which wanted to jest, because you feared to be thought a buffoon, and now you let it free and pamper it at these performances, with the result that often you have quite unconsciously gone the length of being a comic poet in your own conduct?’

Glaucon:: ‘Certainly.’

Socrates:: ‘And with regard to sexual desires, and anger, and all feelings of desire and pain and pleasure in the soul, which we say follow all our actions, you observe that poetic imitation produces all these effects in us. They should be withered, and it waters them and makes them grow. It makes them rule over us, when they ought to be subjects if we are to become better and happier, instead of worse and more miserable.’

Glaucon:: ‘I can’t disagree with you.’

Socrates:: ‘Then, Glaucon, when you find Homer’s admirers saying that this poet has educated Hellas, and that in questions of human conduct and culture a man ought to read and study Homer, and organize his whole life in accordance with the teaching of this poet, you must be friendly and kind to such people—they are as good as they know how to be—and agree that Homer is the most poetical and the first of the tragic poets, but be quite sure in your mind that only such specimens of poetry as are hymns to the gods or praises of good men are to be received into a city. If you receive the pleasure-seasoned Muse of song and epic, pleasure and pain will be kings in your city instead of law and the principle which at all times has been decided by the community to be best.’

Glaucon:: ‘Very true.’

Socrates:: •Let it, then, be our defense now that we have recurred to the subject of poetry, that it was only to be expected that we should expel poetry from the city, such being her nature. The argument compelled us. And let us tell her also, in case she should accuse us of brutality and boorishness, that there is an ancient quarrel between philosophy and poetry. Phrases like “the bitch that at her master yelps.” “the yelping hound that in assemblies of the fools exalts its head,” “the conquering rabble of the over wise," the statement that "the men of subtle thought are beggars all," and many others are signs of this ancient antagonism. Nevertheless, let us state that if the pleasure-producing poetry and imitation has any arguments to show that she is in her right place in a well-governed city, we shall be very glad to receive her back again. We are conscious of the charm she exercises upon us. Only to betray the truth as it appears to us is impious. Do not you, my friend, also feel her magic charm, especially when she speaks with Homer's lips?'

Glaucon:: 'Very much so.'

Socrates:: 'Then is it not just that she should return on those conditions, after she has published her defense in lyrical or any other meter?'

Glaucon:: 'Certainly.'

Socrates:: 'And we might also allow her champions, who are not poets, but lovers of poetry, to publish a prose defense on her behalf, showing that she is not only pleasant but also useful for political constitutions and for human life, and we shall listen with friendly feelings. For it will be to our profit if she is made out to be not only pleasant, but useful.'

Glaucon:: 'Most certainly to our profit.'

Socrates:: 'But if not, my dear comrade, then, as men who have loved but have come to the conclusion that their love is unprofitable, though it may cost a struggle, yet turn away; so likewise, though by reason of the love for such poetry that our nurture in beautiful constitutions has bred in us we shall be glad of any manifestation of her goodness and truth, yet until she is able to defend herself, we will not listen to her without repeating to ourselves as a charm this argument of ours and this incantation, for fear of falling again into that childish love which is still shared by the many. We shall chant, therefore, that this poetry is not to be taken seriously, as though it were a solemn performance which had to do with truth, but that he who hears it is to keep watch on it, fearful for the city in his soul, and that we must lay down these laws concerning poetry which we have described.'

Glaucon:: 'I entirely agree with you.'

Socrates:: 'For much is at stake, my dear Glaucon, more than people think, in a man's becoming good or bad; and therefore he must not be seduced by honour or money or any office, or even by poetry, to dare to neglect justice and the rest of virtue.'

Glaucon:: 'What we have said makes me agree with you. and I think every one else would do the same.'

Socrates:: 'And yet, we have not described the greatest prizes and rewards reserved for virtue.'

Glaucon:: 'You must be speaking of some unexampled greatness, if there are others greater than those already enumerated.'

Socrates:: 'What could be great in a brief space of time?' 'For surely the whole time from childhood to old age is compared to all time brief and short?'

Glaucon:: 'Yes.'

Socrates:: 'Well, do you think that an immortal thing should take thought for a time no longer than the span of life and not for all time?'

Glaucon:: 'I agree with you. But why do you say this?'

Socrates:: 'Have you not perceived, that our soul is immortal, and never perishes?' He looked at me, and said in amazement;

Glaucon:: 'By Zeus, not I. Can you say that?'

Socrates:: ‘Can! I must. And I think you will go with me. It is not difficult.’

Glaucon:: ‘It is to me. But I should be very glad to hear this easy thing.’

Socrates:: Well, you may.’

Glaucon:: ‘Then speak.’

Socrates:: ‘Do you talk of a good and an evil?’

Glaucon:: ‘I do.’

Socrates:: ‘Do you conceive them as I do?’

Glaucon:: ‘In what way?’

Socrates:: ‘That which destroys and corrupts everything is the evil; that which preserves and benefits, the good.’

Glaucon:: ‘Yes.’

Socrates:: ‘Further, do you talk of an evil and a good belonging to each thing? For example, there is ophthalmia for eyes, disease for the whole body, mould for bread, rot for wood, rust for brass and iron; and, as I say, all things have each their natural evil and disease?’

Glaucon:: ‘I agree.’

Socrates:: ‘When one of these evils comes upon anything, does it not cause defects in that on which it settles, and finally altogether dissolve and destroy it?’

Glaucon:: ‘Surely.’

Socrates:: ‘But each thing is destroyed by its own natural evil and badness, and if that does not destroy it there is nothing else that can harm it. For the good will certainly never destroy it, nor will that which is neither evil nor good.’

Glaucon:: How could it?’

Socrates:: ‘Then if we discover anything among existences which has its own evil which makes it worse, and find that this evil is unable to destroy and dissolve it, shall we not then know that of a thing so constituted there is no destruction?

Glaucon:: ‘Yes, that is probable.’

Socrates:: ‘Now, has the soul that which makes it evil?

Glaucon:: ‘Of course. All the things we have described—injustice and licentiousness, and cowardice and ignorance.’

Socrates:: ‘But does any one of these dissolve and destroy the soul? And see that we are not cheated into thinking that the unjust and foolish man when he is caught in his evil conduct is then destroyed by injustice, the proper badness of his soul. Consider the question in this way. Disease, which is the badness of the body, makes the body waste away and dissolve till it is no longer a body; and so all things which we mentioned a moment ago are brought to nothing by their own evil, which takes its seat within them, and so destroys them. Is it not so?

Glaucon:: ‘Yes.’

Socrates:: ‘Come, now, and consider the soul in the same way. Does injustice and vice in general when it dwells in the soul destroy it by having its seat and abode there, and make it wither away until it brings it down to death and parts soul from body?

Glaucon:: ‘No, certainly not.’

Socrates:: ‘But it is unreasonable, that the badness of any’ thing else should destroy it, when its own badness does not?

Glaucon:: ‘It is.’

Socrates:: ‘Now consider, Glaucon, that we do not think that the body must be destroyed by the badness of articles of food, whatever that may be—age or rottenness or anything else. But if the badness of articles of food produces in the body an evil condition of body, then we say that the body has been destroyed by its own evil, which is disease resulting from the bad food. But we shall never allow that body, which is one thing, is destroyed by the badness of food, which is another, unless the evil of the other produces the natural intimate evil of the first.'

Glaucon:: 'What you say is perfectly right.'

Socrates:: 'But according to the same argument, unless the badness of the body produces in the soul badness of the soul, we shall not allow that the soul is destroyed by the evil of another thing without the action of its own peculiar badness, so that one thing is destroyed by the evil of another.'

Glaucon:: 'That is reasonable.'

Socrates:: 'Then either let us prove that our argument is unsound, or, until that be done, let us say that the soul is never in the least destroyed by fever, or any disease, or by the edge of the sword, not if you cut the body into the smallest pieces, unless it is demonstrated that these sufferings of the body make the soul more unjust and more impious. Let us not allow any one to say that the soul, or anything else, can be destroyed by an alien evil occurring in something else while its own peculiar evil does not occur in it.'

Glaucon:: 'But nobody will ever prove, that when men die, death makes their souls more unjust.'

Socrates:: 'And if any one, dares to face the argument, and to say that death makes a man worse and more unjust, simply so as not to be compelled to admit that our souls are immortal, then we may fairly claim, if what he says is true, that injustice is as mortal as disease to its possessor, and that because the power to kill is part of its nature, those who take it should die by it, the most unjust dying quicker, the less unjust more slowly; whereas, as it is, the unjust are killed by other people punishing them because of their injustice.'

Glaucon:: 'By Zeus, injustice will not then appear so very terrible, if it is mortal to him that receives it: for that would be a respite from evil. But I fancy, rather, that we shall find just the opposite—that injustice kills other people to the best of its power, but makes its possessor even more alive than before, and not only alive, but always awake; so very far is it from being mortal, apparently.'

Socrates:: 'Well said. For when the soul cannot be killed and destroyed by its own badness and its own evil, it will be a long time before the evil which is ordained for the destruction of something different will kill it or anything else than that ordained thing.'

Glaucon:: A long time, naturally enough.'

Socrates:: 'Then when there is no one evil, whether belonging to itself or another, which destroys the soul, it must obviously exist always, and if it exists always, be immortal.'

Glaucon:: 'It must.'

Socrates:: 'Well, we may suppose that that is the case, and if it is, you will notice that there will always be the same number of souls. For, of course, they could not become fewer by any being destroyed, nor, again, could they become more numerous. If anything immortal increased, that would involve, you know, the mortal becoming immortal, so that finally everything would be immortal.'

Glaucon:: 'True.'

Socrates:: 'But, let us not believe this, which the argument will not allow, or that the soul in its truest nature is such as to be full of great diversity and inequality and difference from itself.’

Glaucon:: ‘What do you mean?’

Socrates:: ‘Everlastingness, cannot easily be a property of a thing which is compounds out of many, and that not with the fairest composition; and yet such the soul has appeared to us to be.’

Glaucon:: ‘No, it is not likely.’

Socrates:: ‘Yet our recent argument and the other proofs compel us to the conclusion that the soul is immortal. But if we are to see it as it is in truth, we ought not to see it as we do at present, polluted by the association of the body and other evils; we ought to behold it properly by the help of reason, as it is when it is purified, and then we shall find it far more lovely, and shall discern more clearly justices and injustices and all that we have described. But in the meantime we have declared the truth regarding it as it appears at present. For we have looked upon the soul as men who saw the sea god Glaucus. His original nature was no longer easily visible. The old limbs were broken off or worn away and all deformed by the force of the waves, while he was overgrown with shell-fish and seaweed and stones, so that to look at he might have been any kind of beast instead of what he really was. So do we look upon the soul reduced to this condition by countless evils. But we must turn our eyes yonder, Glaucon.’

Glaucon:: ‘Whither?’

Socrates:: ‘To the soul’s love of wisdom, and observe what she apprehends, and after what company she strives, led on by her kinship to the divine and immortal and that which ever is; and what she would become if she followed this with her whole being, and by this impulsion were rescued from the sea in which she lies now, and could strike off the stones and shell-fish that cover her; for now she feasts upon earth, and from those feastings that men call happy there has grown upon her a covering of earth and stone, thick and rough. Then one might see her true nature, whether it is manifold or single, or how and in what manner she is constituted. Meanwhile, I imagine, we have given a fair description of the states and varieties which she manifests in human life?'

Glaucon:: 'Certainly.'

Socrates:: 'And now, have we not in our argument cleared away all other objections? In especial we have not praised the rewards and reputation of justice as you said was done by Hesiod and Homer, but have found that justice itself is best for the soul itself—found, too, that the soul must act justly whether she have the ring of Gyges or not; yes, though she have with that ring the cap of darkness.'

Glaucon:: 'What you say is very true.'

Socrates:: 'Then, Glaucon, can there now be any harm in our going further and restoring to justice and the rest of virtue the rewards, in their proper number and kinds, which it renders to the soul at the hands of gods and men, both in a man's lifetime and after he is dead?'

Glaucon:: 'None whatever.'

Socrates:: 'Then will you give me back what you borrowed from me in the discussion?'

Glaucon:: 'What do you mean in particular?'

Socrates:: 'I allowed to you that the just man should appear unjust, and the unjust just. For you asked that even supposing those things could not be concealed from gods and men, we should yet grant, for the sake of argument, that they could, in order to judge between justice pure and simple and injustice pure and simple. Do you not remember?’

Glaucon:: ‘It would be unjust of me did I not.’

Socrates:: ‘Well, now that judgment has been given, I demand back for justice that we too should agree to give her the reputation which she actually enjoys with gods and men, that she may get even those prizes of victory which she acquires from seeding and bestows on those who possess her. For we have found that she really gives the good things which come from being, and does not deceive those who really accept her.’

Glaucon:: ‘Your demand is just.’

Socrates:: ‘In that case, will you first of all allow that the gods are not deceived as to the natures of the two men?’

Glaucon:: ‘We will.’

Socrates:: ‘Then if they are not, the one man will be loved by the gods, the other hated, as we agreed originally?’

Glaucon:: ‘Yes.’

Socrates:: ‘And shall we not agree that to those whom the gods love, all things which come from the hands of the gods are as good as they can be, except perhaps for some evil which has been necessitated by sin in a previous existence?’

Glaucon:: ‘Certainly.’

Socrates:: ‘Then must we not assume the same for the just man, that though he live in poverty, in disease, or any other seeming evil, these things will in the end work out well for him either in life or after death. For surely the gods do not neglect him who will bestir himself to become just, and by the practice of virtue to make himself as like God as man may.’

Glaucon:: 'It is only natural, that God should not neglect him who is like himself.'

Socrates:: 'Then ought we not to suppose the opposite of the unjust?'

Glaucon:: 'Most certainly.'

Socrates:: 'Then at the hands of gods the just man will get some such prizes as these?'

Glaucon:: 'That is at any rate my opinion.'

Socrates:: 'And what at the hands of men?' 'Does not the case stand thus if we must state the fact? Do not the clever unjust men act like those runners who run well from the top end of the course to the bottom, but not from the bottom to the top; at the start they leap off at a great pace, but at the finish are laughed off the course and go away, their ears sunk down to their shoulders, and no crown on their heads. But the true runners run to a finish, receive their prizes, and are crowned. Is it not usually the same with the just? At the end of every action and partnership, and at the end of life, they win a good report and carry off prizes at men's hands.'

Glaucon:: 'Certainly.'

Socrates:: 'Then will you suffer me to say of them what you yourself said of the unjust? For I shall say that the just, when they advance in years, will hold office in their city if they desire office, will take a wife from what family they please and give in marriage to whom they will; and all the things you said of the unjust I now say of the just. And I shall say also of the unjust that most of them, though they may not be found out while they are young, are caught at, the end of their course and are laughed to scorn. When they become old men they are miserably insulted by strangers and townsmen, they are scourged and suffer all those punishments—racking and burning—which you truly described as cruel. You may suppose me to enumerate them all. Will you suffer what I am saying?'

Glaucon:: 'Most certainly, for your words are just.'

Socrates:: 'Then such, will be the prizes and rewards and gifts which the just man has at the hands of gods and men during his life, besides those advantages given by justice itself.'

Glaucon:: 'Yes, and they are fair and steadfast.'

Socrates:: 'But these, are nothing in number or greatness compared with those which await each man after death. And these must be heard in order that each man may receive in full the words that the argument owes him.'

Glaucon:: 'Speak on. There are few things I should be more glad to hear.'

Socrates:: 'I shall tell you, a story, not of Alcinous, but of a valiant man, Er, son of Armenius, of the race of Pamphylia. Once upon a time he fell in battle. On the tenth day they took up the dead, who were now stinking, but his body was found fresh. They took him home, and were going to bury him when on the twelfth day he came to life as he was lying on the pyre. When he had revived, he told them what he had seen yonder. His soul, he said, departed from him, and journeyed along with a great company, until they arrived at a certain ghostly place where there were two openings in the earth side by side, and opposite them and above two openings in the heaven. In the middle sat judges. These, when they had given their judgment, ordered the just to take the road to the right, which led upward through heaven, first binding tablets on them in front signifying their judgments. The unjust they ordered to take the road to the left, which led downward. They also had tablets signifying all that they had done bound on their backs. When it came to his turn they told him that it was laid upon him to be a messenger to men concerning the things that were there, and they ordered him to listen to and look at everything in the place. Then he saw there souls departing, after judgment had been delivered upon them, by one of the openings of heaven and one of earth; by the other two souls were arriving, on the one side coming up out of the earth, travel-stained and dusty, on the other coming down from heaven, shining pure. They all seemed on their arrival to have come a long journey, and were glad to turn aside into the meadow. There they encamped as in an assembly, and those who were acquaintances recognized one another. They who had come out of the earth inquired of the others concerning the things above, and those from heaven inquired of the first in their turn concerning the things that had happened to them. So they discoursed with one another, some weeping and lamenting as they called to mind all that they had suffered and seen, both much and terrible, in their journey below the earth, a journey of a thousand years, while the others, who had come from heaven, recounted the extraordinary beauty of their happiness and their vision. There were many things, Glaucon, which would take long to relate. But this, he said, was the sum of it. For all the unjust deeds that each man has ever done, and for all the men to whom he has done injustice, he pays penalty in due course, ten times for each (now this is once in every hundred years, for so long is the span of human life), in order that he may pay a tenfold ransom for his wrongdoing. If there be any who have caused the deaths of many men, either by betraying cities or armies, or by casting men into slavery, or taking part in any other villainy, for all these crimes they suffer torments tenfold for each; and on the other hand, if they have done any deeds of kindness and have been just and holy, they get their reward on the same terms. Concerning infants who died as soon as they were born, or had lived but a short time, there were other things he said not worth remembering. For impiety or piety to gods and to parents and for murder there were still greater requitals, which he described.

‘For he said that he stood by while one man asked another where Ardiaeus the Great was. Now this Ardiaeus had been tyrant in a city of Pamphylia a thousand years before that time; he had killed his old father and his elder brother, and had wrought many other impious deeds, so it was related. And he said that he who was questioned replied: “He has not come, nor will he come hither. For this was one of the terrible sights we saw. When we were near the mouth and were about to go up, and had endured all our sufferings but this, suddenly we saw Ardiaeus and others with him. Most of them were tyrants, but there were also some private persons of the number of those who were great sinners. They thought that they were at last going to ascend, but the mouth would not receive them, and whenever any one of those who had sunk into incurable wickedness, or any one who had not paid his punishment in full, tried to ascend, the mouth bellowed. And then,” he said, “fierce men, like coals of fire to look upon, who were standing by and had heard the sound, came forward, and some they took in their arms and dragged away, but Ardiaeus and others they bound hand and foot and head, threw them down, and flayed them. They dragged them out of the way to a place apart, and there carded them on thorns, saying to all that passed that they were being taken away to be plunged into Tartarus, and explaining why this was done to them. After that,” he said, “though many and diverse fears had come upon us, this was above them all. Each man feared that the voice would sound for him as he ascended, and it was with great joy that each went up without the mouth breaking silence.” Now, of this kind, he said, were the punishments and penalties, and the rewards corresponded to them. Each company passed seven days in the meadow, and on the eighth they had to rise up and go on their way, and after four days they came to a place whence they could look down on a straight beam of light, extended like a pillar through heaven and earth, more like the rainbow than anything else, but brighter and purer. To this they came after a day’s journey, and there from the middle of the light they saw extended from heaven the ends of the chains which compose it. For this light chains heaven, holding together the whole circumference as under-girders bind a trireme. And from those ends is hung the spindle of Necessity, by means of which all the circles revolve. Now the shaft and hook thereof are of adamant, but the whorl is partly of adamant, partly of other materials. And the whorl is of this fashion. In shape it is like an ordinary whorl, but from his description you must conceive of it as one great whorl with the inside completely cut out, and another similar but smaller whorl fitted into it, and within that a third, and within that a fourth, and then four others, fitted into one another like puzzle boxes. For there are eight whorls in all, fitted into one another, their upper rims showing in circles, so that they make up the continuous surface of one whorl round the shaft, and the shaft pierces right through the middle of the eighth. The circle made by the rim of the first and outside whorl is the broadest, that of the sixth the second broadest, that of the fourth third, of the eighth fourth, of the seventh fifth, of the fifth sixth, of the third seventh, and that of the second eighth broadest. The circle of the greatest is of many colors, the circle of the seventh is the brightest, the eighth gets its color from the seventh shining upon it, the second and the fifth are very like each other, being ruddier than the others;

the third is the whitest, the fourth is fiery red, and the sixth is second in whiteness. The whole spindle turns round with one circling motion, but as the whole revolves the seven inside circles spin round smoothly in an opposite direction to the whole Of these the eighth turns fastest, and after it come the seventh, sixth, and fifth, all three at the same pace. Third in swiftness, so it seemed to them, circles the fourth, the third fourth, and the second fifth. The whole spindle is turned on the knees of Necessity. On the top of each circle sits a siren, who is carried round with the circle, uttering one note at one pitch, and the eight together make up a single harmony. Round about at equal distances others are seated, three in number, each on a throne. These are the Fates, daughters of Necessity, Lachesis and Clotho and Atropos. They are clothed in white and have garlands on their heads, and they sing to the accompaniment of the sirens' harmony, Lachesis of what has been, Clotho of what is, and Atropos of what shall be. And Clotho from time to time lays her right hand on the outer circumference and helps to push it round, while Atropos does the same to the inner circles with her left hand; but Lachesis touches inner and outer with each hand in turn. Now the souls, when they came thither, had to go at once to Lachesis. Then a prophet first marshaled them in order, and then taking lots and patterns of lives from the lap of Lachesis, mounted upon a high pulpit and spoke: 'The word, of the daughter of Necessity, maid Lachesis. Souls of a day, here beginneth another circle that bears the mortal race to death. The angel will not cast lots for you, but you shall choose your angel. Let him whose lot falls first have first choice of a life to which he shall be bound by Necessity. But virtue has no master, and as a man honors or despises her, so will he have more of her or less. The responsibility is on him that chooseth. There is none on God.”

‘So saying, the prophet cast the lots to all, and each man took up the lot that fell beside him, except Er. Him the prophet forbade. And as each took it up he knew what order in the lot he had obtained. And after this the prophet laid on the ground before them the patterns of lives, many more patterns than there were persons present. Now there were patterns of all kinds. There were lives of all living creatures, and with them all human lives. Among them were tyrannies, some lasting, others destroyed in mid course and ending in poverty and exile and beggary. There were lives of famous men also, some famed for their comeliness and beauty, or for their strength and prowess, others for their lineage and the virtues of their ancestors; similarly there were lives of unknown men; and also the lives of women. But there was no determination of soul, because of necessity the soul becomes different according as she chooses a different life. All other things were mixed with each other, and with wealth and poverty; some with disease and some with health, and there were also mean conditions of these things. And it is here, it seems, my dear Glaucon, that man’s greatest danger lies; and for those reasons we must give all heed that each of us, putting aside all other learning, may search after and study this alone, if in any way he may be able to learn and discover who will give him capacity and knowledge to discern the good and the evil in life, and always and everywhere to choose the better according to his ability. He will reckon up all the things we have just mentioned, taking them both together and separately, and estimate their contribution to virtue of life; and so he will know what of good or evil is worked by beauty, whether mixed with poverty or riches, and with what disposition of soul these are good and with what bad; and what of good or evil is worked by noble birth or ignoble birth, by private or public station, by strength or weakness of body, by learning or ignorance, and by all such properties as concern the soul, both natural and acquired, in their combinations with one another, so that he may be able to put all these considerations together, and looking to the nature of the soul may choose the worse or the better life, calling that worse which will lead the soul into greater injustice, and that better which will lead it into greater justice. But all other considerations he will leave alone. For we have seen that this is the greatest choice both for life and beyond it. And a man when he goes to the other world must have this belief like adamant within him, in order that there also he may be unmoved by riches and evils of that sort, and may not by falling into tyranny or some such course of action, both commit and himself suffer in greater degree evils many and incurable, but may have knowledge to choose always the life that lies in the middle and avoid the extremes on both sides, both in this life, so far as he may, and in the life to come. For so man wins his greatest happiness.

‘Now the messenger from yonder went on with his tale, and told how the prophet spoke thus: “Even for him that comes last, if he choose with understanding, and take heed in his life, there is laid up a life that is not evil, with which he may be content. Let not him who hath first choice be careless, or him who hath last downhearted.”

‘He said that when the prophet had thus spoken, he who had drawn first came forward and chose the mightiest of tyrannies, and from folly and greed he chose without making a thorough examination, and so did not notice that in his choice it was fated that he should devour his own children and suffer other evil things. So when he came to examine it at his leisure he began to gash his breast and bewail his choice, not abiding by the warnings of the prophet. For he did not blame himself for his evils, but chance and the angels and everything rather than himself. Now he was of those who had come from heaven, and had lived in his former life in a well-ordered city and had participated in virtue by habit and not by philosophy. Generally speaking, not the least part of those who were caught in this way had come from heaven, for they had not been disciplined by labors; while of those from earth, the most, because they had themselves endured labors, and had seen the labors of others, were in no hurry to make their choice. For these reasons, and because of the fortune of the lot, most souls had a change of evil and good. For if any man always steadfastly pursues philosophy whenever he comes to life in this world, and if the lot of choice falls to him not among the last, it appears, from what we are told from yonder, not only that he will be happy in this life, but that his journey from here to the world beyond and back again to this world will not be along the rough and underground track, but along the smooth and heavenly way.

And he said that it was a sight worth seeing to behold the several souls choose their lives. And a piteous and a laughable and amazing sight it was also. The choice was mostly governed by what they had been accustomed to in their former life. He said that he saw the soul which had once been Orpheus' choosing the life of a swan; his death at the hands of women had so made him hate the whole race, that he would not consent to be born of woman. The soul of Thamyras he saw choosing the life of a nightingale, he also saw a swan turning to choose a human life, and other musical creatures doing the same. The soul that had the twentieth choice took a lion's life. It was the soul of Ajax, the son of Telamon, who refused to become a man because he remembered the judgment concerning the armor. After him came the soul of Agamemnon. He also hated the human race by reason of his sufferings, and took in exchange the life of an eagle. The soul of Atalanta obtained her choice somewhere in the middle, and catching sight of the great honors of a man who was an athlete could not pass them by, but made that her choice. After her he saw the soul of Epeus, son of Panopeus, passing into the nature of a working woman. Quite among the last he saw the soul of the ridiculous Thersites becoming a monkey. It so happened that the soul of Odysseus came forward to choose the very last of all. He remembered his former labors and had ceased from his ambition and so he spent a long time going round looking for the life of a private and obscure man. At last he found it lying about, ignored by every one else; and when he saw it he took it gladly, and said that he would have made the same choice if the lot had fallen to him first. Similarly all the other animals changed into men and into each other, the unjust into fierce, and the just into tame animals, and there were all possible combinations.

‘And when all the souls had chosen their lives they went unto Lachesis in the order of their choosing. And she gave each the angel he had chosen to be a guard throughout his life and to accomplish his choice. The angel first led the soul towards Clotho, passing it under her hand and under the sweep of the whirling spindle, so ratifying the fate which the man had chosen in his turn. He touched the spindle, and then led the soul on to where Atropos was spinning, so that the threads might be made unalterable. Thence the man went without turning under the throne of Necessity, and after coming out on the other side he first waited for the others to pass through, and then all proceeded through terrible burning heat to the plain of

Lethe where grew no plants nor any trees. At last they encamped at evening by the river of Forgetfulness, whose water no pitcher may hold. All had to drink a certain measure of this water, but those who were not preserved by wisdom drank more than the measure. Each as he drank it forgot everything. Then they went to sleep, and it was midnight; there was thunder and an earthquake, and at once they were carried up from thence along different ways to their birth, shooting like stars. But he himself had been forbidden to drink of the water. When or how he returned to the body he did not know, but he suddenly opened his eyes and saw it was morning and he was lying on the pyre.

'And so, Glaucon, the tale was preserved and did not perish, and it will preserve us if we take heed to it, and cross the river of Lethe safely, and keep our souls undefiled. But if you will listen to me, and believe that the soul is immortal and able to endure all evil and all good, we shall always hold to the upper road, and in every way follow justice and wisdom. So we shall be friends to ourselves and to the gods, both while we remain here and when, like victorious athletes who go about adding to their prizes, we receive the rewards of our justice; and here, and in the journey of a thousand years which I have described to you, we shall fare well.'

## Republic.

Translated by Paul Shorey.

Socrates, Cephalus, Glaucon, Thrasymachus,
Adeimantus, Cleitophon, Polemarchus, Boy.

### Book 1.

Socrates:: I went down yesterday to the Piraeus with Glaucon, the son of Ariston, to pay my devotions to the goddess, and also because I wished to see how they would conduct the festival, since this was its inauguration.

I thought the procession of the citizens very fine, but it was no better than the show made by the marching of the Thracian contingent.

After we had said our prayers and seen the spectacle we were starting for town when Polemarchus, the son of Cephalus, caught sight of us from a distance as we were hastening homeward and ordered his boy run and bid us to wait for him, and the boy caught hold of my himation from behind and said;

Boy:: Polemarchus wants you to wait.

Socrates:: And I turned around and asked where his master was.

Boy:: There he is, behind you, coming this way. Wait for him.

Glaucon:: So we will.

Socrates:: And shortly after Polemarchus came up and Adimantus, the brother of Glaucon, and Niceratus, the son of Nicias, and a few others apparently from the procession.

Whereupon Polemarchus said;

Polemarchus:: Socrates, you appear to have turned your faces townward and to be going to leave us.

Socrates:: Not a bad guess.

Polemarchus:: But you see how many we are?

Socrates:: Surely.

Polemarchus:: You must either then prove yourselves the better men or stay here.

Socrates:: Why, is there not left, the alternative of our persuading you that you ought to let us go?

Polemarchus:: But *could* you persuade us, if we refused to listen?

Glaucon:: No how.

Polemarchus:: Well, we won't listen, and you might as well make up your minds to it.

Adeimantus:: Do you mean to say, that you haven't heard that there is to be a torchlight race this evening on horseback in honor of the goddess?

Socrates:: On horseback? That is a new idea. Will they carry torches and pass them along to one another as they race with the horses, or how do you mean?

Polemarchus:: That's the way of it, and, besides, there is to be a night festival which will be worth seeing. For after dinner we will get up and go out and see the sights and meet a lot of the lads there and have good talk. So stay and do as we ask.

Glaucon:: It looks as if we should have to stay.

Socrates:: Well, if it so be, so be it.

—So we went with them to Polemarchus' house, and there we found Lysias and Euthydemus, the brothers of Polemarchus, yes, and Thrasymachus, too, of Chalcedon, and Charmantides of the deme of Paeania, and Clitophon, the son of Aristonymus. And the father of Polemarchus, Cephalus, was also at home.

And I thought him much aged, for it was a long time since I had seen him. He was sitting on a sort of chair with cushions and he had a chaplet on his head, for he had just finished sacrificing in the court. So we went and sat down beside him, for there were seats there disposed in a circle.

As soon as he saw me Cephalus greeted me and said;

Cephalus:: You are not a very frequent visitor, Socrates. You don't often come down to the Piraeus to see us. That is not right. For if I were still able to make the a journey up to town easily there would be no need of your resorting hither, but we would go to visit you. But as it is you should not space too widely your visits here. For I would have you know that, for my part, as the satisfactions of the body decay, in the same measure my desire for the pleasures of good talk and my delight in them increase. Don't refuse then, but be yourself a companion to these lads and make our house your resort and regard us as your very good friends and intimates.

Socrates:: Why, yes, Cephalus, and I enjoy talking with the very aged. For to my thinking we have to learn of them as it were from wayfarers who have preceded us on a road on which we too, it may be, must sometime fare—what it is like. Is it rough and hard-going or easy and pleasant to travel? And so now I would fain learn of you what you think of this thing, now that your time has come to it, the thing that the poets call 'the threshold of old age.' Is it a hard part of life to bear or what report have you to make of it?

Cephalus:: Yes, indeed, Socrates, I will tell you my own feeling about it. For it often happens that some of us elders of about the same age come together and verify the old saw of like to like. At these reunions most of us make lament, longing for the lost joys of youth and recalling to mind the pleasures of wine, women, and feasts, and other things thereto appertaining, and they repine in the belief that the greatest things have been taken from them and that then they lived well and now it is no life at all. And some of them complain of the indignities that friends and kinsmen put upon old age and thereto recite a doleful litany of all the miseries for which they blame old age. But in my opinion, Socrates, they do not put the blame on the real cause. For if it were the cause I too should have had the same experience so far as old age is concerned, and so would all others who have come to this time of life. But in fact I have ere now met with others who do not feel in this way, and in particular I remember hearing Sophocles the poet greeted by a fellow who asked, How about your service of Aphrodite, Sophocles—is your natural force still unabated? And he replied, Hush, man, most gladly have I escaped this thing you talk of, as if I had run away from a raging and savage beast of a master. I thought it a good answer then and now I think so still more. For in very truth there comes to old age a great tranquility in such matters and a blessed release. When the fierce tensions of the passions and desires relax, then is the word of Sophocles approved, and we are rid of many and mad masters. But indeed, in respect of these complaints and in the matter of our relations with kinsmen and friends there is just one cause, Socrates—not old age, but the character of the man. For if men are temperate and cheerful even old age is only moderately burdensome. But if the reverse, old age, Socrates, and youth are hard for such dispositions.

Socrates:: And I was filled with admiration for the man by these words, and desirous of hearing more I tried to draw him out and said, I fancy, Cephalus, that most people, when they hear you talk in this way, are not convinced but think that you bear old age lightly not because of your character but because of your wealth, for the rich, they say, have many consolations.

Cephalus:: You are right, They don’t accept my view and there is something in their objection, though not so much as they suppose. But the retort of Themistocles comes in pat here, who, when a man from the little island of Seriphus grew abusive and told him that he owed his fame not to himself but to the city from which he came, replied that neither would he himself ever have made a name if he had been born in Seriphus nor the other if he had been an Athenian. And the same principle applies excellently to those who not being rich take old age hard, for neither would the reasonable man find it altogether easy to endure old age conjoined with poverty, nor would the unreasonable man by the attainment of riches ever attain to self-contentment and a cheerful temper.

Socrates:: May I ask, Cephalus, whether you inherited most of your possessions or acquired them yourself?

Cephalus:: Acquired, quotha? As a money-maker, I hold a place somewhere halfway between my grandfather and my father. For my grandfather and namesake inherited about as much property as I now possess and multiplied it many times, my father Lysanias reduced it below the present amount, and I am content if I shall leave the estate to these boys not less but by some slight measure more than my inheritance.

Socrates:: The reason I asked, is that you appear to me not to be over-fond of money. And that is generally the case with those who have not earned it themselves. But those who have themselves acquired it have a double reason in comparison with other men for loving it. For just as poets feel complacency about their own poems and fathers about their own sons, so men who have made money take this money seriously as their own creation and they also value it for its uses as other people do. So they are hard to talk to since they are unwilling to commend anything except wealth.

Cephalus:: You are right.

Socrates:: I assuredly am. But tell me further this. What do you regard as the greatest benefit you have enjoyed from the possession of property?

Cephalus:: Something, which I might not easily bring many to believe if I told them. For let me tell you, Socrates, that when a man begins to realize that he is going to die, he is filled with apprehensions and concern about matters that before did not occur to him. The tales that are told of the world below and how the men who have done wrong here must pay the penalty there, though he may have laughed them down hitherto, then begin to torture his soul with the doubt that there may be some truth in them. And apart from that the man himself either from the weakness of old age or possibly as being now nearer to the things beyond has a somewhat clearer view of them. Be that as it may, he is filled with doubt, surmises, and alarms and begins to reckon up and consider whether he has ever wronged anyone. Now he to whom the ledger of his life shows an account of many evil deeds starts up even from his dreams like a child again and again in affright and his days are haunted by anticipations of worse to come. But on him who is conscious of no wrong that he has done a sweet hope ever attends and a goodly, to be nurse of his old age, as Pindar too says. For a beautiful saying it is, Socrates, of the poet that when a man lives out his days in justice and piety, ‘sweet companion with him, to cheer his heart and nurse his old age, accompanies hope, who chiefly rules the changeful mind of mortals.' That is a fine saying and an admirable. It is for this, then, that I affirm that the possession of wealth is of most value, not it may be to every man but to the good man. Not to cheat any man even unintentionally or play him false, not remaining in debt to a god for some sacrifice or to a man for money, so to depart in fear to that other world—to this result the possession of property contributes not a little. It has also many other uses. But, setting one thing against another, I would lay it down, Socrates, that for a man of sense this is the chief service of wealth.

Socrates:: An admirable sentiment, Cephalus. But speaking of this very thing, justice, are we to affirm thus without qualification that it is truth telling and paying back what one has received from anyone, or may these very actions sometimes be just and sometimes unjust? I mean, for example, as everyone I presume would admit, if one took over weapons from a friend who was in his right mind and then the lender should go mad and demand them back, that we ought not to return them in that case and that he who did so return them would not be acting justly—nor yet would he who chose to speak nothing but the truth to one who was in that state.

Cephalus:: You are right.

Socrates:: Then this is not the definition of justice—to tell the truth and return what one has received.

Polemarchus:: Nay, but it is, Socrates.

Socrates:: said Polemarchus breaking in;

Polemarchus:: if indeed we are to put any faith in Simonides.

Cephalus:: Very well, indeed I make over the whole argument to you. For it is time for me to attend the sacrifices.

Socrates:: Well, is not Polemarchus the heir of everything that is yours?

Cephalus:: Certainly!

Socrates:: said he with a laugh, and at the same time went out to the sacred rites.

—Tell me, then, you the inheritor of the argument, what it is that you affirm that Simonides says and rightly says about justice.

Polemarchus:: That it is just, to render to each his due. In saying this I think he speaks well.

Socrates:: I must admit, that it is not easy to disbelieve Simonides. For he is a wise and inspired man. But just what he may mean by this you, Polemarchus, doubtless know, but I do not. Obviously he does not mean what we were just speaking of, this return of a deposit to anyone whatsoever even if he asks it back when not in his right mind. And yet what the man deposited is due to him in a sense, is it not?

Polemarchus:: Yes.

Socrates:: But rendered to him it ought not to be by any manner of means when he demands it not being in his right mind.

Polemarchus:: True.

Socrates:: It is then something other than this that Simonides must, as it seems, mean by the saying that it is just to render back what is due.

Polemarchus:: Something else in very deed, for he believes that friends owe it to friends to do them some good and no evil.

Socrates:: I see. You mean that he does not render what is due or owing who returns a deposit of gold if this return and the acceptance prove harmful and the returner and the recipient are friends. Isn’t that what you say Simonides means?

Polemarchus:: Quite so.

Socrates:: But how about this—should one not render to enemies what is their due?

Polemarchus:: By all means, what is due and owing to them, and there is due and owing from an enemy to an enemy what also is proper for him, some evil.

Socrates:: It was a riddling definition of justice, then, that Simonides gave after the manner of poets, for while his meaning, it seems, was that justice is rendering to each what befits him, the name that he gave to this was ‘the due.’

Polemarchus:: What else do you suppose?

Socrates:: In heaven’s name! Suppose someone had questioned him thus. Tell me, Simonides, the art that renders what that is due and befitting to what is called the art of medicine? What do you take it would have been his answer?

Polemarchus:: Obviously, the art that renders to bodies drugs, foods, and drinks.

Socrates:: And the art that renders to what things what that is due and befitting is called the culinary art?

Polemarchus:: Seasoning to meats.

Socrates:: Good. In the same way tell me the art that renders what to whom would be denominated justice.

Polemarchus:: If we are to follow the previous examples, Socrates, it is that which renders benefits and harms to friends and enemies.

Socrates:: To do good to friends and evil to enemies, then, is justice in his meaning?

Polemarchus:: I think so.

Socrates:: Who then is the most able when they are ill to benefit friends and harm enemies in respect to disease and health?

Polemarchus:: The physician.

Socrates:: And who navigators in respect of the perils of the sea?

Polemarchus:: The pilot.

Socrates:: Well then, the just man, in what action and for what work is he the most competent to benefit friends and harm enemies?

Polemarchus:: In making war and as an ally, I should say.

Socrates:: Very well. But now if they are not sick, friend Polemarchus, the physician is useless to them.

Polemarchus:: True.

Socrates:: And so to those who are not at sea the pilot.

Polemarchus:: Yes.

Socrates:: Shall we also say this, that for those who are not at war the just man is useless?

Polemarchus:: By no means.

Socrates:: There is a use then even in peace for justice?

Polemarchus:: Yes, it is useful.

Socrates:: But so is agriculture, isn't it?

Polemarchus:: Yes.

Socrates:: Namely, for the getting of a harvest?

Polemarchus:: Yes.

Socrates:: But likewise the cobbler's art?

Polemarchus:: Yes.

Socrates:: Namely, I presume you would say, for the getting of shoes.

Polemarchus:: Certainly.

Socrates:: Then tell me, for the service and getting of what would you say that justice is useful in time of peace?

Polemarchus:: In engagements and dealings, Socrates.

Socrates:: And by dealings do you mean associations, partnerships, or something else?

Polemarchus:: Associations, of course.

Socrates:: Is it the just man, then, who is a good and useful associate and partner in the placing of draughts or the draughts player?

Polemarchus:: The player.

Socrates:: And in the placing of bricks and stones is the just man a more useful and better associate than the builder?

Polemarchus:: By no means.

Socrates:: Then what is the association in which the just man is a better partner than the harpist as a harpist is better than the just man for striking the chords?

Polemarchus:: For money dealings, I think.

Socrates:: Except, I presume, Polemarchus, for the use of money when there is occasion to buy in common or sell a horse. Then, I take it, the man who knows horses, isn’t it so?

Polemarchus:: Apparently.

Socrates:: And again, if it is a vessel, the shipwright or the pilot.

Polemarchus:: It would seem so.

Socrates:: What then is the use of money in common for which a just man is the better partner?

Polemarchus:: When it is to be deposited and kept safe, Socrates.

Socrates:: You mean when it is to be put to no use but is to lie idle?

Polemarchus:: Quite so.

Socrates:: Then it is when money is useless that justice is useful in relation to it?

Polemarchus:: It looks that way.

Socrates:: And similarly when a scythe is to be kept safe, then justice is useful both in public and private. But when it is to be used, the vine-dresser's art is useful?

Polemarchus:: Apparently.

Socrates:: And so you will have to say that when a shield and a lyre are to be kept and put to no use, justice is useful, but when they are to be made use of, the military art and music.

Polemarchus:: Necessarily.

Socrates:: And so in all other cases, in the use of each thing, justice is useless but in its uselessness useful?

Polemarchus:: It looks that way.

Socrates:: Then, my friend, justice cannot be a thing of much worth if it is useful only for things out of use and useless. But let us consider this point. Is not the man who is most skillful to strike or inflict a blow in a fight, whether as a boxer or elsewhere, also the most wary to guard against a blow?

Polemarchus:: Assuredly.

Socrates:: Is it not also true that he who best knows how to guard against disease is also most cunning to communicate it and escape detection?

Polemarchus:: I think so.

Socrates:: But again, the very same man is a good guardian of an army who is good at stealing a march upon the enemy in respect of their designs and proceedings generally.

Polemarchus:: Certainly.

Socrates:: Of whatsoever, then, anyone is a skillful guardian, of that he is also a skillful thief?

Polemarchus:: It seems so.

Socrates:: If then the just man is an expert in guarding money he is an expert in stealing it.

Polemarchus:: The argument certainly points that way.

Socrates:: A kind of thief then the just man it seems has turned out to be, and it is likely that you acquired this idea from Homer. For he regards with complacency Autolycus, the maternal uncle of Odysseus, and says, 'he was gifted beyond all men in thievery and perjury.' So justice, according to you and Homer and Simonides, seems to be a kind of stealing, with the qualification that it is for the benefit of friends and the harm of enemies. Isn't that what you meant?

Polemarchus:: No, by Zeus. I no longer know what I did mean. Yet this I still believe, that justice benefits friends and harms enemies.

Socrates:: May I ask whether by friends you mean those who seem to a man to be worthy or those who really are so, even if they do not seem, and similarly of enemies?

Polemarchus:: It is likely, that men will love those whom they suppose to be good and dislike those whom they deem bad.

Socrates:: Do not men make mistakes in this matter so that many seem good to them who are not and the reverse?

Polemarchus:: They do.

Socrates:: For those, then, who thus err the good are their enemies and the bad their friends?

Polemarchus:: Certainly.

Socrates:: But all the same it is then just for them to benefit the bad and injure the good?

Polemarchus:: It would seem so.

Socrates:: But again, the good are just and incapable of injustice.

Polemarchus:: True.

Socrates:: On your reasoning then it is just to wrong those who do no injustice.

Polemarchus:: Nay, nay, Socrates, the reasoning can’t be right.

Socrates:: Then, it is just to harm the unjust and benefit the just.

Polemarchus:: That seems a better conclusion than the other.

Socrates:: It will work out, then, for many, Polemarchus, who have misjudged men that it is just to harm their friends, for they have got bad ones, and to benefit their enemies, for they are good. And so we shall find ourselves saying the very opposite of what we affirmed Simonides to mean.

Polemarchus:: Most certainly, it does work out so. But let us change our ground, for it looks as if we were wrong in the notion we took up about the friend and the enemy.

Socrates:: What notion, Polemarchus?

Polemarchus:: That the man who seems to us good is the friend.

Socrates:: And to what shall we change it now?

Polemarchus:: That the man who both seems and is good is the friend, but that he who seems but is not really so seems but is not really the friend. And there will be the same assumption about the enemy.

Socrates:: Then on this view it appears the friend will be the good man and the bad the enemy.

Polemarchus:: Yes.

Socrates:: So you would have us qualify our former notion of the just man by an addition. We then said it was just to do good to a friend and evil to an enemy, but now we are to add that it is just to benefit the friend if he is good and harm the enemy if he is bad?

Polemarchus:: By all means, that, I think, would be the right way to put it.

Socrates:: Is it then, the part of a good man to harm anybody whatsoever?

Polemarchus:: Certainly it is. A man ought to harm those who are both bad and his enemies.

Socrates:: When horses are harmed does it make them better or worse?

Polemarchus:: Worse.

Socrates:: In respect of the excellence or virtue of dogs or that of horses?

Polemarchus:: Of horses.

Socrates:: And do not also dogs when harmed become worse in respect of canine and not of equine virtue?

Polemarchus:: Necessarily.

Socrates:: And men, my dear fellow, must we not say that when they are harmed it is in respect of the distinctive excellence or virtue of man that they become worse?

Polemarchus:: Assuredly.

Socrates:: And is not justice the specific virtue of man?

Polemarchus:: That too must be granted.

Socrates:: Then it must also be admitted, my friend, that men who are harmed become more unjust.

Polemarchus:: It seems so.

Socrates:: Do musicians then make men unmusical by the art of music?

Polemarchus:: Impossible.

Socrates:: Well, do horsemen by horsemanship unfit men for dealing with horses?

Polemarchus:: No.

Socrates:: By justice then do the just make men unjust, or in sum do the good by virtue make men bad?

Polemarchus:: Nay, it is impossible.

Socrates:: It is not, I take it, the function of heat to chill but of its opposite.

Polemarchus:: Yes.

Socrates:: Nor of dryness to moisten but of its opposite.

Polemarchus:: Assuredly.

Socrates:: Nor yet of the good to harm but of its opposite.

Polemarchus:: So it appears.

Socrates:: But the just man is good?

Polemarchus:: Certainly.

Socrates:: It is not then the function of the just man, Polemarchus, to harm either friend or anyone else, but of his opposite, the unjust.

Polemarchus:: I think you are altogether right, Socrates.

Socrates:: If, then, anyone affirms that it is just to render to each his due and he means by this that injury and harm is what is due to his enemies from the just man and benefits to his friends, he was no truly wise man who said it. For what he meant was not true. For it has been made clear to us that in no case is it just to harm anyone.

Polemarchus:: I concede it.

Socrates:: We will take up arms against him, then, you and I together, if anyone affirms that either Simonides or Bias or Pittacus or any other of the wise and blessed said such a thing.

Polemarchus:: I, for my part, am ready to join in the battle with you.

Socrates:: Do you know, to whom I think the saying belongs—this statement that it is just to benefit friends and harm enemies?

Polemarchus:: To whom?

Socrates:: I think it was the saying of Periander or Perdiccas or Xerxes or Ismenias the Theban or some other rich man who had great power in his own conceit.

Polemarchus:: That is most true.

Socrates:: Very well, since it has been made clear that this too is not justice and the just, what else is there that we might say justice to be?

—Now Thrasymachus, even while we were conversing, had been trying several times to break in and lay hold of the discussion but he was restrained by those who sat by him who wished to hear the argument out. But when we came to a pause after I had said this, he couldn’t any longer hold his peace. But gathering himself up like a wild beast he hurled himself upon us as if he would tear us to pieces. And Polemarchus and I were frightened and fluttered apart.

—He bawled out into our midst;

Thrasymachus:: What balderdash is this that you have been talking, and why do you Simple Simons truckle and give way to one another? But if you really wish, Socrates, to know what the just is, don’t merely ask questions or plume yourself upon controverting any answer that anyone gives—since your acumen has perceived that it is easier to ask questions than to answer them—but do you yourself answer and tell what you say the just is. And don't you be telling me that it is that which ought to be, or the beneficial or the profitable or the gainful or the advantageous, but express clearly and precisely whatever you say. For I won't take from you any such drivel as that!

Socrates:: And I, when I heard him, was dismayed, and looking upon him was filled with fear, and I believe that if I had not looked at him before he did at me I should have lost my voice. But as it is, at the very moment when he began to be exasperated by the course of the argument I glanced at him first, so that I became capable of answering him, and said with a slight tremor, Thrasymachus, don't be harsh with us. If I, and my friend, have made mistakes in the consideration of the question, rest assured that it is unwillingly that we err. For you surely must not suppose that while, if our quest were for gold, we would never willingly truckle to one another and make concessions in the search and so spoil our chances of finding it, yet that when we are searching for justice, a thing more precious than much fine gold, we should then be so foolish as to give way to one another and not rather do our serious best to have it discovered. You surely must not suppose that, my friend. But you see it is our lack of ability that is at fault. It is pity then that we should far more reasonably receive from clever fellows like you than severity.

And he, on hearing this, gave a great guffaw and laughed sardonically and said;

Thrasymachus:: Ye gods! Here we have the well-known irony of Socrates, and I knew it and predicted that when it came to replying you would refuse and dissemble and do anything rather than answer any question that anyone asked you.

Socrates:: That’s because you are wise, Thrasymachus, and so you knew very well that if you asked a man how many are twelve, and in putting the question warned him, Don’t you be telling me, fellow, that twelve is twice six or three times four or six times two or four times three, for I won’t accept any such drivel as that from you as an answer—it was obvious, I fancy, to you that no one could give an answer to a question framed in that fashion. Suppose he had said to you, Thrasymachus, what do you mean? Am I not to give any of the prohibited answers, not even, do you mean to say, if the thing really is one of these, but must I say something different from the truth, or what do you mean?—What would have been your answer to him?

Thrasymachus:: Humph! How very like the two cases are!

Socrates:: There is nothing to prevent it. Yet even granted that they are not alike, yet if it appears to the person asked the question that they are alike, do you suppose that he will any the less answer what appears to him, whether we forbid him or whether we don’t?

Thrasymachus:: Is that, then, what you are going to do? Are you going to give one of the forbidden answers?

Socrates:: I shouldn’t be surprised, if on reflection that would be my view.

Thrasymachus:: What then, if I show you another answer about justice a differing from all these, a better one—what penalty do you think you deserve?

Socrates:: Why, what else, than that which it befits anyone who is ignorant to suffer? It befits him, I presume, to learn from the one who does know. That then is what I propose that I should suffer.

Thrasymachus:: I like your simplicity. But in addition to 'learning' you must pay a fine of money.

Socrates:: Well, I will when I have got it.

Glaucon:: It is there. If money is all that stands in the way, Thrasymachus, go on with your speech. We will all contribute for Socrates.

Thrasymachus:: Oh yes, of course, so that Socrates may contrive, as he always does, to evade answering himself but may cross-examine the other man and refute his replies.

Socrates:: Why, how, my dear fellow, could anybody answer if in the first place he did not know and did not even profess to know, and secondly, even if he had some notion of the matter, he had been told by a man of weight that he mustn't give any of his suppositions as an answer? Nay, it is more reasonable that you should be the speaker. For you do affirm that you know and are able to tell. Don't be obstinate, but do me the favor to reply and don't be chary of your wisdom, and instruct Glaucon here and the rest of us.

—When I had spoken thus Glaucon and the others urged him not to be obstinate. It was quite plain that Thrasymachus was eager to speak in order that he might do himself credit, since he believed that he had a most excellent answer to our question. But he demurred and pretended to make a point of my being the respondent. Finally he gave way and then said;

Thrasymachus:: Here you have the wisdom of Socrates, to refuse himself to teach, but go about and learn from others and not even pay thanks therefore.

Socrates:: That I learn from others, you said truly, Thrasymachus. But in saying that I do not pay thanks you are mistaken. I pay as much as I am able. And I am able only to bestow praise. For money I lack. But that I praise right willingly those who appear to speak well you will well know forthwith as soon as you have given your answer. For I think that you will speak well.

Thrasymachus:: Hearken and hear then. I affirm that the just is nothing else than the advantage of the stronger. Well, why don't you applaud? Nay, you'll do anything but that.

Socrates:: Provided only I first understand your meaning, for I don't yet apprehend it. The advantage of the stronger is what you affirm the just to be. But what in the world do you mean by this? I presume you don't intend to affirm this, that if Polydamas, the pancratiast, is stronger than we are and the flesh of beef is advantageous for him, for his body, this viand is also for us who are weaker than he both advantageous and just.

Thrasymachus:: You are a buffoon, Socrates, and take my statement in the most detrimental sense.

Socrates:: Not at all, my dear fellow. I only want you to make your meaning plainer.

Thrasymachus:: Don't you know then, that some cities are governed by tyrants, in others democracy rules, in others aristocracy?

Socrates:: Assuredly.

Thrasymachus:: And is not this the thing that is strong and has the mastery in each—the ruling party?

Socrates:: Certainly.

Thrasymachus:: And each form of government enacts the laws with a view to its own advantage, a democracy democratic laws and tyranny autocratic and the others likewise, and by so legislating they proclaim that the just for their subjects is that which is for their—the rulers'—advantage and the man who deviates from this law they chastise as a lawbreaker and a wrongdoer. This, then, my good sir, is what I understand as the identical principle of justice that obtains in all states—the advantage of the established government. This I presume you will admit holds power and is strong, so that, if one reasons rightly, it works out that the just is the same thing everywhere, the advantage of the stronger.

Socrates:: Now, I have learned your meaning, but whether it is true or not I have to try to learn. The advantageous, then, is also your reply, Thrasymachus, to the question, what is the just—though you forbade me to give that answer. But you add thereto that of the stronger.

Thrasymachus:: A trifling addition perhaps you think it.

Socrates:: It is not yet clear whether it is a big one either, but that we must inquire whether what you say is true is clear. For since I too admit that the just is something that is of advantage—but you are for making an addition and affirm it to be the advantage of the stronger, while I don't profess to know—we must pursue the inquiry.

Thrasymachus:: Inquire away.

Socrates:: I will do so. Tell me, then, you affirm also, do you not, that obedience to rulers is just?

Thrasymachus:: I do.

Socrates:: May I ask whether the rulers in the various states are infallible or capable sometimes of error?

Thrasymachus:: Surely, they are liable to err.

Socrates:: Then in their attempts at legislation they enact some laws rightly and some not rightly, do they not?

Thrasymachus:: So I suppose.

Socrates:: And by rightly we are to understand for their advantage, and by wrongly to their disadvantage? Do you mean that or not?

Thrasymachus:: That.

Socrates:: But whatever they enact must be performed by their subjects and is justice?

Thrasymachus:: Of course.

Socrates:: Then on your theory it is just not only to do what is the advantage of the stronger but also the opposite, what is not to his advantage.

Thrasymachus:: What's that you're saying?

Socrates:: What you yourself are saying, I think. Let us consider it more closely. Have we not agreed that the rulers in giving orders to the ruled sometimes mistake their own advantage, and that whatever the rulers enjoin it is just for the subjects to perform? Was not that admitted?

Thrasymachus:: I think it was.

Socrates:: Then you will have to think, that to do what is disadvantageous to the rulers and the stronger has been admitted by you to be just in the case when the rulers unwittingly enjoin what is bad for themselves, while you affirm that it is just for the others to do what they enjoined. In that way does not this conclusion inevitably follow, my most sapient Thrasymachus, that it is just to do the very opposite of what you say? For it is in that case surely the disadvantage of the stronger or superior that the inferior are commanded to perform.

Polemarchus:: Yes, by Zeus, Socrates, nothing could be more conclusive.

Clitophon:: Of course, if you are his witness.

Polemarchus:: What need is there of a witness? Thrasymachus himself admits that the rulers sometimes enjoin what is evil for themselves and yet says that it is just for the subjects to do this.

Clitophon:: That, Polemarchus, is because Thrasymachus laid it down that it is just to obey the orders of the rulers.

Polemarchus:: Yes, Clitophon, but he also took the position that the advantage of the stronger is just. And after these two assumptions he again admitted that the stronger sometimes bid the inferior and their subjects do what is to the disadvantage of the rulers. And from these admissions the just would no more be the advantage of the stronger than the contrary.

Clitophon:: Oh well, by the advantage of the superior he meant what the superior supposed to be for his advantage. This was what the inferior had to do, and that this is the just was his position.

Polemarchus:: That isn't what he said.

Socrates:: Never mind, Polemarchus. But if that is Thrasymachus' present meaning, let us take it from him in that sense. So tell me, Thrasymachus, was this what you intended to say, that the just is the advantage of the superior as it appears to the superior whether it really is or not? Are we to say this was your meaning?

Thrasymachus:: Not in the least, Do you suppose that I call one who is in error a superior when he errs?

Socrates:: I certainly did suppose that you meant that, when you agreed that rulers are not infallible but sometimes make mistakes.

Thrasymachus:: That is because you argue like a pettifogger, Socrates. Why, to take the nearest example, do you call one who is mistaken about the sick a physician in respect of his mistake or one who goes wrong in a calculation a calculator when he goes wrong and in respect of this error? Yet that is what we say literally—we say that the physician erred, and the calculator and the schoolmaster. But the truth, I take it, is, that each of these in so far as he is that which we entitle him never errs, so that, speaking precisely, since you are such a stickler for precision, no craftsman errs. For it is when his knowledge abandons him that he who goes wrong goes wrong—when he is not a craftsman. So that no craftsman, wise man, or ruler makes a mistake then when he is a ruler, though everybody would use the expression that the physician made a mistake and the ruler erred. It is in this loose way of speaking, then, that you must take the answer I gave you a little while ago. But the most precise statement is that other, that the ruler in so far forth as ruler does not err, and not erring he enacts what is best for himself, and this the subject must do, so that, even as I meant from the start, I say the just is to do what is for the advantage of the stronger.

Socrates:: So then, Thrasymachus, my manner of argument seems to you pettifogging?

Thrasymachus:: It does.

Socrates:: You think, do you, that it was with malice aforethought and trying to get the better of you unfairly that I asked that question?

Thrasymachus:: I don’t think it, I know it, and you won’t make anything by it, for you won’t get the better of me by stealth and, failing stealth, you are not of the force to beat me in debate.

Socrates:: Bless your soul, I wouldn’t even attempt such a thing. But that nothing of the sort may spring up between us again, define in which sense you take the ruler and stronger. Do you mean the so-called ruler or that ruler in the precise sense of whom you were just now telling us, and for whose advantage as being the superior it will be just for the inferior to act?

Thrasymachus:: I mean the ruler in the very most precise sense of the word, Now bring on against this your cavils and your shyster's tricks if you are able. I ask no quarter. But you'll find yourself unable.

Socrates:: Why, do you suppose, that I am so mad as to try to beard a lion and try the pettifogger on Thrasymachus?

Thrasymachus:: You did try it just now, paltry fellow though you be.

Socrates:: Something too much of this sort of thing. But tell me, your physician in the precise sense, of whom you were just now speaking, is he a money-maker, an earner of fees, or a healer of the sick? And remember to speak of the physician who is really such.

Thrasymachus:: A healer of the sick.

Socrates:: And what of the pilot—the pilot rightly so called—is he a ruler of sailors or a sailor?

Thrasymachus:: A ruler of sailors.

Socrates:: We don't, I fancy, have to take into account the fact that he actually sails in the ship, nor is he to be denominated a sailor. For it is not in respect of his sailing that he is called a pilot but in respect of his art and his ruling of the sailors.

Thrasymachus:: True.

Socrates:: Then for each of them is there not a something that is for his advantage?

Thrasymachus:: Quite so.

Socrates:: And is it not also true, that the art naturally exists for this, to discover and provide for each his advantage?

Thrasymachus:: Yes, for this.

Socrates:: Is there, then, for each of the arts any other advantage than to be as perfect as possible?

Thrasymachus:: What do you mean by that question?

Socrates:: Just as if, you should ask me whether it is enough for the body to be the body or whether it stands in need of something else, I would reply, By all means it stands in need. That is the reason why the art of medicine has now been invented, because the body is defective and such defect is unsatisfactory. To provide for this, then, what is advantageous, that is the end for which the art was devised. Do you think that would be a correct answer, or not?

Thrasymachus:: Correct.

Socrates:: But how about this? Is the medical art itself defective or faulty, or has any other art any need of some virtue, quality, or excellence—as the eyes of vision, the ears of hearing—and for this reason is there need of some art over them that will consider and provide what is advantageous for these very ends? Does there exist in the art itself some defect and does each art require another art to consider its advantage and is there need of still another for the considering art and so on ad infinitum, or will the art look out for its own advantage? Or is it a fact that it needs neither itself nor another art to consider its advantage and provide against its deficiency? For there is no defect or error at all that dwells in any art. Nor does it befit an art to seek the advantage of anything else than that of its object. But the art itself is free from all harm and admixture of evil, and is right so long as each art is precisely and entirely that which it is. And consider the matter in that ‘precise’ way of speaking. Is it so or not?

Thrasymachus:: It appears to be so.

Socrates:: Then medicine, does not consider the advantage of medicine but of the body?

Thrasymachus:: Yes.

Socrates:: Nor horsemanship of horsemanship but of horses, nor does any other art look out for itself—for it has no need—but for that of which it is the art.

Thrasymachus:: So it seems.

Socrates:: But surely, Thrasymachus, the arts do hold rule and are stronger than that of which they are the arts.

He conceded this but it went very hard.

Then no art considers or enjoins the advantage of the stronger but every art that of the weaker which is ruled by it.

—This too he was finally brought to admit though he tried to contest it.

—Can we deny, then, that neither does any physician in so far as he is a physician seek or enjoin the advantage of the physician but that of the patient? For we have agreed that the physician, 'precisely' speaking, is a ruler and governor of bodies and not a moneymaker. Did we agree on that?

—He assented.

And so the 'precise' pilot is a ruler of sailors, not a sailor?

—That was admitted.

—Then that sort of a pilot and ruler will not consider and enjoin the advantage of the pilot but that of the sailor whose ruler he is.

—He assented reluctantly.

—Then, Thrasymachus, neither does anyone in any office of rule in so far as he is a ruler consider and enjoin his own advantage but that of the one whom he rules and for whom he exercises his craft, and he keeps his eyes fixed on that and on what is advantageous and suitable to that in all that he says and does.

—When we had come to this point in the discussion and it was apparent to everybody that his formula of justice had suffered a reversal of form, Thrasymachus, instead of replying, said;

Thrasymachus:: Tell me, Socrates, have you got a nurse?

Socrates:: What do you mean? Why didn't you answer me instead of asking such a question?

Thrasymachus:: Because, she lets her little snotty run about driveling and doesn't wipe your face clean, though you need it badly, if she can't get you to know the difference between the shepherd and the sheep.

Socrates:: And what, pray, makes you think that?

Thrasymachus:: Because you think that the shepherds and the neatherds are considering the good of the sheep and the cattle and fatten and tend them with anything else in view than the good of their masters and themselves. And by the same token you seem to suppose that the rulers in our cities, I mean the real rulers, differ at all in their thoughts of the governed from a man's attitude toward his sheep or that they think of anything else night and day than the sources of their own profit. And you are so far out concerning the just and justice and the unjust and injustice that you don't know that justice and the just are literally the other fellow's good—the advantage of the stronger and the ruler, but a detriment that is all his own of the subject who obeys and serves—while injustice is the contrary and rules those who are simple in every sense of the word and just, and they being thus ruled do what is for his advantage who is the stronger and make him happy by serving him, but themselves by no manner of means. And you must look at the matter, my simple-minded Socrates, in this way, that the just man always comes out at a disadvantage in his relation with the unjust. To begin with, in their business dealings in any joint undertaking of the two you will never find that the just man has the advantage over the unjust at the dissolution of the partnership but that he always has the worst of it. Then again, in their relations with the state, if there are direct taxes or contributions to be paid, the just man contributes more from an equal estate and the other less, and when there is a distribution the one gains much and the other nothing. And so when each holds office, apart from any other loss the just man must count on his own affairs' falling into disorder through neglect, while because of his justice he makes no profit from the state, and thereto he will displease his friends and his acquaintances by his unwillingness to serve them unjustly. But to the unjust man all the opposite advantages accrue. I mean, of course, the one I was just speaking of, the man who has the ability to overreach on a large scale. Consider this type of man, then, if you wish to judge how much more profitable it is to him personally to be unjust than to be just. And the easiest way of all to understand this matter will be to turn to the most consummate form of injustice which makes the man who has done the wrong most happy and those who are wronged and who would not themselves willingly do wrong most miserable. And this is tyranny, which both by stealth and by force takes away what belongs to others, both sacred and profane, both private and public, not little by little but at one swoop. For each several part of such wrongdoing the malefactor who fails to escape detection is fined and incurs the extreme of contumely, for temple robbers, kidnapers, burglars, swindlers, and thieves are the appellations of those who commit these several forms of injustice. But when in addition to the property of the citizens men kidnap and enslave the citizens themselves, instead of these opprobrious names they are pronounced happy and blessed not only by their fellow citizens but by all who hear the story of the man who has committed complete and entire injustice. For it is not the fear of doing but of suffering wrong that calls forth the reproaches of those who revile injustice. Thus, Socrates, injustice on a sufficiently large scale is a stronger, freer, and more masterful thing than justice, and, as I said in the beginning, it is the advantage of the stronger that is the just, while the unjust is what profits a man's self and is for his advantage.

Socrates:: After this Thrasymachus was minded to depart when like a bathman he had poured his speech in a sudden flood over our ears. But the company would not suffer him and were insistent that he should remain and render an account of what he had said. And I was particularly urgent and said, I am surprised at you, Thrasymachus. After hurling such a doctrine at us, can it be that you propose to depart without staying to teach us properly or learn yourself whether this thing is so or not? Do you think it a small matter that you are attempting to determine and not the entire conduct of life that for each of us would make living most worth while?

Thrasymachus:: Well, do I deny it?

Socrates:: You seem to, or else to care nothing for us and so feel no concern whether we are going to live worse or better lives in our ignorance of what you affirm that you know. Nay, my good fellow, do your best to make the matter clear to us also—it will be no bad investment for you, any benefit that you bestow on such a company as this. For I tell you for my part that I am not convinced;

neither do I think that injustice is more profitable than justice, not even If one gives it free scope and does not hinder it of its will. But, suppose, sir, a man to be unjust and to be able to act unjustly either because he is not detected or can maintain it by violence. All the same he does not convince me that it is more profitable than justice. Now it may be that there is someone else among us who feels in this way and that I am not the only one. Persuade us, then, my dear fellow, convince us satisfactorily that we are ill advised in preferring justice to injustice.

Thrasymachus:: And how am I to persuade you? If you are not convinced by what I just now was saying, what more can I do for you? Shall I take the argument and ram it into your head?

Socrates:: Heaven forbid! Don't do that. But in the first place when you have said a thing stand by it, or if you shift your ground change openly and don't try to deceive us. But, as it is, you see, Thrasymachus—let us return to the previous examples—you see that while you began by taking the physician in the true sense of the word, you did not think fit afterward to be consistent and maintain with precision the notion of the true shepherd, but you apparently think that he herds his sheep in his quality of shepherd, not with regard to what is best for the sheep, but as if he were a banqueter about to be feasted with regard to the good cheer, or again with a view to the sale of them, as if he were a money-maker and not a shepherd. But the art of the shepherd surely is concerned with nothing else than how to provide what is best for that over which it is set, since its own affairs, its own best estate, are surely sufficiently provided for so long as it in nowise fails of being the shepherd's art. And in like manner I supposed that we just now were constrained to acknowledge that every form of rule in so far as it is rule considers what is best for nothing else than that which is governed and cared for by it, alike in political and private rule. Why, do you think that the rulers and holders of office in our cities—the true rulers—willingly hold office and rule?

Thrasymachus:: I don't think, I know right well they do.

Socrates:: But what of other forms of rule, Thrasymachus? Do you not perceive that no one chooses of his own will to hold the office of rule? Men demand pay, which implies that not to them will benefit accrue from their holding office but to those whom they rule. Tell me this. We ordinarily say, do we not, that each of the arts is different from others because its power or function is different? And, my dear fellow, in order that we may reach some result, don't answer counter to your real belief.

Thrasymachus:: Well, yes, that is what renders it different.

Socrates:: And does not each art also yield us benefit that is peculiar to itself and not general, as for example medicine health, the pilot's art safety at sea, and the other arts similarly?

Thrasymachus:: Assuredly.

Socrates:: And does not the wage earner's art yield wages? For that is its function. Would you identify medicine and the pilot's art? Or if you please to discriminate 'precisely' as you proposed, none the more if a pilot regains his health because a sea voyage is good for him, no whit the more, I say, for this reason do you call his art medicine, do you?

Thrasymachus:: Of course not.

Socrates:: Neither, I take it, do you call wage earning medicine if a man earning wages is in health.

Thrasymachus:: Surely not.

Socrates:: But what of this? Do you call medicine wage earning, if a man when giving treatment earns wages?

Thrasymachus:: No.

Socrates:: And did we not agree that the benefit derived from each art is peculiar to it?

Thrasymachus:: So be it.

Socrates:: Any common or general benefit that all craftsmen receive, then, they obviously derive from their common use of some further identical thing.

Thrasymachus:: It seems so.

Socrates:: And we say that the benefit of earning wages accrues to the craftsmen from their further exercise of the wage-earning art.

—He assented reluctantly.

Then the benefit, the receiving of wages, does not accrue to each from his own art. But if we are to consider it 'precisely,' medicine produces health but the fee-earning art the pay, and architecture a house but the fee-earning art accompanying it the fee, and so with all the others—each performs its own task and benefits that over which it is set. But unless pay is added to it, is there any benefit which the craftsman receives from the craft?

Thrasymachus:: Apparently not.

Socrates:: Does he then bestow no benefit either when he works for nothing?

Thrasymachus:: I'll say he does.

Socrates:: Then, Thrasymachus, is not this immediately apparent, that no art or office provides what is beneficial for itself—but as we said long ago it provides and enjoins what is beneficial to its subject, considering the advantage of that, the weaker, and not the advantage of the stronger? That was why, friend Thrasymachus, I was just now saying that no one of his own will chooses to hold rule and office and take other people's troubles in hand to straighten them out, but everybody expects pay for that, because he who is to exercise the art rightly never does what is best for himself or enjoins it when he gives commands according to the art, but what is best for the subject. That is the reason, it seems, why pay must be provided for those who are to consent to rule, either in the form of money or honor or a penalty if they refuse.

Glaucon:: What do you mean by that, Socrates? The two wages I recognize, but the penalty you speak of and described as a form of wage I don't understand.

Socrates:: Then, you don't understand the wages of the best men for the sake of which the finest spirits hold office and rule when they consent to do so. Don't you know that to be covetous of honor and covetous of money is said to be and is a reproach?

Glaucon:: I do.

Socrates:: Well, then, that is why the good are not willing to rule either for the sake of money or of honor. They do not wish to collect pay openly for their service of rule and be styled hirelings, nor to take it by stealth from their office and be called thieves, nor yet for the sake of honor, for they are not covetous of honor. So there must be imposed some compulsion and penalty to constrain them to rule if they are to consent to hold office. That is perhaps why to seek office oneself and not await compulsion is thought disgraceful. But the chief penalty is to be governed by someone worse if a man will not himself hold office and rule. It is from fear of this, as it appears to me, that the better sort hold office when they do, and then they go to it not in the expectation of enjoyment nor as to a good thing, but as to a necessary evil and because they are unable to turn it over to better men than themselves or to their like. For we may venture to say that, if there should be a city of good men only, immunity from office holding would be as eagerly contended for as office is now, and there it would be made plain that in very truth the true ruler does not naturally seek his own advantage but that of the ruled, so that every man of understanding would rather choose to be benefited by another than to be bothered with benefiting him. This point then I by no means concede to Thrasymachus, that justice is the advantage of the superior. But that we will reserve for another occasion. A far weightier matter seems to me Thrasymachus' present statement, his assertion that the life of the unjust man is better than that of the just. Which now do you choose, Glaucon? And which seems to you to be the truer statement?

Glaucon:: That the life of the just man is more profitable, I say.

Socrates:: Did you hear, all the goods that Thrasymachus just now enumerated for the life of the unjust man?

Glaucon:: I heard, but I am not convinced.

Socrates:: Do you wish us then to try to persuade him, supposing we can find a way, that what he says is not true?

Glaucon:: Of course I wish it.

Socrates:: If then we oppose him in a set speech enumerating in turn the advantages of being just and he replies and we rejoin, we shall have to count up and measure the goods listed in the respective speeches and we shall forthwith be in need of judges to decide between us. But if, as in the preceding discussion, we come to terms with one another as to what we admit in the inquiry, we shall be ourselves both judges and pleaders.

Glaucon:: Quite so.

Socrates:: Which method do you like better?

Glaucon:: This one.

Socrates:: Come then, Thrasymachus, go back to the beginning and answer us. You affirm that perfect and complete injustice is more profitable than justice that is complete.

Thrasymachus:: I affirm it, and have told you my reasons.

Socrates:: Tell me then how you would express yourself on this point about them. You call one of them, I presume, a virtue and the other a vice?

Thrasymachus:: Of course.

Socrates:: Justice the virtue and injustice the vice?

Thrasymachus:: It is likely, you innocent, when I say that injustice pays and justice doesn’t pay.

Socrates:: But what then, pray?

Thrasymachus:: The opposite.

Socrates:: What! Justice vice?

Thrasymachus:: No, but a most noble simplicity or goodness of heart.

Socrates:: Then do you call injustice badness of heart?

Thrasymachus:: No, but goodness of judgment.

Socrates:: Do you also, Thrasymachus, regard the unjust as intelligent and good?

Thrasymachus:: Yes, if they are capable of complete injustice, and are able to subject to themselves cities and tribes of men. But you probably suppose that I mean those who take purses. There is profit to be sure even in that sort of thing, if it goes undetected. But such things are not worth taking into the account, but only what I just described.

Socrates:: I am not unaware of your meaning in that, but this is what surprised me, that you should range injustice under the head of virtue and wisdom, and justice in the opposite class.

Thrasymachus:: Well, I do so class them.

Socrates:: That, is a stiffer proposition, my friend, and if you are going as far as that it is hard to know what to answer. For if your position were that injustice is profitable yet you conceded it to be vicious and disgraceful as some other disputants do, there would be a chance for an argument on conventional principles. But, as it is, you obviously are going to affirm that it is honorable and strong and you will attach to it all the other qualities that we were assigning to the just, since you don't shrink from putting it in the category of virtue and wisdom.

Thrasymachus:: You are a most veritable prophet.

Socrates:: Well, I mustn't flinch from following out the logic of the inquiry, so long as I conceive you to be saying what you think. For now, Thrasymachus, I absolutely believe that you are not 'mocking' us but telling us your real opinions about the truth.

Thrasymachus:: What difference does it make to you, whether I believe it or not? Why don't you test the argument?

Socrates:: No difference, but here is something I want you to tell me in addition to what you have said. Do you think the just man would want to overreach or exceed another just man?

Thrasymachus:: By no means, Otherwise he would not be the delightful simpleton that he is.

Socrates:: And would he exceed or overreach or go beyond the just action?

Thrasymachus:: Not that either.

Socrates:: But how would he treat the unjust man—would he deem it proper and just to outdo, overreach, or go beyond him or would he not?

Thrasymachus:: He would, but he wouldn't be able to.

Socrates:: That is not my question, but whether it is not the fact that the just man does not claim or wish to outdo the just man but only the unjust?

Thrasymachus:: That is the case.

Socrates:: How about the unjust then? Does he claim to overreach and outdo the just man and the just action?

Thrasymachus:: Of course, since he claims to overreach and get the better of everything.

Socrates:: Then the unjust man will overreach and outdo also both the unjust man and the unjust action, and all his endeavor will be to get the most in everything for himself.

Thrasymachus:: That is so.

Socrates:: Let us put it in this way. The just man does not seek to take advantage of his like but of his unlike, but the unjust man of both.

Thrasymachus:: Admirably put.

Socrates:: But the unjust man is intelligent and good and the just man neither.

Thrasymachus:: That, too, is right.

Socrates:: Is it not also true, that the unjust man is like the intelligent and good and the just man is not?

Thrasymachus:: Of course, being such he will be like to such and the other not.

Socrates:: Excellent. Then each is such as that to which he is like.

Thrasymachus:: What else do you suppose?

Socrates:: Very well, Thrasymachus, but do you recognize that one man is a musician and another unmusical?

Thrasymachus:: I do.

Socrates:: Which is the intelligent and which the unintelligent?

Thrasymachus:: The musician, I presume, is the intelligent and the unmusical the unintelligent.

Socrates:: And is he not good in the things in which he is intelligent and bad in the things in which he is unintelligent?

Thrasymachus:: Yes.

Socrates:: And the same of the physician?

Thrasymachus:: The same.

Socrates:: Do you think then, my friend, that any musician in the tuning of a lyre would want to overreach another musician in the tightening and relaxing of the strings or would claim and think fit to exceed or outdo him?

Thrasymachus:: I do not.

Socrates:: But would he the unmusical man?

Thrasymachus:: Of necessity.

Socrates:: And how about the medical man? In prescribing food and drink would he want to outdo the medical man or the medical procedure?

Thrasymachus:: Surely not.

Socrates:: But he would the unmedical man?

Thrasymachus:: Yes.

Socrates:: Consider then with regard to all forms of knowledge and ignorance whether you think that anyone who knows would choose to do or say other or more than what another who knows would do or say, and not rather exactly what his like would do in the same action.

Thrasymachus:: Why, perhaps it must be so, in such cases.

Socrates:: But what of the ignorant man—of him who does not know? Would he not overreach or outdo equally the knower and the ignorant?

Thrasymachus:: It may be.

Socrates:: But the one who knows is wise?

Thrasymachus:: I'll say so.

Socrates:: And the wise is good?

Thrasymachus:: I'll say so.

Socrates:: Then he who is good and wise will not wish to overreach his like but his unlike and opposite.

Thrasymachus:: It seems so.

Socrates:: But the bad man and the ignoramus will overreach both like and unlike?

Thrasymachus:: So it appears.

Socrates:: And does not our unjust man, Thrasymachus, overreach both unlike and like? Did you not say that?

Thrasymachus:: I did.

Socrates:: But the just man will not overreach his like but only his unlike?

Thrasymachus:: Yes.

Socrates:: Then the just man is like the wise and good, and the unjust is like the bad and the ignoramus.

Thrasymachus:: It seems likely.

Socrates:: But furthermore we agreed that each is such as that to which he is like.

Thrasymachus:: Yes, we did.

Socrates:: Then the just man has turned out on our hands to be good and wise and the unjust man bad and ignorant.

—Thrasymachus made all these admissions not as I now lightly narrate them, but with much balking and reluctance and prodigious sweating, it being summer, and it was then I beheld what I had never seen before—Thrasymachus blushing. But when we did reach our conclusion that justice is virtue and wisdom and injustice vice and ignorance, Good, let this be taken as established. But we were also affirming that injustice is a strong and potent thing. Don't you remember, Thrasymachus?

Thrasymachus:: I remember, but I don't agree with what you are now saying either and I have an answer to it, but if I were to attempt to state it, I know very well that you would say that I was delivering a harangue. Either then allow me to speak at such length as I desire, or, if you prefer to ask questions, go on questioning and I, as we do for old wives telling their tales, will say, 'Very good,' and will nod assent and dissent.

Socrates:: No, no, not counter to your own belief.

Thrasymachus:: Yes, to please you, since you don't allow me freedom of speech. And yet what more do you want?

Socrates:: Nothing, indeed, but if this is what you propose to do, do it, and I will ask the questions.

Thrasymachus:: Ask on, then.

Socrates:: This, then, is the question I ask, the same as before, so that our inquiry may proceed in sequence. What is the nature of injustice as compared with justice? For the statement made, I believe, was that injustice is a more potent and stronger thing than justice. But now, if justice is wisdom and virtue, it will easily, I take it, be shown to be also a stronger thing than injustice, since injustice is ignorance—no one could now fail to recognize that—but what I want is not quite so simple as that. I wish, Thrasymachus, to consider it in some such fashion as this. A city, you would say, may be unjust and try to enslave other cities unjustly, have them enslaved and hold many of them in subjection.

Thrasymachus:: Certainly, and this is what the best state will chiefly do, the state whose injustice is most complete.

Socrates:: I understand, that this was your view. But the point that I am considering is this, whether the city that thus shows itself superior to another will have this power without justice or whether she must of necessity combine it with justice.

Thrasymachus:: If, what you were just now saying holds good, that justice is wisdom, with justice; if it is as I said, with injustice.

Socrates:: Admirable, Thrasymachus. You not only nod assent and dissent, but give excellent answers.

Thrasymachus:: I am trying to please you.

Socrates:: Very kind of you. But please me in one thing more and tell me this. Do you think that a city, an army, or bandits, or thieves, or any other group that attempted any action in common, could accomplish anything if they wronged one another?

Thrasymachus:: Certainly not.

Socrates:: But if they didn’t, wouldn’t they be more likely to?

Thrasymachus:: Assuredly.

Socrates:: For factions, Thrasymachus, are the outcome of injustice, and hatreds and internecine conflicts, but justice brings oneness of mind and love. Is it not so?

Thrasymachus:: So be it, not to differ from you.

Socrates:: That is good of you, my friend, but tell me this. If it is the business of injustice to engender hatred wherever it is found, will it not, when it springs up either among free men or slaves, cause them to hate and be at strife with one another, and make them incapable of effective action in common?

Thrasymachus:: By all means.

Socrates:: Suppose, then, it springs up between two, will they not be at outs with and hate each other and be enemies both to one another and to the just?

Thrasymachus:: They will.

Socrates:: And then will you tell me that if injustice arises in one it will lose its force and function or will it nonetheless keep it?

Thrasymachus:: Have it that it keeps it.

Socrates:: And is it not apparent that its force is such that wherever it is found in city, family, camp, or in anything else, it first renders the thing incapable of cooperation with itself owing to faction and difference, and secondly an enemy to itself and to its opposite in every case, the just? Isn't that so?

Thrasymachus:: By all means.

Socrates:: Then in the individual too, I presume, its presence will operate all these effects which it is its nature to produce. It will in the first place make him incapable of accomplishing anything because of inner faction and lack of self-agreement, and then an enemy to himself and to the just. Is it not so?

Thrasymachus:: Yes.

Socrates:: But, my friend, the gods too are just.

Thrasymachus:: Have it that they are.

Socrates:: So to the gods also, it seems, the unjust man will be hateful, but the just man dear.

Thrasymachus:: Revel in your discourse, without fear, for I shall not oppose you, so as not to offend your partisans here.

Socrates:: Fill up the measure of my feast, then, and complete it for me, by continuing to answer as you have been doing. Now that the just appear to be wiser and better and more capable of action and the unjust incapable of any common action, and that if we ever say that any men who are unjust have vigorously combined to put something over, our statement is not altogether true, for they would not have kept their hands from one another if they had been thoroughly unjust, but it is obvious that there was in them some justice which prevented them from wronging at the same time one another too as well as those whom they attacked. And by dint of this they accomplished whatever they did and set out to do injustice only half corrupted by injustice, since utter rascals completely unjust are completely incapable of effective action—all this I understand to be the truth, and not what you originally laid down. But whether it is also true that the just have a better life than the unjust and are happier, which is the question we afterward proposed for examination, is what we now have to consider. It appears even now that they are, I think, from what has already been said. But all the same we must examine it more carefully. For it is no ordinary matter that we are discussing, but the right conduct of life.

Thrasymachus:: Proceed with your inquiry.

Socrates:: I proceed. Tell me then—would you say that a horse has a specific work or function?

Thrasymachus:: I would.

Socrates:: Would you be willing to define the work of a horse or of anything else to be that which one can do only with it or best with it?

Thrasymachus:: I don't understand.

Socrates:: Well, take it this way. Is there anything else with which you can see except the eyes?

Thrasymachus:: Certainly not.

Socrates:: Again, could you hear with anything but ears?

Thrasymachus:: By no means.

Socrates:: Would you not rightly say that these are the functions of these organs?

Thrasymachus:: By all means.

Socrates:: Once more, you could use a dirk to trim vine branches and a knife and many other instruments.

Thrasymachus:: Certainly.

Socrates:: But nothing so well, I take it, as a pruning knife fashioned for this purpose.

Thrasymachus:: That is true.

Socrates:: Must we not then assume this to be the work or function of that?

Thrasymachus:: We must.

Socrates:: You will now, then, I fancy, better apprehend the meaning of my question when I asked whether that is not the work of a thing which it only or it better than anything else can perform.

Thrasymachus:: Well, I do understand, and agree that the work of anything is that.

Socrates:: Very good. Do you not also think that there is a specific virtue or excellence of everything for which a specific work or function is appointed? Let us return to the same examples. The eyes we say have a function?

Thrasymachus:: They have.

Socrates:: Is there also a virtue of the eyes?

Thrasymachus:: There is.

Socrates:: And was there not a function of the ears?

Thrasymachus:: Yes.

Socrates:: And so also a virtue?

Thrasymachus:: Also a virtue.

Socrates:: And what of all other things? Is the case not the same?

Thrasymachus:: The same.

Socrates:: Take note now. Could the eyes possibly fulfill their function well if they lacked their own proper excellence and had in its stead the defect?

Thrasymachus:: How could they? For I presume you meant blindness instead of vision.

Socrates:: Whatever, the excellence may be. For I have not yet come to that question, but am only asking whether whatever operates will not do its own work well by its own virtue and badly by its own defect.

Thrasymachus:: That much, you may safely affirm to be true.

Socrates:: Then the ears, too, if deprived of their own virtue will do their work ill?

Thrasymachus:: Assuredly.

Socrates:: And do we then apply the same principle to all things?

Thrasymachus:: I think so.

Socrates:: Then next consider this. The soul, has it a work which you couldn’t accomplish with anything else in the world, as for example, management, rule, deliberation, and the like? Is there anything else than soul to which you could rightly assign these and say that they were its peculiar work?

Thrasymachus:: Nothing else.

Socrates:: And again life? Shall we say that too is the function of the soul?

Thrasymachus:: Most certainly.

Socrates:: And do we not also say that there is an excellence or virtue of the soul?

Thrasymachus:: We do.

Socrates:: Will the soul ever accomplish its own work well if deprived of its own virtue, or is this impossible?

Thrasymachus:: It is impossible.

Socrates:: Of necessity, then, a bad soul will govern and manage things badly while the good soul will in all these things do well.

Thrasymachus:: Of necessity.

Socrates:: And did we not agree that the excellence or virtue of soul is justice and its defect injustice?

Thrasymachus:: Yes, we did.

Socrates:: The just soul and the just man then will live well and the unjust ill?

Thrasymachus:: So it appears, by your reasoning.

Socrates:: But furthermore, he who lives well is blessed and happy, and he who does not the contrary.

Thrasymachus:: Of course.

Socrates:: Then the just is happy and the unjust miserable.

Thrasymachus:: So be it.

Socrates:: But it surely does not pay to be miserable, but to be happy.

Thrasymachus:: Of course not.

Socrates:: Never, then, most worshipful Thrasymachus, can injustice be more profitable than justice.

Thrasymachus:: Let this complete your entertainment, Socrates, at the festival of Bendis.

Socrates:: A feast furnished by you, Thrasymachus, now that you have become gentle with me and are no longer angry. I have not dined well, however—by my own fault, not yours. But just as gluttons snatch at every dish that is handed along and taste it before they have properly enjoyed the preceding, so I, methinks, before finding the first object of our inquiry—what justice is—let go of that and set out to consider something about it, namely whether it is vice and ignorance or wisdom and virtue. And again, when later the view was sprung upon us that injustice is more profitable than justice I could not refrain from turning to that from the other topic. So that for me the present outcome of the discussion is that I know nothing. For if I don't know what the just is, I shall hardly know whether it is a virtue or not, and whether its possessor is or is not happy.

## Book 2.

Socrates:: When I had said this I supposed that I was done with the subject, but it all turned out to be only a prelude. For Glaucon, who is always an intrepid, enterprising spirit in everything, would not on this occasion acquiesce in Thrasymachus' abandonment of his case, but said;

Glaucon:: Socrates, is it your desire to seem to have persuaded us or really to persuade us that it is without exception better to be just than unjust?

Socrates:: Really, if the choice rested with me.

Glaucon:: Well, then, you are not doing what you wish. For tell me, do you agree that there is a kind of good which we would choose to possess, not from desire for its aftereffects, but welcoming it for its own sake? As, for example, joy and such pleasures as are harmless and nothing results from them afterward save to have and to hold the enjoyment.

Socrates:: I recognize that kind.

Glaucon:: And again a kind that we love both for its own sake and for its consequences, such as understanding, sight, and health? For these I presume we welcome for both reasons.

Socrates:: Yes.

Glaucon:: And can you discern a third form of good under which fall exercise and being healed when sick and the art of healing and the making of money generally? For of them we would say that they are laborious and painful yet beneficial, and for their own sake we would not accept them, but only for the rewards and other benefits that accrue from a them.

Socrates:: Why yes, I must admit this third class also. But what of it?

Glaucon:: In which of these classes do you place justice?

Socrates:: In my opinion, it belongs in the fairest class, that which a man who is to be happy must love both for its own sake and for the results.

Glaucon:: Yet the multitude, do not think so, but that it belongs to the toilsome class of things that must be practiced for the sake of rewards and repute due to opinion but that in itself is to be shunned as an affliction.

Socrates:: I am aware, that that is the general opinion and Thrasymachus has for some time been disparaging it as such and praising injustice. But I, it seems, am somewhat slow to learn.

Glaucon:: Come now, hear what I too have to say and see if you agree with me. For Thrasymachus seems to me to have given up to you too soon, as if he were a serpent that you had charmed, but I am not yet satisfied with the proof that has been offered about justice and injustice. For what I desire is to hear what each of them is and what potency and effect each has in and of itself dwelling in the soul, but to dismiss their rewards and consequences. This, then, is what I propose to do, with your concurrence. I will renew the argument of Thrasymachus and will first state what men say is the nature and origin of justice, secondly, that all who practice it do so reluctantly, regarding it as something necessary and not as a good, and thirdly, that they have plausible grounds for thus acting, since forsooth the life of the unjust man is far better than that of the just man—as they say, though I, Socrates, don't believe it. Yet I am disconcerted when my ears are dinned by the arguments of Thrasymachus and innumerable others. But the case for justice, to prove that it is better than injustice, I have never yet heard stated by any as I desire to hear it. What I desire is to hear an encomium on justice in and by itself. And I think I am most likely to get that from you. For which reason I will lay myself out in praise of the life of injustice, and in so speaking will give you an example of the manner in which I desire to hear from you in turn the dispraise of injustice and the praise of justice. Consider whether my proposal pleases you.

Socrates:: Nothing could please me more, for on what subject would a man of sense rather delight to hold and hear discourse again and again?

Glaucon:: That is excellent, and now listen to what I said would be the first topic—the nature and origin of justice.

By nature, they say, to commit injustice is a good and to suffer it is an evil, but that the excess of evil in being wronged is greater than the excess of good in doing wrong, so that when men do wrong and are wronged by one another and taste of both, those who lack the power to avoid the one and take the other determine that it is for their profit to make a compact with one another neither to commit nor to suffer injustice, and that this is the beginning of legislation and of covenants between men, and that they name the commandment of the law the lawful and the just, and that this is the genesis and essential nature of justice—a compromise between the best, which is to do wrong with impunity, and the worst, which is to be wronged and be impotent to get one's revenge. Justice, they tell us, being midway between the two, is accepted and approved, not as a real good, but as a thing honored in the lack of vigor to do injustice, since anyone who had the power to do it and was in reality 'a man' would never make a compact with anybody neither to wrong nor to be wronged, for he would be mad. The nature, then, of justice is this and such as this, Socrates, and such are the conditions in which it originates, according to the theory.

But as for the second point, that those who practice it do so unwillingly and from want of power to commit injustice, we shall be most likely to apprehend that if we entertain some such supposition as this in thought—if we grant to both the just and the unjust license and power to do whatever they please, and then accompany them in imagination and see whither desire will conduct them. We should then catch the just man in the very act of resorting to the same conduct as the unjust man because of the self-advantage which every creature by its nature pursues as a good, while by the convention of law it is forcibly diverted to paying honor to 'equality.' The license that I mean would be most nearly such as would result from supposing them to have the power which men say once came to the ancestor[a] of Gyges the Lydian. They relate that he was a shepherd in the service of the ruler at that time of Lydia, and that after a great deluge of rain and an earthquake the ground opened and a chasm appeared in the place where he was pasturing, and they say that he saw and wondered and went down into the chasm. And the story goes that he beheld other marvels there and a hollow bronze horse with little doors, and that he peeped in and saw a corpse within, as it seemed, of more than mortal stature, and that there was nothing else but a gold ring on its hand, which he took off, and so went forth. And when the shepherds held their customary assembly to make their monthly report to the king about the flocks, he also attended, wearing the ring. So as he sat there it chanced that he turned the cullet of the ring toward himself, toward the inner part of his hand, and when this took place they say that he became invisible to those who sat by him and they spoke of him as absent, and that he was amazed, and again fumbling with the ring turned the cullet outward and so became visible. On noting this he experimented with the ring to see if it possessed this virtue, and he found the result to be that when he turned the cullet inward he became invisible, and when outward visible, and becoming aware of this, he immediately managed things so that he became one of the messengers who went up to the king, and on coming there he seduced the king's wife and with her aid set upon the king and slew him and possessed his kingdom.

If now there should be two such rings, and the just man should put on one and the unjust the other, no one could be found, it would seem, of such adamantine temper as to persevere in justice and endure to refrain his hands from the possessions of others and not touch them, though he might with impunity take what he wished even from the market place, and enter into houses and lie with whom he pleased, and slay and loose from bonds whomsoever he would, and in all other things conduct himself among mankind as the equal of a god. And in so acting he would do no differently from the other man, but both would pursue the same course. And yet this is a great proof, one might argue, that no one is just of his own will but only from constraint, in the belief that justice is not his personal good, inasmuch as every man, when he supposes himself to have the power to do wrong, does wrong. For that there is far more profit for him personally in injustice than in justice is what every man believes, and believes truly, as the proponent of this theory will maintain. For if anyone who had got such a license within his grasp should refuse to do any wrong or lay his hands on others' possessions, he would be regarded as most pitiable and a great fool by all who took note of it, though they would praise him before one another's faces, deceiving one another because of their fear of suffering injustice. So much for this point.

But to come now to the decision between our two kinds of life, if we separate the most completely just and the most completely unjust man, we shall be able to decide rightly, but if not, not. How, then, is this separation to be made? Thus. We must subtract nothing of his injustice from the unjust man or of his justice from the just, but assume the perfection of each in his own mode of conduct. In the first place, the unjust man must act as clever craftsmen do. A first-rate pilot or physician, for example, feels the difference between impossibilities and possibilities in his art and attempts the one and lets the others go, and then, too, if he does happen to trip, he is equal to correcting his error. Similarly, the unjust man who attempts injustice rightly must be supposed to escape detection if he is to be altogether unjust, and we must regard the man who is caught as a bungler. For the height of injustice is to seem just without being so. To the perfectly unjust man, then, we must assign perfect injustice and withhold nothing of it, but we must allow him, while committing the greatest wrongs, to have secured for himself the greatest reputation for justice, and if he does happen to trip, we must concede to him the power to correct his mistakes by his ability to speak persuasively if any of his misdeeds come to light, and when force is needed, to employ force by reason of his manly spirit and vigor and his provision of friends and money. And when we have set up an unjust man of this character, our theory must set the just man at his side—a simple and noble man, who, in the phrase of Aeschylus, does not wish to seem but to be good. Then we must deprive him of the seeming. For if he is going to be thought just he will have honors and gifts because of that esteem. We cannot be sure in that case whether he is just for justice' sake or for the sake of the gifts and the honors. So we must strip him bare of everything but justice and make his state the opposite of his imagined counterpart. Though doing no wrong he must have the repute of the greatest injustice, so that he may be put to the test as regards justice through not softening because of ill repute and the consequences thereof. But let him hold on his course unchangeable even unto death, seeming all his life to be unjust though being just, so that, both men attaining to the limit, the one of injustice, the other of justice, we may pass judgment which of the two is the happier.

Socrates:: Bless me, my dear Glaucon. How strenuously you polish off each of your two men for the competition for the prize as if it were a statue!

Glaucon:: To the best of my ability, and if such is the nature of the two, it becomes an easy matter, I fancy, to unfold the tale of the sort of life that awaits each. We must tell it, then, and even if my language is somewhat rude and brutal, you must not suppose, Socrates, that it is I who speak thus, but those who commend injustice above justice. What they will say is this, that such being his disposition the just man will have to endure the lash, the rack, chains, the branding iron in his eyes, and finally, after every extremity of suffering, he will be crucified, and so will learn his lesson that not to be but to seem just is what we ought to desire. And the saying of Aeschylus was, it seems, far more correctly applicable to the unjust man. For it is literally true, they will say, that the unjust man, as pursuing what clings closely to reality, to truth, and not regulating his life by opinion, desires not to seem but to be unjust;

> Exploiting the deep furrows of his wit
> From which there grows the fruit of counsels shrewd.

first office and rule in the state because of his reputation for justice, then a wife from any family he chooses, and the giving of his children in marriage to whomsoever he pleases, dealings and partnerships with whom he will, and in all these transactions advantage and profit for himself because he has no squeamishness about committing injustice. And so they say that if he enters into lawsuits, public or private, he wins and gets the better of his opponents, and, getting the better, is rich and benefits his friends and harms his enemies, and he performs sacrifices and dedicates votive offerings to the gods adequately and magnificently, and he serves and pays court to men whom he favors and to the gods far better than the just man, so that he may reasonably expect the favor of heaven also to fall rather to him than to the just. So much better they say, Socrates, is the life that is prepared for the unjust man from gods and men than that which awaits the just.

Socrates:: When Glaucon had thus spoken, I had a mind to make some

reply thereto, but his brother Adimantus said;

Adeimantus:: You surely don't suppose, Socrates, that the statement of the case is complete?

Socrates:: Why, what else?

Adeimantus:: The very most essential point, has not been mentioned.

Socrates:: Then, the proverb has it, let a brother help a man'—and so, if Glaucon omits any word or deed, do you come to his aid. Though for my part what he has already said is quite enough to overthrow me and incapacitate me for coming to the rescue of justice.

Adeimantus:: Nonsense, but listen to this further point. We must set forth the reasoning and the language of the opposite party, of those who commend justice and dispraise injustice, if what I conceive to be Glaucon's meaning is to be made more clear. Fathers, when they address exhortations to their sons, and all those who have others in their charge, urge the necessity of being just, not by praising justice itself, but the good repute with mankind that accrues from it, the object that they hold before us being that by seeming to be just the man may get from the reputation office and alliances and all the good things that Glaucon just now enumerated as coming to the unjust man from his good name. But those people draw out still further this topic of reputation. For, throwing in good standing with the gods, they have no lack of blessings to describe, which they affirm the gods give to pious men, even as the worthy Hesiod and Homer declare—the one that the gods make the oaks bear for the just

> Acorns on topmost branches and swarms of bees on their mid-trunks.

and he tells how the

> Flocks of the fleece-bearing sheep are laden and weighted with soft wool.

and of many other blessings akin to these, and similarly the other poet;

> Even as when a good king, who rules in the fear of the high gods,
> Upholds justice and right, and the black earth yields him her foison,
> Barley and wheat, and his trees are laden and weighted with fair fruits,
> Increase comes to his flocks and the ocean is teeming with fishes.

And Musaeus and his son have a more excellent song than these of the blessings that the gods bestow on the righteous. For they conduct them to the house of Hades in their tale and arrange a symposium of the saints, where, reclined on couches and crowned with wreaths, they entertain the time henceforth with wine, as if the fairest mead of virtue were an everlasting drunk. And others extend still further the rewards of virtue from the gods. For they say that the children's children of the pious and oath-keeping man and his race thereafter never fail. Such and suchlike are their praises of justice. But the impious and the unjust they bury in mud in the house of Hades and compel them to fetch water in a sieve, and, while they still live, they bring them into evil repute, and all the sufferings that Glaucon enumerated as befalling just men who are thought to be unjust, these they recite about the unjust, but they have nothing else to say. Such is the praise and the censure of the just and of the unjust.

Consider further, Socrates, another kind of language about justice and injustice employed by both laymen and poets. All with one accord reiterate that soberness and righteousness are fair and honorable, to be sure, but unpleasant and laborious, while licentiousness and injustice are pleasant and easy to win and are only in opinion and by convention disgraceful. They say that injustice pays better than justice, for the most part, and they do not scruple to felicitate bad men who are rich or have other kinds of power and to do them honor in public and private, and to dishonor and disregard those who are in any way weak or poor, even while admitting that they are better men than the others. But the strangest of all these speeches are the things they say about the gods and virtue—how it is that the gods themselves assign to many good men misfortunes and an evil life, but to their opposites a contrary lot, and begging priests and soothsayers go to rich men's doors and make them believe that they by means of sacrifices and incantations have accumulated a treasure of power from the gods that can expiate and cure with pleasurable festivals any misdeed of a man or his ancestors, and that if a man wishes to harm an enemy, at slight cost he will be enabled to injure just and unjust alike, since they are masters of spells and enchantments that constrain the gods to serve their end. And for all these sayings they cite the poets as witnesses, with regard to the ease and plentifulness of vice, quoting;

> Evildoing in plenty a man shall find for the seeking.
> Smooth is the way, and it lies near at hand and is easy to enter,
> But on the pathway of virtue the gods put sweat from the first step.

and a certain long and uphill road. And others cite Homer as a witness to the beguiling of gods by men, since he too said;

> The gods themselves are moved by prayers,
> And men by sacrifice and soothing vows,
> And incense and libation turn their wills
> Praying, whene'er they have sinned and made transgression.

And they produce a bushel of books of Musaeus and Orpheus, the offspring of the Moon and of the Muses, as they affirm, and these books they use in their ritual, and make not only ordinary men but states believe that there really are remissions of sins and purifications for deeds of injustice, by means of sacrifice and pleasant sport for the living, and that there are also special rites for the defunct, which they call functions, that deliver us from evils in that other world, while terrible things await those who have neglected to sacrifice.

What, Socrates, do we suppose is the effect of all such sayings about the esteem in which men and gods hold virtue and vice upon the souls that hear them, the souls of young men who are quick-witted and capable of flitting, as it were, from one expression of opinion to another and inferring from them all the character and the path whereby a man would lead the best life? Such a youth would most likely put to himself the question Pindar asks, 'Is it by justice or by crooked deceit that I the higher tower shall scale and so live my life out in fenced and guarded security?' The consequences of my being just are, unless I likewise seem so, not assets, they say, but liabilities, labor, and total loss, but if I am unjust and have procured myself a reputation for justice, a godlike life is promised. Then since it is 'the seeming,' as the wise men show me, that 'masters the reality' and is lord of happiness, to this I must devote myself without reserve. For a front and a show I must draw about myself a shadow outline of virtue, but trail behind me the fox of the most sage Archilochus, shifty and bent on gain. Nay, 'tis objected, it is not easy for a wrongdoer always to lie hid. Neither is any other big thing facile, we shall reply. But all the same if we expect to be happy, we must pursue the path to which the footprints of our arguments point. For with a view to lying hid we will organize societies and political clubs, and there are teachers of cajolery who impart the arts of the popular assembly and the courtroom, so that, partly by persuasion, partly by force, we shall contrive to overreach with impunity. But against the gods, it may be said, neither secrecy nor force can avail. Well, if there are no gods, or they do not concern themselves with the doings of men, neither need we concern ourselves with eluding their observation. If they do exist and pay heed, we know and hear of them only from such discourses and from the poets who have described their pedigrees. But these same authorities tell us that the gods are capable of being persuaded and swerved from their course by 'sacrifice and soothing vows' and dedications. We must believe them in both or neither. And if we are to believe them, the thing to do is to commit injustice and offer sacrifice from the fruits of our wrongdoing. For if we are just, we shall, it is true, be unscathed by the gods, but we shall be putting away from us the profits of injustice, but if we are unjust, we shall win those profits, and, by the importunity of our prayers, when we transgress and sin we shall persuade them and escape scot free. Yes, it will be objected, but we shall be brought to judgment in the world below for our unjust deeds here, we or our children's children. Nay, my dear sir, our calculating friend will say, here again the rites for the dead have much efficacy, and the absolving divinities, as the greatest cities declare, and the sons of gods, who became the poets and prophets of the gods, and who reveal that this is the truth.

On what further ground, then, could we prefer justice to supreme injustice? If we combine this with a counterfeit decorum, we shall prosper to our heart's desire, with gods and men, in life and death, as the words of the multitude and of men of the highest authority declare. In consequence, then, of all that has been said, what possibility is there, Socrates, that any man who has the power of any resources of mind, money, body, or family should consent to honor justice and not rather laugh when he hears her praised? In sooth, if anyone is able to show the falsity of these arguments, and has come to know with sufficient assurance that justice is best, he feels much indulgence for the unjust, and is not angry with them, but is aware that except a man by inborn divinity of his nature disdains injustice, or, having won to knowledge, refrains from it, no one else is willingly just, but that it is from lack of manly spirit or from old age or some other weakness that men dispraise injustice, lacking the power to practice it. The fact is patent. For no sooner does such a one come into the power than he works injustice to the extent of his ability.

And the sole cause of all this is the fact that was the starting point of this entire plea of my friend here and of myself to you, Socrates, pointing out how strange it is that of all you self-styled advocates of justice, from the heroes of old whose discourses survive to the men of the present day, not one has ever censured injustice or commended justice otherwise than in respect of the repute, the honors, and the gifts that accrue from each. But what each one of them is in itself, by its own inherent force, when it is within the soul of the possessor and escapes the eyes of both gods and men, no one has ever adequately set forth in poetry or prose—the proof that the one is the greatest of all evils that the soul contains within itself, while justice is the greatest good. For if you had all spoken in this way from the beginning and from our youth up had sought to convince us, we should not now be guarding against one another's injustice, but each would be his own best guardian, for fear lest by working injustice he should dwell in communion with the greatest of evils.

This, Socrates, and perhaps even more than this, Thrasymachus and haply another might say in pleas for and against justice and injustice, inverting their true potencies, as I believe, grossly. But I—for I have no reason to hide anything from you—am laying myself out to the utmost on the theory, because I wish to hear its refutation from you. Do not merely show us by argument that justice is superior to injustice, but make clear to us what each in and of itself does to its possessor, whereby the one is evil and the other good. But do away with the repute of both, as Glaucon urged. For, unless you take away from either the true repute and attach to each the false, we shall say that it is not justice that you are praising but the semblance, nor injustice that you censure, but the seeming, and that you really are exhorting us to be unjust but conceal it, and that you are at one with Thrasymachus in the opinion that justice is the other man's good, the advantage of the stronger, and that injustice is advantageous and profitable to oneself but disadvantageous to the inferior. Since, then, you have admitted that justice belongs to the class of those highest goods which are desirable both for their consequences and still more for their own sake, as sight, hearing, intelligence, yes and health too, and all other goods that are productive by their very nature and not by opinion, this is what I would have you praise about justice—the benefit which it and the harm which injustice inherently works upon its possessor. But the rewards and the honors that depend on opinion, leave to others to praise. For while I would listen to others who thus commended justice and disparaged injustice, bestowing their praise and their blame on the reputation and the rewards of either, I could not accept that sort of thing from you unless you say I must, because you have passed your entire life in the consideration of this very matter. Do not, then, I repeat, merely prove to us in argument the superiority of justice to injustice, but show us what it is that each inherently does to its possessor—whether he does or does not escape the eyes of gods and men—whereby the one is good and the other evil.

Socrates:: While I had always admired the genius of Glaucon and Adimantus, I was especially pleased by their words on this occasion, and said, It was excellently spoken of you, sons of the man we know, in the beginning of the elegy which the admirer of Glaucon wrote when you distinguished yourselves in the battle of Megara—’Sons of Ariston, whose race from a glorious sire is godlike.’ This, my friends, I think, was well said. For there must indeed be a touch of the godlike in your disposition if you are not convinced that injustice is preferable to justice though you can plead its case in such fashion. And I believe that you are really not convinced. I infer this from your general character, since from your words alone I should have distrusted you. But the more I trust you the more I am at a loss what to make of the matter. I do not know how I can come to the rescue. For I doubt my ability for the reason that you have not accepted the arguments whereby I thought I proved against Thrasymachus that justice is better than injustice. Nor yet again do I know how I can refuse to come to the rescue. For I fear lest it be actually impious to stand idly by when justice is reviled and be fainthearted and not defend her so long as one has breath and can utter his voice. The best thing, then, is to aid her as best I can.

—Glaucon, then, and the rest besought me by all means to come to the rescue and not to drop the argument but to pursue to the end the investigation as to the nature of each and the truth about their respective advantages. I said then as I thought, The inquiry we are undertaking is no easy one but calls for keen vision, as it seems to me. So, since we are not clever persons, I think we should employ the method of search that we should use if we, with not very keen vision, were bidden to read small letters from a distance, and then someone had observed that these same letters exist elsewhere larger and on a larger surface. We should have accounted it a godsend, I fancy, to be allowed to read those letters first, and then examine the smaller, if they are the same.

Adeimantus:: Quite so, but what analogy to this do you detect in the inquiry about justice?

Socrates:: I will tell you. There is a justice of one man, we say, and, I suppose, also of an entire city?

Adeimantus:: Assuredly.

Socrates:: Is not the city larger than the man?

Adeimantus:: It is larger.

Socrates:: Then, perhaps, there would be more justice in the larger object, and more easy to apprehend. If it please you, then, let us first look for its quality in states, and then only examine it also in the individual, looking for the likeness of the greater in the form of the less.

Adeimantus:: I think that is a good suggestion.

Socrates:: If, then, our argument should observe the origin of a state, we should see also the origin of justice and injustice in it?

Adeimantus:: It may be.

Socrates:: And if this is done, we may expect to find more easily what we are seeking?

Adeimantus:: Much more.

Socrates:: Shall we try it, then, and go through with it? I fancy it is no slight task. Reflect, then.

Adeimantus:: We have reflected. Proceed and don't refuse.

Socrates:: The origin of the city, then, in my opinion, is to be found in the fact that we do not severally suffice for our own needs, but each of us lacks many things. Do you think any other principle establishes the state?

Adeimantus:: No other.

Socrates:: As a result of this, then, one man calling in another for one service and another for another, we, being in need of many things, gather many into one place of abode as associates and helpers. and to this dwelling together we give the name city or state, do we not?

Adeimantus:: By all means.

Socrates:: And between one man and another there is an interchange of giving, if it so happens, and taking, because each supposes this to be better for himself.

Adeimantus:: Certainly.

Socrates:: Come, then, let us create a city from the beginning, in our theory. Its real creator, as it appears, will be our needs.

Adeimantus:: Obviously.

Socrates:: Now the first and chief of our needs is the provision of food for existence and life.

Adeimantus:: Assuredly.

Socrates:: The second is housing and the third is raiment and that sort of thing.

Adeimantus:: That is so.

Socrates:: Tell me, then, how our city will suffice for the provision of all these things. Will there not be a farmer for one, and a builder, and then again a weaver? And shall we add thereto a cobbler and some other purveyor for the needs of the body?

Adeimantus:: Certainly.

Socrates:: The indispensable minimum of a city, then, would consist of four or five men.

Adeimantus:: Apparently.

Socrates:: What of this, then? Shall each of these contribute his work for the common use of all? I mean, shall the farmer, who is one, provide food for four and spend fourfold time and toil on the production of food and share it with the others, or shall he take no thought for them and provide a fourth portion of the food for himself alone in a quarter of the time and employ the other three-quarters, the one in the provision of a house, the other of a garment, the other of shoes, and not have the bother of associating with other people, but, himself for himself, mind his own affairs?

Adeimantus:: But, perhaps, Socrates, the former way is easier.

Socrates:: It would not, by Zeus, be at all strange, for now that you have mentioned it, it occurs to me myself that, to begin with, our several natures are not all alike but different. One man is naturally fitted for one task, and another for another. Don't you think so?

Adeimantus:: I do.

Socrates:: Again, would one man do better working at many tasks or one at one?

Adeimantus:: One at one.

Socrates:: And, furthermore, this, I fancy, is obvious—that if one lets slip the right season, the favorable moment in any task, the work is spoiled.

Adeimantus:: Obvious.

Socrates:: That, I take it, is because the business will not wait upon the leisure of the workman, but the workman must attend to it as his main affair, and not as a by-work.

Adeimantus:: He must indeed.

Socrates:: The result, then, is that more things are produced, and better and more easily when one man performs one task according to his nature, at the right moment, and at leisure from other occupations.

Adeimantus:: By all means.

Socrates:: Then, Adimantus, we need more than four citizens for the provision of the things we have mentioned. For the farmer, it appears, will not make his own plow if it is to be a good one, nor his hoe, nor his other agricultural implements, nor will the builder, who also needs many, and similarly the weaver and cobbler.

Adeimantus:: True.

Socrates:: Carpenters, then, and smiths and many similar craftsmen, associating themselves with our hamlet, will enlarge it considerably.

Adeimantus:: Certainly.

Socrates:: Yet it still wouldn't be very large even if we should add to them neatherds and shepherds and other herders, so that the farmers might have cattle for plowing, and the builders oxen to use with the farmers for transportation, and the weavers and cobblers hides and fleeces for their use.

Adeimantus:: It wouldn't be a small city, either, if it had all these.

Socrates:: But further, it is practically impossible to establish the city in a region where it will not need imports.

Adeimantus:: It is.

Socrates:: There will be a further need, then, of those who will bring in from some other city what it requires.

Adeimantus:: There will.

Socrates:: And again, if our servitor goes forth empty-handed, not taking with him any of the things needed by those from whom they procure what they themselves require, he will come back with empty hands, will he not?

Adeimantus:: I think so.

Socrates:: Then their home production must not merely suffice for themselves but in quality and quantity meet the needs of those of whom they have need.

Adeimantus:: It must.

Socrates:: So our city will require more farmers and other craftsmen.

Adeimantus:: Yes, more.

Socrates:: And also of other ministrants who are to export and import the merchandise. These are traders, are they not?

Adeimantus:: Yes.

Socrates:: We shall also need traders, then.

Adeimantus:: Assuredly.

Socrates:: And if the trading is carried on by sea, we shall need quite a number of others who are expert in maritime business.

Adeimantus:: Quite a number.

Socrates:: But again, within the city itself how will they share with one another the products of their labor? This was the very purpose of our association and establishment of a state.

Adeimantus:: Obviously, by buying and selling.

Socrates:: A market place, then, and money as a token for the purpose of exchange will be the result of this.

Adeimantus:: By all means.

Socrates:: If, then, the farmer or any other craftsman taking his products to the market place does not arrive at the same time with those who desire to exchange with him, is he to sit idle in the market place and lose time from his own work?

Adeimantus:: By no means, but there are men who see this need and appoint themselves for this service—in well-conducted cities they are generally those who are weakest in body and those who are useless for any other task. They must wait there in the agora and exchange money for goods with those who wish to sell, and goods for money with as many as desire to buy.

Socrates:: This need, then, creates the class of shopkeepers in our city. Or is not ‘shopkeepers’ the name we give to those who, planted in the agora, serve us in buying and selling, while we call those who roam from city to city merchants?

Adeimantus:: Certainly.

Socrates:: And there are, furthermore, I believe, other servitors who in the things of the mind are not altogether worthy of our fellowship, but whose strength of body is sufficient for toil; so they, selling the use of this strength and calling the price wages, are designated, I believe, 'wage earners,' are they not?

Adeimantus:: Certainly.

Socrates:: Wage earners, then, it seems, are the complement that helps to fill up the state.

Adeimantus:: I think so.

Socrates:: Has our city, then, Adimantus, reached its full growth, and is it complete?

Adeimantus:: Perhaps.

Socrates:: Where, then, can justice and injustice be found in it? And along with which of the constituents that we have considered do they come into the state?

Adeimantus:: I cannot conceive, Socrates, unless it be in some need that those very constituents have of one another.

Socrates:: Perhaps that is a good suggestion. We must examine it and not hold back.

—First of all, then, let us consider what will be the manner of life of men thus provided. Will they not make bread and wine and garments and shoes? And they will build themselves houses and carry on their work in summer for the most part unclad and unshod and in winter clothed and shod sufficiently. And for their nourishment they will provide meal from their barley and flour from their wheat, and kneading and cooking these they will serve noble cakes and loaves on some arrangement of reeds or clean leaves. And, reclined on rustic beds strewed with bryony and myrtle, they will feast with their children, drinking of their wine thereto, garlanded and singing hymns to the gods in pleasant fellowship, not begetting offspring beyond their means lest they fall into poverty or war.

—Here Glaucon broke in.

Glaucon:: No relishes apparently, for the men you describe as feasting.

Socrates:: True, I forgot that they will also have relishes—salt, of course, and olives and cheese, and onions and greens, the sort of things they boil in the country, they will boil up together. But for dessert we will serve them figs and chick-peas and beans, and they will toast myrtle berries and acorns before the fire, washing them down with moderate potations. And so, living in peace and health, they will probably die in old age and hand on a like life to their off-spring.

Glaucon:: And If you were founding a city of pigs, Socrates, what other fodder than this would you provide?

Socrates:: Why, what would you have, Glaucon?

Glaucon:: What is customary. They must recline on couches, I presume, if they are not to be uncomfortable, and dine from tables and have dishes and sweetmeats such as are now in use.

Socrates:: Good. I understand. It is not merely the origin of a city, it seems, that we are considering but the origin of a luxurious city. Perhaps that isn't such a bad suggestion, either. For by observation of such a city it may be we could discern the origin of justice and injustice in states. The true state I believe to be the one we have described—the healthy state, as it were. But if it is your pleasure that we contemplate also a fevered state, there is nothing to hinder. For there are some, it appears, who will not be contented with this sort of fare or with this way of life, but couches will have to be added thereto and tables and other furniture, yes, and relishes and myrrh and incense and girls and cakes—all sorts of all of them. And the requirements we first mentioned, houses and garments and shoes, will no longer be confined to necessities, but we must set painting to work and embroidery, and procure gold and ivory and similar adornments, must we not?

Glaucon:: Yes.

Socrates:: Then shall we not have to enlarge the city again? For that healthy state is no longer sufficient, but we must proceed to swell out its bulk and fill it up with a multitude of things that exceed the requirements of necessity in states, as, for example, the entire class of huntsmen, and the imitators, many of them occupied with figures and colors and many with music—the poets and their assistants, rhapsodists, actors, chorus dancers, contractors—and the manufacturers of all kinds of articles, especially those that have to do with women's adornment. And so we shall also want more servitors. Don't you think that we shall need tutors, nurses wet and dry, beauty-shop ladies, barbers, and yet again cooks and chefs? And we shall have need, further, of swineherds; there were none of these creatures in our former city, for we had no need of them, but in this city there will be this further need. And we shall also require other cattle in great numbers if they are to be eaten, shall we not?

Glaucon:: Yes.

Socrates:: Doctors, too, are something whose services we shall be much more likely to require if we live thus than as before?

Glaucon:: Much.

Socrates:: And the territory, I presume, that was then sufficient to feed the then population, from being adequate will become too small. Is that so or not?

Glaucon:: It is.

Socrates:: Then we shall have to cut out a cantle of our neighbor’s land if we are to have enough for pasture and plowing, and they in turn of ours if they too abandon themselves to the unlimited acquisition of wealth, disregarding the limit set by our necessary wants.

Glaucon:: Inevitably, Socrates.

Socrates:: We shall go to war as the next step, Glaucon—or what will happen?

Glaucon:: What you say.

Socrates:: And we are not yet to speak, of any evil or good effect of war, but only to affirm that we have further discovered the origin of war, namely, from those things from which the greatest disasters, public and private, come to states when they come.

Glaucon:: Certainly.

Socrates:: Then, my friend, we must still further enlarge our city by no small increment, but by a whole army, that will march forth and fight it out with assailants in defense of all our wealth and the luxuries we have just described.

Glaucon:: How so? Are the citizens themselves not sufficient for that?

Socrates:: Not if you, and we all were right in the admission we made when we were molding our city. We surely agreed, if you remember, that it is impossible for one man to do the work of many arts well.

Glaucon:: True.

Socrates:: Well, then, don't you think that the business of fighting is an art and a profession?

Glaucon:: It is indeed.

Socrates:: Should our concern be greater, then, for the cobbler's art than for the art of war?

Glaucon:: By no means.

Socrates:: Can we suppose, then, that while we were at pains to prevent the cobbler from attempting to be at the same time a farmer, a weaver, or a builder instead of just a cobbler, to the end that we might have the cobbler's business well done, and similarly assigned to each and every one man one occupation, for which he was fit and naturally adapted and at which he was to work all his days, at leisure from other pursuits and not letting slip the right moments for doing the work well, and that yet we are in doubt whether the right accomplishment of the business of war is not of supreme moment? Is it so easy that a man who is cultivating the soil will be at the same time a soldier and one who is practicing cobbling or any other trade, though no man in the world could make himself a competent expert at draughts or the dice who did not practice that and nothing else from childhood but treated it as an occasional business? And are we to believe that a man who takes in hand a shield or any other instrument of war springs upon that very day a competent combatant in heavy armor or in any other form of warfare—though no other tool will make a man be an artist or an athlete by his taking it in hand, nor will it be of any service to those who have neither acquired the science of it nor sufficiently practiced themselves in its use?

Glaucon:: Great indeed, would be the value of tools in that case!

Socrates:: Then, in the same degree that the task of our guardians is the greatest of all, it would require more leisure than any other business and the greatest science and training.

Glaucon:: I think so.

Socrates:: Does it not also require a nature adapted to that very pursuit?

Glaucon:: Of course.

Socrates:: It becomes our task, then, it seems, if we are able, to select which and what kind of natures are suited for the guardianship of a state.

Glaucon:: Yes, ours.

Socrates:: Upon my word, it is no light task that we have taken upon ourselves. But we must not faint so far as our strength allows.

Glaucon:: No, we mustn’t.

Socrates:: Do you think, that there is any difference between the nature of a well-bred hound for this watchdog’s work and that of a wellborn lad?

Glaucon:: What point have you in mind?

Socrates:: I mean that each of them must be keen of perception, quick in pursuit of what it has apprehended, and strong too if it has to fight it out with its captive.

Glaucon:: Why, yes, there is need of all these qualities.

Socrates:: And it must, further, be brave if it is to fight well.

Glaucon:: Of course.

Socrates:: And will a creature be ready to be brave that is not high-spirited, whether horse or dog or anything else? Have you never observed what an irresistible and invincible thing is spirit, the presence of which makes every soul in the face of everything fearless and unconquerable?

Glaucon:: I have.

Socrates:: The physical qualities of the guardian, then, are obvious.

Glaucon:: Yes.

Socrates:: And also those of his soul, namely that he must be of high spirit.

Glaucon:: Yes, this too.

Socrates:: How then, Glaucon, will they escape being savage to one another and to the other citizens if this is to be their nature?

Glaucon:: Not easily, by Zeus.

Socrates:: And yet we must have them gentle to their friends and harsh to their enemies; otherwise they will not await their destruction at the hands of others, but will be first themselves in bringing it about.

Glaucon:: True.

Socrates:: What, then, are we to do? Where shall we discover a disposition that is at once gentle and great-spirited? For there appears to be an opposition between the spirited type and the gentle nature.

Glaucon:: There does.

Socrates:: But yet if one lacks either of these qualities, a good guardian he never can be. But these requirements resemble impossibilities, and so the result is that a good guardian is impossible.

Glaucon:: It seems likely.

Socrates:: And I was at a standstill, and after reconsidering what we had been saying, We deserve to be at a loss, my friend, for we have lost sight of the comparison that we set before ourselves.

Glaucon:: What do you mean?

Socrates:: We failed to note that there are after all such natures as we thought impossible, endowed with these opposite qualities.

Glaucon:: Where?

Socrates:: It may be observed in other animals, but especially in that which we likened to the guardian. You surely have observed in well-bred hounds that their natural disposition is to be most gentle to their familiars and those whom they recognize, but the contrary to those whom they do not know.

Glaucon:: I am aware of that.

Socrates:: The thing is possible, then, and it is not an unnatural requirement that we are looking for in our guardian.

Glaucon:: It seems not.

Socrates:: And does it seem to you that our guardian-to-be will also need, in addition to the being high-spirited, the further quality of having the love of wisdom in his nature?

Glaucon:: How so? I don’t apprehend your meaning.

Socrates:: This too, is something that you will discover in dogs and which is worth our wonder in the creature.

Glaucon:: What?

Socrates:: That the sight of an unknown person angers him before he has suffered any injury, but an acquaintance he will fawn upon though he has never received any kindness from him. Have you never marveled at that?

Glaucon:: I never paid any attention to the matter before now, but that he acts in some such way is obvious.

Socrates:: But surely that is an exquisite trait of his nature and one that shows a true love of wisdom.

Glaucon:: In what respect, pray?

Socrates:: In respect, that he distinguishes a friendly from a hostile aspect by nothing save his apprehension of the one and his failure to recognize the other. How, I ask you, can the love of learning be denied to a creature whose criterion of the friendly and the alien is intelligence and ignorance?

Glaucon:: It certainly cannot.

Socrates:: But you will admit, that the love of learning and the love of wisdom are the same?

Glaucon:: The same.

Socrates:: Then may we not confidently lay it down, in the case of man too, that if he is to be in some sort gentle to friends and familiars he must be by nature a lover of wisdom and of learning?

Glaucon:: Let us so assume.

Socrates:: The love of wisdom, then, and high spirit and quickness and strength will be combined for us in the nature of him who is to be a good and true guardian of the state.

Glaucon:: By all means.

Socrates:: Such, then, would be the basis of his character. But the rearing of these men and their education, how shall we manage that? And will the consideration of this topic advance us in any way toward discerning what is the object of our entire inquiry—the origin of justice and injustice in a state—our aim must be to omit nothing of a sufficient discussion, and yet not to draw it out to tiresome length?

—And Glaucon’s brother replied;

Adeimantus:: Certainly, I expect that this inquiry will bring us nearer to that end.

Socrates:: Certainly, then, my dear Adimantus, we must not abandon it even if it prove to be rather long.

Adeimantus:: No, we must not.

Socrates:: Come, then, just as if we were telling stories or fables and had ample leisure, let us educate these men in our discourse.

Adeimantus:: So we must.

Socrates:: What, then, is our education? Or is it hard to find a better than that which long time has discovered—which is, I suppose, gymnastics for the body, and for the soul, music?

Adeimantus:: It is.

Socrates:: And shall we not begin education in music earlier than in gymnastics?

Adeimantus:: Of course.

Socrates:: And under music you include tales, do you not?

Adeimantus:: I do.

Socrates:: And tales are of two species, the one true and the other false?

Adeimantus:: Yes.

Socrates:: And education must make use of both, but first of the false?

Adeimantus:: I don’t understand your meaning.

Socrates:: Don’t you understand, that we begin by telling children fables, and the fable is, taken as a whole, false, but there is truth in it also? And we make use of fable with children before gymnastics.

Adeimantus:: That is so.

Socrates:: That, then, is what I meant by saying that we must take up music before gymnastics.

Adeimantus:: You were right.

Socrates:: Do you not know, then, that the beginning in every task is the chief thing, especially for any creature that is young and tender? For it is then that it is best molded and takes the impression that one wishes to stamp upon it.

Adeimantus:: Quite so.

Socrates:: Shall we, then, thus lightly suffer our children to listen to any chance stories fashioned by any chance teachers and so to take into their minds opinions for the most part contrary to those that we shall think it desirable for them to hold when they are grown up?

Adeimantus:: By no manner of means will we allow it.

Socrates:: We must begin, then, it seems, by a censorship over our story-and what they do well we must pass and what not, reject. And the stories on the accepted list we will induce nurses and mothers to tell to the children and so shape their souls by these stories far rather than their bodies by their hands. But most of the stories they now tell we must reject.

Adeimantus:: What sort of stories?

Socrates:: The example of the greater stories, will show us the lesser also. For surely the pattern must be the same, and the greater and the less must have a like tendency. Don’t you think so?

Adeimantus:: I do, but I don’t apprehend which you mean by the greater, either.

Socrates:: Those, that Hesiod and Homer and the other poets related to us. These, methinks, composed false stories which they told and still tell to mankind.

Adeimantus:: Of what sort? And with what in them do you find fault?

Socrates:: With that, which one ought first and chiefly to blame, especially if the lie is not a pretty one.

Adeimantus:: What is that?

Socrates:: When anyone images badly in his speech the true nature of gods and heroes, like a painter whose portraits bear no resemblance to his models.

Adeimantus:: It is certainly right to condemn things like that, but just what do we mean and what particular things?

Socrates:: There is, first of all, the greatest lie about the things of greatest concernment, which was no pretty invention of him who told how Uranus did what Hesiod says he did to Cronus, and how Cronus in turn took his revenge, and then there are the doings and sufferings of Cronus at the hands of his son. Even if they were true I should not think that they ought to be thus lightly told to thoughtless young persons. But the best way would be to bury them in silence, and if there were some necessity for relating them, only a very small audience should be admitted under pledge of secrecy and after sacrificing, not a pig, but some huge and unprocurable victim, to the end that as few as possible should have heard these tales.

Adeimantus:: Why, yes, such stories are hard sayings.

Socrates:: Yes, and they are not to be told, Adimantus, in our city, nor is it to be said in the hearing of a young man that in doing the utmost wrong he would do nothing to surprise anybody, nor again in punishing his father's wrongdoings to the limit, but would only be following the example of the first and greatest of the gods.

Adeimantus:: No, by heaven, I do not myself think that they are fit to be told.

Socrates:: Neither must we admit at all, that gods war with gods and plot against one another and contend—for it is not true either—if we wish our future guardians to deem nothing more shameful than lightly to fall out with one another. Still less must we make battles of gods and giants the subject for them of stories and embroideries, and other enmities many and manifold of gods and heroes toward their kith and kin. But if there is any likelihood of our persuading them that no citizen ever quarreled with his fellow citizen and that the very idea of it is an impiety, that is the sort of thing that ought rather to be said by their elders, men and women, to children from the beginning and as they grow older, and we must compel the poets to keep close to this in their compositions. But Hera's fetterings by her son and the hurling out of heaven of Hephaestus by his father when he was trying to save his mother from a beating, and the battles of the gods in Homer's verse are things that we must not admit into our city either wrought in allegory or without allegory. For the young are not able to distinguish what is and what is not allegory, but whatever opinions are taken into the mind at that age are wont to prove indelible and unalterable. For which reason, maybe, we should do our utmost that the first stories that they hear should be so composed as to bring the fairest lessons of virtue to their ears.

Adeimantus:: Yes, that is reasonable, but if again someone should ask us to be specific and say what these compositions may be and what are the tales, what could we name?

Socrates:: Adimantus, we are not poets, you and I at present, but founders of a state. And to founders it pertains to know the patterns on which poets must compose their fables and from which their poems must not be allowed to deviate, but the founders are not required themselves to compose fables.

Adeimantus:: Right, but this very thing—the patterns or norms of right speech about the gods—what would they be?

Socrates:: Something like this. The true quality of God we must always surely attribute to him whether we compose in epic, melic, or tragic verse.

Adeimantus:: We must.

Socrates:: And is not God of course good in reality and always to be spoken of as such?

Adeimantus:: Certainly.

Socrates:: But further, no good thing is harmful, is it?

Adeimantus:: I think not.

Socrates:: Can what is not harmful harm?

Adeimantus:: By no means.

Socrates:: Can that which does not harm do any evil?

Adeimantus:: Not that either.

Socrates:: But that which does no evil would not be cause of any evil either?

Adeimantus:: How could it?

Socrates:: Once more, is the good beneficent?

Adeimantus:: Yes.

Socrates:: It is the cause, then, of welfare?

Adeimantus:: Yes.

Socrates:: Then the good is not the cause of all things, but of things that are well it is the cause—of things that are ill it is blameless.

Adeimantus:: Entirely so.

Socrates:: Neither, then, could God, since he is good, be, as the multitude say, the cause of all things, but for mankind he is the cause of few things, but of many things not the cause. For good things are far fewer with us than evil, and for the good we must assume no other cause than God, but the cause of evil we must look for in other things and not in God.

Adeimantus:: What you say seems to me most true.

Socrates:: Then, we must not accept from Homer or any other poet the folly of such error as this about the gods, when he says;

> Two urns stand on the floor of the palace of Zeus and are filled with
> Dooms he allots, one of blessings, the other of gifts that are evil.

And to whomsoever Zeus gives of both commingled

> Now upon evil he chances and now again good is his portion.

But the man for whom he does not blend the lots, but to whom he gives unmixed evil;

> Hunger devouring drives him, a wanderer over the wide world.

Nor will we tolerate the saying that;

> Zeus is dispenser alike of good and of evil to mortals.

But as to the violation of the oaths and the truce by Pandarus, if anyone affirms it to have been brought about by the action of Athena and Zeus, we will not approve, nor that the strife and contention of the gods were the doing of Themis and Zeus, nor again must we permit our youth to hear what Aeschylus says;

> A god implants the guilty cause in men When he would utterly destroy a house.

But if any poets compose a ‘Sorrows of Niobe,’ the poem that contains these iambics, or a tale of the Pelopidae or of Troy, or anything else of the kind, we must either forbid them to say that these woes are the work of God, or they must devise some such interpretation as we now require, and must declare that what God did was righteous and good, and they were benefited by their chastisement. But that they were miserable who paid the penalty, and that the doer of this was God, is a thing that the poet must not be suffered to say. If on the other hand he should say that for needing chastisement the wicked were miserable and that in paying the penalty they were benefited by God, that we must allow. But as to saying that God, who is good, becomes the cause of evil to anyone, we must contend in every way that neither should anyone assert this in his own city if it is to be well governed, nor anyone hear it, neither younger nor older, neither telling a story in meter or without meter, for neither would the saying of such things, if they are said, be holy, nor would they be profitable to us or concordant with themselves.

Adeimantus:: I cast my vote with yours for this law, and am well pleased with it.

Socrates:: This, then, will be one of the laws and patterns concerning the gods to which speakers and poets will be required to conform, that God is not the cause of all things, but only of the good.

Adeimantus:: And an entirely satisfactory one.

Socrates:: And what of this, the second? Do you think that God is a wizard and capable of manifesting himself by design, now in one aspect, now in another, at one time himself changing and altering his shape in many transformations and at another deceiving us and causing us to believe such things about him, or that he is simple and less likely than anything else to depart from his own form?

Adeimantus:: I cannot say offhand.

Socrates:: But what of this? If anything went out from its own form, would it not be displaced and changed, either by itself or by something else?

Adeimantus:: Necessarily.

Socrates:: Is it not true that to be altered and moved by something else happens least to things that are in the best condition, as, for example, a body by food and drink and toil, and plants by the heat of the sun and winds and similar influences—is it not true that the healthiest and strongest is least altered?

Adeimantus:: Certainly.

Socrates:: And is it not the soul that is bravest and most intelligent that would be least disturbed and altered by any external affection?

Adeimantus:: Yes.

Socrates:: And, again, it is surely true of all composite implements, edifices, and habiliments, by parity of reasoning, that those which are well made and in good condition are least liable to be changed by time and other influences.

Adeimantus:: That is so.

Socrates:: It is universally true, then, that that which is in the best state by nature or art or both admits least alteration by something else.

Adeimantus:: So it seems.

Socrates:: But God, surely, and everything that belongs to God, is in every way in the best possible state.

Adeimantus:: Of course.

Socrates:: From this point of view, then, it would be least of all likely that there would be many forms in God.

Adeimantus:: Least indeed.

Socrates:: But would he transform and alter himself?

Adeimantus:: Obviously, if he is altered.

Socrates:: Then does he change himself for the better and to something fairer, or for the worse and to something uglier than himself?

Adeimantus:: It must necessarily, be for the worse if he is changed. For we surely will not say that God is deficient in either beauty or excellence.

Socrates:: Most rightly spoken. And if that were his condition, do you think, Adimantus, that any one god or man would of his own will worsen himself in any way?

Adeimantus:: Impossible.

Socrates:: It is impossible then, even for a god to wish to alter himself, but, as it appears, each of them, being the fairest and best possible, abides forever simply in his own form.

Adeimantus:: An absolutely necessary conclusion to my thinking.

Socrates:: No poet then, my good friend, must be allowed to tell us that 'The gods, in the likeness of strangers, many disguises assume as they visit the cities of mortals.' Nor must anyone tell falsehoods about Proteus and Thetis, nor in any tragedy or in other poems bring in Hera disguised as a priestess collecting alms 'for the life-giving sons of Inachus, the Argive stream.' And many similar falsehoods they must not tell. Nor again must mothers under the influence of such poets terrify their children with harmful tales, how there are certain gods whose apparitions haunt the night in the likeness of many strangers from all manner of lands, lest while they speak evil of the gods they at the same time make cowards of the children.

Adeimantus:: They must not.

Socrates:: But, may we suppose that while the gods themselves are incapable of change they cause us to fancy that they appear in many shapes deceiving and practicing magic upon us?

Adeimantus:: Perhaps.

Socrates:: Consider. Would a god wish to deceive, or lie, by presenting in either word or action what is only appearance?

Adeimantus:: I don't know.

Socrates:: Don't you know, that the veritable lie, if the expression is permissible, is a thing that all gods and men abhor?

Adeimantus:: What do you mean?

Socrates:: his, that falsehood in the most vital part of themselves, and about their most vital concerns, is something that no one willingly accepts, but it is there above all that everyone fears it.

Adeimantus:: I don't understand yet either.

Socrates:: That is because you suspect me of some grand meaning, but what I mean is, that deception in the soul about realities, to have been deceived and to be blindly ignorant and to have and hold the falsehood there, is what all men would least of all accept, and it is in that case that they loathe it most of all.

Adeimantus:: Quite so.

Socrates:: But surely it would be most wholly right, as I was just now saying, to describe this as in very truth falsehood—ignorance namely in the soul of the man deceived. For the falsehood in words is a copy of the affection in the soul, an after rising image of it and not an altogether unmixed falsehood. Is not that so?

Adeimantus:: By all means.

Socrates:: Essential falsehood, then, is hated not only by gods but by men.

Adeimantus:: I agree.

Socrates:: But what of the falsehood in words—when and for whom is it serviceable so as not to merit abhorrence? Will it not be against enemies? And when any of those whom we call friends owing to madness or folly attempts to do some wrong, does it not then become useful to avert the evil–as a medicine? And also in the fables of which we were just now speaking, owing to our ignorance of the truth about antiquity, we liken the false to the true as far as we may and so make it edifying.

Adeimantus:: We most certainly do.

Socrates:: Tell me, then, on which of these grounds falsehood would be serviceable to God. Would he because of his ignorance of antiquity make false likenesses of it?

Adeimantus:: An absurd supposition, that.

Socrates:: Then there is no lying poet in God.

Adeimantus:: I think not.

Socrates:: Well then, would it be through fear of his enemies that he would lie?

Adeimantus:: Far from it.

Socrates:: Would it be because of the folly or madness of his friends?

Adeimantus:: Nay, no fool or madman is a friend of God.

Socrates:: Then there is no motive for God to deceive.

Adeimantus:: None.

Socrates:: So from every point of view the divine and the divinity are free from falsehood.

Adeimantus:: By all means.

Socrates:: Then God is altogether simple and true in deed and word, and neither changes himself nor deceives others by visions or words or the sending of signs in waking or in dreams.

Adeimantus:: I myself think so, when I hear you say it.

Socrates:: You concur then, in this as our second norm or canon for speech and poetry about the gods—that neither are they wizards in shape shifting nor do they mislead us by falsehoods in words or deed?

Adeimantus:: I concur.

Socrates:: Then, though there are many other things that we praise in Homer, this we will not applaud, the sending of the dream by Zeus to Agamemnon, nor shall we approve of Aeschylus when his Thetis avers that Apollo, singing at her wedding, ‘foretold the happy fortunes of her issue,’

> Their days prolonged, from pain and sickness free,
> And rounding out the tale of heaven’s blessings,
> Raised the proud paean, making glad my heart.
> And I believed that Phoebus’ mouth divine,
> Filled with the breath of prophecy, could not lie.
> But he himself, the singer, himself who sat
> At meat with us, himself who promised all,
> Is now himself the slayer of my son.

When anyone says that sort of thing about the gods, we shall be wroth with him, we will refuse him a chorus. Neither will we allow teachers to use him for the education of the young if our guardians are to be god-fearing men and godlike in so far as that is possible for humanity.

Adeimantus:: By all means, I accept these norms and would use them as canons and laws.

## Book 3.

Socrates:: Concerning the gods then, this is the sort of thing that we must allow or not allow them to hear from childhood up, if they are to honor the gods and their fathers and mothers, and not to hold their friendship with one another in light esteem.

Adeimantus:: That was our view and I believe it right.

Socrates:: What then of this? If they are to be brave, must we not extend our prescription to include also the sayings that will make them least likely to fear death? Or do you suppose that anyone could ever become brave who had that dread in his heart?

Adeimantus:: No indeed, I do not.

Socrates:: And again, if he believes in the reality of the underworld and its terrors, do you think that any man will be fearless of death and in battle will prefer death to defeat and slavery?

Adeimantus:: By no means.

Socrates:: Then it seems we must exercise supervision also, in the matter of such tales as these, over those who undertake to supply them and request them not to dispraise in this undiscriminating fashion the life in Hades but rather praise it, since what they now tell us is neither true nor edifying to men who are destined to be warriors.

Adeimantus:: Yes, we must.

Socrates:: Then, beginning with this verse we will expunge everything of the same kind;

> Liefer were I in the fields up above to be serf to another
> Tiller of some poor plot which yields him a scanty subsistence,

> Than to be ruler and king over all the dead who have perished.

and this;

> Lest unto men and immortals the homes of the dead be uncovered
> Horrible, noisome, dank, that the gods too hold in abhorrence.

and;

> Ah me! So it is true that ‘en in the dwellings of Hades
> Spirit there is and wraith, but within there is no understanding.

and this [of Tiresias];

> Sole to have wisdom and wit, but the others are shadowy phantoms.

and;

> Forth from his limbs unwilling his spirit flitted to Hades,
> Wailing its doom and its lustihood lost and the May of its manhood.

and;

> Under the earth like a vapor vanished the gibbering soul.

and;

> Even as bats in the hollow of some mysterious grotto
> Fly with a flitter-mouse shriek when one of them falls from the cluster,
> Whereby they hold to the rock and are clinging the one to the other,
> Flitted their gibbering ghosts.

We will beg Homer and the other poets not to be angry if we cancel those and all similar passages, not that they are not poetic and pleasing to most hearers, but because the more poetic they are the less are they suited to the ears of boys and men who are destined to be free and to be more afraid of slavery than of death.

Adeimantus:: By all means.

Socrates:: Then we must further taboo in these matters the entire vocabulary of terror and fear, Cocytus named of lamentation loud, abhorred Styx, the flood of deadly hate, the people of the infernal pit and of the charnel house, and all other terms of this type, whose very names send a shudder through all the hearers every year. And they may be excellent for other purposes, but we are in fear for our guardians lest the habit of such thrills make them more sensitive and soft than we would have them.

Adeimantus:: And we are right in so fearing.

Socrates:: We must remove those things then?

Adeimantus:: Yes.

Socrates:: And the opposite type to them is what we must require in speech and in verse?

Adeimantus:: Obviously.

Socrates:: And shall we also do away with the wailings and lamentations of men of repute?

Adeimantus:: That necessarily follows, from the other.

Socrates:: Consider, whether we shall be right in thus getting rid of them or not. What we affirm is that a good man will not think that for a good man, whose friend he also is, death is a terrible thing.

Adeimantus:: Yes, we say that.

Socrates:: Then it would not be for his friend's sake as if he had suffered something dreadful that he would make lament.

Adeimantus:: Certainly not.

Socrates:: But we also say this, that such a one is most of all men sufficient unto himself for a good life and is distinguished from other men in having least need of anybody else.

Adeimantus:: True.

Socrates:: Least of all then to him is it a terrible thing to lose son or brother or his wealth or anything of the sort.

Adeimantus:: Least of all.

Socrates:: Then he makes the least lament and bears it most moderately when any such misfortune overtakes him.

Adeimantus:: Certainly.

Socrates:: Then we should be right in doing away with the lamentations of men of note and in attributing them to women, and not to the most worthy of them either, and to inferior men, in order that those whom we say we are breeding for the guardianship of the land may disdain to act like these.

Adeimantus:: We should be right.

Socrates:: Again then we shall request Homer and the other poets not to portray Achilles, the son of a goddess, as, 'lying now on his side, and then again on his back, and again on his face,' and then rising up and 'drifting distraught on the shore of the waste unharvested ocean,' nor as clutching with both hands the sooty dust and strewing it over his head, nor as weeping and lamenting in the measure and manner attributed to him by the poet, nor yet Priam, near kinsman of the gods, making supplication and rolling in the dung, 'calling aloud unto each, by name to each man appealing.' And yet more than this shall we beg of them at least not to describe the gods as lamenting and crying, 'Ah, woe is me, woeful mother who bore to my sorrow the bravest,' and if they will so picture the gods, at least not to have the effrontery to present so unlikely a likeness of the supreme god as to make him say;

> Out on it, dear to my heart is the man whose pursuit around Troy town

> I must behold with my eyes while my spirit is grieving
> within me.

and;

> Ah, woe is me! Of all men to me is Sarpedon the
> dearest,
> Fated to fall by the hands of Patroclus, Menoetius'
> offspring.

For if, dear Adimantus, our young men should seriously incline to listen to such tales and not laugh at them as unworthy utterances, still less likely would any man be to think such conduct unworthy of himself and to rebuke himself if it occurred to him to do or say anything of that kind, but without shame or restraint full many a dirge for trifles would he chant and many a lament.

Adeimantus:: You say most truly.

Socrates:: But that must not be, as our reasoning but now showed us, in which we must put our trust until someone convinces us with a better reason.

Adeimantus:: No, it must not be.

Socrates:: Again, they must not be prone to laughter. For ordinarily when one abandons himself to violent laughter his condition provokes a violent reaction.

Adeimantus:: I think so.

Socrates:: Then if anyone represents men of worth as overpowered by laughter we must not accept it, much less if gods.

Adeimantus:: Much indeed.

Socrates:: Then we must not accept from Homer such sayings as these either about the gods;

> Quenchless then was the laughter that rose from the
> blessed immortals
>
> When they beheld Hephaestus officiously puffing and
> panting.

Adeimantus:: We must not accept them on your view.

Socrates:: If it pleases you to call it mine, At any rate we must not accept them. But further we must surely prize truth most highly. For if we were right in what we were just saying and falsehood is in very deed useless to gods, but to men useful as a remedy or form of medicine, it is obvious that such a thing must be assigned to physicians, and laymen should have nothing to do with it.

Adeimantus:: Obviously.

Socrates:: The rulers then of the city may, if anybody, fitly lie on account of enemies or citizens for the benefit of the state; no others may have anything to do with it. But for a layman to lie to rulers of that kind we shall affirm to be as great a sin, nay a greater, than it is for a patient not to tell his physician or an athlete his trainer the truth about his bodily condition, or for a man to deceive the pilot about the ship and the sailors as to the real condition of himself or a fellow sailor, and how they fare.

Most true.

Socrates:: If then the ruler catches anybody else in the city lying, any of the craftsmen, 'whether a prophet or healer of sickness or joiner of timbers,' he will chastise him for introducing a practice as subversive and destructive of a state as it is of a ship.

Adeimantus:: He will, if deed follows upon word.

Socrates:: Again, will our lads not need the virtue of self-control?

Adeimantus:: Of course.

Socrates:: And for the multitude are not the main points of self-control these—to be obedient to their rulers and themselves to be rulers over the bodily appetites and pleasures of food, drink, and the rest?

Adeimantus:: I think so.

Socrates:: Then, I take it, we will think well said such sayings as that of Homer's Diomedes;

> Friend, sit down and be silent and hark to the word of my bidding.

and what follows;

> Breathing high spirit the Greeks marched silently fearing their captains.

and all similar passages.

Adeimantus:: Yes, well said.

Socrates:: But what of this sort of thing;

> Heavy with wine, with the eyes of a dog and the heart of a fleet deer.

and the lines that follow? Are these well—and other impertinences in prose or verse of private citizens to their rulers?

Adeimantus:: They are not well.

Socrates:: They certainly are not suitable for youth to hear for the inculcation of self-control. But if from another point of view they yield some pleasure we must not be surprised, or what is your view of it?

Adeimantus:: This.

Socrates:: Again, to represent the wisest man as saying that this seems to him the fairest thing in the world;

> When the bounteous tables are standing
> Laden with bread and with meat and the cupbearer ladles the sweet wine
> Out of the mixer and bears it and empties it into the beakers.

do you think the hearing of that sort of thing will conduce to a young man's temperance or self-control? Or this?

> Hunger is the most piteous death that a mortal may suffer.

Or to hear how Zeus lightly forgot all the designs which he devised, awake while the other gods and men slept, because of the excitement of his passions, and was so overcome by the sight of Hera that he is not even willing to go to their chamber, but wants to lie with her there on the ground and says that he is possessed by a fiercer desire than when they first consorted with one another, 'deceiving their dear parents'? Nor will it profit them to hear of Hephaestus' fettering of Ares and Aphrodite for a like motive.

Adeimantus:: No, by Zeus, I don't think it will.

Socrates:: But any words or deeds of endurance in the face of all odds attributed to famous men are suitable for our youth to see represented and to hear, such as;

> He smote his breast and chided thus his heart,
> Endure, my heart, for worse hast thou endured.

Adeimantus:: By all means.

Socrates:: It is certain that we cannot allow our men to be accepters of bribes or greedy for gain.

Adeimantus:: By no means.

Socrates:: Then they must not chant, 'Gifts move the gods and gifts persuade dread kings.' Nor should we approve Achilles' attendant Phoenix as speaking fairly when he counseled him if he received gifts for it to defend the Achaeans, but without gifts not to lay aside his wrath. Nor shall we think it proper nor admit that Achilles himself was so greedy as to accept gifts from Agamemnon and again to give up a dead body after receiving payment but otherwise to refuse.

Adeimantus:: It is not right, to commend such conduct.

Socrates:: But, for Homer's sake, I hesitate to say that it is positively impious to affirm such things of Achilles and to believe them when told by others, or again to believe that he said to Apollo;

> Me thou hast balked, far-darter, the most pernicious of all gods,
> Mightily would I requite thee if only my hands had the power.

and how he was disobedient to the river, who was a god, and was ready to fight with him, and again that he said of the locks of his hair, consecrated to the other river, Spercheus;

> This let me give to take with him my hair to the hero, Patroclus.

who was a dead body. And that he did so we must not believe. And again the trailings of Hector's body round the grave of Patroclus and the slaughter of the living captives upon his pyre, all these we will affirm to be lies, nor will we suffer our youth to believe that Achilles, the son of a goddess and of Peleus, the most chaste of men, grandson of Zeus, and himself bred under the care of the most sage Chiron, was of so perturbed a spirit as to be affected with two contradictory maladies, the greed that becomes no free man and at the same time overweening arrogance toward gods and men.

Adeimantus:: You are right.

Socrates:: Neither, then, must we believe this, or suffer it to be said, that Theseus, the son of Poseidon, and Pirithous, the son of Zeus, attempted such dreadful rapes, nor that any other child of a god or hero would have brought himself to accomplish the terrible and impious deeds that they now falsely relate of them. But we must constrain the poets either to deny that these are their deeds or that they are the children of gods, but not to make both statements or attempt to persuade our youth that the gods are the begetters of evil, and that heroes are no better than men. For, as we were saying, such utterances are both impious and false. For we proved, I take it, that for evil to arise from gods is an impossibility.

Adeimantus:: Certainly.

Socrates:: And they are furthermore harmful to those that hear them. For every man will be very lenient with his own misdeeds if he is convinced that such are and were the actions of;

> The near-sown seed of gods,
> Close kin to Zeus, for whom on Ida's top
> Ancestral altars flame to highest heaven,
> Nor in their lifeblood fails the fire divine.

For which cause we must put down such fables, lest they breed in our youth great laxity in turpitude.

Adeimantus:: Most assuredly.

Socrates:: What type of discourse remains for our definition of our prescriptions and proscriptions? We have declared the right way of speaking about gods and daemons and heroes and that other world?

Adeimantus:: We have.

Socrates:: Speech, then, about men would be the remainder.

Adeimantus:: Obviously.

Socrates:: It is impossible for us, my friend, to place this here.

Adeimantus:: Why?

Socrates:: Because I presume we are going to say that so it is that both poets and writers of prose speak wrongly about men in matters of greatest moment, saying that there are many examples of men who, though unjust, are happy, and of just men who are wretched, and that there is profit in injustice if it be concealed, and that justice is the other man's good and your own loss, and I presume that we shall forbid them to say this sort of thing and command them to sing and fable the opposite. Don’t you think so?

Adeimantus:: Nay, I well know it.

Socrates:: Then, if you admit that I am right, I will say that you have conceded the original point of our inquiry?

Adeimantus:: Rightly apprehended.

Socrates:: Then, as regards men, that speech must be of this kind, that is a point that we will agree upon when we have discovered the nature of justice and the proof that it is profitable to its possessor whether he does or does not appear to be just.

Adeimantus:: Most true.

Socrates:: So this concludes the topic of tales. That of diction, I take it, is to be considered next. So we shall have completely examined both the matter and the manner of speech.

Adeimantus:: I don’t understand what you mean by this.

Socrates:: Well, we must have you understand. Perhaps you will be more likely to apprehend it thus. Is not everything that is said by fabulists or poets a narration of past, present, or future things?

Adeimantus:: What else could it be?

Socrates:: Do not they proceed either by pure narration or by a narrative that is effected through imitation, or by both?

Adeimantus:: This too, I still need to have made plainer.

Socrates:: I seem to be a ridiculous and obscure teacher. So, like men who are unable to express themselves I won’t try to speak in wholes and universals but will separate off a particular part and by the example of that try to show you my meaning. Tell me, do you know the first lines of the Iliad in which the poet says that Chryses implored

Agamemnon to release his daughter, and that the king was angry and that Chryses, failing of his request, imprecated curses on the Achaeans in his prayers to the god?

You know then that as far as these verses;

And prayed unto all the Achaeans.
Chiefly to Atreus's sons, twin leaders who marshaled the people.

the poet himself is the speaker and does not even attempt to suggest to us that anyone but himself is speaking. But what follows he delivers as if he were himself Chryses and tries as far as may be to make us feel that not Homer is the speaker, but the priest, an old man. And in this manner he has carried on nearly all the rest of his narration about affairs in Ilium, all that happened in Ithaca, and the entire *Odyssey*.

Adeimantus:: Quite so.

Socrates:: Now, it is narration, is it not, both when he presents the several speeches and the matter between the speeches?

Adeimantus:: Of course.

Socrates:: But when he delivers a speech as if he were someone else, shall we not say that he then assimilates thereby his own diction as far as possible to that of the person whom he announces as about to speak?

Adeimantus:: We shall, obviously.

Socrates:: And is not likening oneself to another in speech or bodily bearing an imitation of him to whom one likens oneself?

Adeimantus:: Surely.

Socrates:: In such case then, it appears, he and the other poets effect their narration through imitation.

Adeimantus:: Certainly.

Socrates:: But if the poet should conceal himself nowhere, then his entire poetizing and narration would have been accomplished without imitation. And lest you may say again that you don't understand, I will explain to you how this would be done. If Homer, after telling us that Chryses came with the ransom of his daughter and as a suppliant of the Achaeans but chiefly of the kings, had gone on speaking not as if made or being Chryses but still as Homer, you are aware that it would not be imitation but narration, pure and simple. It would have been somewhat in this wise. I will state it without meter for I am not a poet. The priest came and prayed that to them the gods should grant to take Troy and come safely home, but that they should accept the ransom and release his daughter, out of reverence for the god, and when he had thus spoken the others were of reverent mind and approved, but Agamemnon was angry and bade him depart and not come again lest the scepter and the fillets of the god should not avail him. And ere his daughter should be released, she would grow old in Argos with himself, and he ordered him to be off and not vex him if he wished to get home safe. And the old man on hearing this was frightened and departed in silence, and having gone apart from the camp he prayed at length to Apollo, invoking the appellations of the god, and reminding him of and asking requital for any of his gifts that had found favor whether in the building of temples or the sacrifice of victims. In return for these things he prayed that the Achaeans should suffer for his tears by the god's shafts.

Socrates:: It is in this way, my dear fellow, that without imitation simple narration results.

Adeimantus:: I understand.

Socrates:: Understand then, that the opposite of this arises when one removes the words of the poet between and leaves the alternation of speeches.

Adeimantus:: This too I understand, It is what happens in tragedy.

Socrates:: You have conceived me most rightly, and now I think I can make plain to you what I was unable to before, that there is one kind of poetry and tale telling which works wholly through imitation, as you remarked, tragedy and comedy, and another which employs the recital of the poet himself, best exemplified, I presume, in the dithyramb, and there is again that which employs both, in epic poetry and in many other places, if you apprehend me.

Adeimantus:: I understand now, what you then meant.

Socrates:: Recall then also the preceding statement that we were done with the 'what' of speech and still had to consider the 'how.'

Adeimantus:: I remember.

Socrates:: What I meant then was just this, that we must reach a decision whether we are to suffer our poets to narrate as imitators or in part as imitators and in part not, and what sort of things in each case, or not allow them to imitate at all.

Adeimantus:: I divine, that you are considering whether we shall admit tragedy and comedy into our city or not.

Socrates:: Perhaps, and perhaps even more than that. For I certainly do not yet know myself, but whithersoever the wind, as it were, of the argument blows, there lies our course.

Adeimantus:: Well said.

Socrates:: This then, Adimantus, is the point we must keep in view. Do we wish our guardians to be good mimics or not? Or is this also a consequence of what we said before, that each one could practice well only one pursuit and not many, but if he attempted the latter, dabbling in many things, he would fail of distinction in all?

Adeimantus:: Of course it is.

Socrates:: And does not the same rule hold for imitation, that the same man is not able to imitate many things well as he can one?

Adeimantus:: No, he is not.

Socrates:: Still less, then, will he be able to combine the practice of any worthy pursuit with the imitation of many things and the quality of a mimic, since, unless I mistake, the same men cannot practice well at once even the two forms of imitation that appear most nearly akin, as the writing of tragedy and comedy. Did you not just now call these two imitations?

Adeimantus:: I did, and you are right in saying that the same men are not able to succeed in both.

Socrates:: Nor yet to be at once good rhapsodists and actors?

Adeimantus:: True.

Socrates:: But neither can the same men be actors for tragedies and comedies—and all these are imitations, are they not?

Adeimantus:: Yes, imitations.

Socrates:: And to still smaller coinage than this, in my opinion, Adimantus, proceeds the fractioning of human faculty, so as to be incapable of imitating many things or of doing the things themselves of which the imitations are likenesses.

Adeimantus:: Most true.

Socrates:: If, then, we are to maintain our original principle, that our guardians, released from all other crafts, are to be expert craftsmen of civic liberty, and pursue nothing else that does not conduce to this, it would not be fitting for these to do nor yet to imitate anything else. But if they imitate they should from childhood up imitate what is appropriate to them—men, that is, who are brave, sober, pious, free, and all things of that kind—but things unbecoming the free man they should neither do nor be clever at imitating, nor yet any other shameful thing, lest from the imitation they imbibe the reality. Or have you not observed that imitations, if continued from youth far into life, settle down into habits and second nature in the body, the speech, and the thought?

Adeimantus:: Yes, indeed.

Socrates:: We will not then allow our charges, whom we expect to prove good men, being men, to play the parts of women and imitate a woman young or old wrangling with her husband, defying heaven, loudly boasting, fortunate in her own conceit, or involved in misfortune and possessed by grief and lamentation—still less a woman that is sick, in love, or in labor.

Adeimantus:: Most certainly not.

Socrates:: Nor may they imitate slaves, female and male, doing the offices of slaves.

Adeimantus:: No, not that either.

Socrates:: Nor yet, as it seems, bad men who are cowards and who do the opposite of the things we just now spoke of, reviling and lampooning one another, speaking foul words in their cups or when sober and in other ways sinning against themselves and others in word and deed after the fashion of such men. And I take it they must not form the habit of likening themselves to madmen either in words nor yet in deeds. For while knowledge they must have both of mad and bad men and women, they must do and imitate nothing of this kind.

Adeimantus:: Most true.

Socrates:: What of this? Are they to imitate smiths and other craftsmen or the rowers of triremes and those who call the time to them or other things connected therewith?

Adeimantus:: How could they, since it will be forbidden them even to pay any attention to such things?

Socrates:: Well, then, neighing horses and lowing bulls, and the noise of rivers and the roar of the sea and the thunder and everything of that kind—will they imitate these?

Adeimantus:: Nay, they have been forbidden, to be mad or liken themselves to madmen.

Socrates:: If, then, I understand your meaning, there is a form of diction and narrative in which the really good and true man would narrate anything that he had to say, and another form unlike this to which the man of the opposite birth and breeding would cleave and in which he would tell his story.

Adeimantus:: What are these forms?

Socrates:: A man of the right sort, I think, when he comes in the course of his narrative to some word or act of a good man will be willing to impersonate the other in reporting it, and will feel no shame at that kind of mimicry, by preference imitating the good man when he acts steadfastly and sensibly, and less and more reluctantly when he is upset by sickness or love or drunkenness or any other mishap. But when he comes to someone unworthy of himself, he will not wish to liken himself in earnest to one who is inferior, except in the few cases where he is doing something good, but will be embarrassed both because he is unpracticed in the mimicry of such characters, and also because he shrinks in distaste from molding and fitting himself to the types of baser things. His mind disdains them, unless it be for jest.

Adeimantus:: Naturally.

Socrates:: Then the narrative that he will employ will be of the kind that we just now illustrated by the verses of Homer, and his diction will be one that partakes of both, of imitation and simple narration, but there will be a small portion of imitation in a long discourse—or is there nothing in what I say?

Adeimantus:: Yes, indeed, that is the type and pattern of such a speaker.

Socrates:: Then, the other kind of speaker, the more debased he is the less will he shrink from imitating anything and everything. He will think nothing unworthy of himself, so that he will attempt, seriously and in the presence of many, to imitate all things, including those we just now mentioned—claps of thunder, and the noise of wind and hail and axles and pulleys, and the notes of trumpets and flutes and Panpipes, and the sounds of all instruments, and the cries of dogs, sheep, and birds—and so his style will depend wholly on imitation in voice and gesture, or will contain but a little of pure narration.

Adeimantus:: That too follows of necessity.

Socrates:: These, then, were the two types of diction of which I was speaking.

Adeimantus:: There are those two.

Socrates:: Now does not one of the two involve slight variations, and if we assign a suitable pitch and rhythm to the diction, is not the result that the right speaker speaks almost on the same note and in one cadence—for the changes are slight—and similarly in a rhythm of nearly the same kind?

Adeimantus:: Quite so.

Socrates:: But what of the other type? Does it not require the opposite, every kind of pitch and all rhythms, if it too is to have appropriate expression, since it involves manifold forms of variation?

Adeimantus:: Emphatically so.

Socrates:: And do all poets and speakers hit upon one type or the other of diction or some blend which they combine of both?

Adeimantus:: They must.

Socrates:: What, then, are we to do? Shall we admit all of these into the city, or one of the unmixed types, or the mixed type?

Adeimantus:: If my vote prevails, the unmixed imitator of the good.

Socrates:: Nay, but the mixed type also is pleasing, Adimantus, and far most pleasing to boys and their tutors and the great mob is the opposite of your choice.

Adeimantus:: Most pleasing it is.

Socrates:: But perhaps, you would affirm it to be ill suited to our polity, because there is no twofold or manifold man among us, since every man does one thing.

Adeimantus:: It is not suited.

Socrates:: And is this not the reason why such a city is the only one in which we shall find the cobbler a cobbler and not a pilot in addition to his cobbling, and the farmer a farmer and not a judge added to his farming, and the soldier a soldier and not a money-maker in addition to his soldiery, and so of all the rest?

Adeimantus:: True.

Socrates:: If a man, then, it seems, who was capable by his cunning of assuming every kind of shape and imitating all things should arrive in our city, bringing with himself the poems which he wished to exhibit, we should fall down and worship him as a holy and wondrous and delightful creature, but should say to him that there is no man of that kind among us in our city, nor is it lawful for such a man to arise among us, and we should send him away to another city, after pouring myrrh down over his head and crowning him with fillets of wool, but we ourselves, for our souls' good, should continue to employ the more austere and less delightful poet and taleteller, who would imitate the diction of the good man and would tell his tale in the patterns which we prescribed in the beginning, when we set out to educate our soldiers.

Adeimantus:: We certainly should do that if it rested with us.

Socrates:: And now, my friend, we may say that we have completely finished the part of music that concerns speeches and tales. For we have set forth what is to be said and how it is to be said.

Adeimantus:: I think so too.

Socrates:: After this, then, comes the manner of song and tunes?

Adeimantus:: Obviously.

Socrates:: And having gone thus far, could not everybody discover what we must say of their character in order to conform to what has already been said?

Glaucon:: I am afraid that 'everybody' does not include me;

Socrates:: Laughed Glaucon.

Glaucon:: I cannot sufficiently divine offhand what we ought to say, though I have a suspicion.

Socrates:: You certainly, I presume, have a sufficient understanding of this—that the song is composed of three things, the words, the tune, and the rhythm?

Glaucon:: Yes, that much.

Socrates:: And so far as it is words, it surely in no manner differs from words not sung in the requirement of conformity to the patterns and manner that we have prescribed?

Glaucon:: True.

Socrates:: And again, the music and the rhythm must follow the speech.

Glaucon:: Of course.

Socrates:: But we said we did not require dirges and lamentations in words.

Glaucon:: We do not.

Socrates:: What, then, are the dirge like modes of music? Tell me, for you are a musician.

Glaucon:: The mixed Lydian, and the tense or higher Lydian, and similar modes.

Socrates:: These, then, we must do away with. For they are useless even to women who are to make the best of themselves, let alone to men.

Glaucon:: Assuredly.

Socrates:: But again, drunkenness is a thing most unbefitting guardians, and so is softness and sloth.

Glaucon:: Yes.

Socrates:: What, then, are the soft and convivial modes?

Glaucon:: There are certain Ionian and also Lydian modes that are called lax.

Socrates:: Will you make any use of them for warriors?

Glaucon:: None at all, but it would seem that you have left the Dorian and the Phrygian.

Socrates:: I don't know the musical modes, but leave us that mode that would fittingly imitate the utterances and the accents of a brave man who is engaged in warfare or in any enforced business, and who, when he has failed, either meeting wounds or death or having fallen into some other mishap, in all these conditions confronts fortune with steadfast endurance and repels her strokes. And another for such a man engaged in works of peace, not enforced but voluntary, either trying to persuade somebody of something and imploring him—whether it be a god, through prayer, or a man, by teaching and admonition—or contrariwise yielding himself to another who is petitioning or teaching him or trying to change his opinions, and in consequence faring according to his wish, and not bearing himself arrogantly, but in all this acting modestly and moderately and acquiescing in the outcome. Leave us these two modes—the enforced and the voluntary—that will best imitate the utterances of men failing or succeeding, the temperate, the brave—leave us these.

Glaucon:: Well, you are asking me to leave none other than those I just spoke of.

Socrates:: Then, we shall not need in our songs and airs instruments of many strings or whose compass includes all the harmonies.

Glaucon:: Not in my opinion.

Socrates:: Then we shall not maintain makers of triangles and harps and all a other many-stringed and polyharmonic instruments.

Glaucon:: Apparently not.

Socrates:: Well, will you admit to the city flute makers and flute players? Or is not the flute the most 'many-stringed' of instruments and do not the panharmonics themselves imitate it?

Glaucon:: Clearly.

Socrates:: You have left, the lyre and the cithara. These are useful in the city, and in the fields the shepherds would have a little piccolo to pipe on.

Glaucon:: So our argument indicates.

Socrates:: We are not innovating, my friend, in preferring Apollo and the instruments of Apollo to Marsyas and his instruments.

Glaucon:: No, by heaven! I think not.

Socrates:: And by the dog, we have all unawares purged the city which a little while ago we said was luxurious.

Glaucon:: In that we show our good sense.

Socrates:: Come then, let us complete the purification. For upon harmonies would follow the consideration of rhythms; we must not pursue complexity nor great variety in the basic movements, but must observe what are the rhythms of a life that is orderly and brave, and after observing them require the foot and the air to conform to that kind of man's speech and not the speech to the foot and the tune. What those rhythms would be, it is for you to tell us as you did the musical modes.

Glaucon:: Nay, in faith, I cannot tell. For that there are some three forms from which the feet are combined, just as there are four in the notes of the voice whence come all harmonies, is a thing that I have observed and could tell. But which are imitations of which sort of life, I am unable to say.

Socrates:: Well, on this point we will take counsel with Damon, too, as to which are the feet appropriate to illiberality, and insolence or madness or other evils, and what rhythms we must leave for their opposites. And I believe I have heard him obscurely speaking of a foot that he called the enoplios, a composite foot, and a dactyl and a heroic foot, which he arranged, I know not how, to be equal up and down in the interchange of long and short, and unless I am mistaken he used the term iambic, and there was another foot that he called the trochaic, and he added the quantities long and short. And in some of these, I believe, he censured and commended the tempo of the foot no less than the rhythm itself, or else some combination of the two, I can't say. But, as I said, let this matter be postponed for Damon's consideration. For to determine the truth of these would require no little discourse. Do you think otherwise?

Glaucon:: No, by heaven, I do not.

Socrates:: But this you are able to determine—that seemliness and unseemliness are attendant upon the good rhythm and the bad.

Glaucon:: Of course.

Socrates:: And, further, that good rhythm and bad rhythm accompany, the one fair diction, assimilating itself thereto. and the other the opposite, and so of the apt and the unapt, if, as we were just now saying, the rhythm and harmony follow the words and not the words these.

Glaucon:: They certainly must follow the speech.

Socrates:: And what of the manner of the diction, and the speech? Do they not follow and conform to the disposition of the soul?

Glaucon:: Of course.

Socrates:: And all the rest to the diction?

Glaucon:: Yes.

Socrates:: Good speech, then, good accord, and good grace, and good rhythm wait upon a good disposition, not that weakness of head which we euphemistically style goodness of heart, but the truly good and fair disposition of the character and the mind.

Glaucon:: By all means.

Socrates:: And must not our youth pursue these everywhere if they are to do what it is truly theirs to do?

Glaucon:: They must indeed.

Socrates:: And there is surely much of these qualities in painting and in all similar craftsmanship—weaving is full of them and embroidery and architecture and likewise the manufacture of household furnishings and thereto the natural bodies of animals and plants as well. For in all these there is grace or gracelessness. And gracelessness and evil rhythm and disharmony are akin to evil speaking and the evil temper, but the opposites are the symbols and the kin of the opposites, the sober and good disposition.

Glaucon:: Entirely so.

Socrates:: Is it, then, only the poets that we must supervise and compel to embody in their poems the semblance of the good character or else not write poetry among us, or must we keep watch over the other craftsmen, and forbid them to represent the evil disposition, the licentious, the illiberal, the graceless, either in the likeness of living creatures or in buildings or in any other product of their art, on penalty, if unable to obey, of being forbidden to practice their art among us, that our guardians may not be bred among symbols of evil, as it were in a pasturage of poisonous herbs, lest grazing freely and cropping from many such day by day they little by little and all unawares accumulate and build up a huge mass of evil in their own souls. But we must look for those craftsmen who by the happy gift of nature are capable of following the trail of true beauty and grace, that our young men, dwelling as it were in a salubrious region, may receive benefit from all things about them, whence the influence that emanates from works of beauty may waft itself to eye or ear like a breeze that brings from wholesome places health, and so from earliest childhood insensibly guide them to likeness, to friendship, to harmony with beautiful reason.

Glaucon:: Yes, that would be far the best education for them.

Socrates:: And is it not for this reason, Glaucon, that education in music is most sovereign, because more than anything else rhythm and harmony find their way to the inmost soul and take strongest hold upon it, bringing with them and imparting grace, if one is rightly trained, and otherwise the contrary? And further, because omissions and the failure of beauty in things badly made or grown would be most quickly perceived by one who was properly educated in music, and so, feeling distaste rightly, he would praise beautiful things and take delight in them and receive them into his soul to foster its growth and become himself beautiful and good. The ugly he would rightly disapprove of and hate while still young and yet unable to apprehend the reason, but when reason came the man thus nurtured would be the first to give her welcome, for by this affinity he would know her.

Glaucon:: I certainly think, that such is the cause of education in music.

Socrates:: It is, then, as it was when we learned our letters and felt that we knew them sufficiently only when the separate letters did not elude us, appearing as few elements in all the combinations that convey them, and when we did not disregard them in small things or great and think it unnecessary to recognize them, but were eager to distinguish them everywhere, in the belief that we should never be literate and letter-perfect till we could do this.

Glaucon:: True.

Socrates:: And is it not also true that if there are any likenesses of letters reflected in water or mirrors, we shall never know them until we know the originals, but such knowledge belongs to the same art and discipline?

Glaucon:: By all means.

Socrates:: Then, by heaven, am I not right in saying that by the same token we shall never be true musicians, either—neither we nor the guardians that we have undertaken to educate—until we are able to recognize the forms of soberness, courage, liberality, and high-mindedness, and all their kindred and their opposites, too, in all the combinations that contain and convey them, and to apprehend them and their images wherever found, disregarding them neither in trifles nor in great things, but believing the knowledge of them to belong to the same art and discipline?

Glaucon:: The conclusion is inevitable.

Socrates:: Then, when there is a coincidence of a beautiful disposition in the soul and corresponding and harmonious beauties of the same type in the bodily form—is not this the fairest spectacle for one who is capable of its contemplation?

Glaucon:: Far the fairest.

Socrates:: And surely the fairest is the most lovable.

Glaucon:: Of course.

Socrates:: The true musician, then, would love by preference persons of this sort, but if there were disharmony he would not love this.

Glaucon:: No, not if there was a defect in the soul, but if it were in the body he would bear with it and still be willing to bestow his love.

Socrates:: I understand, that you have or have had favorites of this sort and I grant your distinction. But tell me this—can there be any communion between soberness and extravagant pleasure?

Glaucon:: How could there be, since such pleasure puts a man beside himself no less than pain?

Socrates:: Or between it and virtue generally?

Glaucon:: By no means.

Socrates:: But is there between pleasure and insolence and license?

Glaucon:: Most assuredly.

Socrates:: Do you know of greater or keener pleasure than that associated with Aphrodite?

Glaucon:: I don't, nor yet of any more insane.

Socrates:: But is not the right love a sober and harmonious love of the orderly and the beautiful?

Glaucon:: It is indeed.

Socrates:: Then nothing of madness, nothing akin to license, must be allowed to come nigh the right love?

Glaucon:: No.

Socrates:: Then this kind of pleasure may not come nigh, nor may lover and beloved who rightly love and are loved have anything to do with it?

Glaucon:: No, by heaven, Socrates, it must not come nigh them.

Socrates:: Thus, then, as it seems, you will lay down the law in the city that we are founding, that the lover may kiss and pass the time with and touch the beloved as a father would a son, for honorable ends, if he persuade him. But otherwise he must so associate with the objects of his care that there should never be any suspicion of anything further, on penalty of being stigmatized for want of taste and true musical culture.

Glaucon:: Even so.

Socrates:: Do you not agree, then, that our discourse on music has come to an end? It has certainly made a fitting end, for surely the end and consummation of culture is the love of the beautiful.

Glaucon:: I concur.

Socrates:: After music our youth are to be educated by gymnastics?

Glaucon:: Certainly.

Socrates:: In this too they must be carefully trained from boyhood through life, and the way of it is this, I believe, but consider it yourself too. For I, for my part, do not believe that a sound body by its excellence makes the soul good, but on the contrary that a good soul by its virtue renders the body the best that is possible. What is your opinion?

Glaucon:: I think so too.

Socrates:: Then if we should sufficiently train the mind and turn over to it the minutiae of the care of the body, and content ourselves with merely indicating the norms or patterns, not to make a long story of it, we should be acting rightly?

Glaucon:: By all means.

Socrates:: From intoxication we said that they must abstain. For a guardian is surely the last person in the world to whom it is allowable to get drunk and not know where on earth he is.

Glaucon:: Yes, it would be absurd that a guardian should need a guard.

Socrates:: What next about their food? These men are athletes in the greatest of contests, are they not?

Glaucon:: Yes.

Socrates:: Is, then, the bodily habit of the athletes we see about us suitable for such?

Glaucon:: Perhaps.

Socrates:: Nay, that is a drowsy habit and precarious for health. Don’t you observe that they sleep away their lives, and that if they depart ever so little from their prescribed regimen these athletes are liable to great and violent diseases?

Glaucon:: I do.

Socrates:: Then, we need some more ingenious form of training for our athletes of war, since these must be as it were sleepless hounds, and have the keenest possible perceptions of sight and hearing, and in their campaigns undergo many changes in their drinking water, their food, and in exposure to the heat of the sun and to storms, without disturbance of their health.

Glaucon:: I think so.

Socrates:: Would not, then, the best gymnastics be akin to the music that we were just now describing?

Glaucon:: What do you mean?

Socrates:: It would be a simple and flexible gymnastic training, and especially so in the training for war.

Glaucon:: In what way?

Socrates:: One could learn that, even from Homer. For you are aware that in the banqueting of the heroes on campaign he does not feast them on fish, though they are at the seaside on the Hellespont, nor on boiled meat, but only on roast, which is what soldiers could most easily procure. For everywhere, one may say, it is of easier provision to use the bare fire than to convey pots and pans along.

Glaucon:: Indeed it is.

Socrates:: Neither, as I believe, does Homer ever make mention of sweetmeats. Is not that something which all men in training understand—that if one is to keep his body in good condition he must abstain from such things altogether?

Glaucon:: They are right, in that they know it and do abstain.

Socrates:: Then, my friend, if you think this is the right way, you apparently do not approve of a Syracusan table and the Sicilian variety of dishes.

Glaucon:: I think not.

Socrates:: You would frown, then, on a little Corinthian maid as the chère amie of men who were to keep themselves fit?

Glaucon:: Most certainly.

Socrates:: And also on the seeming delights of Attic pastry?

Glaucon:: Inevitably.

Socrates:: In general, I take it, if we likened that kind of food and regimen to music and song expressed in the panharmonic mode and in every variety of rhythm it would be a fair comparison.

Glaucon:: Quite so.

Socrates:: And there variety engendered licentiousness, did it not, but here disease, while simplicity in music begets sobriety in the souls, and in gymnastic training it begets health in bodies?

Glaucon:: Most true.

Socrates:: And when licentiousness and disease multiply in a city, are not many courts of law and dispensaries opened? And the arts of chicane and medicine give themselves airs when even free men in great numbers take them very seriously.

Glaucon:: How can they help it?

Socrates:: Will you be able to find a surer proof of an evil and shameful state of education in a city than the necessity of first-rate physicians and judges, not only for the base and mechanical, but for those who claim to have been bred in the fashion of free men? Do you not think it disgraceful and a notable mark of bad breeding to have to make use of a justice imported from others, who thus become your masters and judges, from lack of such qualities in yourself?

Glaucon:: The most shameful thing in the world.

Socrates:: Is it? Or is this still more shameful—when a man not only wears out the better part of his days in the courts of law as defendant or accuser, but from the lack of all true sense of values is led to plume himself on this very thing, as being a smart fellow to 'put over' an unjust act and cunningly to try every dodge and practice, every evasion, and wriggle out of every hold in defeating justice, and that too for trifles and worthless things, because he does not know how much nobler and better it is to arrange his life so as to have no need of a nodding juryman?

Glaucon:: That is, still more shameful than the other.

Socrates:: And to require medicine, not merely for wounds or the incidence of some seasonal maladies, but, because of sloth and such a regimen as we described, to fill one’s body up with winds and humors like a marsh and compel the ingenious sons of Asclepius to invent for diseases such names as fluxes and flatulences—don’t you think that disgraceful?

Glaucon:: Those surely are, newfangled and monstrous strange names of diseases.

Socrates:: There was nothing of the kind, I fancy, in the days of Asclepius. I infer this from the fact that at Troy his sons did not find fault with the damsel who gave to the wounded Eurypylus to drink a posset of Pramnian wine plentifully sprinkled with barley and gratings of cheese, inflammatory ingredients of a surety, nor did they censure Patroclus, who was in charge of the case.

Glaucon:: It was indeed, a strange potion for a man in that condition.

Socrates:: Not so strange, if you reflect that the former Asclepiads made no use of our modern coddling medication of diseases before the time of Herodicus. But Herodicus was a trainer and became a valetudinarian, and blended gymnastics and medicine, for the torment first and chiefly of himself and then of many successors.

Glaucon:: How so?

Socrates:: By lingering out his death. For living in perpetual observance of his malady, which was incurable, he was not able to effect a cure, but lived through his days unfit for the business of life, suffering the tortures of the damned if he departed a whit from his fixed regimen. And struggling against death, by reason of his science he won the prize of a doting old age.

Glaucon:: A noble prize indeed for his science.

Socrates:: The appropriate one, for a man who did not know that it was not from ignorance or inacquaintance with this type of medicine that Asclepius did not discover it to his descendants, but because he knew that for all well-governed peoples there is a work assigned to each man in the city which he must perform, and no one has leisure to be sick and doctor himself all his days. And this we absurdly enough perceive in the case of a craftsman, but don’t see in the case of the rich and so-called fortunate.

Glaucon:: How so?

Socrates:: A carpenter, when he is sick expects his physician to give him a drug which will operate as an emetic on the disease, or to get rid of it by purging or the use of cautery or the knife. But if anyone prescribes for him a long course of treatment with swathings about the head and their accompaniments, he hastily says that he has no leisure to be sick, and that such a life of preoccupation with his illness and neglect of the work that lies before him isn’t worth living. And thereupon he bids farewell to that kind of physician, enters upon his customary way of life, regains his health, and lives attending to his affairs—or, if his body is not equal to the strain, he dies and is freed from all his troubles.

Glaucon:: For such a man, that appears to be the right use of medicine.

Socrates:: And is not the reason, that he had a task and that life wasn’t worth acceptance on condition of not doing his work?

Glaucon:: Obviously.

Socrates:: But the rich man, we say, has no such appointed task, the necessity of abstaining from which renders life intolerable.

Glaucon:: I haven’t heard of any.

Socrates:: Why, haven’t you heard that saying of Phocylides, that after a man has ‘made his pile’ he ought to practice virtue?

Glaucon:: Before, too, I fancy.

Socrates:: Let us not quarrel with him on that point, but inform ourselves whether this virtue is something for the rich man to practice, and life is intolerable if he does not, or whether we are to suppose that while valetudinarianism is a hindrance to single-minded attention to carpentry and the other arts, it is no obstacle to the fulfillment of Phocylides' exhortation.

Glaucon:: Yes, indeed, this excessive care for the body that goes beyond simple gymnastics is about the greatest of all obstacles.

Socrates:: For it is troublesome in household affairs and military service and sedentary offices in the city. And, chief of all, it puts difficulties in the way of any kind of instruction, thinking, or private meditation forever imagining headaches and dizziness and attributing their origin to philosophy. So that wherever this kind of virtue is practiced and tested it is in every way a hindrance. For it makes the man always fancy himself sick and never cease from anguishing about his body.

Glaucon:: Naturally.

Socrates:: Then shall we not say that it was because Asclepius knew this, that for those who were by nature and course of life sound of body but had some localized disease, that for such, I say, and for this habit he revealed the art of medicine, and, driving out their disease by drugs and surgery, prescribed for them their customary regimen in order not to interfere with their civic duties, but that, when bodies were diseased inwardly and throughout, he did not attempt by diet and by gradual evacuations and infusions to prolong a wretched existence for the man and have him beget in all likelihood similar wretched offspring? But if a man was incapable of living in the established round and order of life, he did not think it worth while to treat him, since such a fellow is of no use either to himself or to the state.

Glaucon:: A most politic Asclepius you’re telling us of.

Socrates:: Obviously, that was his character. And his sons too, don’t you see that at Troy they proved themselves good fighting men and practiced medicine as I described it? Don’t you remember that in the case of Menelaus too. from the wound that Pandarus inflicted ‘they sucked the blood, and soothing simples sprinkled’? But what he was to eat or drink thereafter they no more prescribed than for Eurypylus, taking it for granted that the remedies sufficed to heal men who before their wounds were healthy and temperate in diet even if they did happen for the nonce to drink a posset. But they thought that the life of a man constitutionally sickly and intemperate was of no use to himself or others, and that the art of medicine should not be for such nor should they be given treatment even if they were richer than Midas.

Glaucon:: Very ingenious fellows, you make out these sons of Asclepius to be.

Socrates:: ‘Tis fitting, and yet in disregard of our principles the tragedians and Pindar affirm that Asclepius, though he was the son of Apollo, was bribed by gold to heal a man already at the point of death, and that for this cause he was struck by the lightning. But we in accordance with the aforesaid principles refuse to believe both statements. If he was the son of a god he was not avaricious, we will insist, and if he was greedy of gain he was not the son of a god.

Glaucon:: That much, is most certainly true. But what have you to say to this, Socrates? Must we not have good physicians in our city? And they would be the most likely to be good who had treated the greatest number of healthy and diseased men, and so good judges would be those who had associated with all sorts and conditions of men.

Socrates:: Most assuredly I want them good, but do you know whom I regard as such?

Glaucon:: I'll know if you tell.

Socrates:: Well, I will try. You, however, have put unlike cases in one question.

Glaucon:: How so?

Socrates:: Physicians, it is true, would prove most skilled if, from childhood up, in addition to learning the principles of the art they had familiarized themselves with the greatest possible number of the most sickly bodies, and if they themselves had suffered all diseases and were not of very healthy constitution. For you see they do not treat the body by the body. If they did, it would not be allowable for their bodies to be or to have been in evil condition. But they treat the body with the mind—and it is not competent for a mind that is or has been evil to treat anything well.

Glaucon:: Right.

Socrates:: But a judge, mark you, my friend, rules soul with soul and it is not allowable for a soul to have been bred from youth up among evil souls and to have grown familiar with them, and itself to have run the gauntlet of every kind of wrongdoing and injustice so as quickly to infer from itself the misdeeds of others as it might diseases in the body, but it must have been inexperienced in evil natures and uncontaminated by them while young, if it is to be truly fair and good and judge soundly of justice. For which cause the better sort seem to be simpleminded in youth and are easily deceived by the wicked, since they do not have within themselves patterns answering to the affections of the bad.

Glaucon:: That is indeed their experience.

Socrates:: Therefore it is, that the good judge must not be a youth but an old man, a late learner of the nature of injustice, one who has not become aware of it as a property in his own soul, but one who has through the long years trained himself to understand it as an alien thing in alien souls, and to discern how great an evil it is by the instrument of mere knowledge and not by experience of his own.

Glaucon:: That at any rate, appears to be the noblest kind of judge.

Socrates:: And what is more, a good one, which was the gist of your question. For he who has a good soul is good. But that cunning fellow quick to suspect evil. and who has himself done many unjust acts and who thinks himself a smart trickster, when he associates with his like does appear to be clever, being on his guard and fixing his eyes on the patterns within himself. But when the time comes for him to mingle with the good and his elders, then on the contrary he appears stupid. He is unseasonably distrustful and he cannot recognize a sound character because he has no such pattern in himself. But since he more often meets with the bad than the good, he seems to himself and to others to be rather wise than foolish.

Glaucon:: That is quite true.

Socrates:: Well then, such a one must not be our ideal of the good and wise judge but the former. For while badness could never come to know both virtue and itself, native virtue through education will at last acquire the science of both itself and badness. This one, then, as I think, is the man who proves to be wise and not the bad man.

Glaucon:: And I concur.

Socrates:: Then will you not establish by law in your city such an art of medicine as we have described in conjunction with this kind of justice? And these arts will care for the bodies and souls of such of your citizens as are truly wellborn, but those who are not, such as are defective in body, they will suffer to die, and those who are evil-natured and incurable in soul they will themselves put to death.

Glaucon:: This certainly, has been shown to be the best thing for the sufferers themselves and for the state.

Socrates:: And so your youths, employing that simple music which we said engendered sobriety will, it is clear, guard themselves against falling into the need of the justice of the courtroom.

Glaucon:: Yes.

Socrates:: And will not our musician, pursuing the same trail in his use of gymnastics, if he please, get to have no need of medicine save when indispensable?

Glaucon:: I think so.

Socrates:: And even the exercises and toils of gymnastics he will undertake with a view to the spirited part of his nature to arouse that rather than for mere strength, unlike ordinary athletes, who treat diet and exercise only as a means to muscle.

Glaucon:: Nothing could be truer.

Socrates:: Then may we not say, Glaucon, that those who established an education in music and gymnastics had not the purpose in view that some attribute to them in so instituting, namely to treat the body by one and the soul by the other?

Glaucon:: But what?

Socrates:: It seems likely, that they ordained both chiefly for the soul’s sake.

Glaucon:: How so?

Socrates:: Have you not observed, the effect on the disposition of the mind itself of lifelong devotion to gymnastics with total neglect of music? Or the disposition of those of the opposite habit?

Glaucon:: In what respect do you mean?

Socrates:: In respect of savagery and hardness or, on the other hand, of softness and gentleness?

Glaucon:: I have observed, that the devotees of unmitigated gymnastics turn out more brutal than they should be and those of music softer than is good for them.

Socrates:: And surely, this savagery is a quality derived from the high-spirited element in our nature, which, if rightly trained, becomes brave, but if overstrained, would naturally become hard and harsh.

Glaucon:: I think so.

Socrates:: And again, is not the gentleness a quality which the philosophical nature would yield? This if relaxed too far would be softer than is desirable but if rightly trained gentle and orderly?

Glaucon:: That is so.

Socrates:: But our requirement, we say, is that the guardians should possess both natures.

Glaucon:: It is.

Socrates:: And must they not be harmoniously adjusted to one another?

Glaucon:: Of course.

Socrates:: And the soul of the man thus attuned is sober and brave?

Glaucon:: Certainly.

Socrates:: And that of the ill-adjusted is cowardly and rude?

Glaucon:: It surely is.

Socrates:: Now when a man abandons himself to music, to play upon him and pour into his soul as it were through the funnel of his ears those sweet, soft, and dirge like airs of which we were just now speaking, and gives his entire time to the warblings and blandishments of song, the first result is that the principle of high spirit, if he had it, is softened like iron and is made useful instead of useless and brittle. But when he continues the practice without remission and is spellbound, the effect begins to be that he melts and liquefies till he completely dissolves away his spirit, cuts out as it were the very sinews of his soul and makes of himself a 'feeble warrior.'

Glaucon:: Assuredly.

Socrates:: And if, he has to begin with a spiritless nature he reaches this result quickly, but if a high-spirited, by weakening the spirit he makes it unstable, quickly irritated by slight stimuli, and as quickly quelled. The outcome is that such men are choleric and irascible instead of high-spirited, and are peevish and discontented.

Glaucon:: Precisely so.

Socrates:: On the other hand, if a man toils hard at gymnastics and eats right lustily and holds no truck with music and philosophy, does he not at first get very fit and full of pride and high spirit and become more brave and bold than he was?

Glaucon:: He does indeed.

Socrates:: But what if he does nothing but this and has no contact with the Muse in any way? Is not the result that even if there was some principle of the love of knowledge in his soul, since it tastes of no instruction nor of any inquiry and does not participate in any discussion or any other form of culture, it becomes feeble, deaf, and blind, because it is not aroused or fed nor are its perceptions purified and quickened?

Glaucon:: That is so.

Socrates:: And so such a man, I take it, becomes a misologist and a stranger to the Muses. He no longer makes any use of persuasion by speech but achieves all his ends like a beast by violence and savagery, and in his brute ignorance and ineptitude lives a life of disharmony and gracelessness.

Glaucon:: That is entirely true.

Socrates:: For these two, then, it seems there are two arts which I would say some god gave to mankind, music and gymnastics for the service of the high-spirited principle and the love of knowledge in them—not for the soul and the body except incidentally, but for the harmonious adjustment of these two principles by the proper degree of tension and relaxation of each.

Glaucon:: Yes, so it appears.

Socrates:: Then he who best blends gymnastics with music and applies them most suitably to the soul is the man whom we should most rightly pronounce to be the most perfect and harmonious musician, far rather than the one who brings the strings into unison with one another.

Glaucon:: That seems likely, Socrates.

Socrates:: And shall we not also need in our city, Glaucon, a permanent overseer of this kind if its constitution is to be preserved?

Glaucon:: We most certainly shall.

Socrates:: Such would be the outlines of their education and breeding. For why should one recite the list of the dances of such citizens, their hunts and chases with hounds, their athletic contests and races? It is pretty plain that they must conform to these principles and there is no longer any difficulty in discovering them.

Glaucon:: There is, it may be, no difficulty.

Socrates:: Very well. What, then, have we next to determine? Is it not which ones among them shall be the rulers and the ruled?

Glaucon:: Certainly.

Socrates:: That the rulers must be the elder and the ruled the younger is obvious.

Glaucon:: It is.

Socrates:: And that the rulers must be their best?

Glaucon:: This too.

Socrates:: And do not the best of the farmers prove the best farmers?

Glaucon:: Yes.

Socrates:: And in this case, since we want them to be the best of the guardians, must they not be the best guardians, the most regardful of the state?

Glaucon:: Yes.

Socrates:: They must then to begin with be intelligent in such matters and capable, and furthermore careful of the interests of the state?

Glaucon:: That is so.

Socrates:: But one would be most likely to be careful of that which he loved.

Glaucon:: Necessarily.

Socrates:: And again, one would be most likely to love that whose interests he supposed to coincide with his own, and thought that when it prospered he too would prosper and if not, the contrary.

Glaucon:: So it is.

Socrates:: Then we must pick out from the other guardians such men as to our observation appear most inclined through the entire course of their lives to be zealous to do what they think for the interest of the state, and who would be least likely to consent to do the opposite.

Glaucon:: That would be a suitable choice.

Socrates:: I think, then, we shall have to observe them at every period of life, to see if they are conservators and guardians of this conviction in their minds and never by sorcery nor by force can be brought to expel from their souls unawares this conviction that they must do what is best for the state.

Glaucon:: What do you mean by the ‘expelling’?

Socrates:: I will tell you. It seems to me that the exit of a belief from the mind is either voluntary or involuntary. Voluntary is the departure of the false belief from one who learns better, involuntary that of every true belief.

Glaucon:: The voluntary, I understand, but I need instruction about the involuntary.

Socrates:: How now, don’t you agree with me in thinking that men are unwillingly deprived of good things but willingly of evil? Or is it not an evil to be deceived in respect of the truth and a good to possess truth? And don’t you think that to opine the things that are is to possess the truth?

Glaucon:: Why, yes, you are right, and I agree that men are unwillingly deprived of true opinions.

Socrates:: And doesn’t this happen to them by theft, by the spells of sorcery, or by force?

Glaucon:: I don’t understand now either.

Socrates:: I must be talking in high tragic style. By those who have their opinions stolen from them I mean those who are over-persuaded and those who forget, because in the one case time, in the other argument strips them unawares of their beliefs. Now I presume you understand, do you not?

Glaucon:: Yes.

Socrates:: Well then, by those who are constrained or forced I mean those whom some pain or suffering compels to change their minds.

Glaucon:: That too I understand and you are right.

Socrates:: And the victims of sorcery I am sure you too would say are they who alter their opinions under the spell of pleasure or terrified by some fear.

Glaucon:: Yes, everything that deceives appears to cast a spell upon the mind.

Socrates:: Well then, as I was just saying, we must look for those who are the best guardians of the indwelling conviction that what they have to do is what they at any time believe to be best for the state. Then we must observe them from childhood up and propose for them tasks in which one would be most likely to forget this principle or be deceived, and he whose memory is sure and who cannot be beguiled we must accept and the other kind we must cross off from our list. Is not that so?

Glaucon:: Yes.

Socrates:: And again we must subject them to toils and pains and competitions in which we have to watch for the same traits.

Glaucon:: Right.

Socrates:: Then, must we not institute a third kind of competitive test with regard to sorcery and observe them in that? Just as men conduct colts to noises and uproar to see if they are liable to take fright, so we must bring these lads while young into fears and again pass them into pleasures, testing them much more carefully than men do gold in the fire, to see if the man remains immune to such witchcraft and preserves his composure throughout, a good guardian of himself and the culture which he has received, maintaining the true rhythm and harmony of his being in all those conditions, and the character that would make him most useful to himself and to the state. And he who as boy, lad, and man endures the test and issues from it unspoiled we must establish as ruler over our city and its guardian, and bestow rewards upon him in life, and in death the allotment of the supreme honors of burial rites and other memorials. But the man of the other type we must reject. Such, appears to me, Glaucon, the general notion of our selection and appointment of rulers and guardians as sketched in outline, but not drawn out in detail.

Glaucon:: I too, think much the same.

Socrates:: Then would it not truly be most proper to designate these as guardians in the full sense of the word, watchers against foemen without and friends within, so that the latter shall not wish and the former shall not be able to work harm, but to name those youths whom we were calling guardians just now helpers and aids for the decrees of the rulers?

Glaucon:: I think so.

Socrates:: How, then, might we contrive one of those opportune falsehoods of which we were just now speaking, so as by one noble lie to persuade if possible the rulers themselves, but failing that the rest of the city?

Glaucon:: What kind of a fiction do you mean?

Socrates:: Nothing unprecedented, but a sort of Phoenician tale, something that has happened ere now in many parts of the world, as the poets aver and have induced men to believe, but that has not happened and perhaps would not be likely to happen in our day and demanding no little persuasion to make it believable.

Glaucon:: You act like one who shrinks from telling his thought.

Socrates:: You will think that I have right good reason for shrinking when I have told.

Glaucon:: Say on, and don't be afraid.

Socrates:: Very well, I will. And yet I hardly know how to find the audacity or the words to speak and undertake to persuade first the rulers themselves and the soldiers and then the rest of the city that in good sooth all our training and educating of them were things that they imagined and that happened to them as it were in a dream, but that in reality at that time they were down within the earth being molded and fostered themselves while their weapons and the rest of their equipment were being fashioned. And when they were quite finished the earth as being their mother delivered them, and now as if their land were their mother and their nurse they ought to take thought for her and defend her against any attack and regard the other citizens as their brothers and children of the selfsame earth.

Glaucon:: It is not for nothing, that you were so bashful about coming out with your lie.

Socrates:: It was quite natural that I should be, but all the same hear the rest of the story. While all of you in the city are brothers, we will say in our tale, yet God in fashioning those of you who are fitted to hold rule mingled gold in their generation, for which reason they are the most precious—but in the helpers silver, and iron and brass in the farmers and other craftsmen. And as you are all akin, though for the most part you will breed after your kinds, it may sometimes happen that a golden father would beget a silver son and that a golden offspring would come from a silver sire and that the rest would in like manner be born of one another. So that the first and chief injunction that the god lays upon the rulers is that of nothing else are they to be such careful guardians and so intently observant as of the intermixture of these metals in the souls of their offspring, and if sons are born to them with an infusion of brass or iron they shall by no means give way to pity in their treatment of them, but shall assign to each the status due to his nature and thrust them out among the artisans or the farmers. And again, if from these there are born sons with unexpected gold or silver in their composition they shall honor such and bid them go up higher, some to the office of guardian, some to the assistantship, alleging that there is an oracle that the state shall then be overthrown when the man of iron or brass is its guardian. Do you see any way of getting them to believe this tale?

Glaucon:: No, not these themselves, but I do their sons and successors and the rest of mankind who come after.

Socrates:: Well, even that would have a good effect in making them more inclined to care for the state and one another. For I think I apprehend your meaning. And this shall fall out as tradition guides. But let us arm these sons of earth and conduct them under the leadership of their rulers. And when they have arrived they must look out for the fairest site in the city for their encampment, a position from which they could best hold down rebellion against the laws from within and repel aggression from without as of a wolf against the fold. And after they have encamped and sacrificed to the proper gods they must make their lairs, must they not?

Glaucon:: Yes.

Socrates:: And these must be of a character to keep out the cold in winter and be sufficient in summer?

Glaucon:: Of course. For I presume you are speaking of their houses.

Socrates:: Yes, the houses of soldiers, not of money-makers.

Glaucon:: What distinction do you intend by that?

Socrates:: I will try to tell you. It is surely the most monstrous and shameful thing in the world for shepherds to breed the dogs who are to help them with their flocks in such wise and of such a nature that from indiscipline or hunger or some other evil condition the dogs themselves shall attack the sheep and injure them and be likened to wolves instead of dogs.

Glaucon:: A terrible thing, indeed.

Socrates:: Must we not then guard by every means in our power against our helpers' treating the citizens in any such way and, because they are the stronger, converting themselves from benign assistants into savage masters?

Glaucon:: We must.

Socrates:: And would they not have been provided with the chief safeguard if their education has really been a good one?

Glaucon:: But it surely has.

Socrates:: That, dear Glaucon, we may not properly affirm, but what we were just now saying we may, that they must have the right education, whatever it is, if they are to have what will do most to make them gentle to one another and to their charges.

Glaucon:: That is right.

Socrates:: In addition, moreover, to such an education a thoughtful man would affirm that their houses and the possessions provided for them ought to be such as not to interfere with the best performance of their own work as guardians and not to incite them to wrong the other citizens.

Glaucon:: He will rightly affirm that.

Socrates:: Consider then, whether, if that is to be their character. their habitations and ways of life must not be something after this fashion. In the first place, none must possess any private property save the indispensable. Secondly, none must have any habitation or treasure house which is not open for all to enter at will. Their food, in such quantities as are needful for athletes of war sober and brave, they must receive as an agreed stipend from the other citizens as the wages of their guardianship, so measured that there shall be neither superfluity at the end of the year nor any lack. And resorting to a common mess like soldiers on campaign they will live together. Gold and silver, we will tell them, they have of the divine quality from the gods always in their souls, and they have no need of the metal of men nor does holiness suffer them to mingle and contaminate that heavenly possession with the acquisition of mortal gold, since many impious deeds have been done about the coin of the multitude, while that which dwells within them is unsullied. But for these only of all the dwellers in the city it is not lawful to handle gold and silver and to touch them nor yet to come under the same roof with them, nor to hang them as ornaments on their limbs nor to drink from silver and gold. So living they would save themselves and save their city. But whenever they shall acquire for themselves land of their own and houses and coin, they will be householders and farmers instead of guardians, and will be transformed from the helpers of their fellow citizens to their enemies and masters, and so in hating and being hated, plotting and being plotted against, they will pass their days fearing far more and rather the townsmen within than the foemen without—and then even then laying the course of near shipwreck for themselves and the state. For all these reasons, let us declare that such must be the provision for our guardians in lodging and other respects and so legislate. Shall we not?

Glaucon:: By all means.

## Book 4.

Socrates:: And Adimantus broke in and said;

Adeimantus:: What will be your defense, Socrates, if anyone objects that you are not making these men very happy, and that through their own fault? For the city really belongs to them and yet they get no enjoyment out of it as ordinary men do by owning lands and building fine big houses and providing them with suitable furniture and winning the favor of the gods by private sacrifices and entertaining guests and enjoying too those possessions which you just now spoke of, gold and silver and all that is customary for those who are expecting to be happy. But they seem, one might say, to be established in idleness in the city, exactly like hired mercenaries, with nothing to do but keep guard.

Socrates:: Yes, and what is more, they serve for board wages and do not even receive pay in addition to their food as others do, so that they will not even be able to take a journey on their own account, if they wish to, or make presents to their mistresses, or spend money in other directions according to their desires like the men who are thought to be happy. These and many similar counts of the indictment you are omitting.

Adeimantus:: Well, assume these counts too.

Socrates:: What then will be our apology you ask?

Adeimantus:: Yes.

Socrates:: By following the same path I think we shall find what to reply. For we shall say that while it would not surprise us if these men thus living prove to be the most happy, yet the object on which we fixed our eyes in the establishment of our state was not the exceptional happiness of any one class but the greatest possible happiness of the city as a whole. For we thought that in a state so constituted we should be most likely to discover justice as we should injustice in the worst-governed state, and that when we had made these out we could pass judgment on the issue of our long inquiry. Our first task then, we take it, is to mold the model of a happy state—we are not isolating a small class in it and postulating their happiness, but that of the city as a whole. But the opposite type of state we will consider presently. It is as if we were coloring a statue and someone approached and censured us, saying that we did not apply the most beautiful pigments to the most beautiful parts of the image, since the eyes, which are the most beautiful part, have not been painted with purple but with black. We should think it a reasonable justification to reply, Don't expect us, quaint friend, to paint the eyes so fine that they will not be like eyes at all, nor the other parts, but observe whether by assigning what is proper to each we render the whole beautiful. And so in the present case you must not require us to attach to the guardians a happiness that will make them anything but guardians. For in like manner we could clothe the farmers in robes of state and deck them with gold and bid them cultivate the soil at their pleasure, and we could make the potters recline on couches from left to right before the fire drinking toasts and feasting with their wheel alongside to potter with when they are so disposed, and we can make all the others happy in the same fashion, so that thus the entire city may be happy. But urge us not to this, since, if we yield, the farmer will not be a farmer nor the potter a potter, nor will any other of the types that constitute a state keep its form. However, for the others it matters less. For cobblers who deteriorate and are spoiled and pretend to be the workmen that they are not are no great danger to a state. But guardians of laws and of the city who are not what they pretend to be, but only seem, destroy utterly, I would have you note, the entire state, and on the other hand, they alone are decisive of its good government and happiness. If then we are forming true guardians and keepers of our liberties, men least likely to harm the commonwealth, but the proponent of the other ideal is thinking of farmers and 'happy' feasters as it were in a festival and not in a civic community, he would have something else in mind than a state. Consider, then, whether our aim in establishing the guardians is the greatest possible happiness among them or whether that is something we must look to see develop in the city as a whole, but these helpers and guardians are to be constrained and persuaded to do what will make them the best craftsmen in their own work, and similarly all the rest. And so, as the entire city develops and is ordered well, each class is to be left to the share of happiness that its nature comports.

Adeimantus:: Well, I think you are right.

Socrates:: And will you then, also think me reasonable in another point akin to this?

Adeimantus:: What pray?

Socrates:: Consider whether these are the causes that corrupt other craftsmen too so as positively to spoil them.

Adeimantus:: What causes?

Socrates:: Wealth and poverty.

Adeimantus:: How so?

Socrates:: Thus! Do you think a potter who grew rich would any longer be willing to give his mind to his craft?

Adeimantus:: By no means.

Socrates:: But will he become more idle and negligent than he was?

Adeimantus:: Far more.

Socrates:: Then he becomes a worse potter?

Adeimantus:: Far worse too.

Socrates:: And yet again, if from poverty he is unable to provide himself with tools and other requirements of his art, the work that he turns out will be worse, and he will also make inferior workmen of his sons or any others whom he teaches.

Adeimantus:: Of course.

Socrates:: From both causes, then, poverty and wealth, the products of the arts deteriorate, and so do the artisans?

Adeimantus:: So it appears.

Socrates:: Here, then, is a second group of things, it seems, that our guardians must guard against and do all in their power to keep from slipping into the city without their knowledge.

Adeimantus:: What are they?

Socrates:: Wealth and poverty, since the one brings luxury, idleness, and innovation, and the other illiberality and the evil of bad workmanship in addition to innovation.

Adeimantus:: Assuredly, Yet here is a point for your consideration, Socrates—how our city, possessing no wealth, will be able to wage war, especially if compelled to fight a large and wealthy state.

Socrates:: Obviously, it would be rather difficult to fight one such, but easier to fight two.

Adeimantus:: What did you mean by that?

Socrates:: Tell me first, whether, if they have to fight, they will not be fighting as athletes of war against men of wealth?

Adeimantus:: Yes, that is true.

Socrates:: Answer me then, Adimantus. Do you not think that one boxer perfectly trained in the art could easily fight two fat rich men who knew nothing of it?

Adeimantus:: Not at the same time perhaps.

Socrates:: Not even, if he were allowed to retreat and then turn and strike the one who came up first, and if he repeated the procedure many times under a burning and stifling sun? Would not such a fighter down even a number of such opponents?

Adeimantus:: Doubtless, it wouldn't be surprising if he did.

Socrates:: Well, don't you think that the rich have more of the skill and practice of boxing than of the art of war?

Adeimantus:: I do.

Socrates:: It will be easy, then, for our athletes in all probability to fight with double and triple their number.

Adeimantus:: I shall have to concede the point, for I believe you are right.

Socrates:: Well then, if they send an embassy to the other city and say what is in fact true, 'We make no use of gold and silver nor is it lawful for us, but it is for you; do then join us in the war and keep the spoils of the enemy'—do you suppose any who heard such a proposal would choose to fight against hard and wiry hounds rather than with the aid of the hounds against fat and tender sheep?

Adeimantus:: I think not. Yet consider whether the accumulation of all the wealth of other cities in one does not involve danger for the state that has no wealth.

Socrates:: What happy innocence, to suppose that you can properly use the name city of any other than the one we are constructing.

Adeimantus:: Why, what should we say?

Socrates:: A greater predication, must be applied to the others. For they are each one of them many cities, not a city, as it goes in the game. There are two at the least at enmity with one another, the city of the rich and the city of the poor, and in each of these there are many. If you deal with them as one you will altogether miss the mark, but if you treat them as a multiplicity by offering to the one faction the property, the power, the very persons of the other, you will continue always to have few enemies and many allies. And so long as your city is governed soberly in the order just laid down, it will be the greatest of cities. I do not mean greatest in repute, but in reality, even though it have only a thousand defenders. For a city of this size that is really one you will not easily discover either among Greeks or barbarians—but of those that seem so you will find many and many times the size of this. Or do you think otherwise?

Adeimantus:: No, indeed I don't.

Socrates:: Would not this, then, be the best rule and measure for our governors of the proper size of the city and of the territory that they should mark off for a city of that size and seek no more?

Adeimantus:: What is the measure?

Socrates:: I think, that they should let it grow so long as in its growth it consents to remain a unity, but no further.

Adeimantus:: Excellent.

Socrates:: Then is not this still another injunction that we should lay upon our guardians, to keep guard in every way that the city shall not be too small, nor great only in seeming, but that it shall be a sufficient city and one?

Adeimantus:: That behest will perhaps be an easy one for them.

Socrates:: And still easier, haply, is this that we mentioned before when we said that if a degenerate offspring was born to the guardians he must be sent away to the other classes, and likewise if a superior to the others he must be enrolled among the guardians, and the purport of all this was that the other citizens too must be sent to the task for which their natures were fitted, one man to one work, in order that each of them fulfilling his own function may be not many men, but one, and so the entire city may come to be not a multiplicity but a unity.

Adeimantus:: Why yes, this is even more trifling than that.

Socrates:: These are not, my good Adimantus, as one might suppose, numerous and difficult injunctions that we are imposing upon them, but they are all easy, provided they guard, as the saying is, the one great thing—or instead of great let us call it sufficient.

Adeimantus:: What is that?

Socrates:: Their education and nurture. For if a right education makes of them reasonable men they will easily discover everything of this kind—and other principles that we now pass over, as that the possession of wives and marriage, and the procreation of children and all that sort of thing should be made as far as possible the proverbial goods of friends that are common.

Adeimantus:: Yes, that would be the best way.

Socrates:: And, moreover, the state, if it once starts well, proceeds as it were in a cycle of growth. I mean that a sound nurture and education if kept up create good natures in the state, and sound natures in turn receiving an education of this sort develop into better men than their predecessors both for other purposes and for the production of offspring, as among animals also.

Adeimantus:: It is probable.

Socrates:: To put it briefly, then, it is to this that the overseers of our state must cleave and be watchful against its insensible corruption. They must throughout be watchful against innovations in music and gymnastics counter to the established order, and to the best of their power guard against them, fearing when anyone says that that song is most regarded among men ‘which hovers newest on the singer’s lips,’ lest haply it be supposed that the poet means not new songs but a new way of song and is commending this. But we must not praise that sort of thing nor conceive it to be the poet’s meaning. For a change to a new type of music is something to beware of as a hazard of all our fortunes. For the modes of music are never disturbed without unsettling of the most fundamental political and social conventions, as Damon affirms and as I am convinced.

Adeimantus:: Set me too down in the number of the convinced.

Socrates:: It is here, then, in music, as it seems, that our guardians must build their guardhouse and post of watch.

Adeimantus:: It is certain, that this is the kind of lawlessness that easily insinuates itself unobserved.

Socrates:: Yes, because it is supposed to be only a form of play and to work no harm.

Adeimantus:: Nor does it work any, except that by gradual infiltration it softly overflows upon the characters and pursuits of men and from these issues forth grown greater to attack their business dealings, and from these relations it proceeds against the laws and the constitution with wanton license, Socrates, till finally it overthrows all things public and private.

Socrates:: Well, are these things so?

Adeimantus:: I think so.

Socrates:: Then, as we were saying in the beginning, our youth must join in a more law-abiding play, since, if play grows lawless and the children likewise, it is impossible that they should grow up to be men of serious temper and lawful spirit.

Adeimantus:: Of course.

Socrates:: And so we may reason that when children in their earliest play are imbued with the spirit of law and order through their music, the opposite of the former supposition happens—this spirit waits upon them in all things and fosters their growth, and restores and sets up again whatever was overthrown in the other type of state.

Adeimantus:: True indeed.

Socrates:: Then such men rediscover for themselves those seemingly trifling conventions which their predecessors abolished altogether.

Adeimantus:: Of what sort?

Socrates:: Such things as the becoming silence of the young in the presence of their elders, the giving place to them and rising up before them, and dutiful service of parents, and the cut of the hair and the garments and the fashion of the footgear, and in general the deportment of the body and everything of the kind. Don’t you think so?

Adeimantus:: I do.

Socrates:: Yet to enact them into laws would, I think, be silly. For such laws are not obeyed nor would they last, being enacted only in words and on paper.

Adeimantus:: How could they?

Socrates:: At any rate, Adimantus, the direction of the education from whence one starts is likely to determine the quality of what follows. Does not like ever summon like?

Adeimantus:: Surely.

Socrates:: And the final outcome, I presume, we would say is one complete and vigorous product of good or the reverse.

Adeimantus:: Of course.

Socrates:: For my part, then, for these reasons I would not go on to try to legislate on such matters.

Adeimantus:: With good reason.

Socrates:: But what, in heaven's name, about business matters, the deals that men make with one another in the agora—and, if you please, contracts with workmen and actions for foul language and assault, the filing of declarations, the impaneling of juries, the payment and exaction of any dues that may be needful in markets or harbors and in general market, police, or harbor regulations and the like—can we bring ourselves to legislate about these?

Adeimantus:: Nay, 'twould not be fitting, to dictate to good and honorable men. For most of the enactments that are needed about these things they will easily, I presume, discover.

Socrates:: Yes, my friend, provided God grants them the preservation of the principles of law that we have already discussed.

Adeimantus:: Failing that, they will pass their lives multiplying such petty laws and amending them in the expectation of attaining what is best.

Socrates:: You mean, that the life of such citizens will resemble that of men who are sick, yet from intemperance are unwilling to abandon their unwholesome regimen.

Adeimantus:: By all means.

Socrates:: And truly, these latter go on in a most charming fashion. For with all their doctoring they accomplish nothing except to complicate and augment their maladies. And they are always hoping that someone will recommend a panacea that will restore their health.

Adeimantus:: A perfect description, of the state of such invalids.

Socrates:: And isn't this a charming trait in them, that they hate most in all the world him who tells them the truth, that until a man stops drinking and gorging and wenching and idling, neither drugs nor cautery nor the knife, no, nor spells nor periapts nor anything of that kind will be of any avail?

Adeimantus:: Not altogether charming, for there is no grace or charm in being angry with him who speaks well.

Socrates:: You do not seem to be an admirer of such people.

Adeimantus:: No, by heaven, I am not.

Socrates:: Neither then, if an entire city, as we were just now saying, acts in this way, will it have your approval, or don't you think that the way of such invalids is precisely that of those cities which being badly governed forewarn their citizens not to meddle with the general constitution of the state, denouncing death to whosoever attempts that—while whoever most agreeably serves them governed as they are and who curries favor with them by fawning upon them and anticipating their desires and by his cleverness in gratifying them, him they will account the good man, the man wise in worthwhile things, the man they will delight to honor?

Adeimantus:: Yes, I think their conduct is identical, and I don't approve it in the very least.

Socrates:: And what again of those who are willing and eager to serve such states? Don't you admire their valiance and lighthearted irresponsibility?

Adeimantus:: I do, except those who are actually deluded and suppose themselves to be in truth statesmen because they are praised by the many.

Socrates:: What do you mean? Can't you make allowances for the men? Do you think it possible for a man who does not know how to measure when a multitude of others equally ignorant assure him that he is four cubits tall not to suppose this to be the fact about himself?

Adeimantus:: Why no, I don't think that.

Socrates:: Then don't be harsh with them. For surely such fellows are the most charming spectacle in the world when they enact and amend such laws as we just now described and are perpetually expecting to find a way of putting an end to frauds in business and in the other matters of which I was speaking because they can't see that they are in very truth trying to cut off a Hydra's head.

Adeimantus:: Indeed, that is exactly what they are doing.

I, then, should not have supposed that the true lawgiver ought to work out matters of that kind in the laws and the constitution of either an ill-governed or a well-governed state—in the one because they are useless and accomplish nothing, in the other because some of them anybody could discover and others will result spontaneously from the pursuits already described.

Adeimantus:: What part of legislation, then, is still left for us?

Socrates:: For us nothing, but for the Apollo of Delphi, the chief, the fairest, and the first of enactments.

Adeimantus:: What are they?

Socrates:: The founding of temples, and sacrifices, and other forms of worship of gods, daemons, and heroes, and likewise the burial of the dead and the services we must render to the dwellers in the world beyond to keep them gracious. For of such matters we neither know anything nor in the founding of our city if we are wise shall we entrust them to any other or make use of any other interpreter than the god of our fathers. For this god surely is in such matters for all mankind the interpreter of the religion of their fathers who from his seat in the middle and at the very navel of the earth delivers his interpretation.

Adeimantus:: Excellently said, and that is what we must do.

Socrates:: At last, then, son of Ariston, your city may be considered as established. The next thing is to procure a sufficient light somewhere and to look yourself, and call in the aid of your brother and of Polemarchus and the rest, if we may in any wise discover where justice and injustice should be in it, wherein they differ from one another, and which of the two he must have who is to be happy, alike whether his condition is known or not known to all gods and men.

Glaucon:: Nonsense, you promised that you would carry on the search yourself, admitting that it would be impious for you not to come to the aid of justice by every means in your power.

Socrates:: A true reminder, and I must do so, but you also must lend a hand.

Glaucon:: Well, we will.

Socrates:: I expect then, that we shall find it in this way. I think our city, if it has been rightly founded, is good in the full sense of the word.

Glaucon:: Necessarily.

Socrates:: Clearly, then, it will be wise, brave, sober, and just.

Glaucon:: Clearly.

Socrates:: Then if we find any of these qualities in it, the remainder will be that which we have not found?

Glaucon:: Surely.

Socrates:: Take the case of any four other things. If we were looking for any one of them in anything and recognized the object of our search first, that would have been enough for us, but if we had recognized the other three first, that in itself would have made known to us the thing we were seeking. For plainly there was nothing left for it to be but the remainder.

Glaucon:: Right.

Socrates:: And so, since these are four, we must conduct the search in the same way.

Glaucon:: Clearly.

Socrates:: And, moreover, the first thing that I think I clearly see therein is the wisdom, and there is something odd about that, it appears.

Glaucon:: What?

Socrates:: Wise in very deed I think the city that we have described is, for it is well counseled, is it not?

Glaucon:: Yes.

Socrates:: And surely this very thing, good counsel, is a form of wisdom. For it is not by ignorance but by knowledge that men counsel well.

Glaucon:: Obviously.

Socrates:: But there are many and manifold knowledges or sciences in the city.

Glaucon:: Of course.

Socrates:: Is it then owing to the science of her carpenters that a city is to be called wise and well advised?

Glaucon:: By no means for that, but rather mistress of the arts of building.

Socrates:: Then a city is not to be styled wise because of the deliberations of the science of wooden utensils for their best production?

Glaucon:: No, I grant you.

Socrates:: Is it, then, because of that of brass implements or any other of that kind?

Glaucon:: None whatsoever.

Socrates:: Nor yet because of the science of the production of crops from the soil, but the name it takes from that is agricultural.

Glaucon:: I think so.

Socrates:: Then, is there any science in the city just founded by us residing in any of its citizens which does not take counsel about some particular thing in the city but about the city as a whole and the betterment of its relations with itself and other states?

Glaucon:: Why, yes, there is.

Socrates:: What is it, and in whom is it found?

Glaucon:: It is the science of guardianship or government and it is to be found in those rulers to whom we just now gave the name of guardians in the full sense of the word.

Socrates:: And what term then do you apply to the city because of this knowledge?

Glaucon:: Well-advised, and truly wise.

Socrates:: Which class, then, do you suppose will be the more numerous in our city, the smiths or these true guardians?

Glaucon:: The smiths, by far.

Socrates:: And would not these rulers be the smallest of all the groups of those who possess special knowledge and receive distinctive appellations?

Glaucon:: By far.

Socrates:: Then it is by virtue of its smallest class and minutest part of itself, and the wisdom that resides therein, in the part which takes the lead and rules, that a city established on principles of nature would be wise as a whole. And as it appears these are by nature the fewest, the class to which it pertains to partake of the knowledge which alone of all forms of knowledge deserves the name of wisdom.

Glaucon:: Most true.

Socrates:: This one of our four, then, we have, I know not how, discovered, the thing itself and its place in the state.

Glaucon:: I certainly think, that it has been discovered sufficiently.

Socrates:: But again there is no difficulty in seeing bravery itself and the part of the city in which it resides for which the city is called brave.

Glaucon:: How so?

Socrates:: Who, in calling a city cowardly or brave would fix his eyes on any other part of it than that which defends it and wages war in its behalf?

Glaucon:: No one at all.

Socrates:: For the reason, I take it, that the cowardice or the bravery of the other inhabitants does not determine for it the one quality or the other.

Glaucon:: It does not.

Socrates:: Bravery too, then, belongs to a city by virtue of a part of itself owing to its possession in that part of a quality that under all conditions will preserve the conviction that things to be feared are precisely those which and such as the lawgiver inculcated in their education. Is not that what you call bravery?

Glaucon:: I don't altogether understand what you said, but say it again.

Socrates:: A kind of conservation, is what I mean by bravery.

Glaucon:: What sort of a conservation?

Socrates:: The conservation of the conviction which the law has created by education about fearful things—what and what sort of things are to be feared. And by the phrase 'under all conditions' I mean that the brave man preserves it both in pain and pleasures and in desires and fears and does not expel it from his soul. And I may illustrate it by a similitude if you please.

Glaucon:: I do.

Socrates:: You are aware that dyers when they wish to dye wool so as to hold the purple hue begin by selecting from the many colors there be the one nature of the white and then give it a careful preparatory treatment so that it will take the hue in the best way, and after the treatment, then and then only, dip it in the dye. And things that are dyed by this process become fast-colored and washing either with or without lyes cannot take away the sheen of their hues. But otherwise you know what happens to them, whether anyone dips other colors or even these without the preparatory treatment.

Glaucon:: I know, that they present a ridiculous and washed-out appearance.

Socrates:: By this analogy, then, you must conceive what we too to the best of our ability were doing when we selected our soldiers and educated them in music and exercises of the body. The sole aim of our contrivance was that they should be convinced and receive our laws like a dye as it were, so that their belief and faith might be fast-colored about both the things that are to be feared and all other things because of the fitness of their nature and nurture, and that so their dyes might not be washed out by those lyes that have such dread power to scour our faiths away, pleasure more potent than any detergent or abstergent to accomplish this, and pain and fear, and desire more sure than any lye. This power in the soul, then, this unfailing conservation of right and lawful belief about things to be and not to be feared is what I call and would assume to be courage, unless you have something different to say.

Glaucon:: No, nothing, for I presume that you consider mere right opinion about the same matters not produced by education, that which may manifest itself in a beast or a slave, to have little or nothing to do with law and that you would call it by another name than courage.

Socrates:: That is most true.

Glaucon:: Well then, I accept this as bravery.

Socrates:: Do so, and you will be right, with the reservation that it is the courage of a citizen. Some other time, if it please you, we will discuss it more fully. At present we were not seeking this but justice, and for the purpose of that inquiry I believe we have done enough.

Glaucon:: You are quite right.

Socrates:: Two things still remain, to make out in our city, soberness and the object of the whole inquiry, justice.

Glaucon:: Quite so.

Socrates:: If there were only some way to discover justice so that we need not further concern ourselves about soberness.

Glaucon:: Well, I, for my part, neither know of any such way nor would I wish justice to be discovered first if that means that we are not to go on to the consideration of soberness. But if you desire to please me, consider this before that.

Socrates:: It would certainly be very wrong of me not to desire it.

Glaucon:: Go on with the inquiry then.

Socrates:: I must go on, and viewed from here it bears more likeness to a kind of concord and harmony than the other virtues did.

Glaucon:: How so?

Socrates:: Soberness is a kind of beautiful order and a continence of certain pleasures and appetites, as they say, using the phrase 'master of himself' I know not how, and there are other similar expressions that as it were point us to the same trail. Is that not so?

Glaucon:: Most certainly.

Socrates:: Now the phrase 'master of himself' is an absurdity, is it not? For he who is master of himself would also be subject to himself, and he who is subject to himself would be master. For the same person is spoken of in all these expressions.

Glaucon:: Of course.

Socrates:: But, the intended meaning of this way of speaking appears to me to be that the soul of a man within him has a better part and a worse part, and the expression self-mastery means the control of the worse by the naturally better part. It is, at any rate, a term of praise. But when, because of bad breeding or some association, the better part, which is the smaller, is dominated by the multitude of the worse, I think that our speech censures this as a reproach, and calls the man in this plight unself-controlled and licentious.

Glaucon:: That seems likely.

Socrates:: Turn your eyes now upon our new city, and you will find one of these conditions existent in it. For you will say that it is justly spoken of as master of itself if that in which the superior rules the inferior is to be called sober and self-mastered.

Glaucon:: I do turn my eyes upon it, and it is as you say.

Socrates:: And again, the mob of motley appetites and pleasures and pains one would find chiefly in children and women and slaves and in the base rabble of those who are free men in name.

Glaucon:: By all means.

Socrates:: But the simple and moderate appetites which with the aid of reason and right opinion are guided by consideration you will find in few and those the best born and best educated.

Glaucon:: True.

Socrates:: And do you not find this too in your city and a domination there of the desires in the multitude and the rabble by the desires and the wisdom that dwell in the minority of the better sort?

Glaucon:: I do.

Socrates:: If, then, there is any city that deserves to be described as master of its pleasures and desires and self-mastered, this one merits that designation.

Glaucon:: Most assuredly.

Socrates:: And is it not also to be called sober in all these respects?

Glaucon:: Indeed it is.

Socrates:: And yet again, if there is any city in which the rulers and the ruled are of one mind as to who ought to rule, that condition will be found in this. Don't you think so?

Glaucon:: I most emphatically do.

Socrates:: In which class of the citizens, then, will you say that the virtue of soberness has its seat when this is their condition? In the rulers or in the ruled?

Glaucon:: In both, I suppose.

Socrates:: Do you see then, that our intuition was not a bad one just now that discerned a likeness between soberness and a kind of harmony?

Glaucon:: Why so?

Socrates:: Because its operation is unlike that of courage and wisdom, which residing in separate parts respectively made the city, the one wise and the other brave. That is not the way of soberness, but it extends literally through the entire gamut throughout, bringing about the unison in the same chant of the strongest, the weakest, and the intermediate, whether in wisdom or, if you please, in strength, or for that matter in numbers, wealth, or any similar criterion. So that we should be quite right in affirming this unanimity to be soberness, the concord of the naturally superior and inferior as to which ought to rule in both the state and the individual.

Glaucon:: I entirely concur.

Socrates:: Very well, we have made out these three forms in our city to the best of our present judgment. What can be the remaining form that would give the city still another virtue? For it is obvious that the remainder is justice.

Glaucon:: Obvious.

Socrates:: Now then, Glaucon, is the time for us like huntsmen to surround the covert and keep close watch that justice may not slip through and get away from us and vanish from our sight. It plainly must be somewhere hereabout. Keep your eyes open then and do your best to descry it. You may see it before I do and point it out to me.

Glaucon:: Would that I could, but I think rather that if you find in me one who can follow you and discern what you point out to him you will be making a very fair use of me.

Socrates:: Pray for success then, and follow along with me.

Glaucon:: That I will do, only lead on.

Socrates:: And truly, it appears to be an inaccessible place, lying in deep shadows.

Glaucon:: It certainly is a dark covert, not easy to beat up.

Socrates:: But all the same, on we must go.

Glaucon:: Yes, on.

Socrates:: And I caught view and gave a halloo and said, Glaucon, I think we have found its trail and I don't believe it will get away from us.

Glaucon:: I am glad to hear that.

Socrates:: Truly, we were slackers indeed.

Glaucon:: How so?

Socrates:: Why, all the time, bless your heart, the thing apparently was tumbling about our feet from the start and yet we couldn’t see it, but were most ludicrous, like people who sometimes hunt for what they hold in their hands. So we did not turn our eyes upon it, but looked off into the distance, which was perhaps the reason it escaped us.

Glaucon:: What do you mean?

Socrates:: This, that it seems to me that though we were speaking of it and hearing about it all the time we did not understand ourselves or realize that we were speaking of it in a sense.

Glaucon:: That is a tedious prologue, for an eager listener.

Socrates:: Listen then, and learn if there is anything in what I say. For what we laid down in the beginning as a universal requirement when we were founding our city, this I think, or some form of this, is justice. And what we did lay down, and often said, if you recall, was that each one man must perform one social service in the state for which his nature was best adapted.

Glaucon:: Yes, we said that.

Socrates:: And again, that to do one’s own business and not to be a busybody is justice is a saying that we have heard from many and have very often repeated ourselves.

Glaucon:: We have.

Socrates:: This, then, my friend, if taken in a certain sense appears to be justice, this principle of doing one’s own business. Do you know whence I infer this?

Glaucon:: No, but tell me.

Socrates:: I think that this is the remaining virtue in the state after our consideration of soberness, courage, and intelligence, a quality which made it possible for them all to grow up in the body politic and which when they have sprung up preserves them as long as it is present. And I hardly need to remind you that we said that justice would be the residue after we had found the other three.

Glaucon:: That is an unavoidable conclusion.

Socrates:: But moreover, if we were required to decide what it is whose indwelling presence will contribute most to making our city good, it would be a difficult decision whether it was the unanimity of rulers and ruled or the conservation in the minds of the soldiers of the convictions produced by law as to what things are or are not to be feared, or the watchful intelligence that resides in the guardians, or whether this is the chief cause of its goodness, the principle embodied in child, woman, slave, free, artisan, ruler, and ruled, that each performed his one task as one man and was not a versatile busybody.

Glaucon:: Hard to decide indeed.

Socrates:: A thing, then, that in its contribution to the excellence of a state vies with and rivals its wisdom, its soberness, its bravery, is this principle of everyone in it doing his own task.

Glaucon:: It is indeed.

Socrates:: And is not justice the name you would have to give to the principle that rivals these as conducting to the virtue of a state?

Glaucon:: By all means.

Socrates:: Consider it in this wise too, if so you will be convinced. Will you not assign the conduct of lawsuits in your state to the rulers?

Glaucon:: Of course.

Socrates:: Will not this be the chief aim of their decisions, that no one shall have what belongs to others or be deprived of his own?

Glaucon:: Nothing else but this.

Socrates:: On the assumption that this is just?

Glaucon:: Yes.

Socrates:: From this point of view too, then, the having and doing of one's own and what belongs to oneself would admittedly be justice.

Glaucon:: That is so.

Socrates:: Consider now whether you agree with me. A carpenter undertaking to do the work of a cobbler or a cobbler of a carpenter or their interchange of one another's tools or honors or even the attempt of the same man to do both—the confounding of all other functions would not, think you, greatly injure a state, would it?

Glaucon:: Not much.

Socrates:: But when, I fancy, one who is by nature an artisan or some kind of money-maker tempted and incited by wealth or command of votes or bodily strength or some similar advantage tries to enter into the class of the soldiers or one of the soldiers into the class of counselors and guardians, for which he is not fitted, and these interchange their tools and their honors or when the same man undertakes all these functions at once, then, I take it, you too believe that this kind of substitution and meddlesomeness is the ruin of a state.

Glaucon:: By all means.

Socrates:: The interference with one another's business, then, of three existent classes, and the substitution of the one for the other, is the greatest injury to a state and would most rightly be designated as the thing which chiefly works it harm.

Glaucon:: Precisely so.

Socrates:: And the thing that works the greatest harm to one’s own state, will you not pronounce to be injustice?

Glaucon:: Of course.

Socrates:: This, then, is injustice. Again, let us put it in this way. The proper functioning of the money-makers, the helpers, and the guardians, each doing his own work in the state, being the reverse of that just described, would be justice and would render the city just.

Glaucon:: I think the case is thus and no otherwise.

Socrates:: Let us not yet affirm it quite fixedly, but if this form, when applied to the individual man, is accepted there also as a definition of justice, we will then concede the point—for what else will there be to say? But if not, then we will look for something else. But now let us work out the inquiry in which we supposed that, if we found some larger thing that contained justice and viewed it there, we should more easily discover its nature in the individual man. And we agreed that this larger thing is the city, and so we constructed the best city in our power, well knowing that in the good city it would of course be found. What, then, we thought we saw there we must refer back to the individual arid, if it is confirmed, all will be well. But if something different manifests itself in the individual, we will return again to the state and test it there and it may be that, by examining them side by side and rubbing them against one another, as it were from the fire sticks we may cause the spark of justice to flash forth, and when it is thus revealed confirm it in our own minds.

Glaucon:: Well, that seems a sound method and that is what we must do.

Socrates:: Then, if you call a thing by the same name whether it is big or little, is it unlike in the way in which it is called the same or like?

Glaucon:: Like.

Socrates:: Then a just man too will not differ at all from a just city in respect of the very form of justice, but will be like it.

Glaucon:: Yes, like.

Socrates:: But now the city was thought to be just because three natural kinds existing in it performed each its own function, and again it was sober, brave, and wise because of certain other affections and habits of these three kinds.

Glaucon:: True.

Socrates:: Then, my friend, we shall thus expect the individual also to have these same forms in his soul, and by reason of identical affections of these with those in the city to receive properly the same appellations.

Glaucon:: Inevitable.

Socrates:: Goodness gracious, here is another trifling inquiry into which we have plunged, the question whether the soul really contains these three forms in itself or not.

Glaucon:: It does not seem to me at all trifling, for perhaps, Socrates, the saying is true that 'fine things are difficult.'

Socrates:: Apparently, and let me tell you, Glaucon, that in my opinion we shall never apprehend this matter accurately from such methods as we are now employing in discussion. For there is another longer and harder way that conducts to this. Yet we may perhaps discuss it on the level of our previous statements and inquiries.

Glaucon:: May we not acquiesce in that? I for my part should be quite satisfied with that for the present.

Socrates:: And I surely should be more than satisfied.

Glaucon:: Don't you weary then, but go on with the inquiry.

Socrates:: Is it not, then, impossible for us to avoid admitting this much, that the same forms and qualities are to be found in each one of us that are in the state? They could not get there from any other source. It would be absurd to suppose that the element of high spirit was not derived in states from the private citizens who are reputed to have this quality, as the populations of the Thracian and Scythian lands and generally of northern regions, or the quality of love of knowledge, which would chiefly be attributed to the region where we dwell, or the love of money which we might say is not least likely to be found in Phoenicians and the population of Egypt.

Glaucon:: One certainly might.

Socrates:: This is the fact then, and there is no difficulty in recognizing it.

Glaucon:: Certainly not.

Socrates:: But the matter begins to be difficult when you ask whether we do all these things with the same thing or whether there are three things and we do one thing with one and one with another—learn with one part of ourselves, feel anger with another, and with yet a third desire the pleasures of nutrition and generation and their kind, or whether it is with the entire soul that we function in each case when we once begin. That is what is really hard to determine properly.

Glaucon:: I think so too.

Socrates:: Let us then attempt to define the boundary and decide whether they are identical with one another in this way.

Glaucon:: How?

Socrates:: It is obvious that the same thing will never do or suffer opposites in the same respect in relation to the same thing and at the same time. So that if ever we find these contradictions in the functions of the mind we shall know that it was not the same thing functioning but a plurality.

Glaucon:: Very well.

Socrates:: Consider, then, what I am saying.

Glaucon:: Say on.

Socrates:: Is it possible for the same thing at the same time in the same respect to be at rest and in motion?

Glaucon:: By no means.

Socrates:: Let us have our understanding still more precise, lest as we proceed we become involved in dispute. If anyone should say of a man standing still but moving his hands and head that the same man is at the same time at rest and in motion we should not, I take it, regard that as the right way of expressing it, but rather that a part of him is at rest and a part in motion. Is not that so?

Glaucon:: It is.

Socrates:: Then if the disputant should carry the jest still further with the subtlety that tops at any rate stand still as a whole at the same time that they are in motion when with the peg fixed in one point they revolve, and that the same is true of any other case of circular motion about the same spot—we should reject the statement on the ground that the repose and the movement in such cases were not in relation to the same parts of the objects. But we would say that there was a straight line and a circumference in them and that in respect of the straight line they are standing still since they do not incline to either side, but in respect of the circumference they move in a circle, but that when as they revolve they incline the perpendicular to right or left or forward or back, then they are in no wise at rest.

Glaucon:: And that would be right.

Socrates:: No such remarks then will disconcert us or any whit the more make us believe that it is ever possible for the same thing at the same time in the same respect and the same relation to suffer, be, or do opposites.

Glaucon:: They will not me, I am sure.

Socrates:: All the same, that we may not be forced to examine at tedious length the entire list of such contentions and convince ourselves that they are false, let us proceed on the hypothesis that this is so, with the understanding that, if it ever appear otherwise, everything that results from the assumption shall be invalidated.

Glaucon:: That is what we must do.

Socrates:: Will you not then, set down as opposed to one another assent and dissent, and the endeavor after a thing to the rejection of it, and embracing to repelling—do not these and all things like these belong to the class of opposite actions or passions, it will make no difference which?

Glaucon:: None, but they are opposites.

Socrates:: What then, of thirst and hunger and the appetites generally, and again consenting and willing—would you not put them all somewhere in the classes just described? Will you not say, for example, that the soul of one who desires either strives for that which he desires or draws toward its embrace what it wishes to accrue to it, or again, in so far as it wills that anything be presented to it, nods assent to itself thereon as if someone put the question, striving toward its attainment?

Glaucon:: I would say so.

Socrates:: But what of not-willing and not-consenting nor yet desiring? Shall we not put these under the soul's rejection and repulsion from itself and generally into the opposite class from all the former?

Glaucon:: Of course.

Socrates:: This being so, shall we say that the desires constitute a class and that the most conspicuous members of that class are what we call thirst and hunger?

Glaucon:: We shall.

Socrates:: Is not the one desire of drink, the other of food?

Glaucon:: Yes.

Socrates:: Then in so far as it is thirst, would it be of anything more than that of which we say it is a desire in the soul? I mean is thirst thirst for hot drink or cold or much or little or in a word for a draught of any particular quality, or is it the fact that if heat is attached to the thirst it would further render the desire—a desire of cold, and if cold of hot? But if owing to the presence of muchness the thirst is much it would render it a thirst for much and if little for little. But mere thirst will never be desire of anything else than that of which it is its nature to be, mere drink, and so hunger of food.

Glaucon:: That is so, Each desire in itself is of that thing only of which it is its nature to be. The epithets belong to the quality—such or such.

Socrates:: Let no one then, disconcert us when off our guard with the objection that everybody desires not drink but good drink and not food but good food, because, the argument will run, all men desire good, and so, if thirst is desire, it would be of good drink or of good whatsoever it is, and so similarly of other desires.

Glaucon:: Why, there perhaps would seem to be something in that objection.

Socrates:: But I need hardly remind you, that of relative terms those that are somehow qualified are related to a qualified correlate, those that are severally just themselves to a correlate that is just itself.

Glaucon:: I don’t understand.

Socrates:: Don’t you understand, that the greater is such as to be greater than something?

Glaucon:: Certainly.

Socrates:: Is it not than the less?

Glaucon:: Yes.

Socrates:: But the much greater than the much less. Is that not so?

Glaucon:: Yes.

Socrates:: And may we add the onetime greater than the onetime less and that which will be greater than that which will be less?

Glaucon:: Surely.

Socrates:: And similarly of the more toward the fewer, and the double toward the half and of all like cases, and again of the heavier toward the lighter, the swifter toward the slower, and yet again of the hot toward the cold and all cases of that kind—does not the same hold?

Glaucon:: By all means.

Socrates:: But what of the sciences? Is not the way of it the same? Science, which is just that, is of knowledge which is just that, or is of whatsoever we must assume the correlate of science to be. But a particular science of a particular kind is of some particular thing of a particular kind. I mean something like this. As there was a science of making a house it differed from other sciences so as to be named architecture.

Glaucon:: Certainly.

Socrates:: Was not this by reason of its being of a certain kind such as no other of all the rest?

Glaucon:: Yes.

Socrates:: And was it not because it was of something of a certain kind that it itself became a certain kind of science? And similarly of the other arts and sciences?

Glaucon:: That is so.

Socrates:: This then, if haply you now understand, is what you must say I then meant, by the statement that of all things that are such as to be of something, those that are just themselves only are of things just themselves only, but things of a certain kind are of things of a kind. And I don't at all mean that they are of the same kind as the things of which they are, so that we are to suppose that the science of health and disease is a healthy and diseased science and that of evil and good, evil and good. I only mean that as science became the science not of just the thing of which science is but of some particular kind of thing, namely, of health and disease, the result was that it itself became some kind of science and this caused it to be no longer called simply science but, with the addition of the particular kind, medical science.

Glaucon:: I understand, and agree that it is so.

Socrates:: To return to thirst, then, will you not class it with the things that are of something and say that it is what it is in relation to something—and it is, I presume, thirst?

Glaucon:: I will, namely of drink.

Socrates:: Then if the drink is of a certain kind, so is the thirst, but thirst that is just thirst is neither of much nor little nor good nor bad, nor in a word of any kind, but just thirst is naturally of just drink only.

Glaucon:: By all means.

Socrates:: The soul of the thirsty then, in so far as it thirsts, wishes nothing else than to drink, and yearns for this and its impulse is toward this.

Glaucon:: Obviously.

Socrates:: Then if anything draws it back when thirsty it must be something different in it from that which thirsts and drives it like a beast to drink. For it cannot be, we say, that the same thing with the same part of itself at the same time acts in opposite ways about the same thing.

Glaucon:: We must admit that it does not.

Socrates:: So I fancy it is not well said of the archer that his hands at the same time thrust away the bow and draw it nigh, but we should rather say that there is one hand that puts it away and another that draws it to.

Glaucon:: By all means.

Socrates:: Are we to say, then, that some men sometimes though thirsty refuse to drink?

Glaucon:: We are indeed, many and often.

Socrates:: What then, should one affirm about them? Is it not that there is a something in the soul that bids them drink and a something that forbids, a different something that masters that which bids?

Glaucon:: I think so.

Socrates:: And is it not the fact that that which inhibits such actions arises when it arises from the calculations of reason, but the impulses which draw and drag come through affections and diseases?

Glaucon:: Apparently.

Socrates:: Not unreasonably, shall we claim that they are two and different from one another, naming that in the soul whereby it reckons and reasons the rational, and that with which it loves, hungers, thirsts, and feels the flutter and titillation of other desires, the irrational and appetitive—companion of various repletions and pleasures.

Glaucon:: It would not be unreasonable but quite natural, for us to think this.

Socrates:: These two forms, then, let us assume to have been marked off as actually existing in the soul. But now the thumos, or principle of high spirit, that with which we feel anger, is it a third, or would it be identical in nature with one of these?

Glaucon:: Perhaps, with one of these, the appetitive.

Socrates:: But, I once heard a story which I believe, that Leontius the son of Aglaion, on his way up from the Piraeus under the outer side of the northern wall, becoming aware of dead bodies that lay at the place of public execution at the same time felt a desire to see them and a repugnance and aversion, and that for a time he resisted and veiled his head, but overpowered in despite of all by his desire, with wide staring eyes he rushed up to the corpses and cried, There, ye wretches, take your fill of the fine spectacle!

Glaucon:: I too, have heard the story.

Socrates:: Yet, surely, this anecdote, signifies that the principle of anger sometimes fights against desires as an alien thing against an alien.

Glaucon:: Yes, it does.

Socrates:: And do we not, on many other occasions observe when his desires constrain a man contrary to his reason that he reviles himself and is angry with that within which masters him, and that as it were in a faction of two parties the high spirit of such a man becomes the ally of his reason? But its making common cause with the desires against the reason when reason whispers low, Thou must not—that, I think, is a kind of thing you would not affirm ever to have perceived in yourself, nor, I fancy, in anybody else either.

Glaucon:: No, by heaven.

Socrates:: Again, when a man thinks himself to be in the wrong, is it not true that the nobler he is the less is he capable of anger though suffering hunger and cold and whatsoever else at the hands of him whom he believes to be acting justly therein, and as I say his spirit refuses to be aroused against such a one?

Glaucon:: True.

Socrates:: But what when a man believes himself to be wronged? Does not his spirit in that case seethe and grow fierce—and also because of his suffering hunger, cold, and the like—and make itself the ally of what he judges just? And in noble souls it endures and wins the victory and will not let go until either it achieves its purpose, or death ends all, or, as a dog is called back by a shepherd, it is called back by the reason within and calmed.

Glaucon:: Your similitude is perfect, and it confirms our former statements that the helpers are as it were dogs subject to the rulers who are as it were the shepherds of the city.

Socrates:: You apprehend my meaning excellently. But do you also take note of this?

Glaucon:: Of what?

Socrates:: That what we now think about the spirited element is just the opposite of our recent surmise. For then we supposed it to be a part of the appetitive, but now, far from that, we say that, in the factions of the soul, it much rather marshals itself on the side of the reason.

Glaucon:: By all means.

Socrates:: Is it then distinct from this too, or is it a form of the rational, so that there are not three but two kinds in the soul, the rational and the appetitive? Or just as in the city there were three existing kinds that composed its structure, the money-makers, the helpers, the counselors, so also in the soul does there exist a third kind, this principle of high spirit, which is the helper of reason by nature unless it is corrupted by evil nurture?

Glaucon:: We have to assume it as a third.

Socrates:: Yes, provided it shall have been shown to be something different from the rational, as it has been shown to be other than the appetitive.

Glaucon:: That is not hard to be shown, for that much one can see in children, that they are from their very birth chock-full of rage and high spirit, but as for reason, some of them, to my thinking, never participate in it, and the majority quite late.

Socrates:: Yes, by heaven, excellently said, and further, one could see in animals that what you say is true. And to these instances we may add the testimony of Homer quoted above, ‘He smote his breast and chided thus his heart.’ For there Homer has clearly represented that in us which has reflected about the better and the worse as rebuking that which feels unreasoning anger as if it were a distinct and different thing.

Glaucon:: You are entirely right.

Socrates:: Through these waters, then, we have with difficulty made our way and we are fairly agreed that the same kinds equal in number are to be found in the state and in the soul of each one of us.

Glaucon:: That is so.

Socrates:: Then does not the necessity of our former postulate immediately follow, that as and whereby the state was wise, so and thereby is the individual wise?

Glaucon:: Surely.

Socrates:: And so whereby and as the individual is brave, thereby and so is the state brave, and that both should have all the other constituents of virtue in the same way?

Glaucon:: Necessarily.

Socrates:: Just too, then, Glaucon, I presume we shall say a man is in the same way in which a city was just.

Glaucon:: That too is quite inevitable.

Socrates:: But we surely cannot have forgotten this, that the state was just by reason of each of the three classes found in it fulfilling its own function.

Glaucon:: I don't think we have forgotten.

Socrates:: We must remember, then, that each of us also in whom the several parts within him perform each their own task—he will be a just man and one who minds his own affair.

Glaucon:: We must indeed remember.

Socrates:: Does it not belong to the rational part to rule, being wise and exercising forethought in behalf of the entire soul, and to the principle of high spirit to be subject to this and its ally?

Glaucon:: Assuredly.

Socrates:: Then is it not, as we said, the blending of music and gymnastics that will render them concordant, intensifying and fostering the one with fair words and teachings and relaxing and soothing and making gentle the other by harmony and rhythm?

Glaucon:: Quite so.

Socrates:: And these two, thus reared and having learned and been educated to do their own work in the true sense of the phrase, will preside over the appetitive part which is the mass of the soul in each of us and the most insatiate by nature of wealth. They will keep watch upon it, lest, by being filled and infected with the so-called pleasures associated with the body and so waxing big and strong, it may not keep to its own work but may undertake to enslave and rule over the classes which it is not fitting that it should, and so overturn the entire life of all.

Glaucon:: By all means.

Socrates:: Would not these two, then, best keep guard against enemies from without also in behalf of the entire soul and body, the one taking counsel, the other giving battle, attending upon the ruler, and by its courage executing the ruler’s designs?

Glaucon:: That is so.

Socrates:: Brave, too, then, I take it, we call each individual by virtue of this part in him, when, namely, his high spirit preserves in the midst of pains and pleasures the rule handed down by the reason as to what is or is not to be feared.

Glaucon:: Right.

Socrates:: But wise by that small part that ruled in him and handed down these commands, by its possession in turn within it of the knowledge of what is beneficial for each and for the whole, the community composed of the three.

Glaucon:: By all means.

Socrates:: And again, was he not sober by reason of the friendship and concord of these same parts, when, namely, the ruling principle and its two subjects are at one in the belief that the reason ought to rule, and do not raise faction against it?

Glaucon:: The virtue of soberness certainly, is nothing else than this, whether in a city or an individual.

Socrates:: But surely, now, a man is just by that which and in the way we have so often described.

Glaucon:: That is altogether necessary.

Socrates:: Well then, has our idea of justice in any way lost the edge of its contour so as to look like anything else than precisely what it showed itself to be in the state?

Glaucon:: I think not.

Socrates:: We might, completely confirm your reply and our own conviction thus, if anything in our minds still disputes our definition—by applying commonplace and vulgar tests to it.

Glaucon:: What are these?

Socrates:: For example, if an answer were demanded to the question concerning that city and the man whose birth and breeding was in harmony with it, whether we believe that such a man, entrusted with a deposit of gold or silver, would withhold it and embezzle it, who do you suppose would think that he would be more likely so to act than men of a different kind?

Glaucon:: No one would.

Socrates:: And would not he be far removed from sacrilege and theft and betrayal of comrades in private life or of the state in public?

Glaucon:: He would.

Socrates:: And, moreover, he would not be in any way faithless either in the keeping of his oaths or in other agreements.

Glaucon:: How could he?

Socrates:: Adultery, surely, and neglect of parents and of the due service of the gods would pertain to anyone rather than to such a man.

Glaucon:: To anyone indeed.

Socrates:: And is not the cause of this to be found in the fact that each of the principles within him does its own work in the matter of ruling and being ruled?

Glaucon:: Yes, that and nothing else.

Socrates:: Do you still, then, look for justice to be anything else than this potency which provides men and cities of this sort?

Glaucon:: No, by heaven, I do not.

Socrates:: Finished, then, is our dream and perfected—the surmise we spoke of, that, by some providence, at the very beginning of our foundation of the state, we chanced to hit upon the original principle and a sort of type of justice.

Glaucon:: Most assuredly.

Socrates:: It really was, it seems, Glaucon, which is why it helps, a sort of adumbration of justice, this principle that it is right for the cobbler by nature to cobble and occupy himself with nothing else, and the carpenter to practice carpentry, and similarly all others.

Glaucon:: Clearly.

Socrates:: But the truth of the matter was, as it seems, that justice is indeed something of this kind, yet not in regard to the doing of one’s own business externally, but with regard to that which is within and in the true sense concerns one’s self, and the things of one’s self. It means that a man must not suffer the principles in his soul to do each the work of some other and interfere and meddle with one another, but that he should dispose well of what in the true sense of the word is properly his own, and having first attained to self-mastery and beautiful order within himself, and having harmonized these three principles, the notes or intervals of three terms quite literally the lowest, the highest, and the mean, and all others there may be between them, and having linked and bound all three together and made of himself a unit, one man instead of many, self-controlled and in unison, he should then and then only turn to practice if he find aught to do either in the getting of wealth or the tendance of the body or it may be in political action or private business—in all such doings believing and naming the just and honorable action to be that which preserves and helps to produce this condition of soul, and wisdom the science that presides over such conduct, and believing and naming the unjust action to be that which ever tends to overthrow this spiritual constitution, and brutish ignorance to be the opinion that in turn presides over this.

Glaucon:: What you say is entirely true, Socrates.

Socrates:: Well, if we should affirm that we had found the just man and state and what justice really is in them, I think we should not be much mistaken.

Glaucon:: No indeed, we should not.

Socrates:: Shall we affirm it, then?

Glaucon:: Let us so affirm.

Socrates:: So be it, then. Next after this, I take it, we must consider injustice.

Glaucon:: Obviously.

Socrates:: Must not this be a kind of civil war of these three principles, their meddlesomeness and interference with one another's functions, and the revolt of one part against the whole of the soul that it may hold therein a rule which does not belong to it, since its nature is such that it befits it to serve as a slave to the ruling principle? Something of this sort, I fancy, is what we shall say, and that the confusion of these principles and their straying from their proper course is injustice and licentiousness and cowardice and brutish ignorance and, in general, all turpitude.

Glaucon:: Precisely this.

Socrates:: Then, to act unjustly and be unjust and in turn to act justly—the meaning of all these terms becomes at once plain and clear, since injustice and justice are so.

Glaucon:: How so?

Socrates:: Because, these are in the soul what the healthful and the diseaseful are in the body; there is no difference.

Glaucon:: In what respect?

Socrates:: Healthful things surely engender health and diseaseful disease.

Glaucon:: Yes.

Socrates:: Then does not doing just acts engender justice and unjust injustice?

Glaucon:: Of necessity.

Socrates:: But to produce health is to establish the elements in a body in the natural relation of dominating and being dominated by one another, while to cause disease is to bring it about that one rules or is ruled by the other contrary to nature.

Glaucon:: Yes, that is so.

Socrates:: And is it not likewise the production of justice in the soul to establish its principles in the natural relation of controlling and being controlled by one another, while injustice is to cause the one to rule or be ruled by the other contrary to nature?

Glaucon:: Exactly so.

Socrates:: Virtue, then, as it seems, would be a kind of health and beauty and good condition of the soul, and vice would be disease, ugliness, and weakness.

Glaucon:: It is so.

Socrates:: Then is it not also true that beautiful and honorable pursuits tend to the winning of virtue and the ugly to vice?

Glaucon:: Of necessity.

Socrates:: And now at last, it seems, it remains for us to consider whether it is profitable to do justice and practice honorable pursuits and be just, whether one is known to be such or not, or whether injustice profits, and to be unjust, if only a man escape punishment and is not bettered by chastisement.

Glaucon:: Nay, Socrates, I think that from this point on our inquiry becomes an absurdity—if, while life is admittedly intolerable with a ruined constitution of body even though accompanied by all the food and drink and wealth and power in the world, we are yet to be asked to suppose that, when the very nature and constitution of that whereby we live is disordered and corrupted, life is going to be worth living, if a man can only do as he pleases, and pleases to do anything save that which will rid him of evil and injustice and make him possessed of justice and virtue—now that the two have been shown to be as we have described them.

Socrates:: Yes, it is absurd, but nevertheless, now that we have won to this height, we must not grow weary in endeavoring to discover with the utmost possible clearness that these things are so.

Glaucon:: That is the last thing in the world we must do.

Socrates:: Come up here then, that you may see how many are the kinds of evil, I mean those that it is worth while to observe and distinguish.

Glaucon:: I am with you, Only do you say on.

Socrates:: And truly, now that we have come to this height of argument I seem to see as from a point of outlook that there is one form of excellence, and that the forms of evil are infinite, yet that there are some four among them that it is worth while to take note of.

Glaucon:: What do you mean?

Socrates:: As many as are the varieties of political constitutions that constitute specific types, so many, it seems likely, are the characters of soul.

Glaucon:: How many, pray?

Socrates:: There are five kinds of constitutions, and five kinds of soul.

Glaucon:: Tell me what they are.

Socrates:: I tell you, that one way of government would be the constitution that we have just expounded, but the names that might be applied to it are two. If one man of surpassing merit rose among the rulers, it would be denominated royalty; if more than one, aristocracy.

Glaucon:: True.

Socrates:: Well, then, this is one of the forms I have in mind. For neither would a number of such men, nor one if he arose among them, alter to any extent worth mentioning the laws of our city—if he preserved the breeding and the education that we have described.

Glaucon:: It is not likely.

## Book 5.

Socrates:: To such a city, then, or constitution I apply the terms good and right—and to the corresponding kind of man—but the others I describe as bad and mistaken, if this one is right, in respect both to the administration of states and to the formation of the character of the individual soul, they falling under four forms of badness.

Glaucon:: What are these?

Socrates:: And I was going on to enumerate them in what seemed to me the order of their evolution from one another, when Polemarchus—he sat at some little distance from Adimantus—stretched forth his hand, and, taking hold of his garment from above by the shoulder, drew the other toward him and, leaning forward himself, spoke a few words in his ear, of which we overheard nothing else save only this.

Polemarchus:: Shall we let him off, then, or what shall we do?

Socrates:: Raising his voice, Adimantus said:

Adeimantus:: By no means.

Socrates:: What, pray, is it that you are not letting off?

Adeimantus:: You.

Socrates:: And for what special reason, pray?

Adeimantus:: We think you are a slacker, and are trying to cheat us out of a whole division, and that not the least, of the argument to avoid the trouble of expounding it, and expect to ‘get away with it’ by observing thus lightly that, of course, in respect to women and children it is obvious to everybody that the possessions of friends will be in common.

Socrates:: Well, isn’t that right, Adimantus?

Adeimantus:: Yes, but this word ‘right, ’ like other things, requires defining as to the way and manner of such a community. There might be many ways. Don’t, then, pass over the one that you have in mind. For we have long been lying in wait for you, expecting that you would say something both of the procreation of children and their bringing-up, and would explain the whole matter of the community of women and children of which you speak. We think that the right or wrong management of this makes a great difference, all the difference in the world, in the constitution of a state; so now, since you are beginning on another constitution before sufficiently defining this, we are firmly resolved, as you overheard, not to let you go till you have expounded all this as fully as you did the rest.

Glaucon:: Set me down, too, as voting this ticket.

Thrasymachus:: Surely, you may consider it a joint resolution of us all, Socrates.

Socrates:: What a thing you have done, in thus challenging me! What a huge debate you have started afresh, as it were, about this polity, in the supposed completion of which I was rejoicing, being only too glad to have it accepted as I then set it forth! You don’t realize what a swarm of arguments you are stirring up by this demand, which I foresaw and evaded to save us no end of trouble.

Thrasymachus:: Well, do you suppose this company has come here to prospect for gold and not to listen to discussions?

Socrates:: Yes, in measure.

Glaucon:: Nay, Socrates, the measure of listening to such discussions is the whole of life for reasonable men. So don’t consider us, and do not you yourself grow weary in explaining to us what we ask for, your views as to how this communion of wives and children among our guardians will be managed, and also about the rearing of the children while still young in the interval between birth and formal schooling which is thought to be the most difficult part of education. Try, then, to tell us what must be the manner of it.

Socrates:: It is not an easy thing to expound, my dear fellow, for even more than the provisions that precede it, it raises many doubts. For one might doubt whether what is proposed is possible and, even conceding the possibility, one might still be skeptical whether it is best. For which reason one, as it were, shrinks from touching on the matter lest the theory be regarded as nothing but a 'wish-thought,' my dear friend.

Glaucon:: Do not shrink, for your hearers will not be inconsiderate nor distrustful nor hostile.

Socrates:: My good fellow, is that remark intended to encourage me?

Glaucon:: It is.

Socrates:: Well then, it has just the contrary effect. For, if I were confident that I was speaking with knowledge, it would be an excellent encouragement. For there are both safety and boldness in speaking the truth with knowledge about our greatest and dearest concerns to those who are both wise and dear. But to speak when one doubts himself and is seeking while he talks, as I am doing, is a fearful and slippery venture. The fear is not of being laughed at, for that is childish, but, lest, missing the truth, I fall down and drag my friends with me in matters where it most imports not to stumble. So I salute Nemesis, Glaucon, in what I am about to say. For, indeed, I believe that involuntary homicide is a lesser fault than to mislead opinion about the honorable, the good, and the just. This is a risk that it is better to run with enemies than with friends, so that your encouragement is none.

—And Glaucon, with a laugh, said;

Glaucon:: Nay, Socrates, if any false note in the argument does us any harm, we release you as in a homicide case, and warrant you pure of hand and no deceiver of us. So speak on with confidence.

Socrates:: Well, he who is released in that case is counted pure as the law bids, and, presumably, if there, here too.

Glaucon:: Speak on, then, for all this objection.

Socrates:: We must return then, and say now what perhaps ought to have been said in due sequence there. But maybe this way is right, that after the completion of the male drama we should in turn go through with the female, especially since you are so urgent.

—For men, then, born and bred as we described, there is in my opinion no other right possession and use of children and women than that which accords with the start we gave them. Our endeavor, I believe, was to establish these men in our discourse as the guardians of a flock?

Glaucon:: Yes.

Socrates:: Let us preserve the analogy, then, and assign them a generation and breeding answering to it, and see if it suits us or not.

Glaucon:: In what way?

Socrates:: In this. Do we expect the females of watchdogs to join in guarding what the males guard and to hunt with them and share all their pursuits or do we expect the females to stay indoors as being incapacitated by the bearing and the breeding of the whelps while the males toil and have all the care of the flock?

Glaucon:: They have all things in common, except that we treat the females as weaker and the males as stronger.

Socrates:: Is it possible, then, to employ any creature for the same ends as another if you do not assign it the same nurture and education?

Glaucon:: It is not possible.

Socrates:: If, then, we are to use the women for the same things as the men, we must also teach them the same things.

Glaucon:: Yes.

Socrates:: Now music together with gymnastics was the training we gave the men.

Glaucon:: Yes.

Socrates:: Then we must assign these two arts to the women also and the offices of war and employ them in the same way.

Glaucon:: It would seem likely from what you say.

Socrates:: Perhaps, then, the contrast with present custom would make much in our proposals look ridiculous if our words are to be realized in fact.

Glaucon:: Yes, indeed.

Socrates:: What then, is the funniest thing you note in them? Is it not obviously the women exercising unclad in the palaestra together with the men, not only the young, but even the older, like old men in gymnasiums, when, though wrinkled and unpleasant to look at, they still persist in exercising?

Glaucon:: Yes, on my word, it would seem ridiculous under present conditions.

Socrates:: Then, since we have set out to speak our minds, we must not fear all the gibes with which the wits would greet so great a revolution, and the sort of things they would say about gymnastics and culture, and most of all about the bearing of arms and the bestriding of horses.

Glaucon:: You're right.

Socrates:: But since we have begun we must go forward to the rough part of our law, after begging these fellows not to mind their own business but to be serious, and reminding them that it is not long since the Greeks thought it disgraceful and ridiculous, as most of the barbarians do now, for men to be seen naked. And when the practice of athletics began, first with the Cretans and then with the Lacedaemonians, it was open to the wits of that time to make fun of these practices, don't you think so?

Glaucon:: I do.

Socrates:: But when, I take it, experience showed that it is better to strip than to veil all things of this sort, then the laughter of the eyes faded away before that which reason revealed to be best, and this made it plain that he talks idly who deems anything else ridiculous but evil, and who tries to raise a laugh by looking to any other pattern of absurdity than that of folly and wrong or sets up any other standard of the beautiful as a mark for his seriousness than the good.

Glaucon:: Most assuredly.

Socrates:: Then is not the first thing that we have to agree upon with regard to these proposals whether they are possible or not? And we must throw open the debate to anyone who wishes either in jest or in earnest to raise the question whether female human nature is capable of sharing with the male all tasks or none at all, or some but not others, and under which of these heads this business of war falls. Would not this be that best beginning which would naturally and proverbially lead to the best end?

Glaucon:: Far the best.

Socrates:: Shall we then conduct the debate with ourselves in behalf of those others so that the case of the other side may not be taken defenseless and go by default?

Glaucon:: Nothing hinders.

Socrates:: Shall we say then in their behalf, There is no need, Socrates and Glaucon, of others disputing against you, for you yourselves at the beginning of the foundation of your city agreed that each one ought to mind as his own business the one thing for which he was fitted by nature? We did so agree, I think, certainly! Can it be denied then that there is by nature a great difference between men and women? Surely there is. Is it not fitting, then, that a different function should be appointed for each corresponding to this difference of nature? Certainly. How, then, can you deny that you are mistaken and in contradiction with yourselves when you turn around and affirm that the men and the women ought to do the same thing, though their natures are so far apart? Can you surprise me with an answer to that question?

Glaucon:: Not easily on this sudden challenge, but I will and do beg you to lend your voice to the plea in our behalf, whatever it may be.

Socrates:: These and many similar difficulties, Glaucon, I foresaw and feared, and so shrank from touching on the law concerning the getting and breeding of women and children.

Glaucon:: It does not seem an easy thing, by heaven, no, by heaven.

Socrates:: No, it is not, but the fact is that whether one tumbles into a little diving pool or plump into the great sea he swims all the same.

Glaucon:: By all means.

Socrates:: Then we, too, must swim and try to escape out of the sea of argument in the hope that either some dolphin will take us on its back or some other desperate rescue.

Glaucon:: So it seems.

Socrates:: Come then, consider, if we can find a way out. We did agree that different natures should have differing pursuits and that the natures of men and women differ. And yet now we affirm that these differing natures should have the same pursuits. That is the indictment?

Glaucon:: It is.

Socrates:: What a grand thing, Glaucon, is the power of the art of contradiction!

Glaucon:: Why so?

Socrates:: Because, many appear to me to fall into it even against their wills, and to suppose that they are not wrangling but arguing, owing to their inability to apply the proper divisions and distinctions to the subject under consideration. They pursue purely verbal oppositions, practicing eristic, not dialectic on one another.

Socrates:: Yes, this does happen to many, but does this observation apply to us too at present?

Socrates:: Absolutely. At any rate I am afraid that we are unawares slipping into contentiousness.

Glaucon:: In what way?

Socrates:: The principle that natures not the same ought not to share in the same pursuits we are following up most manfully and eristically in the literal and verbal sense, but we did not delay to consider at all what particular kind of diversity and identity of nature we had in mind and with reference to what we were trying to define it when we assigned different pursuits to different natures and the same to the same.

Glaucon:: No, we didn’t consider that.

Socrates:: Wherefore, by the same token, we might ask ourselves whether the natures of bald and long-haired men are the same and not, rather, the contrary. And, after agreeing that they were opposed, we might, if the bald cobbled, forbid the long-haired to do so, or vice versa.

Glaucon:: That would be ridiculous.

Socrates:: Would it be so, for any other reason than that we did not then posit likeness and difference of nature in any and every sense, but were paying heed solely to the kind of diversity and homogeneity that was pertinent to the pursuits themselves? We meant, for example, that a man and a woman who have a physician’s mind have the same nature. Don’t you think so?

Glaucon:: I do.

Socrates:: But that a man physician and a man carpenter have different natures?

Glaucon:: Certainly, I suppose.

Socrates:: Similarly, then, if it appears that the male and the female sex have distinct qualifications for any arts or pursuits, we shall affirm that they ought to be assigned respectively to each. But if it appears that they differ only in just this respect that the female bears and the male begets, we shall say that no proof has yet been produced that the woman differs from the man for our purposes, but we shall continue to think that our guardians and their wives ought to follow the same pursuits.

GLAUCON : And rightly.

Socrates:: Then, is it not the next thing to bid our opponent tell us precisely for what art or pursuit concerned with the conduct of a state the woman's nature differs from the man's?

Glaucon:: That would be at any rate fair.

Socrates:: Perhaps, then, someone else, too, might say what you were saying a while ago, that it is not easy to find a satisfactory answer on a sudden, but that with time for reflection there is no difficulty.

Glaucon:: He might say that.

Socrates:: Shall we, then, beg the raiser of such objections to follow us, if we may perhaps prove able to make it plain to him that there is no pursuit connected with the administration of a state that is peculiar to woman?

Glaucon:: By all means.

Socrates:: Come then, we shall say to him, answer our question. Was this the basis of your distinction between the man naturally gifted for anything and the one not so gifted—that the one learned easily, the other with difficulty, that the one with slight instruction could discover much for himself in the matter studied, but the other, after much instruction and drill, could not even remember what he had learned, and that the bodily faculties of the one adequately served his mind, while, for the other, the body was a hindrance? Were there any other points than these by which you distinguish the well-endowed man in every subject and the poorly endowed?

Glaucon:: No one, will be able to name any others.

Socrates:: Do you know, then, of anything practiced by mankind in which the masculine sex does not surpass the female on all these points? Must we make a long story of it by alleging weaving and the watching of pancakes and the boiling pot, whereon the sex plumes itself and wherein its defeat will expose it to most laughter?

Glaucon:: You are right, that the one sex is far surpassed by the other in everything, one may say. Many women, it is true, are better than many men in many things, but broadly speaking, it is as you say.

Socrates:: Then there is no pursuit of the administrators of a state that belongs to a woman because she is a woman or to a man because he is a man. But the natural capacities are distributed alike among both creatures, and women naturally share in all pursuits and men in all—yet for all the woman is weaker than the man.

Glaucon:: Assuredly.

Socrates:: Shall we, then, assign them all to men and nothing to women?

Glaucon:: How could we?

Socrates:: We shall rather, I take it, say that one woman has the nature of a physician and another not, and one is by nature musical, and another unmusical?

Glaucon:: Surely.

Socrates:: Can we, then, deny that one woman is naturally athletic and warlike and another unwarlike and averse to gymnastics?

Glaucon:: I think not.

Socrates:: And again, one a lover, another a hater, of wisdom? And one high-spirited, and the other lacking spirit?

Glaucon:: That also is true.

Socrates:: Then it is likewise true that one woman has the qualities of a guardian and another not. Were not these the natural qualities of the men also whom we selected for guardians?

Glaucon:: They were.

Socrates:: The women and the men, then, have the same nature in respect to the guardianship of the state, save in so far as the one is weaker, the other stronger.

Glaucon:: Apparently.

Socrates:: Women of this kind, then, must be selected to cohabit with men of this kind and to serve with them as guardians since they are capable of it and akin by nature.

Glaucon:: By all means.

Socrates:: And to the same natures must we not assign the same pursuits?

Glaucon:: The same.

Socrates:: We come round, then, to our previous statement, and agree that it does not run counter to nature to assign music and gymnastics to the wives of the guardians.

Glaucon:: By all means.

Socrates:: Our legislation, then, was not impracticable or utopian, since the law we proposed accorded with nature. Rather, the other way of doing things, prevalent today, proves, as it seems, unnatural.

Glaucon:: Apparently.

Socrates:: The object of our inquiry was the possibility and the desirability of what we were proposing?

Glaucon:: It was.

Socrates:: That it is possible has been admitted.

Glaucon:: Yes.

Socrates:: The next point to be agreed upon is that it is the best way.

Glaucon:: Obviously.

Socrates:: For the production of a female guardian, then, our education will not be one thing for men and another for women, especially since the nature which we hand over to it is the same.

Glaucon:: There will be no difference.

Socrates:: How are you minded, now, in this matter?

Glaucon:: In what?

Socrates:: In the matter of supposing some men to be better and some worse, or do you think them all alike?

Glaucon:: By no means.

Socrates:: In the city, then, that we are founding, which do you think will prove the better men, the guardians receiving the education which we have described or the cobblers educated by the art of cobbling?

Glaucon:: An absurd question.

Socrates:: I understand, and are not these the best of all the citizens?

Glaucon:: By far.

Socrates:: And will not these women be the best of all the women?

Glaucon:: They, too, by far.

Socrates:: Is there anything better for a state than the generation in it of the best possible women and men?

Glaucon:: There is not.

Socrates:: And this, music and gymnastics applied as we described will effect.

Glaucon:: Surely.

Socrates:: Then the institution we proposed is not only possible but the best for the state.

Glaucon:: That is so.

Socrates:: The women of the guardians, then, must strip, since they will be clothed with virtue as a garment, and must take their part with the men in war and the other duties of civic guardianship and have no other occupation. But in these very duties lighter tasks must be assigned to the women than to the men because of their weakness as a class. But the man who ridicules unclad women, exercising because it is best that they should, ‘plucks the unripe fruit’ of laughter and does not know, it appears, the end of his laughter nor what he would be at. For the fairest thing that is said or ever will be said is this, that the helpful is fair and the harmful foul.

Glaucon:: Assuredly.

Socrates:: In this matter, then, of the regulation of women, we may say that we have surmounted one of the waves of our paradox and have not been quite swept away by it in ordaining that our guardians and female guardians must have all pursuits in common, but that in some sort the argument concurs with itself in the assurance that what it proposes is both possible and beneficial.

Glaucon:: It is no slight wave that you are thus escaping.

Socrates:: You will not think it a great one, when you have seen the one that follows.

Glaucon:: Say on then and show me.

Socrates:: This, and all that precedes has for its sequel, in my opinion, the following law.

Glaucon:: What?

Socrates:: That these women shall all be common to all these men, and that none shall cohabit with any privately, and that the children shall be common, and that no parent shall know its own offspring nor any child its parent.

Glaucon:: This is a far bigger paradox than the other, and provokes more distrust as to its possibility and its utility.

Socrates:: I presume, that there would be no debate about its utility, no denial that the community of women and children would be the greatest good, supposing it possible. But I take it that its possibility or the contrary would be the chief topic of contention.

Glaucon:: Both, would be right sharply debated.

Socrates:: You mean, that I have to meet a coalition of arguments. But I expected to escape from one of them, and that if you agreed that the thing was beneficial, it would remain for me to speak only of its feasibility.

Glaucon:: You have not escaped detection, in your attempted flight, but you must render an account of both.

Socrates:: I must pay the penalty, yet do me this much grace. Permit me to take a holiday, just as men of lazy minds are wont to feast themselves on their own thoughts when they walk alone. Such persons, without waiting to discover how their desires may be realized, dismiss that topic to save themselves the labor of deliberating about possibilities and impossibilities, assume their wish fulfilled, and proceed to work out the details in imagination, and take pleasure in portraying what they will do when it is realized, thus making still more idle a mind that is idle without that. I too now succumb to this weakness and desire to postpone and examine later the question of feasibility, but will at present assume that, and will, with your permission, inquire how the rulers will work out the details in practice, and try to show that nothing could be more beneficial to the state and its guardians than the effective operation of our plan. This is what I would try to consider first together with you, and thereafter the other topic, if you allow it.

Glaucon:: I do allow it, Proceed with the inquiry.

Socrates:: I think, then, that the rulers, if they are to deserve that name, and their helpers likewise, will, the one, be willing to accept orders, and the other, to give them, in some things obeying our laws, and imitating them in others which we leave to their discretion.

Glaucon:: Presumably.

Socrates:: You, then, the lawgiver, have picked these men and similarly will select to give over to them women as nearly as possible of the same nature. And they, having houses and meals in common, and no private possessions of that kind, will dwell together, and being commingled in gymnastics and in all their life and education, will be conducted by innate necessity to sexual union. Is not what I say a necessary consequence?

Glaucon:: Not by the necessities of geometry, but by those of love, which are perhaps keener and more potent than the other to persuade and constrain the multitude.

Socrates:: They are, indeed. But next, Glaucon, disorder and promiscuity in these unions or in anything else they do would be an unhallowed thing in a happy state and the rulers will not suffer it.

Glaucon:: It would not be right.

Socrates:: Obviously, then, we must arrange marriages, sacramental so far as may be. And the most sacred marriages would be those that were most beneficial.

Glaucon:: By all means.

Socrates:: How, then, would the greatest benefit result? Tell me this, Glaucon. I see that you have in your house hunting dogs and a number of pedigreed cocks. Have you ever considered something about their unions and procreations?

Glaucon:: What?

Socrates:: In the first place, among these themselves, although they are a select breed, do not some prove better than the rest?

Glaucon:: They do.

Socrates:: Do you then breed from all indiscriminately, or are you careful to breed from the best?

Glaucon:: From the best.

Socrates:: And, again, do you breed from the youngest or the oldest, or, so far as may be, from those in their prime?

Glaucon:: From those in their prime.

Socrates:: And if they are not thus bred, you expect, do you not, that your birds' breed and hounds will greatly degenerate?

Glaucon:: I do.

Socrates:: And what of horses and other animals? Is it otherwise with them?

Glaucon:: It would be strange if it were.

Socrates:: Gracious, dear friend, how imperative, then, is our need of the highest skill in our rulers, if the principle holds also for mankind.

Glaucon:: Well, it does, but what of it?

Socrates:: This, that they will have to employ many of those drugs of which we were speaking. We thought that an inferior physician sufficed for bodies that do not need drugs but yield to diet and regimen. But when it is necessary to prescribe drugs we know that a more enterprising and venturesome physician is required.

Glaucon:: True, but what is the pertinency?

Socrates:: This. It seems likely that our rulers will have to make considerable use of falsehood and deception for the benefit of their subjects. We said, I believe, that the use of that sort of thing was in the category of medicine.

Glaucon:: And that was right.

Socrates:: In our marriages, then, and the procreation of children, it seems there will be no slight need of this kind of 'right.'

Glaucon:: How so?

Socrates:: It follows from our former admissions, that the best men must cohabit with the best women in as many cases as possible and the worst with the worst in the fewest, and that the offspring of the one must be reared and that of the other not, if the flock is to be as perfect as possible. And the way in which all this is brought to pass must be unknown to any but the rulers, if, again, the herd of guardians is to be as free as possible from dissension.

Glaucon:: Most true.

Socrates:: We shall, then, have to ordain certain festivals and sacrifices, in which we shall bring together the brides and the bridegrooms, and our poets must compose hymns suitable to the marriages that then take place. But the number of the marriages we will leave to the discretion of the rulers, that they may keep the number of the citizens as nearly as may be the same, taking into account wars and diseases and all such considerations, and that, so far as possible, our city may not grow too great or too small.

Glaucon:: Right.

Socrates:: Certain ingenious lots, then, I suppose, must be devised so that the inferior man at each conjugation may blame chance and not the rulers.

Glaucon:: Yes, indeed.

Socrates:: And on the young men, surely, who excel in war and other pursuits we must bestow honors and prizes, and, in particular, the opportunity of more frequent intercourse with the women, which will at the same time be a plausible pretext for having them beget as many of the children as possible.

Glaucon:: Right.

Socrates:: And the children thus born will be taken over by the officials appointed for this, men or women or both, since, I take it, the official posts too are common to women and men.

Glaucon:: Yes.

Socrates:: The offspring of the good, I suppose, they will take to the pen or creche, to certain nurses who live apart in a quarter of the city, but the offspring of the inferior, and any of those of the other sort who are born defective, they will properly dispose of in secret, so that no one will know what has become of them.

Glaucon:: That is the condition, of preserving the purity of the guardians' breed.

Socrates:: They will also supervise the nursing of the children, conducting the mothers to the pen when their breasts are full, but employing every device to prevent anyone from recognizing her own infant. And they will provide others who have milk if the mothers are insufficient. But they will take care that the mothers themselves shall not suckle too long, and the trouble of wakeful nights and similar burdens they will devolve upon the nurses, wet and dry.

Glaucon:: You are making maternity a soft job for the women of the guardians.

Socrates:: It ought to be, but let us pursue our design. We said that the offspring should come from parents in their prime.

Glaucon:: True.

Socrates:: Do you agree that the period of the prime may be fairly estimated at twenty years for a woman and thirty for a man?

Glaucon:: How do you reckon it?

Socrates:: The women, beginning at the age of twenty, shall bear for the state to the age of forty, and the man shall beget for the state from the time he passes his prime in swiftness in running to the age of fifty-five.

Glaucon:: That is, the maturity and prime for both of body and mind.

Socrates:: Then, if anyone older or younger than the prescribed age meddles with procreation for the state, we shall say that his error is an impiety and an injustice, since he is begetting for the city a child whose birth, if it escapes discovery, will not be attended by the sacrifices and the prayers which the priests and priestesses and the entire city prefer at the ceremonial marriages, that ever better offspring may spring from good sires and from fathers helpful to the state sons more helpful still. But this child will be born in darkness and conceived in foul incontinence.

Glaucon:: Right.

Socrates:: And the same rule will apply, if any of those still within the age of procreation goes in to a woman of that age with whom the ruler has not paired him. We shall say that he is imposing on the state a baseborn, uncertified, and unhallowed child.

Glaucon:: Most rightly.

Socrates:: But when, I take it, the men and the women have passed the age of lawful procreation, we shall leave the men free to form such relations with whomsoever they please, except daughter and mother and their direct descendants and ascendants, and likewise the women, save with son and father, and so on, first admonishing them preferably not even to bring to light anything whatever thus conceived, but if they are unable to prevent a birth to dispose of it on the understanding that we cannot rear such an offspring.

Glaucon:: All that sounds reasonable, but how are they to distinguish one another's fathers and daughters, and the other degrees of kin that you have just mentioned?

Socrates:: They won't, except that a man will call all male offspring born in the tenth and in the seventh month after he became a bridegroom his sons, and all female, daughters, and they will call him father. And, similarly, he will call their offspring his grandchildren and they will call his group grandfathers and grandmothers. And all children born in the period in which their fathers and mothers were procreating will regard one another as brothers and sisters. This will suffice for the prohibitions of intercourse of which we just now spoke. But the law will allow brothers and sisters to cohabit if the lot so falls out and the Delphic oracle approves.

Glaucon:: Quite right.

Socrates:: This, then, Glaucon, is the manner of the community of wives and children among the guardians. That it is consistent with the rest of our polity and by far the best way is the next point that we must get confirmed by the argument. Is not that so?

Glaucon:: It is, indeed.

Socrates:: Is not the logical first step toward such an agreement to ask ourselves what we could name as the greatest good for the constitution of a state and the proper aim of a lawgiver in his legislation, and what would be the greatest evil, and then to consider whether the proposals we have just set forth fit into the footprints of the good and do not suit those of the evil?

Glaucon:: By all means.

Socrates:: Do we know of any greater evil for a state than the thing that distracts it and makes it many instead of one, or a greater good than that which binds it together and makes it one?

Glaucon:: We do not.

Socrates:: Is not, then, the community of pleasure and pain the tie that binds, when, so far as may be, all the citizens rejoice and grieve alike at the same births and deaths?

Glaucon:: By all means.

Socrates:: But the individualization of these feelings is a dissolvent, when some grieve exceedingly and others rejoice at the same happenings to the city and its inhabitants?

Glaucon:: Of course.

Socrates:: And the chief cause of this is when the citizens do not utter in unison such words as 'mine' and 'not mine,' and similarly with regard to the word 'alien'?

Glaucon:: Precisely so.

Socrates:: That city, then, is best ordered in which the greatest number use the expression 'mine' and 'not mine' of the same things in the same way.

Glaucon:: Much the best.

Socrates:: And the city whose state is most like that of an individual man. For example, if the finger of one of us is wounded, the entire community of bodily connections stretching to the soul for ‘integration’ with the dominant part is made aware, and all of it feels the pain as a whole, though it is a part that suffers, and that is how we come to say that the man has a pain in his finger. And for any other member of the man the same statement holds, alike for a part that labors in pain or is eased by pleasure.

Glaucon:: The same, and, to return to your question, the best-governed state most nearly resembles such an organism.

Socrates:: That is the kind of a state, then, I presume, that, when anyone of the citizens suffers aught of good or evil, will be most likely to speak of the part that suffers as its own and will share the pleasure or the pain as a whole.

Glaucon:: Inevitably, if it is well governed.

Socrates:: It is time, to return to our city and observe whether it, rather than any other, embodies the qualities agreed upon in our argument.

Glaucon:: We must.

Socrates:: Well, then, there are to be found in other cities rulers and the people as in our city, are there not?

Glaucon:: There are.

Socrates:: Will not all these address one another as fellow citizens?

Glaucon:: Of course.

Socrates:: But in addition to citizens, what do the people in other states call their rulers?

Glaucon:: In most cities, masters, in democratic cities, just this—rulers.

Socrates:: But what of the people in our city. In addition to citizens, what do they call their rulers?

Glaucon:: Saviors and helpers.

Socrates:: And what term do these apply to the people?

Glaucon:: Payers of their wage and supporters.

Socrates:: And how do the rulers in other states denominate the populace?

Glaucon:: Slaves.

Socrates:: And how do the rulers describe one another?

Glaucon:: Co-rulers.

Socrates:: And ours?

Glaucon:: Co-guardians.

Socrates:: Can you tell me whether any of the rulers in other states would speak of some of their corulers as ‘belonging’ and others as outsiders?

Glaucon:: Yes, many would.

Socrates:: And such a one thinks and speaks of the one that ‘belongs’ as his own, doesn’t he, and of the outsider as not his own?

Glaucon:: That is so.

Socrates:: But what of your guardians? Could any of them think or speak of his coguardian as an outsider?

Glaucon:: By no means, for no matter whom he meets, he will feel that he is meeting a brother, a sister, a father, a mother, a son, a daughter, or the offspring or forebears of these.

Socrates:: Excellent, but tell me this further. Will it be merely the names of this kinship that you have prescribed for them or must all their actions conform to the names in all customary observance toward fathers and in awe and care and obedience for parents, if they look for the favor of either gods or men, since any other behavior would be neither just nor pious? Shall these be the unanimous oracular voices that they hear from all the people, or shall some other kind of teaching beset the ears of your children from their birth, both concerning what is due to those who are pointed out as their fathers and to their other kin?

Glaucon:: These, for it would be absurd for them merely to pronounce with their lips the names of kinship without the deeds.

Socrates:: Then, in this city more than in any other, when one citizen fares well or ill, men will pronounce in unison the word of which we spoke, It is mine that does well, or, It is mine that does ill.

Glaucon:: That is most true.

Socrates:: And did we not say that this conviction and way of speech brings with it a community in pleasures and pains?

Glaucon:: And rightly, too.

Socrates:: Then these citizens, above all others, will have one and the same thing in common which they will name mine, and by virtue of this communion they will have their pleasures and pains in common.

Glaucon:: Quite so.

Socrates:: And is not the cause of this, besides the general constitution of the state, the community of wives and children among the guardians?

Glaucon:: It will certainly be the chief cause.

Socrates:: But we further agreed that this unity is the greatest blessing for a state, and we compared a well-governed state to the human body in its relation to the pleasure and pain of its parts.

Glaucon:: And we were right in so agreeing.

Socrates:: Then it is the greatest blessing for a state of which the community of women and children among the helpers has been shown to be the cause.

Glaucon:: Quite so.

Socrates:: And this is consistent with what we said before. For we said, I believe, that these helpers must not possess houses of their own or land or any other property, but that they should receive from the other citizens for their support the wage of their guardianship and all spend it in common. That was the condition of their being true guardians.

Glaucon:: Right.

Socrates:: Is it not true, then, as I am trying to say, that those former and these present prescriptions tend to make them still more truly guardians and prevent them from distracting the city by referring mine not to the same but to different things, one man dragging off to his own house anything he is able to acquire apart from the rest, and another doing the same to his own separate house, and having women and children apart, thus introducing into the state the pleasures and pains of individuals? They should all rather, we said, share one conviction about their own, tend to one goal, and so far as practicable have one experience of pleasure and pain.

Glaucon:: By all means.

Socrates:: Then will not lawsuits and accusations against one another vanish, one may say, from among them, because they have nothing in private possession but their bodies, but all else in common? So that we can count on their being free from the dissensions that arise among men from the possession of property, children, and kin.

Glaucon:: They will necessarily be quit of these.

Socrates:: And again, there could not rightly arise among them any lawsuit for assault or bodily injury. For as between age-fellows we shall say that self-defense is honorable and just, thereby compelling them to keep their bodies in condition.

Glaucon:: Right.

Socrates:: And there will be the further advantage in such a law that an angry man, satisfying his anger in such wise, would be less likely to carry the quarrel to further extremes.

Glaucon:: Assuredly.

Socrates:: As for an older man, he will always have the charge of ruling and chastising the younger.

Glaucon:: Obviously.

Socrates:: Again, it is plain that the young man, except by command of the rulers, will probably not do violence to an elder or strike him, or, I take it, dishonor him in any other way. There being the two competent guardians to prevent that, fear and awe, awe restraining him from laying hands on one who may be his parent, and fear in that the others will rush to the aid of the sufferer, some as sons, some as brothers, some as fathers.

Glaucon:: That is the way it works out.

Socrates:: Then in all cases the laws will leave these men to dwell in peace together.

Glaucon:: Great peace.

Socrates:: And if these are free from dissensions among themselves, there is no fear that the rest of the city will ever start faction against them or with one another.

Glaucon:: No, there is not.

Socrates:: But I hesitate, so unseemly are they, even to mention the pettiest troubles of which they would be rid, the flatterings of the rich, the embarrassments and pains of the poor in the bringing-up of their children and the procuring of money for the necessities of life for their households, the borrowings, the repudiations, all the devices with which they acquire what they deposit with wives and servitors to husband, and all the indignities that they endure in such matters, which are obvious and ignoble and not deserving of mention.

Glaucon:: Even a blind man can see these.

Socrates:: From all these, then, they will be finally free, and they will live a happier life than that men count most happy, the life of the victors at Olympia.

Glaucon:: How so?

Socrates:: The things for which those are felicitated are a small part of what is secured for these. Their victory is fairer and their public support more complete. For the prize of victory that they win is the salvation of the entire state, the fillet that binds their brows is the public support of themselves and their children—they receive honor from the city while they live and when they die a worthy burial.

Glaucon:: A fair guerdon, indeed.

Socrates:: Do you recall, that in the preceding argument the objection of somebody or other rebuked us for not making our guardians happy, since, though it was in their power to have everything of the citizens, they had nothing, and we, I believe, replied that this was a consideration to which we would return if occasion offered, but that at present we were making our guardians guardians and the city as a whole as happy as possible, and that we were not modeling our ideal of happiness with reference to any one class?

Glaucon:: I do remember.

Socrates:: Well then, since now the life of our helpers has been shown to be far fairer and better than that of the victors at Olympia, need we compare it with the life of cobblers and other craftsmen and farmers?

Glaucon:: I think not.

Socrates:: But further, we may fairly repeat what I was saying then also, that if the guardian shall strive for a kind of happiness that will unmake him as a guardian and shall not be content with the way of life that is so moderate and secure and, as we affirm, the best, but if some senseless and childish opinion about happiness shall beset him and impel him to use his power to appropriate everything in the city for himself, then he will find out that Hesiod was indeed wise, who said that the half was in some sort more than the whole.

Glaucon:: If he accepts my counsel, he will abide in this way of life.

Socrates:: You accept, then, as we have described it, this partnership of the women with our men in the matter of education and children and the guardianship of the other citizens, and you admit that both within the city and when they go forth to war they ought to keep guard together and hunt together as it were like hounds, and have all things in a every way, so far as possible, in common, and that so doing they will do what is for the best and nothing that is contrary to female human nature in comparison with male or to their natural fellowship with one another.

Glaucon:: I do admit it.

Socrates:: Then, is not the thing that it remains to determine this, whether, namely, it is possible for such a community to be brought about among men as it is in the other animals, and in what way it is possible?

Glaucon:: You have anticipated, the point I was about to raise.

Socrates:: For as for their wars, the manner in which they will conduct them is too obvious for discussion.

Glaucon:: How so?

Socrates:: It is obvious that they will march out together, and, what is more, will conduct their children to war when they are sturdy, in order that, like the children of other craftsmen, they may observe the processes of which they must be masters in their maturity, and in addition to looking on they must assist and minister in all the business of war and serve their fathers and mothers. Or have you never noticed the practice in the arts, how for example the sons of potters look on as helpers a long time before they put their hands to the clay?

Glaucon:: They do, indeed.

Socrates:: Should these then be more concerned than our guardians to train the children by observation and experience of what is to be their proper business?

Glaucon:: That would be ridiculous.

Socrates:: But, further, when it comes to fighting, every creature will do better in the presence of its offspring?

Glaucon:: That is so, but the risk, Socrates, is not slight, in the event of disasters such as may happen in war, that, losing their children as well as themselves, they make it impossible for the remnant of the state to recover.

Socrates:: What you say is true, but, in the first place, is it your idea that the one thing for which we must provide is the avoidance of all danger?

Glaucon:: By no means.

Socrates:: And, if they must incur danger, should it not be for something in which success will make them better?

Glaucon:: Clearly.

Socrates:: Do you think it makes a slight difference and not worth some risk whether men who are to be warriors do or do not observe war as boys?

Glaucon:: No, it makes a great difference for the purpose of which you speak.

Socrates:: Starting, then, from this assumption that we are to make the boys spectators of war, we must further contrive security for them and all will be well, will it not?

Glaucon:: Yes.

Socrates:: To begin with, then, will not the fathers be, humanly speaking, not ignorant of war and shrewd judges of which campaigns are hazardous and which not?

Glaucon:: Presumably.

Socrates:: They will take the boys with them to the one and avoid the others?

Glaucon:: Rightly.

Socrates:: And for officers, I presume, they will put in charge of them not those who are good for nothing else but men who by age and experience are qualified to serve at once as leaders and as case-takers of children.

Glaucon:: Yes, that would be the proper way.

Socrates:: Still, we may object, it is the unexpected that happens to many in many cases.

Glaucon:: Yes, indeed.

Socrates:: To provide against such chances, then, we must wing the children from the start so that if need arises they may fly away and escape.

Glaucon:: What do you mean?

Socrates:: We must mount them when very young, and first have them taught to ride, and then conduct them to the scene of war, not on mettlesome war steeds, but on the swiftest and gentlest horses possible, for thus they will have the best view of their own future business and also, if need arises, will most securely escape to safety in the train of elder guides.

Glaucon:: I think you are right.

Socrates:: But now what of the conduct of war? What should be the attitude of the soldiers to one another and the enemy? Am I right in my notions or not?

Glaucon:: Tell me what notions.

Socrates:: Any one of them who deserts his post, or flings away his weapons, or is guilty of any similar act of cowardice, should be reduced to the artisan or farmer class, should he not?

Glaucon:: By all means.

Socrates:: And anyone who is taken alive by the enemy we will make a present of to his captors, shall we not, to deal with their catch as they please?

Glaucon:: Quite so.

Socrates:: And don’t you agree that the one who wins the prize of valor and distinguishes himself shall first be crowned by his fellows in the campaign, by the lads and boys each in turn?

Glaucon:: I do.

Socrates:: And be greeted with the right hand?

Glaucon:: That, too.

Socrates:: But I presume you wouldn’t go as far as this?

Glaucon:: What?

Socrates:: That he should kiss and be kissed by everyone?

Glaucon:: By all means, and I add to the law the provision that during that campaign none whom he wishes to kiss be allowed to refuse, so that if one is in love with anyone, male or female, he may be the more eager to win the prize.

Socrates:: Excellent, and we have already said that the opportunity of marriage will be more readily provided for the good man, and that he will be more frequently selected than the others for participation in that sort of thing, in order that as many children as possible may be born from such stock.

Glaucon:: We have.

Socrates:: But, furthermore, we may cite Homer too for the justice of honoring in such ways the valiant among our youth. For Homer says that Ajax, who had distinguished himself in the war, was honored with the long chine, assuming that the most fitting meed for a brave man in the prime of his youth is that from which both honor and strength will accrue to him.

Glaucon:: Most rightly.

Socrates:: We will then, take Homer as our guide in this at least. We, too, at sacrifices and on other like occasions, will reward the good so far as they have proved themselves good with hymns and the other privileges of which we have just spoken, and also with 'seats of honor and meat and full cups,' so as to combine physical training with honor for the good, both men and women.

Glaucon:: Nothing could be better.

Socrates:: Very well, and of those who die on campaign, if anyone's death has been especially glorious, shall we not, to begin with, affirm that he belongs to the golden race?

Glaucon:: By all means.

Socrates:: And shall we not believe Hesiod who tells us that when men of this race die, so it is that they become

> Hallowed spirits dwelling on earth, averters of evil,
> Guardians watchful and good of articulate-speaking mortals?

Glaucon:: We certainly shall believe him.

Socrates:: We will inquire of Apollo, then, how and with what distinction we are to bury men of more than human, of divine, qualities, and deal with them according to his response.

Glaucon:: How can we do otherwise?

Socrates:: And ever after we will bestow on their graves the tendance and worship paid to spirits divine. And we will practice the same observance when any who have been adjudged exceptionally good in the ordinary course of life die of old age or otherwise?

Glaucon:: That will surely be right.

Socrates:: But again, how will our soldiers conduct themselves toward enemies?

Glaucon:: In what respect?

Socrates:: First, in the matter of making slaves of the defeated, do you think it right for Greeks to reduce Greek cities to slavery, or rather that, so far as they are able, they should not suffer any other city to do so, but should accustom Greeks to spare Greeks, foreseeing the danger of enslavement by the barbarians?

Glaucon:: Sparing them is wholly and altogether the better.

Socrates:: They are not, then, themselves to own Greek slaves, either, and they should advise the other Greeks not to?

Glaucon:: By all means, At any rate in that way they would be more likely to turn against the barbarians and keep their hands from one another.

Socrates:: And how about stripping the dead after victory of anything except their weapons—is that well? Does it not furnish a pretext to cowards not to advance on the living foe, as if they were doing something needful when poking about the dead? Has not this snatching at the spoils ere now destroyed many an army?

Glaucon:: Yes, indeed.

Socrates:: And don't you think it illiberal and greedy to plunder a corpse, and is it not the mark of a womanish and petty spirit to deem the body of the dead an enemy when the real foeman has flown away and left behind only the instrument with which he fought? Do you see any difference between such conduct and that of the dogs who snarl at the stones that hit them but don't touch the thrower?

Glaucon:: Not the slightest.

Socrates:: We must abandon, then, the plundering of corpses and the refusal to permit their burial.

Glaucon:: By heaven, we certainly must.

Socrates:: And again, we will not take weapons to the temples for dedicatory offerings, especially the weapons of Greeks, if we are at all concerned to preserve friendly relations with the other Greeks. Rather we shall fear that there is pollution in bringing such offerings to the temples from our kind unless in a case where the god bids otherwise.

Glaucon:: Most rightly.

Socrates:: And in the matter of devastating the land of Greeks and burning their houses, how will your soldiers deal with their enemies? I would gladly hear your opinion of that.

Socrates:: In my view, they ought to do neither, but confine themselves to taking away the annual harvest. Shall I tell you why?

Glaucon:: Do.

Socrates:: In my opinion, just as we have the two terms, war and faction, so there are also two things, distinguished by two differentiae. The two things I mean are the friendly and kindred on the one hand and the alien and foreign on the other. Now the term employed for the hostility of the friendly is faction, and for that of the alien is war.

Glaucon:: What you say is in nothing beside the mark.

Socrates:: Consider, then, if this goes to the mark. I affirm that the Hellenic race is friendly to itself and akin, and foreign and alien to the barbarian.

Glaucon:: Rightly.

Socrates:: We shall then say that Greeks fight and wage war with barbarians, and barbarians with Greeks, and are enemies by nature, and that war is the fit name for this enmity and hatred. Greeks, however, we shall say, are still by nature the friends of Greeks when they act in this way, but that Greece is sick in that case and divided by faction, and faction is the name we must give to that enmity.

Glaucon:: I will allow you that habit of speech.

Socrates:: Then observe, that when anything of this sort occurs in faction, as the word is now used, and a state is divided against itself, if either party devastates the land and burns the houses of the other such factional strife is thought to be an accursed thing and neither party to be true patriots. Otherwise, they would never have endured thus to outrage their nurse and mother. But the moderate and reasonable thing is thought to be that the victors shall take away the crops of the vanquished, but that their temper shall be that of men who expect to be reconciled and not always to wage war.

Glaucon:: That way of feeling, is far less savage than the other.

Socrates:: Well, then, is not the city that you are founding to be a Greek city?

Glaucon:: It must be.

Socrates:: Will they then not be good and gentle?

Glaucon:: Indeed they will.

Socrates:: And won't they be philhellenes, lovers of Greeks, and will they not regard all Greece as their own and not renounce their part in the holy places common to all Greeks?

Glaucon:: Most certainly.

Socrates:: Will they not then regard any difference with Greeks who are their own people as a form of faction and refuse even to speak of it as war?

Glaucon:: Most certainly.

Socrates:: And they will conduct their quarrels always looking forward to a reconciliation?

Glaucon:: By all means.

Socrates:: They will correct them, then, for their own good, not chastising them with a view to their enslavement or their destruction, but acting as correctors, not as enemies.

Glaucon:: They will.

Socrates:: They will not, being Greeks, ravage Greek territory nor burn habitations, and they will not admit that in any city all the population are their enemies, men, women, and children, but will say that only a few at any time are their foes, those, namely, who are to blame for the quarrel. And on all these considerations they will not be willing to lay waste the soil, since the majority are their friends, nor to destroy the houses, but will carry the conflict only to the point of compelling the guilty to do justice by the pressure of the suffering of the innocent.

Glaucon:: I, agree that our citizens ought to deal with their Greek opponents on this wise, while treating barbarians as Greeks now treat Greeks.

Socrates:: Shall we lay down this law also, then, for our guardians, that they are not to lay waste the land or burn the houses?

Glaucon:: Let us so decree, and assume that this and our preceding prescriptions are right. But I fear, Socrates, that, if you are allowed to go on in this fashion, you will never get to speak of the matter you put aside in order to say all this, namely, the possibility of such a polity coming into existence, and the way in which it could be brought to pass. I too am ready to admit that if it could be realized everything would be lovely for the state that had it, and I will add what you passed by, that they would also be most successful in war because they would be least likely to desert one another, knowing and addressing each other by the names of brothers, fathers, sons. And if the females should also join in their campaigns, whether in the ranks or marshaled behind to intimidate the enemy, or as reserves in case of need, I recognize that all this too would make them irresistible. And at home, also, I observe all the benefits that you omit to mention. But, taking it for granted that I concede these and countless other advantages, consequent on the realization of this polity, don’t labor that point further, but let us at once proceed to try to convince ourselves of just this, that it is possible and how it is possible, dismissing everything else.

Socrates:: This is a sudden assault, indeed, that you have made on my theory, without any regard for my natural hesitation. Perhaps you don’t realize that when I have hardly escaped the first two waves, you are now rolling up against me the ‘great third wave’ of paradox, the worst of all. When you have seen and heard that, you will be very ready to be lenient, recognizing that I had good reason after all for shrinking and fearing to enter upon the discussion of so paradoxical a notion.

Glaucon:: The more such excuses you offer, the less you will be released by us from telling in what way the realization of this polity is possible. Speak on, then, and do not put us off.

Socrates:: The first thing to recall, then, is that it was the inquiry into the nature of justice and injustice that brought us to this pass.

Glaucon:: Yes, but what of it?

Socrates:: Oh, nothing, only this. If we do discover what justice is, are we to demand that the just man shall differ from it in no respect, but shall conform in every way to the ideal? Or will it suffice us if he approximate to it as nearly as possible and partake of it more than others?

Glaucon:: That will content us.

Socrates:: A pattern, then, was what we wanted when we were inquiring into the nature of ideal justice and asking what would be the character of the perfectly just man, supposing him to exist, and, likewise, in regard to injustice and the completely unjust man. We wished to fix our eyes upon them as types and models, so that whatever we discerned in them of happiness or the reverse would necessarily apply to ourselves in the sense that whosoever is likest them will have the allotment most like to theirs. Our purpose was not to demonstrate the possibility of the realization of these ideals.

Glaucon:: In that, you speak truly.

Socrates:: Do you think, then, that he would be any the less a good painter, who, after portraying a pattern of the ideally beautiful man and omitting no touch required for the perfection of the picture, should not be able to prove that it is actually possible for such a man to exist?

Glaucon:: Not I, by Zeus.

Socrates:: Then were not we, as we say, trying to create in words the pattern of a good state?

Glaucon:: Certainly.

Socrates:: Do you think, then, that our words are any the less well spoken if we find ourselves unable to prove that it is possible for a state to be governed in accordance with our words?

Glaucon:: Of course not.

Socrates:: That, then, is the truth of the matter. But if, to please you, we must do our best to show how most probably and in what respect these things would be most nearly realized, again, with a view to such a demonstration, grant me the same point.

Glaucon:: What?

Socrates:: Is it possible for anything to be realized in deed as it is spoken in word, or is it the nature of things that action should partake of exact truth less than speech, even if some deny it? Do you admit it or not?

Glaucon:: I do.

Socrates:: Then don't insist, that I must exhibit as realized in action precisely what we expounded in words. But if we can discover how a state might be constituted most nearly answering to our description, you must say that we have discovered that possibility of realization which you demanded. Will you not be content if you get this? I for my part would.

Glaucon:: And I too.

Socrates:: Next, it seems, we must try to discover and point out what it is that is now badly managed in our cities, and that prevents them from being so governed, and what is the smallest change that would bring a state to this manner of government, preferably a change in one thing, if not, then in two, and, failing that, the fewest possible in number and the slightest in potency.

Glaucon:: By all means.

Socrates:: There is one change, then, which I think that we can show would bring about the desired transformation. It is not a slight or an easy thing but it is possible.

Glaucon:: What is that?

Socrates:: I am on the very verge, of what we likened to the greatest wave of paradox. But say it I will, even if, to keep the figure, it is likely to wash us away on billows of laughter and scorn. Listen.

Glaucon:: I am all attention.

Socrates:: Unless, either philosophers become kings in our states or those whom we now call our kings and rulers take to the pursuit of philosophy seriously and adequately, and there is a conjunction of these two things, political power and philosophical intelligence, while the motley horde of the natures who at present pursue either apart from the other are compulsorily excluded, there can be no cessation of troubles, dear Glaucon, for our states, nor, I fancy, for the human race either. Nor, until this happens, will this constitution which we have been expounding in theory ever be put into practice within the limits of possibility and see the light of the sun. But this is the thing that has made me so long shrink from speaking out, because I saw that it would be a very paradoxical saying. For it is not easy to see that there is no other way of happiness either for private or public life.

Glaucon:: Whereupon Socrates, after hurling at us such an utterance and statement as that, you must expect to be attacked by a great multitude of our men of light and leading, who forthwith will, so to speak, cast off their garments and strip and, snatching the first weapon that comes to hand, rush at you with might and main, prepared to do dreadful deeds. And if you don’t find words to defend yourself against them, and escape their assault, then to be scorned and flouted will in very truth be the penalty you will have to pay.

Socrates:: And isn’t it you, that have brought this upon me and are to blame?

Glaucon:: And a good thing, too, but I won’t let you down, and will defend you with what I can. I can do so with my good will and my encouragement, and perhaps I might answer your questions more suitably than another. So, with such an aid to back you, try to make it plain to the doubters that the truth is as you say.

Socrates:: I must try, since you proffer so strong an alliance. I think it requisite, then, if we are to escape the assailants you speak of, that we should define for them whom we mean by the philosophers, who we dare to say ought to be our rulers. When these are clearly discriminated it will be possible to defend ourselves by showing that to them by their very nature belong the study of philosophy and political leadership, while it befits the other sort to let philosophy alone and to follow their leader.

Glaucon:: It is high time, to produce your definition.

Socrates:: Come, then, follow me on this line, if we may in some fashion or other explain our meaning.

Glaucon:: Proceed.

Socrates:: Must I remind you, then, or do you remember, that when we affirm that a man is a lover of something, it must be apparent that he is fond of all of it? It will not do to say that some of it he likes and some does not.

Glaucon:: I think you will have to remind me, for I don’t apprehend at all.

Socrates:: That reply, Glaucon, befitted another rather than you. It does not become a lover to forget that all adolescents in some sort sting and stir the amorous lover of youth and appear to him deserving of his attention and desirable. Is not that your ‘reaction’ to the fair? One, because his nose is uptilted, you will praise as piquant, the beak of another you pronounce right royal, the intermediate type you say strikes the harmonious mean, the swarthy are of manly aspect, the white are children of the gods divinely fair, and as for honey-hued, do you suppose the very word is anything but the euphemistic invention of some lover who can feel no distaste for sallowness when it accompanies the blooming time of youth? And, in short, there is no pretext you do not allege and there is nothing you shrink from saying to justify you in not rejecting any who are in the bloom of their prime.

Glaucon:: If it is your pleasure, to take me as your example of this trait in lovers, I admit it for the sake of the argument.

Socrates:: Again, do you not observe the same thing in the lovers of wine? They welcome every wine on any pretext.

Glaucon:: They do, indeed.

Socrates:: And so I take it you have observed that men who are covetous of honor, if they can’t get themselves elected generals, are captains of a company. And if they can’t be honored by great men and dignitaries, are satisfied with honor from little men and nobodies. But honor they desire and must have.

Glaucon:: Yes, indeed.

Socrates:: Admit, then, or reject my proposition. When we say a man is keen about something, shall we say that he has an appetite for the whole class or that he desires only a part and a part not?

Glaucon:: The whole.

Socrates:: Then the lover of wisdom, too, we shall affirm, desires all wisdom, not a part and a part not.

Glaucon:: Certainly.

Socrates:: The student, then, who is finical about his studies, especially when he is young and cannot yet know by reason what is useful and what is not, we shall say is not a lover of learning or a lover of wisdom, just as we say that one who is dainty about his food is not really hungry, has not an appetite for food, and is not a lover of food, but a poor feeder.

Glaucon:: We shall rightly say so.

Socrates:: But the one who feels no distaste in sampling every study, and who attacks his task of learning gladly and cannot get enough of it, him we shall justly pronounce the lover of wisdom, the philosopher, shall we not?

—To which Glaucon replied;

Glaucon:: You will then be giving the name to a numerous and strange band, for all the lovers of spectacles are what they are, I fancy, by virtue of their delight in learning something. And those who always want to hear some new thing are a very queer lot to be reckoned among philosophers. You couldn't induce them to attend a serious debate or any such entertainment, but as if they had farmed out their ears to listen to every chorus in the land, they run about to all the Dionysiac festivals, never missing one, either in the towns or in the country villages. Are we to designate all these, then, and similar folk and all the practitioners of the minor arts as philosophers?

Socrates:: Not at all, but they do bear a certain likeness to philosophers.

Glaucon:: Whom do you mean, then, by the true philosophers?

Socrates:: Those for whom the truth is the spectacle of which they are enamored.

Glaucon:: Right again, but in what sense do you mean it?

Socrates:: It would be by no means easy to explain it to another, but I think that you will grant me this.

Glaucon:: What?

Socrates:: That since the fair and honorable is the opposite of the base and ugly, they are two.

Glaucon:: Of course.

Socrates:: And since they are two, each is one.

Glaucon:: That also.

Socrates:: And in respect of the just and the unjust, the good and the bad, and all the ideas or forms, the same statement holds, that in itself each is one, but that by virtue of their communion with actions and bodies and with one another they present themselves everywhere, each as a multiplicity of aspects.

Glaucon:: Right.

Socrates:: This, then, is my division. I set apart and distinguish those of whom you were just speaking, the lovers of spectacles and the arts, and men of action, and separate from them again those with whom our argument is concerned and who alone deserve the appellation of philosophers or lovers of wisdom.

Glaucon:: What do you mean?

Socrates:: The lovers of sounds and sights, delight in beautiful tones and colors and shapes and in everything that art fashions out of these, but their thought is incapable of apprehending and taking delight in the nature of the beautiful in itself.

Glaucon:: Why, yes, that is so.

Socrates:: And on the other hand, will not those be few who would be able to approach beauty itself and contemplate it in and by itself?

Glaucon:: They would, indeed.

Socrates:: He, then, who believes in beautiful things, but neither believes in beauty itself nor is able to follow when someone tries to guide him to the knowledge of it—do you think that his life is a dream or a waking? Just consider. Is not the dream state, whether the man is asleep or awake, just this—the mistaking of resemblance for identity?

Glaucon:: I should certainly call that dreaming.

Socrates:: Well, then, take the opposite case, the man whose thought recognizes a beauty in itself, and is able to distinguish that self-beautiful and the things that participate in it, and neither supposes the participants to be it nor it the participants—is his life, in your opinion, a waking or a dream state?

Glaucon:: He is very much awake.

Socrates:: Could we not rightly, then, call the mental state of the one as knowing, knowledge, and that of the other as opining, opinion?

Glaucon:: Assuredly.

Socrates:: Suppose, now, he who we say opines but does not know should be angry and challenge our statement as not true—can we find any way of soothing him and gently winning him over, without telling him too plainly that he is not in his right mind?

Glaucon:: We must try.

Socrates:: Come, then, consider what we are to say to him, or would you have us question him in this fashion—premising that if he knows anything, nobody grudges it him, but we should be very glad to see him knowing something—but tell us this, Does he who knows know something or nothing? Do you reply in his behalf.

Glaucon:: I will reply, that he knows something.

Socrates:: Is it something that is or is not?

Glaucon:: That is. How could that which is not be known?

Socrates:: We are sufficiently assured of this, then, even if we should examine it from every point of view, that that which entirely is is entirely knowable, and that which in no way is is in every way unknowable?

Glaucon:: Most sufficiently.

Socrates:: Good. If a thing, then, is so conditioned as both to be and not to be, would it not lie between that which absolutely and unqualifiedly is and that which in no way is?

Glaucon:: Between.

Socrates:: Then since knowledge pertains to that which is and ignorance of necessity to that which is not, for that which lies between we must seek for something between nescience and science, if such a thing there be.

Glaucon:: By all means.

Socrates:: Is there a thing which we call opinion?

Glaucon:: Surely.

Socrates:: Is it a different faculty from science or the same?

Glaucon:: A different.

Socrates:: Then opinion is set over one thing and science over another, each by virtue of its own distinctive power or faculty.

Glaucon:: That is so.

Socrates:: May we say, then, that science is naturally related to that which is, to know that and how that which is is? But rather, before we proceed, I think we must draw the following distinctions.

Glaucon:: What ones?

Socrates:: Shall we say that faculties, powers, abilities are a class of entities by virtue of which we and all other things are able to do what we or they are able to do? I mean that sight and hearing, for example, are faculties, if so be that you understand the class or type that I am trying to describe.

Glaucon:: I understand.

Socrates:: Hear, then, my notion about them. In a faculty I cannot see any color or shape or similar mark such as those on which in many other cases I fix my eyes in discriminating in my thought one thing from another. But in the case of a faculty I look to one thing only—that to which it is related and what it effects, and it is in this way that I come to call each one of them a faculty, and that which is related to the same thing and accomplishes the same thing I call the same faculty, and that to another I call other. How about you, what is your practice?

Glaucon:: The same.

Socrates:: To return, then, my friend, to science or true knowledge, do you say that it is a faculty and a power, or in what class do you put it?

Glaucon:: Into this, the most potent of all faculties.

Socrates:: And opinion—shall we assign it to some other class than faculty?

Glaucon:: By no means, for that by which we are able to opine is nothing else than the faculty of opinion.

But not long ago you agreed that science and opinion are not identical.

Socrates:: How could any rational man affirm the identity of the infallible with the fallible?

Socrates:: Excellent, and we are plainly agreed that opinion is a different thing from scientific knowledge.

Glaucon:: Yes, different.

Socrates:: Each of them, then, since it has a different power, is related to a different object.

Glaucon:: Of necessity.

Socrates:: Science, I presume, to that which is, to know the condition of that which is?

Glaucon:: Yes.

Socrates:: But opinion, we say, opines.

Glaucon:: Yes.

Socrates:: Does it opine the same thing that science knows, and will the knowable and the opinable be identical, or is that impossible?

Glaucon:: Impossible by our admissions, If different faculties are naturally related to different objects and both opinion and science are faculties, but each different from the other, as we say—these admissions do not leave place for the identity of the knowable and the opinable.

Socrates:: Then, if that which is a knowable, something other than that which is would be the opinable.

Glaucon:: Something else.

Socrates:: Does it opine that which is not, or is it impossible even to opine that which is not? Reflect. Does not he who opines bring his opinion to bear upon something or shall we reverse ourselves and say that it is possible to opine, yet opine nothing?

Glaucon:: That is impossible.

Socrates:: Then he who opines opines some one thing?

Glaucon:: Yes.

Socrates:: But surely that which is not could not be designated as some one thing, but most rightly as nothing at all.

Glaucon:: Yes.

Socrates:: To that which is not we of necessity assigned nescience, and to that which is, knowledge.

Glaucon:: Rightly.

Socrates:: Then neither that which is nor that which is not is the object of opinion.

Glaucon:: It seems not.

Socrates:: Then opinion would be neither nescience nor knowledge.

Glaucon:: So it seems.

Socrates:: Is it then a faculty outside of these, exceeding either knowledge in lucidity or ignorance in obscurity?

Glaucon:: It is neither.

Socrates:: But do you deem opinion something darker than knowledge but brighter than ignorance?

Glaucon:: Much so.

Socrates:: And does it lie within the boundaries of the two?

Glaucon:: Yes.

Socrates:: Then opinion would be between the two.

Glaucon:: Most assuredly.

Socrates:: Were we not saying a little while ago that if anything should turn up such that it both is and is not, that sort of thing would lie between that which purely and absolutely is and that which wholly is not, and that the faculty correlated with it would be neither science nor nescience, but that which should appear to hold a place correspondingly between nescience and science.

Glaucon:: Right.

Socrates:: And now there has turned up between these two the thing that we call opinion.

Glaucon:: There has.

Socrates:: It would remain, then, as it seems, for us to discover that which partakes of both, of *to be* and *not to be*, and that could not be rightly designated either in its exclusive purity, so that, if it shall be discovered, we may justly pronounce it to be the opinable, thus assigning extremes to extremes and the intermediate to the intermediate. Is not that so?

Glaucon:: It is.

Socrates:: This much premised, let him tell me, I will say, let him answer me, that good fellow who does not think there is a beautiful in itself or any idea of beauty in itself always remaining the same and unchanged, but who does believe in many beautiful things—the lover of spectacles, I mean, who cannot endure to hear anybody say that the beautiful is one and the just one, and so of other things—and this will be our question. My good fellow, is there any one of these many fair and honorable things that will not sometimes appear ugly and base? And of the just things, that will not seem unjust? And of the pious things, that will not seem impious?

Glaucon:: No, it is inevitable, that they would appear to be both beautiful in a way and ugly, and so with all the other things you asked about.

Socrates:: And again, do the many double things appear any the less halves than doubles?

Glaucon:: None the less.

Socrates:: And likewise of the great and the small things, the light and the heavy things—will they admit these predicates any more than their opposites?

Glaucon:: No, each of them will always hold of, partake of, both.

Socrates:: Then is each of these multiples rather than it *is not* that which one affirms it to be?

Glaucon:: They are like those jesters who palter with us in a double sense at banquets, and resemble the children's riddle about the eunuch and his hitting of the bat—with what and as it sat on what they signify that he struck it. For these things too equivocate, and it is impossible to conceive firmly any one of them to be or not to be or both or neither.

Glaucon:: Do you know what to do with them, then? And can you find a better place to put them than that midway between existence or essence and the not to be? For we shall surely not discover a darker region than not-being that they should still more not be, nor a brighter than being that they should still more be.

Glaucon:: Most true.

Socrates:: We would seem to have found, then, that the many conventions of the many about the fair and honorable and other things are tumbled about in the mid-region between that which is not and that which is in the true and absolute sense.

Glaucon:: We have so found it.

Socrates:: But we agreed in advance that if anything of that sort should be discovered, it must be denominated opinable, not knowable, the wanderer between being caught by the faculty that is betwixt and between.

Glaucon:: We did.

Socrates:: shall affirm, then, that those who view many beautiful things but do not see the beautiful itself and are unable to follow another's guidance to it, and many just things, but not justice itself, and so in all cases—we shall say that such men have opinions about all things, but know nothing of the things they opine.

Glaucon:: Of necessity.

Socrates:: And, on the other hand, what of those who contemplate the very things themselves in each case, ever remaining the same and unchanged—shall we not say that they know and do not merely opine?

Glaucon:: That, too, necessarily follows.

Socrates:: Shall we not also say that the one welcomes to his thought and loves the things subject to knowledge and the other those to opinion? Do we not remember that we said that those loved and regarded tones and beautiful colors and the like, but they could not endure the notion of the reality of the beautiful itself?

Glaucon:: We do remember.

Socrates:: Shall we then offend their ears if we call them doxophilists rather than philosophers and will they be very angry if we so speak?

Glaucon:: Not if they heed my counsel, for to be angry with truth is not lawful.

Socrates:: Then to those who in each and every kind welcome the true being, lovers of wisdom and not lovers of opinion is the name we must give.

Glaucon:: By all means.

## Book 6.

Socrates:: So now, Glaucon, our argument after winding a long and weary way has at last made clear to us who are the philosophers or lovers of wisdom and who are not.

Glaucon:: Yes, a shorter way is perhaps not feasible.

Socrates:: Apparently not. I, at any rate, think that the matter would have been made still plainer if we had had nothing but this to speak of, and if there were not so many things left which our purpose of discerning the difference between the just and the unjust life requires us to discuss.

Glaucon:: What, then, comes next?

Socrates:: What else, but the next in order? Since the philosophers are those who are capable of apprehending that which is eternal and unchanging, while those who are incapable of this, but lose themselves and wander amid the multiplicities of multifarious things, are not philosophers, which of the two kinds ought to be the leaders in a state?

Glaucon:: What, then, would be a fair statement of the matter?

Socrates:: Whichever, appear competent to guard the laws and pure suits of society, these we should establish as guardians.

Glaucon:: Right.

Socrates:: Is this, then, clear, whether the guardian who is to keep watch over anything ought to be blind or keen of sight?

Glaucon:: Of course it is clear.

Socrates:: Do you think, then, that there is any appreciable difference between the blind and those who are veritably deprived of the knowledge of the veritable being of things, those who have no vivid pattern in their souls and so cannot, as painters look to their models, fix their eyes on the absolute truth, and always with reference to that ideal and in the exactest possible contemplation of it establish in this world also the laws of the beautiful, the just, and the good, when that is needful, or guard and preserve those that are established?

Glaucon:: No, by heaven, there is not much difference.

Socrates:: Shall we, then, appoint these blind souls as our guardians, rather than those who have learned to know the ideal reality of things and who do not fall short of the others in experience and are not second to them in any part of virtue?

Glaucon:: It would be strange indeed, to choose others than the philosophers, provided they were not deficient in those other respects, for this very knowledge of the ideal would perhaps be the greatest of superiorities.

Socrates:: Then what we have to say is how it would be possible for the same persons to have both qualifications, is it not?

Glaucon:: Quite so.

Socrates:: Then, as we were saying at the beginning of this discussion, the first thing to understand is the nature that they must have from birth, and I think that if we sufficiently agree on this we shall also agree that the combination of qualities that we seek belongs to the same persons, and that we need no others for guardians of states than these.

Glaucon:: How so?

Socrates:: We must accept as agreed this trait of the philosophical nature, that it is ever enamored of the kind of knowledge which reveals to them something of that essence which is eternal, and is not wandering between the two poles of generation and decay.

Glaucon:: Let us take that as agreed.

Socrates:: And, further, that their desire is for the whole of it and that they do not willingly renounce a small or a great, a more precious or a less honored, part of it. That was the point of our former illustration drawn from lovers and men covetous of honor.

Glaucon:: You are right.

Socrates:: Consider, then, next whether the men who are to meet our requirements must not have this further quality in their natures.

Glaucon:: What quality?

Socrates:: The spirit of truthfulness, reluctance to admit falsehood in any form, the hatred of it and the love of truth.

Glaucon:: It is likely.

Socrates:: It is not only likely, my friend, but there is every necessity that he who is by nature enamored of anything should cherish all that is akin and pertaining to the object of his love.

Glaucon:: Right.

Socrates:: Could you find anything more akin to wisdom than truth?

Glaucon:: Impossible.

Socrates:: Then can the same nature be a lover of wisdom and of falsehood?

Glaucon:: By no means.

Socrates:: Then the true lover of knowledge must, from childhood up, be most of all a striver after truth in every form.

Glaucon:: By all means.

Socrates:: But, again, we surely are aware that when in a man the desires incline strongly to any one thing, they are weakened for other things. It is as if the stream had been diverted into another channel.

Glaucon:: Surely.

Socrates:: So, when a man’s desires have been taught to flow in the channel of learning and all that sort of thing, they will be concerned, I presume, with the pleasures of the soul in itself, and will be indifferent to those of which the body is the instrument, if the man is a true and not a sham philosopher.

Glaucon:: That is quite necessary.

Socrates:: Such a man will be temperate and by no means greedy for wealth, for the things for the sake of which money and great expenditure are eagerly sought others may take seriously, but not he.

Glaucon:: It is so.

Socrates:: And there is this further point to be considered in distinguishing the philosophical from the unphilosophical nature.

Glaucon:: What point?

Socrates:: You must not overlook any touch of illiberality. For nothing can be more contrary than such pettiness to the quality of a soul that is ever to seek integrity and wholeness in all things human and divine.

Glaucon:: Most true.

Socrates:: Do you think that a mind habituated to thoughts of grandeur and the contemplation of all time and all existence can deem this life of man a thing of great concern?

Glaucon:: Impossible.

Socrates:: Hence such a man will not suppose death to be terrible?

Glaucon:: Least of all.

Socrates:: Then a cowardly and illiberal spirit, it seems, could have no part in genuine philosophy.

Glaucon:: I think not.

Socrates:: What then? Could a man of orderly spirit, not a lover of money, not illiberal, nor a braggart nor a coward, ever prove unjust, or a driver of hard bargains?

Impossible.

This too, then, is a point that in your discrimination of the philosophical and unphilosophical soul you will observe—whether the man is from youth up just and gentle or unsocial and savage.

Glaucon:: Assuredly.

Socrates:: Nor will you overlook this, I fancy.

Glaucon:: What?

Socrates:: Whether he is quick or slow to learn. Or do you suppose that anyone could properly love a task which he performed painfully and with little result from much toil?

Glaucon:: That could not be.

Socrates:: And if he could not keep what he learned, being steeped in oblivion, could he fail to be void of knowledge?

Glaucon:: How could he?

Socrates:: And so, having all his labor for naught, will he not finally be constrained to loathe himself and that occupation?

Glaucon:: Of course.

Socrates:: The forgetful soul, then, we must not list in the roll of competent lovers of wisdom, but we require a good memory.

Glaucon:: By all means.

Socrates:: But assuredly we should not say that the want of harmony and seemliness in a nature conduces to anything else than the want of measure and proportion.

Glaucon:: Certainly.

Socrates:: And do you think that truth is akin to measure and proportion or to disproportion?

Glaucon:: To proportion.

Socrates:: Then in addition to our other requirements we look for a mind endowed with measure and grace, whose native disposition will make it easily guided to the aspect of the ideal reality in all things.

Glaucon:: Assuredly.

Socrates:: Tell me, then, is there any flaw in the argument? Have we not proved the qualities enumerated to be necessary and compatible with one another for the soul that is to have a sufficient and perfect apprehension of reality?

Glaucon:: Nay, most necessary.

Socrates:: Is there any fault, then, that you can find with a pursuit which a man could not properly practice unless he were by nature of good memory, quick apprehension, magnificent, gracious, friendly, and akin to truth, justice, bravery, and sobriety?

Glaucon:: Momus himself, could not find fault with such a combination.

Socrates:: Well, then, when men of this sort are perfected by education and maturity of age, would you not entrust the state solely to them?

—And Adimantus said;

Adeimantus:: No one, Socrates, would be able to controvert these statements of yours. But, all the same, those who occasionally hear you argue thus feel in this way. They think that owing to their inexperience in the game of question and answer they are at every question led astray a little bit by the argument, and when these bits are accumulated at the conclusion of the discussion mighty is their fall, and the apparent contradiction of what they at first said, and that just as by expert draughts players the unskilled are finally shut in and cannot make a move, so they are finally blocked and have their mouths stopped by this other game of draughts played not with counters but with words; yet the truth is not affected by that outcome. I say this with reference to the present case, for in this instance one might say that he is unable in words to contend against you at each question, but that when it comes to facts he sees that of those who turn to philosophy, not merely touching upon it to complete their education and dropping it while still young, but lingering too long in the study of it, the majority become cranks, not to say rascals, and those accounted the finest spirits among them are still rendered useless to society by the pursuit which you commend.

Socrates:: And I, on hearing this, said, Do you think that they are mistaken in saying so?

Adeimantus:: I don’t know, but I would gladly hear your opinion.

Socrates:: You may hear, then, that I think that what they say is true.

Adeimantus:: How, then, can it be right to say that our cities will never be freed from their evils until the philosophers, whom we admit to be useless to them, become their rulers?

Socrates:: Your question, requires an answer expressed in a comparison or parable.

Adeimantus:: And you, of course, are not accustomed to speak in comparisons!

Socrates:: So, you are making fun of me after driving me into such an impasse of argument. But, all the same, hear my comparison so that you may still better see how I strain after imagery. For so cruel is the condition of the better sort in relation to the state that there is no single thing like it in nature. But to find a likeness for it and a defense for them one must bring together many things in such a combination as painters mix when they portray goat stags and similar creatures. Conceive this sort of thing happening either on many ships or on one. Picture a shipmaster in height and strength surpassing all others on the ship, but who is slightly deaf and of similarly impaired vision, and whose knowledge of navigation is on a par with his sight and hearing. Conceive the sailors to be wrangling with one another for control of the helm, each claiming that it is his right to steer though he has never learned the art and cannot point out his teacher or any time when he studied it. And what is more, they affirm that it cannot be taught at all, but they are ready to make mincemeat of anyone who says that it can be taught, and meanwhile they are always clustered about the shipmaster importuning him and sticking at nothing to induce him to turn over the helm to them. And sometimes, if they fail and others get his ear, they put the others to death or cast them out from the ship, and then, after binding and stupefying the worthy shipmaster with mandragora or intoxication or otherwise, they take command of the ship, consume its stores and, drinking and feasting, make such a voyage of it as is to be expected from such, and as if that were not enough, they praise and celebrate as a navigator, a pilot, a master of shipcraft, the man who is most cunning to lend a hand in persuading or constraining the shipmaster to let them rule, while the man who lacks this craft they censure as useless. They have no suspicion that the true pilot must give his attention to the time of the year, the seasons, the sky, the winds, the stars, and all that pertains to his art if he is to be a true ruler of a ship, and that he does not believe that there is any art or science of seizing the helm with or without the consent of others, or any possibility of mastering this alleged art and the practice of it at the same time with the science of navigation. With such goings on aboard ship do you not think that the real pilot would in very deed be called a stargazer, an idle babbler, a useless fellow, by the sailors in ships managed after this fashion?

Adeimantus:: Quite so.

Socrates:: You take my meaning, I presume, and do not require us to put the comparison to the proof and show that the condition we have described is the exact counterpart of the relation of the state to the true philosophers.

Adeimantus:: It is indeed.

Socrates:: To begin with, then, teach this parable to the man who is surprised that philosophers are not honored in our cities, and try to convince him that it would be far more surprising if they were honored.

Adeimantus:: I will teach him.

Socrates:: And say to him further, You are right in affirming that the finest spirits among the philosophers are of no service to the multitude. But bid him blame for this uselessness, not the finer spirits, but those who do not know how to make use of them. For it is not the natural course of things that the pilot should beg the sailors to be ruled by him or that wise men should go to the doors of the rich. The author of that epigram was a liar. But the true nature of things is that whether the sick man be rich or poor he must needs go to the door of the physician, and everyone who needs to be governed to the door of the man who knows how to govern, not that the ruler should implore his natural subjects to let themselves be ruled, if he is really good for anything. But you will make no mistake in likening our present political rulers to the sort of sailors we were just describing, and those whom these call useless and stargazing ideologists to the true pilots.

Adeimantus:: Just so.

Socrates:: Hence, and under these conditions, we cannot expect that the noblest pursuit should be highly esteemed by those whose way of life is quite the contrary. But far the greatest and chief disparagement of philosophy is brought upon it by the pretenders to that way of life, those whom you had in mind when you affirmed that the accuser of philosophy says that the majority of her followers are rascals and the better sort useless, while I admitted that what you said was true. Is not that so?

Adeimantus:: Yes.

Socrates:: Have we not, then, explained the cause of the uselessness of the better sort?

Adeimantus:: We have.

Socrates:: Shall we next set forth the inevitableness of the degeneracy of the majority, and try to show if we can that philosophy is not to be blamed for this either?

Adeimantus:: By all means.

Socrates:: Let us begin, then, what we have to say and hear by recalling the starting point of our description of the nature which he who is to be a scholar and gentleman must have from birth. The leader of the choir for him, if you recollect, was truth. That he was to seek always and altogether, on pain of being an impostor without part or lot in true philosophy.

Adeimantus:: Yes, that was said.

Socrates:: Is not this one point quite contrary to the prevailing opinion about him?

Adeimantus:: It is indeed.

Socrates:: Will it not be a fair plea in his defense to say that it was the nature of the real lover of knowledge to strive emulously for true being and that he would not linger over the many particulars that are opined to be real, but would hold on his way, and the edge of his passion would not be blunted nor would his desire fail till he came into touch with the nature of each thing in itself by that part of his soul to which it belongs to lay hold on that kind of reality—the part akin to it, namely—and through that approaching it, and consorting with reality really, he would beget intelligence and truth, attain to knowledge, and truly live and grow, and so find surcease from his travail of soul, but not before?

Adeimantus:: No plea could be fairer.

Socrates:: Well, then, will such a man love falsehood, or, quite the contrary, hate it?

Adeimantus:: Hate it.

Socrates:: When truth led the way, no choir of evils, we, I fancy, would say, could ever follow in its train.

Adeimantus:: How could it?

Socrates:: But rather a sound and just character, which is accompanied by temperance.

Adeimantus:: Right.

Socrates:: What need, then, of repeating from the beginning our proof of the necessary order of the choir that attends on the philosophical nature? You surely remember that we found pertaining to such a nature courage, grandeur of soul, aptness to learn, memory. And when you interposed the objection that though everybody will be compelled to admit our statements, yet, if we abandoned mere words and fixed our eyes on the persons to whom the words referred, everyone would say that he actually saw some of them to be useless and most of them base with all baseness—it was in our search for the cause of this ill repute that we came to the present question. Why is it that the majority are bad? And, for the sake of this, we took up again the nature of the true philosophers and defined what it must necessarily be?

Adeimantus:: That is so.

Socrates:: We have, then, to contemplate the causes of the corruption of this nature in the majority, while a small part escapes, even those whom men call not bad but useless. And after that in turn we are to observe those who imitate this nature and usurp its pursuits, and see what types of souls they are that thus entering upon a way of life which is too high for them and exceeds their powers, by the many discords and disharmonies of their conduct everywhere and among all men, bring upon philosophy the repute of which you speak.

Adeimantus:: Of what corruptions are you speaking?

Socrates:: I will try, to explain them to you if I can. I think everyone will grant us this point, that a nature such as we just now postulated for the perfect philosopher is a rare growth among men and is found in only a few. Don’t you think so?

Adeimantus:: Most emphatically.

Socrates:: Observe, then, the number and magnitude of the things that operate to destroy these few.

Adeimantus:: What are they?

Socrates:: The most surprising fact of all is that each of the gifts of nature which we praise tends to corrupt the soul of its possessor and divert it from philosophy. I am speaking of bravery, sobriety, and the entire list.

Adeimantus:: That does sound like a paradox.

Socrates:: Furthermore, all the so-called goods corrupt and divert, beauty and wealth and strength of body and powerful family connections in the city and all things akin to them—you get my general meaning?

Adeimantus:: I do, and I would gladly hear a more precise statement of it.

Socrates:: Well, grasp it rightly as a general proposition and the matter will be clear and the preceding statement will not seem to you so strange.

Adeimantus:: How do you bid me proceed?

Socrates:: We know it to be universally true of every seed and growth, whether vegetable or animal, that the more vigorous it is the more it falls short of its proper perfection when deprived of the food, the season, the place that suits it. For evil is more opposed to the good than to the not-good.

Adeimantus:: Of course.

Socrates:: So it is, I take it, natural that the best nature should fare worse than the inferior under conditions of nurture unsuited to it.

Adeimantus:: It is.

Socrates:: Then, Adimantus, shall we not similarly affirm that the best endowed souls become worse than the others under a bad education? Or do you suppose that great crimes and unmixed wickedness spring from a slight nature and not from a vigorous one corrupted by its nurture, while a weak nature will never be the cause of anything great, either for good or evil?

Adeimantus:: No, that is the case.

Socrates:: Then the nature which we assumed in the philosopher, if it receives the proper teaching, must needs grow and attain to consummate excellence, but, if it be sown and planted and grown in the wrong environment, the outcome will be quite the contrary unless some god comes to the rescue. Or are you too one of the multitude who believe that there are young men who are corrupted by the Sophists, and that there are Sophists in private life who corrupt to any extent worth mentioning, and that it is not rather the very men who talk in this strain who are the chief Sophists and educate most effectively and mold to their own heart's desire young and old, men and women?

Adeimantus:: When?

Socrates:: Why, when, the multitude are seated together in assemblies or in courtrooms or theaters or camps or any other public gathering of a crowd, and with loud uproar censure some of the things that are said and done and approve others, both in excess, with full-throated clamor and clapping of hands, and thereto the rocks and the region round about reechoing redouble the din of the censure and the praise. In such case how do you think the young man's heart, as the saying is, is moved within him? What private teaching do you think will hold out and not rather be swept away by the torrent of censure and applause, and borne off on its current, so that he will affirm the same things that they do to be honorable and base, and will do as they do, and be even such as they?

Adeimantus:: That is quite inevitable, Socrates.

Socrates:: And, moreover, we have not yet mentioned the chief necessity and compulsion.

Adeimantus:: What is it?

Socrates:: That which these 'educators' and Sophists impose by action when their words fail to convince. Don't you know that they chastise the recalcitrant with loss of civic rights and fines and death?

Adeimantus:: They most emphatically do.

Socrates:: What other Sophist, then, or what private teaching do you think will prevail in opposition to these?

Adeimantus:: None, I fancy.

Socrates:: No, the very attempt is the height of folly. For there is not, never has been, and never will be a divergent type of character and virtue created by an education running counter to theirs—humanly speaking, I mean, my friend. For the divine, as the proverb says, all rules fail. And you may be sure that, if anything is saved and turns out well in the present condition of society and government, in saying that the providence of God preserves it you will not be speaking ill.

Adeimantus:: Neither do I think otherwise.

Socrates:: Then, think this also in addition.

Adeimantus:: What?

Socrates:: Each of these private teachers who work for pay, whom the politicians call Sophists and regard as their rivals, inculcates nothing else than these opinions of the multitude which they opine when they are assembled and calls this knowledge wisdom. It is as if a man were acquiring the knowledge of the humors and desires of a great strong beast which he had in his keeping, how it is to be approached and touched, and when and by what things it is made most savage or gentle, yes, and the several sounds it is wont to utter on the occasion of each, and again what sounds uttered by another make it tame or fierce, and after mastering this knowledge by living with the creature and by lapse of time should call it wisdom, and should construct thereof a system and art and turn to the teaching of it, knowing nothing in reality about which of these opinions and desires is honorable or base, good or evil, just or unjust, but should apply all these terms to the judgments of the great beast, calling the things that pleased it good, and the things that vexed it bad, having no other account to render of them, but should call what is necessary just and honorable, never having observed how great is the real difference between the necessary and the good, and being incapable of explaining it to another. Do you not think, by heaven, that such a one would be a strange educator?

Adeimantus:: I do.

Socrates:: Do you suppose that there is any difference between such a one and the man who thinks that it is wisdom to have learned to know the moods and the pleasures of the motley multitude in their assembly, whether about painting or music or, for that matter, politics? For if a man associates with these and offers and exhibits to them his poetry or any other product of his craft or any political service, and grants the mob authority over himself more than is unavoidable, the proverbial necessity of Diomedes will compel him to give the public what it likes, but that what it likes is really good and honorable, have you ever heard an attempted proof of this that is not simply ridiculous?

Adeimantus:: No, and I fancy I never shall hear it either.

Socrates:: Bearing all this in mind, recall our former question. Can the multitude possibly tolerate or believe in the reality of the beautiful in itself as opposed to the multiplicity of beautiful things, or can they believe in anything conceived in its essence as opposed to the many particulars?

Adeimantus:: Not in the least.

Socrates:: Philosophy, then, the love of wisdom, is impossible for the multitude.

Adeimantus:: Impossible.

Socrates:: It is inevitable, then, that those who philosophize should be censured by them.

Adeimantus:: Inevitable.

Socrates:: And so likewise by those laymen who, associating with the mob, desire to curry favor with it.

Adeimantus:: Obviously.

Socrates:: From this point of view do you see any salvation that will suffer the born philosopher to abide in the pursuit and persevere to the end? Consider it in the light of what we said before. We agreed that quickness in learning, memory, courage, and magnificence were the traits of this nature.

Adeimantus:: Yes.

Socrates:: Then even as a boy among boys such a one will take the lead in all things, especially if the nature of his body matches the soul.

Adeimantus:: How could he fail to do so?

Socrates:: His kinsmen and fellow citizens, then, will desire, I presume, to make use of him when he is older for their own affairs.

Adeimantus:: Of course.

Socrates:: Then they will fawn upon him with petitions and honors, anticipating and flattering the power that will be his.

Adeimantus:: That certainly is the usual way.

Socrates:: How, then, do you think such a youth will behave in such conditions, especially if it happen that he belongs to a great city and is rich and wellborn therein, and thereto handsome and tall? Will his soul not be filled with unbounded ambitious hopes, and will he not think himself capable of managing the affairs of both Greeks and barbarians, and thereupon exalt himself, haughty of mien and stuffed with empty pride and void of sense?

Adeimantus:: He surely will.

Socrates:: And if to a man in this state of mind someone gently comes and tells him what is the truth, that he has no sense and sorely needs it, and that the only way to get it is to work like a slave to win it, do you think it will be easy for him to lend an ear to the quiet voice in the midst of and in spite of these evil surroundings?

Adeimantus:: Far from it.

Socrates:: And even supposing, that owing to a fortunate disposition and his affinity for the words of admonition one such youth apprehends something and is moved and drawn toward philosophy, what do we suppose will be the conduct of those who think that they are losing his service and fellowship? Is there any word or deed that they will stick at to keep him from being persuaded and to incapacitate anyone who attempts it, both by private intrigue and public prosecution in the court?

Adeimantus:: That is inevitable.

Socrates:: Is there any possibility of such a one continuing to philosophize?

Adeimantus:: None at all.

Socrates:: Do you see, then, that we were not wrong in saying that the very qualities that make up the philosophical nature do, in fact, become, when the environment and nurture are bad, in some sort the cause of its backsliding, and so do the so-called goods—riches and all such instrumentalities?

Adeimantus:: No, it was rightly said.

Socrates:: Such, my good friend, and so great as regards the noblest pursuit, is the destruction and corruption of the most excellent nature, which is rare enough in any case, as we affirm. And it is from men of this type that those spring who do the greatest harm to communities and individuals, and the greatest good when the stream chances to be turned into that channel, but a small nature never does anything great to a man or a city.

Adeimantus:: Most true.

Socrates:: Those, then, to whom she properly belongs, thus falling away and leaving philosophy forlorn and unwed, themselves live an unreal and alien life, while other unworthy wooers rush in and defile her as an orphan bereft of her kin, and attach to her such reproaches as you say her revilers taunt her with, declaring that some of her consorts are of no account and the many accountable for many evils.

Adeimantus:: Why, yes, that is what they do say.

Socrates:: And plausibly, for other manikins, observing that the place is unoccupied and full of fine terms and pretensions, just as men escape from prison to take sanctuary in temples, so these gentlemen joyously bound away from the mechanical arts to philosophy, those that are most cunning in their little craft. For in comparison with the other arts the prestige of philosophy even in her present low estate retains a superior dignity, and this is the ambition and aspiration of that multitude of pretenders unfit by nature, whose souls are bowed and mutilated by their vulgar occupations even as their bodies are marred by their arts and crafts. Is not that inevitable?

Adeimantus:: Quite so.

Socrates:: Is not the picture which they present, precisely that of a little bald-headed tinker who has made money and just been freed from bonds and had a bath and is wearing a new garment and has got himself up like a bridegroom and is about to marry his master's daughter who has fallen into poverty and abandonment?

Adeimantus:: There is no difference at all.

Socrates:: Of what sort will probably be the offspring of such parents? Will they not be bastard and base?

Adeimantus:: Inevitably.

Socrates:: And so when men unfit for culture approach philosophy and consort with her unworthily, what sort of ideas and opinions shall we say they beget? Will they not produce what may in very deed be fairly called sophisms, and nothing that is genuine or that partakes of true intelligence?

Adeimantus:: Quite so.

Socrates:: There is a very small remnant, then, Adimantus, of those who consort worthily with philosophy, some wellborn and well-bred nature, it may be, held in check by exile, and so in the absence of corrupters remaining true to philosophy, as its quality bids, or it may happen that a great soul born in a little town scorns and disregards its parochial affairs, and a small group perhaps might by natural affinity be drawn to it from other arts which they justly disdain, and the bridle of our companion Theages also might operate as a restraint. For in the case of Theages all other conditions were at hand for his backsliding from philosophy, but his sickly habit of body keeping him out of politics holds him back. My own case, the divine sign, is hardly worth mentioning—for I suppose it has happened to few or none before me. And those who have been of this little company and have tasted the sweetness and blessedness of this possession and who have also come to understand the madness of the multitude sufficiently and have seen that there is nothing, if I may say so, sound or right in any present politics, and that there is no ally with whose aid the champion of justice could escape destruction, but that he would be as a man who has fallen among wild beasts, unwilling to share their misdeeds and unable to hold out singly against the savagery of all, and that he would thus, before he could in any way benefit his friends or the state, come to an untimely end without doing any good to himself or others—for all these reasons I say the philosopher remains quiet, minds his own affair, and, as it were, standing aside under shelter of a wall in a storm and blast of dust and sleet and seeing others filled full of lawlessness, is content if in any way he may keep himself free from iniquity and unholy deeds through this life and take his departure with fair hope, serene and well content when the end comes.

Adeimantus:: Well, that is no very slight thing to have achieved before taking his departure.

Socrates:: He would not have accomplished any very great thing either, if it were not his fortune to live in a state adapted to his nature. In such a state only will he himself rather attain his full stature and together with his own preserve the commonweal. The causes and the injustice of the calumniation of philosophy, I think, have been fairly set forth, unless you have something to add.

Adeimantus:: No, I have nothing further to offer, on that point. But which of our present governments do you think is suitable for philosophy?

Socrates:: None whatever, but the very ground of my complaint is that no polity of today is worthy of the philosophical nature. This is just the cause of its perversion and alteration; as a foreign seed sown in an alien soil is wont to be overcome and die out into the native growth, so this kind does not preserve its own quality but falls away and degenerates into an alien type. But if ever it finds the best polity as it itself is the best, then will it be apparent that this was in truth divine and all the others human in their natures and practices. Obviously then you are next going to ask what is this best form of government.

Adeimantus:: Wrong, I was going to ask not that but whether it is this one that we have described in our establishment of a state or another.

Socrates:: In other respects it is this one, but there is one special further point that we mentioned even then, namely, that there would always have to be resident in such a state an element having the same conception of its constitution that you the lawgiver had in framing its laws.

Adeimantus:: That was said.

Socrates:: But it was not sufficiently explained, from fear of those objections on your part which have shown that the demonstration of it is long and difficult. And apart from that the remainder of the exposition is by no means easy.

Adeimantus:: Just what do you mean?

Socrates:: The manner in which a state that occupies itself with philosophy can escape destruction. For all great things are precarious and, as the proverb truly says, 'fine things are hard.'

Adeimantus:: All the same, our exposition must be completed by making this plain.

Socrates:: It will be no lack of will, but if anything, a lack of ability, that would prevent that. But you shall observe for yourself my zeal. And note again how zealously and recklessly I am prepared to say that the state ought to take up this pursuit in just the reverse of our present fashion.

Adeimantus:: In what way?

Socrates:: At present, those who do take it up are youths, just out of boyhood, who in the interval before they engage in business and money-making approach the most difficult part of it, and then drop it—and these are regarded forsooth as the best exemplars of philosophy. By the most difficult part I mean discussion. In later life they think they have done much if, when invited, they deign to listen to the philosophical discussions of others. That sort of thing they think should be bywork. And toward old age, with few exceptions, their light is quenched more completely than the sun of Heraclitus, inasmuch as it is never rekindled.

Adeimantus:: And what should they do?

Socrates:: Just the reverse. While they are lads and boys they should occupy themselves with an education and a culture suitable to youth, and while their bodies are growing to manhood take right good care of them, thus securing a basis and a support for the intellectual life. But with the advance of age, when the soul begins to attain its maturity, they should make its exercises more severe, and when the bodily strength declines and they are past the age of political and military service, then at last they should be given free range of the pasture and do nothing but philosophize, except incidentally, if they are to live happily, and, when the end has come, crown the life they have lived with a consonant destiny in that other world.

Adeimantus:: You really seem to be very much in earnest, Socrates, Yet I think most of your hearers are even more earnest in their opposition and will not be in the least convinced, beginning with Thrasymachus.

Socrates:: Do not try to breed a quarrel between me and Thrasymachus, who have just become friends and were not enemies before either. For we will spare no effort until we either convince him and the rest or achieve something that will profit them when they come to that life in which they will be born again and meet with such discussions as these.

Adeimantus:: A brief time your forecast contemplates.

Socrates:: Nay, nothing at all, as compared with eternity. However, the unwillingness of the multitude to believe what you say is nothing surprising. For of the thing here spoken they have never beheld a token, but only the forced and artificial chiming of word and phrase, not spontaneous and accidental as has happened here. But the figure of a man 'equilibrated' and 'assimilated' to virtue's self perfectly, so far as may be, in word and deed, and holding rule in a city of like quality, that is a thing they have never seen in one case or in many. Do you think they have?

Adeimantus:: By no means.

Socrates:: Neither, my dear fellow, have they ever seriously inclined to hearken to fair and free discussions whose sole endeavor was to search out the truth at any cost for knowledge's sake, and which dwell apart and salute from afar all the subtleties and cavils that lead to naught but opinion and strife in courtroom and in private talk.

Adeimantus:: They have not.

Socrates:: For this cause and foreseeing this, we then despite our fears declared under compulsion of the truth that neither city nor polity nor man either will ever be perfected until some chance compels this uncorrupted remnant of philosophers, who now bear the stigma of uselessness, to take charge of the state whether they wish it or not, and constrains the citizens to obey them, or else until by some divine inspiration a genuine passion for true philosophy takes possession either of the sons of the men now in power and sovereignty or of themselves. To affirm that either or both of these things cannot possibly come to pass is, I say, quite unreasonable. Only in that case could we be justly ridiculed as uttering things as futile as daydreams are. Is not that so?

Adeimantus:: It is.

Socrates:: If, then, the best philosophical natures have ever been constrained to take charge of the state in infinite time past, or now are in some barbaric region far beyond our ken, or shall hereafter be, we are prepared to maintain our contention that the constitution we have described has been, is, or will be realized when this philosophical Muse has taken control of the state. It is not a thing impossible to happen, nor are we speaking of impossibilities. That it is difficult we too admit.

Adeimantus:: I also think so.

Socrates:: But the multitude—are you going to say?—does not think so.

Adeimantus:: That may be.

Socrates:: My dear fellow, do not thus absolutely condemn the multitude. They will surely be of another mind if in no spirit of contention but soothingly and endeavoring to do away with the dispraise of learning you point out to them whom you mean by philosophers, and define as we recently did their nature and their pursuits so that the people may not suppose you to mean those of whom they are thinking. Or even if they do look at them in that way, are you still going to deny that they will change their opinion and answer differently? Or do you think that anyone is ungentle to the gentle or grudging to the ungrudging if he himself is ungrudging and mild? I will anticipate you and reply that I think that only in some few and not in the mass of mankind is so ungentle or harsh a temper to be found.

Adeimantus:: And I, you may be assured, concur.

Socrates:: And do you not also concur in this very point that the blame for this harsh attitude of the many toward philosophy falls on that riotous crew who have burst in where they do not belong, wrangling with one another, filled with spite, and always talking about persons, a thing least befitting philosophy?

Adeimantus:: Least of all, indeed.

Socrates:: For surely, Adimantus, the man whose mind is truly fixed on eternal realities has no leisure to turn his eyes downward upon the petty affairs of men, and so engaging in strife with them to be filled with envy and hate, but he fixes his gaze upon the things of the eternal and unchanging order, and seeing that they neither wrong nor are wronged by one another, but all abide in harmony as reason bids, he will endeavor to imitate them and, as far as may be, to fashion himself in their likeness and assimilate himself to them. Or do you think it possible not to imitate the things to which anyone attaches himself with admiration?

Adeimantus:: Impossible.

Socrates:: Then the lover of wisdom associating with the divine order will himself become orderly and divine in the measure permitted to man. But calumny is plentiful everywhere.

Adeimantus:: Yes, truly.

Socrates:: If, then, some compulsion is laid upon him to practice stamping on the plastic matter of human nature in public and private the patterns that he visions there, and not merely to mold and fashion himself, do you think he will prove a poor craftsman of sobriety and justice and all forms of ordinary civic virtue?

Adeimantus:: By no means.

Socrates:: But if the multitude become aware that what we are saying of the philosopher is true, will they still be harsh with philosophers, and will they distrust our statement that no city could ever be blessed unless its lineaments were traced by artists who used the heavenly model?

Adeimantus:: They will not be harsh, if they perceive that. But tell me, what is the manner of that sketch you have in mind?

Socrates:: They will take the city and the characters of men, as they might a tablet, and first wipe it clean—no easy task. But at any rate you know that this would be their first point of difference from ordinary reformers, that they would refuse to take in hand either individual or state or to legislate before they either received a clean slate or themselves made it clean.

Adeimantus:: And they would be right.

Socrates:: And thereafter, do you not think that they would sketch the figure of the constitution?

Adeimantus:: Surely.

Socrates:: And then, I take it, in the course of the work they would glance frequently in either direction, at justice, beauty, sobriety and the like as they are in the nature of things, and alternately at that which they were trying to reproduce in mankind, mingling and blending from various pursuits that hue of the flesh, so to speak, deriving their judgment from that likeness of humanity which Homer too called, when it appeared in men, the image and likeness of God.

Adeimantus:: Right.

Socrates:: And they would erase one touch or stroke and paint it another until in the measure of the possible they had made the characters of men pleasing and dear to God as may be.

Adeimantus:: That at any rate would be the fairest painting.

Socrates:: Are we then making any impression on those who you said were advancing to attack us with might and main? Can we convince them that such a political artist of character and such a painter exists as the one we then were praising when our proposal to entrust the state to him angered them, and are they now in a gentler mood when they hear what we are now saying?

Adeimantus:: Much gentler, if they are reasonable.

Socrates:: How can they controvert it? Will they deny that the lovers of wisdom are lovers of reality and truth?

Adeimantus:: That would be monstrous.

Socrates:: Or that their nature as we have portrayed it is akin to the highest and best?

Adeimantus:: Not that either.

Socrates:: Well, then, can they deny that such a nature bred in the pursuits that befit it will be perfectly good and philosophical so far as that can be said of anyone? Or will they rather say it of those whom we have excluded?

Adeimantus:: Surely not.

Socrates:: Will they, then, any longer be fierce with us when we declare that, until the philosophical class wins control, there will be no surcease of trouble for city or citizens nor will the polity which we fable in words be brought to pass in deed?

Adeimantus:: They will perhaps be less so.

Socrates:: Instead of less so, may we not say that they have been altogether tamed and convinced, so that for very shame, if for no other reason, they may assent?

Adeimantus:: Certainly.

Socrates:: Let us assume, then, that they are won over to this view. Will anyone contend that there is no chance that the offspring of kings and rulers should be born with the philosophical nature?

Adeimantus:: Not one.

Socrates:: And can anyone prove that if so born they must necessarily be corrupted? The difficulty of their salvation we too concede, but that in all the course of time not one of all could be saved, will anyone maintain that?

Adeimantus:: How could he?

Socrates:: But surely, the occurrence of one such is enough, if he has a state which obeys him, to realize all that now seems so incredible.

Adeimantus:: Yes, one is enough.

Socrates:: For if such a ruler, ordains the laws and institutions that we have described it is surely not impossible that the citizens should be content to carry them out.

Adeimantus:: By no means.

Socrates:: Would it, then, be at all strange or impossible for others to come to the opinion to which we have come?

Adeimantus:: I think not.

Socrates:: And further that these things are best, if possible, has already, I take it, been sufficiently shown.

Adeimantus:: Yes, sufficiently.

Socrates:: Our present opinion, then, about this legislation is that our plan would be best if it could be realized and that this realization is difficult yet not impossible.

Adeimantus:: That is the conclusion.

Socrates:: This difficulty disposed of, we have next to speak of what remains, in what way, namely, and as a result of what studies and pursuits, these preservers of the constitution will form a part of our state, and at what ages they will severally take up each study.

Adeimantus:: Yes, we have to speak of that.

Socrates:: I gained nothing, by my cunning in omitting heretofore the distasteful topic of the possession of women and procreation of children and the appointment of rulers—because I knew that the absolutely true and right way would provoke censure and is difficult of realization—for now I am nonetheless compelled to discuss them. The matter of the women and children has been disposed of, but the education of the rulers has to be examined again, I may say, from the starting point. We were saying, if you recollect, that they must approve themselves lovers of the state when tested in pleasures and pains, and make it apparent that they do not abandon this fixed faith under stress of labors or fears or any other vicissitude, and that anyone who could not keep that faith must be rejected, while he who always issued from the test pure and intact, like gold tried in the fire, is to be established as ruler and to receive honors in life and after death and prizes as well. Something of this sort we said while the argument slipped by with veiled face in fear of starting our present debate.

Adeimantus:: Most true, I remember.

Socrates:: We shrank, my friend, from uttering the audacities which have now been hazarded. But now let us find courage for the definitive pronouncement that as the most perfect guardians we must establish philosophers.

Adeimantus:: Yes, assume it to have been said.

Socrates:: Note, then, that they will naturally be few, for the different components of the nature which we said their education presupposed rarely consent to grow in one, but for the most part these qualities are found apart.

Adeimantus:: What do you mean?

Socrates:: Facility in learning, memory, sagacity, quickness of apprehension, and their accompaniments, and youthful spirit and magnificence in soul are qualities, you know, that are rarely combined in human nature with a disposition to live orderly, quiet, and stable lives, but such men, by reason of their quickness, are driven about just as chance directs, and all steadfastness is gone out of them.

Adeimantus:: You speak truly.

Socrates:: And on the other hand, the steadfast and stable temperaments, whom one could rather trust in use, and who in war are not easily moved and aroused to fear, are apt to act in the same way when confronted with studies. They are not easily aroused, learn with difficulty, as if benumbed, and are filled with sleep and yawning when an intellectual task is set them.

Adeimantus:: It is so.

Socrates:: But we affirmed that a man must partake of both temperaments in due and fair combination or else participate in neither the highest education nor in honors nor in rule.

Adeimantus:: And rightly.

Socrates:: Do you not think, then, that such a blend will be a rare thing?

Adeimantus:: Of course.

Socrates:: They must, then, be tested in the toils and fears and pleasures of which we then spoke, and we have also now to speak of a point we then passed by, that we must exercise them in many studies, watching them to see whether their nature is capable of enduring the greatest and most difficult studies or whether it will faint and flinch as men flinch in the trials and contests of the body.

Adeimantus:: hat is certainly the right way of looking at it, But what do you understand by the greatest studies?

Socrates:: You remember, I presume, that after distinguishing three kinds in the soul, we established definitions of justice, sobriety, bravery, and wisdom severally.

Adeimantus:: If I did not remember, I should not deserve to hear the rest.

Socrates:: Do you also remember what was said before this?

Adeimantus:: What?

Socrates:: We were saying, I believe, that for the most perfect discernment of these things another longer way was requisite which would make them plain to one who took it, but that it was possible to add proofs on a par with the preceding discussion. And you said that that was sufficient, and it was on this understanding that what we then said was said, falling short of ultimate precision as it appeared to me, but if it contented you it is for you to say.

Adeimantus:: Well, it was measurably satisfactory to me, and apparently to the rest of the company.

Socrates:: Nay, my friend, a measure of such things that in the least degree falls short of reality proves no measure at all. For nothing that is imperfect is the measure of anything, though some people sometimes think that they have already done enough and that there is no need of further inquiry.

Adeimantus:: Yes, indeed, many experience this because of their sloth.

Socrates:: An experience, that least of all befits the guardians of a state and of its laws.

Adeimantus:: That seems likely.

Socrates:: Then, such a one must go around the longer way and must labor no less in studies than in the exercises of the body, or else, as we were just saying, he will never come to the end of the greatest study and that which most properly belongs to him.

Adeimantus:: Why, are not these things the greatest? But is there still something greater than justice and the other virtues we described?

Socrates:: There is not only something greater, but of these very things we need not merely to contemplate an outline as now, but we must omit nothing of their most exact elaboration. Or would it not be absurd to strain every nerve to attain to the utmost precision and clarity of knowledge about other things of trifling moment and not to demand the greatest precision for the greatest matters?

Adeimantus:: It would indeed, but do you suppose that anyone will let you go without asking what is the greatest study and with what you think it is concerned?

Socrates:: By no means, but do you ask the question. You certainly have heard it often, but now you either do not apprehend or again you are minded to make trouble for me by attacking the argument. I suspect it is rather the latter. For you have often heard that the greatest thing to learn is the idea of good by reference to which just things and all the rest become useful and beneficial. And now I am almost sure you know that this is what I am going to speak of and to say further that we have no adequate knowledge of it. And if we do not know it, then, even if without the knowledge of this we should know all other things never so well, you are aware that it would avail us nothing, just as no possession either is of any avail without the possession of the good. Or do you think there is any profit in possessing everything except that which is good, or in understanding all things else apart from the good while understanding and knowing nothing that is fair and good?

Adeimantus:: No, by Zeus, I do not.

Socrates:: But, furthermore, you know this too, that the multitude believe pleasure to be the good, and the finer spirits intelligence or knowledge.

Adeimantus:: Certainly.

Socrates:: And you are also aware, my friend, that those who hold this latter view are not able to point out what knowledge it is but are finally compelled to say that it is the knowledge of the good.

Adeimantus:: Most absurdly.

Socrates:: Is it not absurd, if while taunting us with our ignorance of good they turn about and talk to us as if we knew it? For they say it is the knowledge of the good, as if we understood their meaning when they utter the word 'good.'

Adeimantus:: Most true.

Socrates:: Well, are those who define the good as pleasure infected with any less confusion of thought than the others? Or are not they in like manner compelled to admit that there are bad pleasures?

Adeimantus:: Most assuredly.

Socrates:: The outcome is, I take it, that they are admitting the same things to be both good and bad, are they not?

Adeimantus:: Certainly.

Socrates:: Then is it not apparent that there are many and violent disputes about it?

Adeimantus:: Of course.

Socrates:: And again, is it not apparent that while in the case of the just and the honorable many would prefer the semblance without the reality in action, possession, and opinion, yet when it comes to the good nobody is content with the possession of the appearance but all men seek the reality, and the semblance satisfies nobody here?

Adeimantus:: Quite so.

Socrates:: That, then, which every soul pursues and for its sake does all that it does, with an intuition of its reality, but yet baffled and unable to apprehend its nature adequately, or to attain to any stable belief about it as about other things, and for that reason failing of any possible benefit from other things—in a matter of this quality and moment, can we, I ask you, allow a like blindness and obscurity in those best citizens to whose hands we are to entrust all things?

Adeimantus:: Least of all.

Socrates:: I fancy, at any rate, that the just and the honorable, if their relation and reference to the good is not known, will not have secured a guardian of much worth in the man thus ignorant, and my surmise is that no one will understand them adequately before he knows this.

Adeimantus:: You surmise well.

Socrates:: Then our constitution will have its perfect and definitive organization only when such a guardian, who knows these things, oversees it.

Adeimantus:: Necessarily, But you yourself, Socrates, do you think that knowledge is the good or pleasure or something else and different?

Socrates:: What a man it is. You made it very plain long ago that you would not be satisfied with what others think about it.

Adeimantus:: Why, it does not seem right to me either, Socrates, to be ready to state the opinions of others but not one's own when one has occupied himself with the matter so long.

Socrates:: But then, do you think it right to speak as having knowledge about things one does not know?

Adeimantus:: By no means, as having knowledge, but one ought to be willing to tell us his opinion what he opines.

Socrates:: Nay, have you not observed that opinions divorced from knowledge are ugly things? The best of them are blind. Or do you think that those who hold some true opinion without intelligence differ appreciably from blind men who go the right way?

Adeimantus:: They do not differ at all.

Socrates:: Is it, then, ugly things that you prefer to contemplate, things blind and crooked, when you might hear from others what is luminous and fair?

Glaucon:: Nay, in heaven's name, Socrates, do not draw back, as it were, at the very goal. For it will content us if you explain the good even as you set forth the nature of justice, sobriety, and the other virtues.

Socrates:: It will right well content me, my dear fellow, but I fear that my powers may fail and that in my eagerness I may cut a sorry figure and become a laughingstock. Nay, my beloved, let us dismiss for the time being the nature of the good in itself, for to attain to my present surmise of that seems a pitch above the impulse that wings my flight today. But of what seems to be the offspring of the good and most nearly made in its likeness I am willing to speak if you too wish it, and otherwise to let the matter drop.

Glaucon:: Well, speak on, for you will duly pay me the tale of the parent another time.

Socrates:: I could wish, that I were able to make and you to receive the payment and not merely as now the interest. But at any rate receive this interest and the offspring of the good. Have a care, however, lest I deceive you unintentionally with a false reckoning of the interest.

Glaucon:: We will do our best, to be on our guard. Only speak on.

Socrates:: Yes, after first coming to an understanding with you and reminding you of what has been said here before and often on other occasions.

Glaucon:: What?

Socrates:: We predicate 'to be' of many beautiful things and many good things, saying of them severally that they are, and so define them in our speech.

Glaucon:: We do.

Socrates:: And again, we speak of a self-beautiful and of a good that is only and merely good, and so, in the case of all the things that we then posited as many, we turn about and posit each as a single idea or aspect, assuming it to be a unity and call it that which each really is.

Glaucon:: It is so.

Socrates:: And the one class of things we say can be seen but not thought, while the ideas can be thought but not seen.

Glaucon:: By all means.

Socrates:: With which of the parts of ourselves, with which of our faculties, then, do we see visible things?

Glaucon:: With sight.

Socrates:: And do we not, hear audibles with hearing, and perceive all sensibles with the other senses?

Glaucon:: Surely.

Socrates:: Have you ever observed, how much the greatest expenditure the creator of the senses has lavished on the faculty of seeing and being seen?

Glaucon:: Why, no, I have not.

Socrates:: Well, look at it thus. Do hearing and voice stand in need of another medium so that the one may hear and the other be heard, in the absence of which third element the one will not hear and the other not be heard?

Glaucon:: They need nothing.

Socrates:: Neither, I fancy, do many others, not to say that none require anything of the sort. Or do you know of any?

Glaucon:: Not I.

Socrates:: But do you not observe that vision and the visible do have this further need?

Glaucon:: How?

Socrates:: Though vision may be in the eyes and its possessor may try to use it, and though color be present, yet without the presence of a third thing specifically and naturally adapted to this purpose, you are aware that vision will see nothing and the colors will remain invisible.

Glaucon:: What is this thing of which you speak?

Socrates:: The thing, that you call light.

Glaucon:: You say truly.

Socrates:: The bond, then, that yokes together visibility and the faculty of sight is more precious by no slight form than that which unites the other pairs, if light is not without honor.

Glaucon:: It surely is far from being so.

Socrates:: Which one can you name of the divinities in heaven as the author and cause of this, whose light makes our vision see best and visible things to be seen?

Glaucon:: Why, the one that you too and other people mean, for your question evidently refers to the sun.

Socrates:: Is not this, then, the relation of vision to that divinity?

Glaucon:: What?

Socrates:: Neither vision itself nor its vehicle, which we call the eye, is identical with the sun.

Glaucon:: Why, no.

Socrates:: But it is, I think, the most sun-like of all the instruments of sense.

Glaucon:: By far the most.

Socrates:: And does it not receive the power which it possesses as an influx, as it were, dispensed from the sun?

Glaucon:: Certainly.

Socrates:: Is it not also true that the sun is not vision, yet as being the cause thereof is beheld by vision itself?

Glaucon:: That is so.

Socrates:: This, then, you must understand that I meant by the offspring of the good which the good begot to stand in a proportion with itself. As the good is in the intelligible region to reason and the objects of reason, so is this in the visible world to vision and the objects of vision.

Glaucon:: How is that? Explain further.

Socrates:: You are aware, that when the eyes are no longer turned upon objects upon whose colors the light of day falls but that of the dim luminaries of night, their edge is blunted and they appear almost blind, as if pure vision did not dwell in them.

Glaucon:: Yes, indeed.

Socrates:: But when, I take it, they are directed upon objects illumined by the sun, they see clearly, and vision appears to reside in these same eyes.

Glaucon:: Certainly.

Socrates:: Apply this comparison to the soul also in this way. When it is firmly fixed on the domain where truth and reality shine resplendent it apprehends and knows them and appears to possess reason, but when it inclines to that region which is mingled with darkness, the world of becoming and passing away, it opines only and its edge is blunted, and it shifts its opinions hither and thither, and again seems as if it lacked reason.

Glaucon:: Yes, it does.

Socrates:: This reality, then, that gives their truth to the objects of knowledge and the power of knowing to the knower, you must say is the idea of good, and you must conceive it as being the cause of knowledge, and of truth in so far as known. Yet fair as they both are, knowledge and truth, in supposing it to be something fairer still than these you will think rightly of it. But as for knowledge and truth, even as in our illustration it is right to deem light and vision sun-like, but never to think that they are the sun, so here it is right to consider these two their counterparts, as being like the good or boniform, but to think that either of them is the good is not right. Still higher honor belongs to the possession and habit of the good.

Glaucon:: An inconceivable beauty you speak of, if it is the source of knowledge and truth, and yet itself surpasses them in beauty. For you surely cannot mean that it is pleasure.

Socrates:: Hush, but examine the similitude of it still further in this way.

Glaucon:: How?

Socrates:: The sun, I presume you will say, not only furnishes to visibles the power of visibility but it also provides for their generation and growth and nurture though it is not itself generation.

Glaucon:: Of course not.

Socrates:: In like manner, then, you are to say that the objects of knowledge not only receive from the presence of the good their being known, but their very existence and essence is derived to them from it, though the good itself is not essence but still transcends essence in dignity and surpassing power.

—And Glaucon very ludicrously said;

Glaucon:: Heaven save us, hyperbole can no further go.

Socrates:: The fault is yours, for compelling me to utter my thoughts about it.

Glaucon:: And don't desist, but at least expound the similitude of the sun, if there is anything that you are omitting.

Socrates:: Why, certainly, I am omitting a great deal.

Glaucon:: Well, don't omit the least bit.

Socrates:: I fancy, that I shall have to pass over much, but nevertheless so far as it is at present practicable I shall not willingly leave anything out.

Glaucon:: Do not.

Socrates:: Conceive then, as we were saying, that there are these two entities, and that one of them is sovereign over the intelligible order and region and the other over the world of the eyeball, not to say the sky-ball, but let that pass. You surely apprehend the two types, the visible and the intelligible.

Glaucon:: I do.

Socrates:: Represent them then, as it were, by a line divided into two unequal sections and cut each section again in the same ratio—the section, that is, of the visible and that of the intelligible order—and then as an expression of the ratio of their comparative clearness and obscurity you will have, as one of the sections of the visible world, images. By images I mean, first, shadows, and then reflections in water and on surfaces of dense, smooth, and bright texture, and everything of that kind, if you apprehend.

Glaucon:: I do.

Socrates:: As the second section assume that of which this is a likeness or an image, that is, the animals about us and all plants and the whole class of objects made by man.

Glaucon:: I so assume it.

Socrates:: Would you be willing to say, that the division in respect of reality and truth or the opposite is expressed by the proportion—as is the opinable to the knowable so is the likeness to that of which it is a likeness?

Glaucon:: I certainly would.

Socrates:: Consider then again the way in which we are to make the division of the intelligible section.

Glaucon:: In what way?

Socrates:: By the distinction that there is one section of it which the soul is compelled to investigate by treating as images the things imitated in the former division, and by means of assumptions from which it proceeds not up to a first principle but down to a conclusion, while there is another section in which it advances from its assumption to a beginning or principle that transcends assumption, and in which it makes no use of the images employed by the other section, relying on ideas only and progressing systematically through ideas.

Glaucon:: I don’t fully understand what you mean by this.

Socrates:: Well, I will try again, for you will better understand after this preamble. For I think you are aware that students of geometry and reckoning and such subjects first postulate the odd and the even and the various figures and three kinds of angles and other things akin to these in each branch of science, regard them as known, and, treating them as absolute assumptions, do not deign to render any further account of them to themselves or others, taking it for granted that they are obvious to everybody. They take their start from these, and pursuing the inquiry from this point on consistently, conclude with that for the investigation of which they set out.

Glaucon:: Certainly, I know that.

Socrates:: And do you not also know that they further make use of the visible forms and talk about them, though they are not thinking of them but of those things of which they are a likeness, pursuing their inquiry for the sake of the square as such and the diagonal as such, and not for the sake of the image of it which they draw? And so in all cases. The very things which they mold and draw, which have shadows and images of themselves in water, these things they treat in their turn as only images, but what they really seek is to get sight of those realities which can be seen only by the mind.

Glaucon:: True.

Socrates:: This then is the class that I described as intelligible, it is true, but with the reservation first that the soul is compelled to employ assumptions in the investigation of it, not proceeding to a first principle because of its inability to extricate itself from and rise above its assumptions, and second, that it uses as images or likenesses the very objects that are themselves copied and adumbrated by the class below them, and that in comparison with these latter are esteemed as clear and held in honor.

Glaucon:: I understand, that you are speaking of what falls under geometry and the kindred arts.

Socrates:: Understand then, that by the other section of the intelligible I mean that which the reason itself lays hold of by the power of dialectic, treating its assumptions not as absolute beginnings but literally as hypotheses. underpinnings, footings, and springboards so to speak, to enable it to rise to that which requires no assumption and is the starting point of all, and after attaining to that again taking hold of the first dependencies from it, so to proceed downward to the conclusion, making no use whatever of any object of sense but only of pure ideas moving on through ideas to ideas and ending with ideas.

Glaucon:: I understand, not fully, for it is no slight task that you appear to have in mind, but I do understand that you mean to distinguish the aspect of reality and the intelligible, which is contemplated by the power of dialectic, as something truer and more exact than the object of the so-called arts and sciences whose assumptions are arbitrary starting points. And though it is true that those who contemplate them are compelled to use their understanding and not their senses, yet because they do not go back to the beginning in the study of them but start from assumptions you do not think they possess true intelligence about them although the things themselves are intelligibles when apprehended in conjunction with a first principle. And I think you call the mental habit of geometers and their like mind or understanding and not reason because you regard understanding as something intermediate between opinion and reason.

Socrates:: Your interpretation is quite sufficient. And now, answering to these four sections, assume these four affections occurring in the soul—intellection or reason for the highest, understanding for the second, belief for the third, and for the last, picture thinking or conjecture—and arrange them in a proportion, considering that they participate in clearness and precision in the same degree as their objects partake of truth and reality.

Glaucon:: I understand, I concur and arrange them as you bid.

## Book 7.

Socrates:: Next, compare our nature in respect of education and its lack to such an experience as this. Picture men dwelling in a sort of subterranean cavern with a long entrance open to the light on its entire width. Conceive them as having their legs and necks fettered from childhood, so that they remain in the same spot, able to look forward only, and prevented by the fetters from turning their heads. Picture further the light from a fire burning higher up and at a distance behind them, and between the fire and the prisoners and above them a road along which a low wall has been built, as the exhibitors of puppet shows have partitions before the men themselves, above which they show the puppets.

Glaucon:: All that I see.

Socrates:: See also, then, men carrying past the wall implements of all kinds that rise above the wall, and human images and shapes of animals as well, wrought in stone and wood and every material, some of these bearers presumably speaking and others silent.

Glaucon:: A strange image you speak of, and strange prisoners.

Socrates:: Like to us. For, to begin with, tell me do you think that these men would have seen anything of themselves or of one another except the shadows cast from the fire on the wall of the cave that fronted them?

Glaucon:: How could they, if they were compelled to hold their heads unmoved through life?

Socrates:: And again, would not the same be true of the objects carried past them?

Glaucon:: Surely.

Socrates:: If then they were able to talk to one another, do you not think that they would suppose that in naming the things that they saw they were naming the passing objects?

Glaucon:: Necessarily.

Socrates:: And if their prison had an echo from the wall opposite them, when one of the passers-by uttered a sound, do you think that they would suppose anything else than the passing shadow to be the speaker?

Glaucon:: By Zeus, I do not.

Socrates:: Then in every way such prisoners would deem reality to be nothing else than the shadows of the artificial objects.

Glaucon:: Quite inevitably.

Socrates:: Consider, then, what would be the manner of the release and healing from these bonds and this folly if in the course of nature something of this sort should happen to them. When one was freed from his fetters and compelled to stand up suddenly and turn his head around and walk and to lift up his eyes to the light, and in doing all this felt pain and, because of the dazzle and glitter of the light, was unable to discern the objects whose shadows he formerly saw, what do you suppose would be his answer if someone told him that what he had seen before was all a cheat and an illusion, but that now, being nearer to reality and turned toward more real things, he saw more truly? And if also one should point out to him each of the passing objects and constrain him by questions to say what it is, do you not think that he would be at a loss and that he would regard what he formerly saw as more real than the things now pointed out to him?

Glaucon:: Far more real.

Socrates:: And if he were compelled to look at the light itself, would not that pain his eyes, and would he not turn away and flee to those things which he is able to discern and regard them as in very deed more clear and exact than the objects pointed out?

Glaucon:: It is so.

Socrates:: And if, someone should drag him thence by force up the ascent which is rough and steep, and not let him go before he had drawn him out into the light of the sun, do you not think that he would find it painful to be so haled along, and would chafe at it, and when he came out into the light, that his eyes would be filled with its beams so that he would not be able to see even one of the things that we call real?

Glaucon:: Why, no, not immediately.

Socrates:: Then there would be need of habituation, I take it, to enable him to see the things higher up. And at first he would most easily discern the shadows and, after that, the likenesses or reflections in water of men and other things, and later, the things themselves, and from these he would go on to contemplate the appearances in the heavens and heaven itself, more easily by night, looking at the light of the stars and the moon, than by day the sun and the sun’s light.

Glaucon:: Of course.

Socrates:: And so, finally, I suppose, he would be able to look upon the sun itself and see its true nature, not by reflections in water or phantasms of it in an alien setting, but in and by itself in its own place.

Glaucon:: Necessarily.

Socrates:: And at this point he would infer and conclude that this it is that provides the seasons and the courses of the year and presides over all things in the visible region, and is in some sort the cause of all these things that they had seen.

Glaucon:: Obviously, that would be the next step.

Socrates:: Well then, if he recalled to mind his first habitation and what passed for wisdom there, and his fellow bondsmen, do you not think that he would count himself happy in the change and pity them?

Glaucon:: He would indeed.

Socrates:: And if there had been honors and commendations among them which they bestowed on one another and prizes for the man who is quickest to make out the shadows as they pass and best able to remember their customary precedences, sequences, and coexistences, and so most successful in guessing at what was to come, do you think he would be very keen about such rewards, and that he would envy and emulate those who were honored by these prisoners and lorded it among them, or that he would feel with Homer and greatly prefer while living on earth to be serf of another, a landless man, and endure anything rather than opine with them and live that life?

Glaucon:: Yes, I think that he would choose to endure anything rather than such a life.

Socrates:: And consider this also. If such a one should go down again and take his old place would he not get his eyes full of darkness, thus suddenly coming out of the sunlight?

Glaucon:: He would indeed.

Socrates:: Now if he should be required to contend with these perpetual prisoners in ‘evaluating’ these shadows while his vision was still dim and before his eyes were accustomed to the dark—and this time required for habituation would not be very short—would he not provoke laughter, and would it not be said of him that he had returned from his journey aloft with his eyes ruined and that it was not worth while even to attempt the ascent? And if it were possible to lay hands on and to kill the man who tried to release them and lead them up, would they not kill him?

Glaucon:: They certainly would.

Socrates:: This image then, dear Glaucon, we must apply as a whole to all that has been said, likening the region revealed through sight to the habitation of the prison, and the light of the fire in it to the power of the sun. And if you assume that the ascent and the contemplation of the things above is the soul's ascension to the intelligible region, you will not miss my surmise, since that is what you desire to hear. But Gods knows whether it is true. But, at any rate, my dream as it appears to me is that in the region of the known the last thing to be seen and hardly seen is the idea of good, and that when seen it must needs point us to the conclusion that this is indeed the cause for all things of all that is right and beautiful, giving birth in the visible world to light, and the author of light and itself in the intelligible world being the authentic source of truth and reason, and that anyone who is to act wisely in private or public must have caught sight of this.

Glaucon:: I concur, so far as I am able.

Socrates:: Come then, and join me in this further thought, and do not be surprised that those who have attained to this height are not willing to occupy themselves with the affairs of men, but their souls ever feel the upward urge and the yearning for that sojourn above. For this, I take it, is likely if in this point too the likeness of our image holds.

Glaucon:: Yes, it is likely.

Socrates:: And again, do you think it at all strange, if a man returning from divine contemplations to the petty miseries of men cuts a sorry figure and appears most ridiculous, if, while still blinking through the gloom, and before he has become sufficiently accustomed to the environing darkness, he is compelled in courtrooms or elsewhere to contend about the shadows of justice or the images that cast the shadows and to wrangle in debate about the notions of these things in the minds of those who have never seen justice itself?

Glaucon:: It would be by no means strange.

Socrates:: But a sensible man, would remember that there are two distinct disturbances of the eyes arising from two causes, according as the shift is from light to darkness or from darkness to light, and, believing that the same thing happens to the soul too, whenever he saw a soul perturbed and unable to discern something, he would not laugh unthinkingly, but would observe whether coming from a brighter life its vision was obscured by the unfamiliar darkness, or whether the passage from the deeper dark of ignorance into a more luminous world and the greater brightness had dazzled its vision. And so he would deem the one happy in its experience and way of life and pity the other, and if it pleased him to laugh at it, his laughter would be less laughable than that at the expense of the soul that had come down from the light above.

Glaucon:: That is a very fair statement.

Socrates:: Then, if this is true, our view of these matters must be this, that education is not in reality what some people proclaim it to be in their professions. What they aver is that they can put true knowledge into a soul that does not possess it, as if they were inserting vision into blind eyes.

Glaucon:: They do indeed.

Socrates:: But our present argument indicates, that the true analogy for this indwelling power in the soul and the instrument whereby each of us apprehends is that of an eye that could not be converted to the light from the darkness except by turning the whole body. Even so this organ of knowledge must be turned around from the world of becoming together with the entire soul, like the scene-shifting periactus in the theater, until the soul is able to endure the contemplation of essence and the brightest region of being. And this, we say, is the good, do we not?

Glaucon:: Yes.

Socrates:: Of this very thing, then, there might be an art, an art of the speediest and most effective shifting or conversion of the soul, not an art of producing vision in it, but on the assumption that it possesses vision but does not rightly direct it and does not look where it should, an art of bringing this about.

Glaucon:: Yes, that seems likely.

Socrates:: Then the other so-called virtues of the soul do seem akin to those of the body. For it is true that where they do not preexist, they are afterward created by habit and practice. But the excellence of thought, it seems, is certainly of a more divine quality, a thing that never loses its potency, but, according to the direction of its conversion, becomes useful and beneficent, or, again, useless and harmful. Have you never observed in those who are popularly spoken of as bad, but smart men how keen is the vision of the little soul, how quick it is to discern the things that interest it, a proof that it is not a poor vision which it has, but one forcibly enlisted in the service of evil, so that the sharper its sight the more mischief it accomplishes?

Glaucon:: I certainly have.

Socrates:: Observe then, that this part of such a soul, if it had been hammered from childhood, and had thus been struck free of the leaden weights, so to speak, of our birth and becoming, which attaching themselves to it by food and similar pleasures and gluttonies turn downward the vision of the soul—if, I say, freed from these, it had suffered a conversion toward the things that are real and true, that same faculty of the same men would have been most keen in its vision of the higher things, just as it is for the things toward which it is now turned.

Glaucon:: It is likely.

Socrates:: Well, then, is not this also likely and a necessary consequence of what has been said, that neither could men who are uneducated and inexperienced in truth ever adequately preside over a state, nor could those who had been permitted to linger on to the end in the pursuit of culture—the one because they have no single aim and purpose in life to which all their actions, public and private, must be directed, and the others, because they will not voluntarily engage in action, believing that while still living they have been transported to the Islands of the Blessed?

Glaucon:: True.

Socrates:: It is the duty of us, the founders, then, to compel the best natures to attain the knowledge which we pronounced the greatest, and to win to the vision of the good, to scale that ascent, and when they have reached the heights and taken an adequate view, we must not allow what is now permitted.

Glaucon:: What is that?

Socrates:: That they should linger there, and refuse to go down again among those bondsmen and share their labors and honors, whether they are of less or of greater worth.

Glaucon:: Do you mean to say that we must do them this wrong, and compel them to live an inferior life when the better is in their power?

Socrates:: You have again forgotten, my friend, that the law is not concerned with the special happiness of any class in the state, but is trying to produce this condition in the city as a whole, harmonizing and adapting the citizens to one another by persuasion and compulsion, and requiring them to impart to one another any benefit which they are severally able to bestow upon the community, and that it itself creates such men in the state, not that it may allow each to take what course pleases him, but with a view to using them for the binding together of the commonwealth.

Glaucon:: True, I did forget it.

Socrates:: Observe, then, Glaucon, that we shall not be wronging, either, the philosophers who arise among us, but that we can justify our action when we constrain them to take charge of the other citizens and be their guardians. For we will say to them that it is natural that men of similar quality who spring up in other cities should not share in the labors there. For they grow up spontaneously from no volition of the government in the several states, and it is justice that the self-grown, indebted to none for its breeding, should not be zealous either to pay to anyone the price of its nurture. But you we have engendered for yourselves and the rest of the city to be, as it were, king bees and leaders in the hive. You have received a better and more complete education than the others, and you are more capable of sharing both ways of life. Down you must go then, each in his turn, to the habitation of the others and accustom yourselves to the observation of the obscure things there. For once habituated you will discern them infinitely better than the dwellers there, and you will know what each of the ‘idols’ is and whereof it is a semblance, because you have seen the reality of the beautiful, the just and the good. So our city will be governed by us and you with waking minds, and not, as most cities now which are inhabited and ruled darkly as in a dream by men who fight one another for shadows and wrangle for office as if that were a great good, when the truth is that the city in which those who are to rule are least eager to hold office must needs be best administered and most free from dissension, and the state that gets the contrary type of ruler will be the opposite of this.

Glaucon:: By all means.

Socrates:: Will our alumni, then, disobey us when we tell them this, and will they refuse to share in the labors of state each in his turn while permitted to dwell most of the time with one another in that purer world?

Glaucon:: Impossible, for we shall be imposing just commands on men who are just. Yet they will assuredly approach office as an unavoidable necessity, and in the opposite temper from that of the present rulers in our cities.

Socrates:: For the fact is, dear friend, if you can discover a better way of life than office holding for your future rulers, a well-governed city becomes a possibility. For only in such a state will those rule who are really rich, not in gold, but in the wealth that makes happiness—a good and wise life. But if, being beggars and starvelings from lack of goods of their own, they turn to affairs of state thinking that it is thence that they should grasp their own good, then it is impossible. For when office and rule become the prizes of contention, such a civil and internecine strife destroys the office seekers themselves and the city as well.

Glaucon:: Most true.

Socrates:: Can you name any other type or ideal of life that looks with scorn on political office except the life of true philosophers?

Glaucon:: No, by Zeus.

Socrates:: But what we require, is that those who take office should not be lovers of rule. Otherwise there will be a contest with rival lovers.

Glaucon:: Surely.

Socrates:: What others, then, will you compel to undertake the guardianship of the city than those who have most intelligence of the principles that are the means of good government and who possess distinctions of another kind and a life that is preferable to the political life?

Glaucon:: No others.

Socrates:: Would you, then, have us proceed to consider how such men may be produced in a state and how they may be led upward to the light even as some are fabled to have ascended from Hades to the gods?

Glaucon:: Of course I would.

Socrates:: So this, it seems, would not be the whirling of the shell in the children's game, but a conversion and turning about of the soul from a day whose light is darkness to the veritable day—that ascension to reality of our parable which we will affirm to be true philosophy.

Glaucon:: By all means.

Socrates:: Must we not, then, consider what studies have the power to effect this?

Glaucon:: Of course.

Socrates:: What, then, Glaucon, would be the study that would draw the soul away from the world of becoming to the world of being? A thought strikes me while I speak. Did we not say that these men in youth must be athletes of war?

Glaucon:: We did.

Socrates:: Then the study for which we are seeking must have this additional qualification.

Glaucon:: What one?

Socrates:: That it be not useless to soldiers.

Glaucon:: Why, yes, it must, if that is possible.

Socrates:: But in our previous account they were educated in gymnastics and music.

Glaucon:: They were.

Socrates:: And gymnastics, I take it, is devoted to that which grows and perishes, for it presides over the growth and decay of the body.

Glaucon:: Obviously.

Socrates:: Then this cannot be the study that we seek.

Glaucon:: No.

Socrates:: Is it, then, music, so far as we have already described it?

Glaucon:: Nay, that, was the counterpart of gymnastics, if you remember. It educated the guardians through habits, imparting by the melody a certain harmony of spirit that is not science, and by the rhythm measure and grace, and also qualities akin to these in the words of tales that are fables and those that are more nearly true. But it included no study that tended to any such good as you are now seeking.

Socrates:: Your recollection is most exact, for in fact it had nothing of the kind. But in heaven's name, Glaucon, what study could there be of that kind? For all the arts were in our opinion base and mechanical.

Glaucon:: Surely, and yet what other study is left apart from music, gymnastics, and the arts?

Socrates:: Come, if we are unable to discover anything outside of these, let us take something that applies to all alike.

Glaucon:: What?

Socrates:: Why, for example, this common thing that all arts and forms of thought and all sciences employ, and which is among the first things that everybody must learn.

Glaucon:: What?

Socrates:: This trifling matter, of distinguishing one and two and three. I mean, in sum, number and calculation. Is it not true of them that every art and science must necessarily partake of them?

Glaucon:: Indeed it is.

Socrates:: The art of war too?

Glaucon:: Most necessarily.

Socrates:: Certainly, then, Palamedes in the play is always making Agamemnon appear a most ridiculous general. Have you not noticed that he affirms that by the invention of number he marshaled the troops in the army at Troy in ranks and companies and enumerated the ships and everything else as if before that they had not been counted, and Agamemnon apparently did not know how many feet he had if he couldn't count? And yet what sort of a general do you think he would be in that case?

Glaucon:: A very queer one in my opinion, if that was true.

Socrates:: Shall we not, then, set down as a study requisite for a soldier the ability to reckon and number?

Glaucon:: Most certainly, if he is to know anything whatever of the ordering of his troops—or rather if he is to be a man at all.

Socrates:: Do you observe then, in this study what I do?

Glaucon:: What?

Socrates:: It seems likely that it is one of those studies which we are seeking that naturally conduce to the awakening of thought, but that no one makes the right use of it, though it really does tend to draw the mind to essence and reality.

Glaucon:: What do you mean?

Socrates:: I will try, to show you at least my opinion. Do you keep watch and observe the things I distinguish in my mind as being or not being conducive to our purpose, and either concur or dissent, in order that here too we may see more clearly whether my surmise is right.

Glaucon:: Point them out.

Socrates:: I do point them out, if you can discern that some reports of our perceptions do not provoke thought to reconsideration because the judgment of them by sensation seems adequate, while others always invite the intellect to reflection because the sensation yields nothing that can be trusted.

Glaucon:: You obviously mean distant appearances, and shadow painting.

Socrates:: You have quite missed my meaning.

Glaucon:: What do you mean?

Socrates:: The experiences that do not provoke thought are those that do not at the same time issue in a contradictory perception. Those that do have that effect I set down as provocatives, when the perception no more manifests one thing than its contrary, alike whether its impact comes from nearby or afar. An illustration will make my meaning plain. Here, we say, are three fingers, the little finger, the second, and the middle.

Glaucon:: Quite so.

Socrates:: Assume that I speak of them as seen near at hand. But this is the point that you are to consider.

Glaucon:: What?

Socrates:: Each one of them appears to be equally a finger, and in this respect it makes no difference whether it is observed as intermediate or at either extreme, whether it is white or black, thick or thin, or of any other quality of this kind. For in none of these cases is the soul of most men impelled to question the reason and to ask what in the world is a finger, since the faculty of sight never signifies to it at the same time that the finger is the opposite of a finger.

Glaucon:: Why, no, it does not.

Socrates:: Then, it is to be expected that such a perception will not provoke or awaken reflection and thought.

Glaucon:: It is.

Socrates:: But now, what about the bigness and the smallness of these objects? Is our vision's view of them adequate, and does it make no difference to it whether one of them is situated outside or in the middle, and similarly of the relation of touch, to thickness and thinness, softness and hardness? And are not the other senses also defective in their reports of such things? Or is the operation of each of them as follows? In the first place, the sensation that is set over the hard is of necessity related also to the soft, and it reports to the soul that the same thing is both hard and soft to its perception.

Glaucon:: It is so.

Socrates:: Then, is not this again a case where the soul must be at a loss as to what significance for it the sensation of hardness has, if the sense reports the same thing as also soft? And, similarly, as to what the sensation of light and heavy means by light and heavy, if it reports the heavy as light, and the light as heavy?

Glaucon:: Yes, indeed, these communications to the soul are strange and invite reconsideration.

Socrates:: Naturally, then, it is in such cases as these that the soul first summons to its aid the calculating reason and tries to consider whether each of the things reported to it is one or two.

Glaucon:: Of course.

Socrates:: And if it appears to be two, each of the two is a distinct unit.

Glaucon:: Yes.

Socrates:: If, then, each is one and both two, the very meaning of ‘two’ is that the soul will conceive them as distinct. For if they were not separable, it would not have been thinking of two, but of one.

Glaucon:: Right.

Socrates:: Sight too saw the great and the small, we say, not separated but confounded. Is not that so?

Glaucon:: Yes.

Socrates:: And for the clarification of this, the intelligence is compelled to contemplate the great and small, not thus confounded but as distinct entities, in the opposite way from sensation.

Glaucon:: True.

Socrates:: And is it not in some such experience as this that the question first occurs to us, What in the world, then, is the great and the small?

Glaucon:: By all means.

Socrates:: And this is the origin of the designation intelligible for the one, and visible for the other.

Glaucon:: Just so.

Socrates:: This, then, is just what I was trying to explain a little while ago when I said that some things are provocative of thought and some are not, defining as provocative things that impinge upon the senses together with their opposites, while those that do not I said do not tend to awaken reflection.

Glaucon:: Well, now I understand, and agree.

Glaucon:: To which class, then, do you think number and the one belong?

Glaucon:: I cannot conceive.

Socrates:: Well, reason it out from what has already been said. For, if unity is adequately seen by itself or apprehended by some other sensation, it would not tend to draw the mind to the apprehension of essence, as we were explaining in the case of the finger. But if some contradiction is always seen coincidentally with it so that it no more appears to be one than the opposite, there would forthwith be need of something to judge between them, and it would compel the soul to be at a loss and to inquire, by arousing thought in itself, and to ask, whatever then is the one as such, and thus the study of unity will be one of the studies that guide and convert the soul to the contemplation of true being.

Glaucon:: But surely, the visual perception of it does especially involve this. For we see the same thing at once as one and as an indefinite plurality.

Socrates:: Then if this is true of the one, the same holds of all number, does it not?

Glaucon:: Of course.

Socrates:: But, further, reckoning and the science of arithmetic are wholly concerned with number.

Glaucon:: They are, indeed.

Socrates:: And the qualities of number appear to lead to the apprehension of truth.

Glaucon:: Beyond anything.

Socrates:: Then, as it seems, these would be among the studies that we are seeking. For a soldier must learn them in order to marshal his troops, and a philosopher because he must rise out of the region of generation and lay hold on essence or he can never become a true reckoner.

Glaucon:: It is so.

Socrates:: And our guardian is soldier and philosopher in one.

Glaucon:: Of course.

Socrates:: It is befitting, then, Glaucon, that this branch of learning should be prescribed by our law and that we should induce those who are to share the highest functions of state to enter upon that study of calculation and take hold of it, not as amateurs, but to follow it up until they attain to the contemplation of the nature of number, by pure thought, not for the purpose of buying and selling, as if they were preparing to be merchants or hucksters, but for the uses of war and for facilitating the conversion of the soul itself from the world of generation to essence and truth.

Glaucon:: Excellently said.

Socrates:: And, further, it occurs to me, now that the study of reckoning has been mentioned, that there is something fine in it, and that it is useful for our purpose in many ways, provided it is pursued for the sake of knowledge and not for huckstering.

Glaucon:: In what respect?

Socrates:: Why, in respect of the very point of which we were speaking, that it strongly directs the soul upward and compels it to discourse about pure numbers, never acquiescing if anyone proffers to it in the discussion numbers attached to visible and tangible bodies. For you are doubtless aware that experts in this study, if anyone attempts to cut up the 'one' in argument, laugh at him and refuse to allow it, but if you mince it up, they multiply, always on guard lest the one should appear to be not one but a multiplicity of parts.

Glaucon:: Most true.

Socrates:: Suppose now, Glaucon, someone were to ask them, My good friends, what numbers are these you are talking about, in which the one is such as you postulate, each unity equal to every other without the slightest difference and admitting no division into parts? What do you think would be their answer?

Glaucon:: This, I think—that they are speaking of units which can only be conceived by thought, and which it is not possible to deal with in any other way.

Socrates:: You see, then, my friend, that this branch of study really seems to be indispensable for us, since it plainly compels the soul to employ pure thought with a view to truth itself.

Glaucon:: It most emphatically does.

Socrates:: Again, have you ever noticed this, that natural reckoners are by nature quick in virtually all their studies? And the slow, if they are trained and drilled in this, even if no other benefit results, all improve and become quicker than they were?

Glaucon:: It is so.

Socrates:: And, further, as I believe, studies that demand more toil in the learning and practice than this we shall not discover easily nor find many of them.

Glaucon:: You will not, in fact.

Socrates:: Then, for all these reasons, we must not neglect this study, but must use it in the education of the best-endowed natures.

Glaucon:: I agree.

Socrates:: Assuming this one point to be established, let us in the second place consider whether the study that comes next is suited to our purpose.

Glaucon:: What is that? Do you mean geometry?

Socrates:: Precisely that.

Glaucon:: So much of it, as applies to the conduct of war is obviously suitable. For in dealing with encampments and the occupation of strong places and the bringing of troops into column and line and all the other formations of an army in actual battle and on the march, an officer who had studied geometry would be a very different person from what he would be if he had not.

Socrates:: But still, for such purposes a slight modicum of geometry and calculation would suffice. What we have to consider is whether the greater and more advanced part of it tends to facilitate the apprehension of the idea of good. That tendency, we affirm, is to be found in all studies that force the soul to turn its vision round to the region where dwells the most blessed part of reality, which it is imperative that it should behold.

Glaucon:: You are right.

Socrates:: Then if it compels the soul to contemplate essence, it is suitable; if genesis, it is not.

Glaucon:: So we affirm.

Socrates:: This at least, will not be disputed by those who have even a slight acquaintance with geometry, that this science is in direct contradiction with the language employed in it by its adepts.

Glaucon:: How so?

Socrates:: Their language is most ludicrous, though they cannot help it, for they speak as if they were doing something and as if all their words were directed toward action. For all their talk is of squaring and applying and adding and the like, whereas in fact the real object of the entire study is pure knowledge.

Glaucon:: That is absolutely true.

Socrates:: And must we not agree on a further point?

Glaucon:: What?

Socrates:: That it is the knowledge of that which always is, and not of a something which at some time comes into being and passes away.

Glaucon:: That is readily admitted, for geometry is the knowledge of the eternally existent.

Socrates:: Then, my good friend, it would tend to draw the soul to truth, and would be productive of a philosophical attitude of mind, directing upward the faculties that now wrongly are turned earthward.

Glaucon:: Nothing is surer.

Socrates:: Then nothing is surer, than that we must require that the men of your fair city shall never neglect geometry, for even the by-products of such study are not slight.

Glaucon:: What are they?

Socrates:: What you mentioned, its uses in war, and also we are aware that for the better reception of all studies there will be an immeasurable difference between the student who has been imbued with geometry and the one who has not.

Glaucon:: Immense indeed, by Zeus.

Socrates:: Shall we, then, lay this down as a second branch of study for our lads?

Glaucon:: Let us do so.

Socrates:: Shall we set down astronomy as a third, or do you dissent?

Glaucon:: I certainly agree, for quickness of perception about the seasons and the courses of the months and the years is serviceable, not only to agriculture and navigation, but still more to the military art.

Socrates:: I am amused, at your apparent fear lest the multitude may suppose you to be recommending useless studies. It is indeed no trifling task, but very difficult to realize that there is in every soul an organ or instrument of knowledge that is purified and kindled afresh by such studies when it has been destroyed and blinded by our ordinary pursuits, a faculty whose preservation outweighs ten thousand eyes, for by it only is reality beheld. Those who share this faith will think your words superlatively true. But those who have and have had no inkling of it will naturally think them all moonshine. For they can see no other benefit from such pursuits worth mentioning. Decide, then, on the spot, to which party you address yourself. Or are you speaking to neither, but chiefly carrying on the discussion for your own sake, without however grudging any other who may be able to profit by it?

Glaucon:: This is the alternative I choose, that it is for my own sake chiefly that I speak and ask questions and reply.

Socrates:: Fall back a little, then, for we just now did not rightly select the study that comes next after geometry.

Glaucon:: What was our mistake?

Socrates:: After plane surfaces, we went on to solids in revolution before studying them in themselves. The right way is next in order after the second dimension to take the third. This, I suppose, is the dimension of cubes and of everything that has depth.

Glaucon:: Why, yes, it is, but this subject, Socrates, does not appear to have been investigated yet.

Socrates:: There are two causes of that. First, inasmuch as no city holds them in honor, these inquiries are languidly pursued owing to their difficulty. And secondly, the investigators need a director, who is indispensable for success and who, to begin with, is not easy to find, and then, if he could be found, as things are now, seekers in this field would be too arrogant to submit to his guidance. But if the state as a whole should join in superintending these studies and honor them, these specialists would accept advice, and continuous and strenuous investigation would bring out the truth. Since even now, lightly esteemed as they are by the multitude and hampered by the ignorance of their students as to the true reasons for pursuing them, they nevertheless in the face of all these obstacles force their way by their inherent charm and it would not surprise us if the truth about them were made apparent.

Glaucon:: It is true, that they do possess an extraordinary attractiveness and charm. But explain more clearly what you were just speaking of. The investigation of plane surfaces, I presume, you took to be geometry?

Socrates:: Yes.

Glaucon:: And then, at first you took astronomy next and then you drew back.

Socrates:: Yes, for in my haste to be done I was making less speed. For, while the next thing in order is the study of the third dimension or solids, I passed it over because of our absurd neglect to investigate it, and mentioned next after geometry astronomy, which deals with the movements of solids.

Glaucon:: That is right.

Socrates:: Then, as our fourth study, let us set down astronomy, assuming that this science, the discussion of which has been passed over, is available, provided, that is, that the state pursues it.

Glaucon:: That is likely, and instead of the vulgar utilitarian commendation of astronomy, for which you just now rebuked me, Socrates, I now will praise it on your principles. For it is obvious to everybody, I think that this study certainly compels the soul to look upward and leads it away from things here to those higher things.

Socrates:: It may be obvious to everybody except me, for I do not think so.

Glaucon:: What do you think?

Socrates:: As it is now handled by those who are trying to lead us up to philosophy, I think that it turns the soul's gaze very much downward.

Glaucon:: What do you mean?

Socrates:: You seem to me in your thought to put a most liberal interpretation on the 'study of higher things,' for apparently if anyone with back-thrown head should learn something by staring at decorations on a ceiling, you would regard him as contemplating them with the higher reason and not with the eyes. Perhaps you are right and I am a simpleton. For I, for my part, am unable to suppose that any other study turns the soul's gaze upward than that which deals with being and the invisible. But if anyone tries to learn about the things of sense, whether gaping up or blinking down, I would never say that he really learns—for nothing of the kind admits of true knowledge—nor would I say that his soul looks up, but down, even though he study floating on his back on sea or land.

Glaucon:: A fair retort, Your rebuke is deserved. But how, then, did you mean that astronomy ought to be taught contrary to the present fashion if it is to be learned in a way to conduce to our purpose?

Socrates:: Thus. These sparks that paint the sky, since they are decorations on a visible surface, we must regard, to be sure, as the fairest and most exact of material things, but we must recognize that they fall far short of the truth, the movements, namely, of real speed and real slowness in true number and in all true figures both in relation to one another and as vehicles of the things they carry and contain. These can be apprehended only by reason and thought, but not by sight, or do you think otherwise?

Glaucon:: By no means.

Socrates:: Then, we must use the blazonry of the heavens as patterns to aid in the study of those realities, just as one would do who chanced upon diagrams drawn with special care and elaboration by Daedalus or some other craftsman or painter. For anyone acquainted with geometry who saw such designs would admit the beauty of the workmanship, but would think it absurd to examine them seriously in the expectation of finding in them the absolute truth with regard to equals or doubles or any other ratio.

Glaucon:: How could it be otherwise than absurd?

Socrates:: Do you not think, that one who was an astronomer in very truth would feel in the same way when he turned his eyes upon the movements of the stars? He will be willing to concede that the artisan of heaven fashioned it and all that it contains in the best possible manner for such a fabric. But when it comes to the proportions of day and night, and of their relation to the month, and that of the month to the year, and of the other stars to these and one another, do you not suppose that he will regard as a very strange fellow the man who believes that these things go on forever without change or the least deviation—though they possess bodies and are visible objects—and that his unremitting quest is the realities of these things?

Glaucon:: I at least do think so, now that I hear it from you.

Socrates:: It is by means of problems, then, as in the study of geometry, that we will pursue astronomy too, and we will let be the things in the heavens, if we are to have a part in the true science of astronomy and so convert to right use from uselessness that natural indwelling intelligence of the soul.

Glaucon:: You enjoin a task, that will multiply the labor of our present study of astronomy many times.

Socrates:: And I fancy, that our other injunctions will be of the same kind if we are of any use as lawgivers. However, what suitable studies have you to suggest?

Glaucon:: Nothing, thus offhand.

Socrates:: Yet, surely, motion in general provides not one but many forms or species, according to my opinion.

To enumerate them all will perhaps be the task of a wise man, but even to us two of them are apparent.

Glaucon:: What are they?

Socrates:: In addition to astronomy, its counterpart.

Glaucon:: What is that?

Socrates:: We may venture to suppose, that as the eyes are framed for astronomy so the ears are framed for the movements of harmony, and these are in some sort kindred sciences, as the Pythagoreans affirm and we admit, do we not, Glaucon?

Glaucon:: We do.

Socrates:: Then, since the task is so great, shall we not inquire of them what their opinion is and whether they have anything to add? And we in all this will be on the watch for what concerns us.

Glaucon:: What is that?

Socrates:: To prevent our fosterlings from attempting to learn anything that does not conduce to the end we have in view, and does not always come out at what we said ought to be the goal of everything, as we were just now saying about astronomy. Or do you not know that they repeat the same procedure in the case of harmonies? They transfer it to hearing and measure audible concords and sounds against one another, expending much useless labor just as the astronomers do.

Glaucon:: Yes, by heaven, and most absurdly too. They talk of something they call minims and, laying their ears alongside, as if trying to catch a voice from next door, some affirm that they can hear a note between and that this is the least interval and the unit of measurement, while others insist that the strings now render identical sounds, both preferring their ears to their minds.

Socrates:: You, are speaking of the worthies who vex and torture the strings and rack them on the pegs, but—not to draw out the comparison with strokes of the plectrum and the musician's complaints of too responsive and too reluctant strings—I drop the figure, and tell you that I do not mean these people, but those others whom we just now said we would interrogate about harmony. Their method exactly corresponds to that of the astronomer, for the numbers they seek are those found in these heard concords, but they do not ascend to generalized problems and the consideration which numbers are inherently concordant and which not and why in each case.

Glaucon:: A superhuman task.

Socrates:: Say, rather, useful, for the investigation of the beautiful and the good, but if otherwise pursued, useless.

Glaucon:: That is likely.

Socrates:: And what is more, I take it that if the investigation of all these studies goes far enough to bring out their community and kinship with one another, and to infer their affinities, then to busy ourselves with them contributes to our desired end, and the labor taken is not lost, but otherwise it is vain.

Glaucon:: I too so surmise, but it is a huge task of which you speak, Socrates.

Socrates:: Are you talking about the prelude, or what? Or do we not know that all this is but the preamble of the law itself, the prelude of the strain that we have to apprehend? For you surely do not suppose that experts in these matters are reasoners and dialecticians?

Glaucon:: No, by Zeus, except a very few whom I have met.

Socrates:: But have you ever supposed, that men who could not render and exact an account of opinions in discussion would ever know anything of the things we say must be known?

Glaucon:: No is surely the answer to that too.

Socrates:: This, then, at last, Glaucon, is the very law which dialectic recites, the strain which it executes, of which, though it belongs to the intelligible, we may see an imitation in the progress of the faculty of vision, as we described its endeavor to look at living things themselves and the stars themselves and finally at the very sun. In like manner, when anyone by dialectic attempts through discourse of reason and apart from all perceptions of sense to find his way to the very essence of each thing and does not desist till he apprehends by thought itself the nature of the good in itself, he arrives at the limit of the intelligible, as the other in our parable came to the goal of the visible.

Glaucon:: By all means.

Socrates:: What, then, will you not call this progress of thought dialectic?

Glaucon:: Surely.

Socrates:: And the release from bonds, and the conversion from the shadows to the images that cast them and to the light and the ascent from the subterranean cavern to the world above, and there the persisting inability to look directly at animals and plants and the light of the sun, but the ability to see the phantasms created by God in water and shadows of objects that are real and not merely, as before, the shadows of images cast through a light which, compared with the sun, is as unreal as they—all this procedure of the arts and sciences that we have described indicates their power to lead the best part of the soul up to the contemplation of what is best among realities, as in our parable the clearest organ in the body was turned to the contemplation of what is brightest in the corporeal and visible region.

Glaucon:: I accept this, as the truth, and yet it appears to me very hard to accept, and again, from another point of view, hard to reject. Nevertheless, since we have not to hear it at this time only, but are to repeat it often hereafter, let us assume that these things are as now has been said, and proceed to the melody itself, and go through with it as we have gone through the prelude. Tell me, then, what is the nature of this faculty of dialectic? Into what divisions does it fall? And what are its ways? For it is these, it seems, that would bring us to the place where we may, so to speak, rest on the road and then come to the end of our journeying.

Socrates:: You will not be able, dear Glaucon, to follow me further, though on my part there will be no lack of good will. And, if I could, I would show you, no longer an image and symbol of my meaning, but the very truth, as it appears to me—though whether rightly or not I may not properly affirm. But that something like this is what we have to see, I must affirm. Is not that so?

Glaucon:: Surely.

Socrates:: And may we not also declare that nothing less than the power of dialectic could reveal this, and that only to one experienced in the studies we have described, and that the thing is in no other wise possible?

Glaucon:: That, too, we may properly affirm.

Socrates:: This, at any rate, no one will maintain in dispute against us, that there is any other way of inquiry that attempts systematically and in all cases to determine what each thing really is. But all the other arts have for their object the opinions and desires of men or are wholly concerned with generation and composition or with the service and tendance of the things that grow and are put together, while the remnant which we said did in some sort lay hold on reality—geometry and the studies that accompany it—are, as we see, dreaming about being, but the clear waking vision of it is impossible for them as long as they leave the assumptions which they employ undisturbed and cannot give any account of them. For where the starting point is something that the reasoner does not know, and the conclusion and all that intervenes is a tissue of things not really known, what possibility is there that assent in such cases can ever be converted into true knowledge or science?

Glaucon:: None.

Socrates:: Then, is not dialectic the only process of inquiry that advances in this manner, doing away with hypotheses, up to the first principle itself in order to find confirmation there? And it is literally true that when the eye of the soul is sunk in the barbaric slough of the Orphic myth, dialectic gently draws it forth and leads it up, employing as helpers and cooperators in this conversion the studies and sciences which we enumerated, which we called sciences often from habit, though they really need some other designation, connoting more clearness than opinion and more obscurity than science. ‘Understanding,’ I believe, was the term we employed. But I presume we shall not dispute about the name when things of such moment lie before us for consideration.

Glaucon:: No, indeed.

Socrates:: Are you satisfied, then, as before, to call the first division science, the second understanding, the third belief, and the fourth conjecture or picture thought—and the last two collectively opinion, and the first two intellection, opinion dealing with generation, and intellection with essence, and this relation being expressed in the proportion : as essence is to generation, so is intellection to opinion, and as intellection is to opinion, so is science to belief, and understanding to image thinking or surmise? But the relation between their objective correlates and the division into two parts of each of these, the opinable, namely, and the intelligible, let us dismiss, Glaucon, lest it involve us in discussion many times as long as the preceding.

Glaucon:: Well, I agree with you about the rest of it, so far as I am able to follow.

Socrates:: And do you not also give the name dialectician to the man who is able to exact an account of the essence of each thing? And will you not say that the one who is unable to do this, in so far as he is incapable of rendering an account to himself and others, does not possess full reason and intelligence about the matter?

Glaucon:: How could I say that he does?

Socrates:: And is not this true of the good likewise—that the man who is unable to define in his discourse and distinguish and abstract from all other things the aspect or idea of the good, and who cannot, as it were in battle, running the gauntlet of all tests, and striving to examine everything by essential reality and not by opinion, hold on his way through all this without tripping in his reasoning—the man who lacks this power, you will say, does not really know the good itself or any particular good, but if he apprehends any adumbration of it, his contact with it is by opinion, not by knowledge, and dreaming and dozing through his present life, before he awakens here he will arrive at the house of Hades and fall asleep forever?

Glaucon:: Yes, by Zeus, all this I will stoutly affirm.

Socrates:: But, surely, if you should ever nurture in fact your children whom you are now nurturing and educating in word, you would not suffer them, I presume, to hold rule in the state, and determine the greatest matters, being themselves as irrational as the lines so called in geometry.

Glaucon:: Why, no.

Socrates:: Then you will provide by law that they shall give special heed to the discipline that will enable them to ask and answer questions in the most scientific manner?

Glaucon:: I will so legislate, in conjunction with you.

Socrates:: Do you agree, then, that we have set dialectic above all other studies to be as it were the coping stone—and that no other higher kind of study could rightly be placed above it, but that our discussion of studies is now complete?

Glaucon:: I do.

Socrates:: The distribution, then, remains, to whom we are to assign these studies and in what way.

Glaucon:: Clearly.

Socrates:: Do you remember, then, the kind of man we chose in our former selection of rulers?

Glaucon:: Of course.

Socrates:: In most respects, then, you must suppose that we have to choose those same natures. The most stable, the most brave and enterprising are to be preferred, and, so far as practicable, the most comely. But in addition we must now require that they not only be virile and vigorous in temper, but that they possess also the gifts of nature suitable to this type of education.

Glaucon:: What qualities are you distinguishing?

Socrates:: They must have, my friend, to begin with, a certain keenness for study, and must not learn with difficulty. For souls are much more likely to flinch and faint in severe studies than in gymnastics, because the toil touches them more nearly, being peculiar to them and not shared with the body.

Glaucon:: True.

Socrates:: And we must demand a good memory and doggedness and industry in every sense of the word. Otherwise how do you suppose anyone will consent both to undergo all the toils of the body and to complete so great a course of study and discipline?

Glaucon:: No one could, unless most happily endowed.

Socrates:: Our present mistake, and the disesteem that has in consequence fallen upon philosophy are, as I said before, caused by the unfitness of her associates and wooers. They should not have been bastards but true scions.

Glaucon:: What do you mean?

Socrates:: In the first place, the aspirant to philosophy must not limp in his industry, in the one half of him loving, in the other shunning, toil. This happens when anyone is a lover of gymnastics and hunting and all the labors of the body, yet is not fond of learning or of listening or inquiring, but in all such matters hates work. And he too is lame whose industry is one-sided in the reverse way.

Glaucon:: Most true.

Socrates:: Likewise in respect of truth, we shall regard as maimed in precisely the same way the soul that hates the voluntary lie and is troubled by it in its own self and greatly angered by it in others, but cheerfully accepts the involuntary falsehood and is not distressed when convicted of lack of knowledge, but wallows in the mud of ignorance as insensitively as a pig.

Glaucon:: By all means.

Socrates:: And with reference to sobriety, and bravery and loftiness of soul and all the parts of virtue, we must especially be on our guard to distinguish the baseborn from the trueborn. For when the knowledge necessary to make such discriminations is lacking in individual or state, they unawares employ at random for any of these purposes the crippled and baseborn natures, as their friends or rulers.

Glaucon:: It is so indeed.

Socrates:: But we, must be on our guard in all such cases, since, if we bring men sound of limb and mind to so great a study and so severe a training, justice herself will have no fault to find with us, and we shall preserve the state and our polity. But, if we introduce into it the other sort, the outcome will be just the opposite, and we shall pour a still greater flood of ridicule upon philosophy.

Glaucon:: That would indeed be shameful.

Socrates:: Most certainly, but here again I am making myself a little ridiculous.

Glaucon:: In what way?

Socrates:: I forgot, that we were jesting, and I spoke with too great intensity. For, while speaking, I turned my eyes upon philosophy, and when I saw how she is undeservedly reviled, I was revolted, and, as if in anger, spoke too earnestly to those who are in fault.

Glaucon:: No, by Zeus, not too earnestly for me as a hearer.

Socrates:: But too much so for me as a speaker. But this we must not forget, that in our former selection we chose old men, but in this one that will not do. For we must not take Solon's word for it that growing old a man is able to learn many things. He is less able to do that than to run a race. To the young belong all heavy and frequent labors.

Glaucon:: Necessarily.

Socrates:: Now, all this study of reckoning and geometry and all the preliminary studies that are indispensable preparation for dialectic must be presented to them while still young, not in the form of compulsory instruction.

Glaucon:: Why so?

Socrates:: Because, a free soul ought not to pursue any study slavishly, for while bodily labors performed under constraint do not harm the body, nothing that is learned under compulsion stays with the mind.

Glaucon:: True.

Socrates:: Do not, then, my friend, keep children to their studies by compulsion but by play. That will also better enable you to discern the natural capacities of each.

Glaucon:: There is reason in that.

Socrates:: And do you not remember, that we also declared that we must conduct the children to war on horseback to be spectators, and wherever it may be safe, bring them to the front and give them a taste of blood as we do with whelps?

Glaucon:: I do remember.

Socrates:: And those who as time goes on show the most facility in all these toils and studies and alarms are to be selected and enrolled on a list.

Glaucon:: At what age?

Socrates:: When they are released from their prescribed gymnastics. For that period, whether it be two or three years, incapacitates them for other occupations. For great fatigue and much sleep are the foes of study, and moreover one of our tests of them, and not the least, will be their behavior in their physical exercises.

Glaucon:: Surely it is.

Socrates:: After this period, those who are given preference from the twenty-year class will receive greater honors than the others, and they will be required to gather the studies which they disconnectedly pursued as children in their former education into a comprehensive survey of their affinities with one another and with the nature of things.

Glaucon:: That, at any rate, is the only instruction that abides with those who receive it.

Socrates:: And it is also, the chief test of the dialectic nature and its opposite. For he who can view things in their connection is a dialectician; he who cannot, is not.

Glaucon:: I concur.

Socrates:: With these qualities in mind, it will be your task to make a selection of those who manifest them best from the group who are steadfast in their studies and in war and in all lawful requirements, and when they have passed the thirtieth year to promote them, by a second selection from those preferred in the first, to still greater honors, and to prove and test them by the power of dialectic to see which of them is able to disregard the eyes and other senses and go on to being itself in company with truth. And at this point, my friend, the greatest care is requisite.

Glaucon:: How so?

Socrates:: Do you not note, how great is the harm caused by our present treatment of dialectic?

Glaucon:: What is that?

Socrates:: Its practitioners are infected with lawlessness.

Glaucon:: They are indeed.

Socrates:: Do you suppose, that there is anything surprising in this state of mind, and do you not think it pardonable?

Glaucon:: In what way, pray?

Socrates:: Their case, resembles that of a supposititious son reared in abundant wealth and a great and numerous family amid many flatterers, who on arriving at manhood should become aware that he is not the child of those who call themselves his parents, and should not be able to find his true father and mother. Can you divine what would be his feelings toward the flatterers and his supposed parents in the time when he did not know the truth about his adoption, and, again, when he knew it? Or would you like to hear my surmise?

Glaucon:: I would.

Socrates:: Well, then, my surmise is, that he would be more likely to honor his reputed father and mother and other kin than the flatterers, and that there would be less likelihood of his allowing them to lack for anything, and that he would be less inclined to do or say to them anything unlawful, and less liable to disobey them in great matters than to disobey the flatterers—during the time when he did not know the truth.

Glaucon:: It is probable.

Socrates:: But when he found out the truth, I surmise that he would grow more remiss in honor and devotion to them and pay more regard to the flatterers, whom he would heed more than before and would henceforth live by their rule, associating with them openly, while for that former father and his adoptive kin he would not care at all, unless he was naturally of a very good disposition.

Glaucon:: All that you say, would be likely to happen. But what is the pertinency of this comparison to the novices of dialectic?

Socrates:: It is this. We have, I take it, certain convictions from childhood about the just and the honorable, in which, in obedience and honor to them, we have been bred as children under their parents.

Glaucon:: Yes, we have.

Socrates:: And are there not other practices going counter to these, that have pleasures attached to them and that flatter and solicit our souls, but do not win over men of any decency; but they continue to hold in honor the teachings of their fathers and obey them?

Glaucon:: It is so.

Socrates:: Well, then, when a man of this kind is met by the question, What is the honorable? and on his giving the answer which he learned from the lawgiver, the argument confutes him, and by many and various refutations upsets his faith and makes him believe that this thing is no more honorable than it is base, and when he has had the same experience about the just and the good and everything that he chiefly held in esteem, how do you suppose that he will conduct himself thereafter in the matter of respect and obedience to this traditional morality?

Glaucon:: It is inevitable, that he will not continue to honor and obey as before.

Socrates:: And then, when he ceases to honor these principles and to think that they are binding on him, and cannot discover the true principles, will he be likely to adopt any other way of life than that which flatters his desires?

Glaucon:: He will not.

Socrates:: He will, then, seem to have become a rebel to law and convention instead of the conformer that he was.

Glaucon:: Necessarily.

Socrates:: And is not this experience of those who take up dialectic in this fashion to be expected and, as I just now said, deserving of much leniency?

Glaucon:: Yes, and of pity too.

Socrates:: Then that we may not have to pity thus your thirty-year-old disciples, must you not take every precaution when you introduce them to the study of dialectic?

Glaucon:: Yes, indeed.

Socrates:: And is it not one chief safeguard not to suffer them to taste of it while young? For I fancy you have not failed to observe that lads, when they first get a taste of disputation, misuse it as a form of sport, always employing it contentiously, and, imitating confuters, they themselves confute others. They delight like puppies in pulling about and tearing with words all who approach them.

Glaucon:: Exceedingly so.

Socrates:: And when they have themselves confuted many and been confuted by many, they quickly fall into a violent distrust of all that they formerly held true, and the outcome is that they themselves and the whole business of philosophy are discredited with other men.

Glaucon:: Most true.

Socrates:: But an older man will not share this craze, but will rather choose to imitate the one who consents to examine truth dialectically than the one who makes a jest and a sport of mere contradiction, and so he will himself be more reasonable and moderate, and bring credit rather than discredit upon his pursuit.

Glaucon:: Right.

Socrates:: And were not all our preceding statements made with a view to this precaution—our requirement that those permitted to take part in such discussions must have orderly and stable natures, instead of the present practice of admitting to it any chance and unsuitable applicant?

Glaucon:: By all means.

Socrates:: Is it enough, then, to devote to the continuous and strenuous study of dialectic undisturbed by anything else, as in the corresponding discipline in bodily exercises, twice as many years as were allotted to that?

Glaucon:: Do you mean six or four?

Socrates:: Well, set it down as five. For after that you will have to send them down into the cave again, and compel them to hold commands in war and the other offices suitable to youth, so that they may not fall short of the other type in experience either. And in these offices, too, they are to be tested to see whether they will remain steadfast under diverse solicitations or whether they will flinch and swerve.

Glaucon:: How much time do you allow for that?

Socrates:: Fifteen years, and at the age of fifty those who have survived the tests and approved themselves altogether the best in every task and form of knowledge must be brought at last to the goal. We shall require them to turn upward the vision of their souls and fix their gaze on that which sheds light on all, and when they have thus beheld the good itself they shall use it as a pattern for the right ordering of the state and the citizens and themselves throughout the remainder of their lives, each in his turn, devoting the greater part of their time to the study of philosophy, but when the turn comes for each, toiling in the service of the state and holding office for the city’s sake, regarding the task not as a fine thing but a necessity. And so, when each generation has educated others like themselves to take their place as guardians of the state, they shall depart to the Islands of the Blessed and there dwell. And the state shall establish public memorials and sacrifices for them as to divinities if the Pythian oracle approves or, if not, as to divine and godlike men.

Glaucon:: A most beautiful finish, Socrates, you have put upon your rulers, as if you were a statuary.

Socrates:: And on the women too, Glaucon, for you must not suppose that my words apply to the men more than to all women who arise among them endowed with the requisite qualities.

Glaucon:: That is right, if they are to share equally in all things with the men as we laid it down.

Socrates:: Well, then, do you admit that our notion of the state and its polity is not altogether a daydream, but that though it is difficult, it is in a way possible and in no other way than that described—when genuine philosophers, many or one, becoming masters of the state scorn the present honors, regarding them as illiberal and worthless, but prize the right and the honors that come from that above all things, and regarding justice as the chief and the one indispensable thing, in the service and maintenance of that reorganize and administer their city?

Glaucon:: In what way?

Socrates:: All inhabitants above the age of ten, they will send out into the fields, and they will take over the children, remove them from the manners and habits of their parents, and bring them up in their own customs and laws which will be such as we have described. This is the speediest and easiest way in which such a city and constitution as we have portrayed could be established and prosper and bring most benefit to the people among whom it arises.

Glaucon:: Much the easiest, and I think you have well explained the manner of its realization if it should ever be realized.

Socrates:: Then, have we not now said enough about this state and the corresponding type of man—for it is evident what our conception of him will be?

Glaucon:: It is evident, and, to answer your question, I think we have finished.

## Book 8.

Socrates:: Very good. We are agreed then, Glaucon, that the state which is to achieve the height of good government must have community of wives and children and all education, and also that the pursuits of men and women must be the same in peace and war, and that the rulers or kings over them are to be those who have approved themselves the best in both war and philosophy.

Glaucon:: We are agreed.

Socrates:: And we further granted this, that when the rulers are established in office they shall conduct these soldiers and settle them in habitations such as we described, that have nothing private for anybody but are common for all, and in addition to such habitations we agreed, if you remember, what should be the nature of their possessions.

Glaucon:: Why, yes, I remember, that we thought it right that none of them should have anything that ordinary men now possess, but that, being as it were athletes of war and guardians, they should receive from the others as pay for their guardianship each year their yearly sustenance, and devote their entire attention to the care of themselves and the state.

Socrates:: That is right. But now that we have finished this topic let us recall the point at which we entered on the digression that has brought us here, so that we may proceed on our way again by the same path.

Glaucon:: That is easy, for at that time, almost exactly as now, on the supposition that you had finished the description of the city, you were going on to say that you assumed such a city as you then described and the corresponding type of man to be good, and that too though, as it appears, you had a still finer city and type of man to tell of, but at any rate you were saying that the others are aberrations, if this city is right. But regarding the other constitutions, my recollection is that you said there were four species worth speaking of and observing their defects and the corresponding types of men, in order that when we had seen them all and come to an agreement about the best and the worst man, we might determine whether the best is the happiest and the worst most wretched or whether it is otherwise. And when I was asking what were the four constitutions you had in mind, Polemarchus and Adimantus thereupon broke in, and that was how you took up the discussion again and brought it to this point.

Socrates:: Your memory is most exact.

Glaucon:: A second time then, as in a wrestling match, offer me the same hold, and when I repeat my question try to tell me what you were then about to say.

Socrates:: I will if I can.

Glaucon:: And indeed, I am eager myself to hear what four forms of government you meant.

Socrates:: There will be no difficulty about that. For those I mean are precisely those that have names in common usage—that which the many praise, your Cretan and Spartan constitution, and the second in place and in honor, that which is called oligarchy, a constitution teeming with many ills, and its sequent counterpart and opponent, democracy, and then the noble tyranny surpassing them all, the fourth and final malady of a state. Can you mention any other type of government, I mean any other that constitutes a distinct species? For, no doubt, there are hereditary principalities and purchased kingships, and similar intermediate constitutions which one could find in even greater numbers among the barbarians than among the Greeks.

Glaucon:: Certainly many strange ones are reported.

Socrates:: Are you aware, then, that there must be as many types of character among men as there are forms of government? Or do you suppose that constitutions spring from the proverbial oak or rock and not from the characters of the citizens, which, as it were, by their momentum and weight in the scales draw other things after them?

Glaucon:: They could not possibly come from any other source.

Socrates:: Then if the forms of government are five, the patterns of individual souls must be five also.

Glaucon:: Surely.

Socrates:: Now we have already described the man corresponding to aristocracy or the government of the best, whom we aver to be the truly good and just man.

Glaucon:: We have.

Socrates:: Must we not, then, next after this, survey the inferior types, the man who is contentious and covetous of honor, corresponding to the Laconian constitution, and the oligarchic man in turn, and the democratic and the tyrannical, in order that, after observing the most unjust of all, we may oppose him to the most just, and complete our inquiry as to the relation of pure justice and pure injustice in respect of the happiness and unhappiness of the possessor, so that we may either follow the counsel of Thrasymachus and pursue injustice or the present argument and pursue justice?

Glaucon:: Assuredly, that is what we have to do.

Socrates:: Shall we, then, as we began by examining moral qualities in states before individuals, as being more manifest there, so now consider first the constitution based on the love of honor? I do not know of any special name for it in use. We must call it either timocracy or timarchy. And then in connection with this we will consider the man of that type, and thereafter oligarchy and the oligarch, and again, fixing our eyes on democracy, we will contemplate the democratic man, and fourthly, after coming to the city ruled by a tyrant and observing it, we will in turn take a look into the tyrannical soul, and so try to make ourselves competent judges of the question before us.

Glaucon:: That would be at least a systematic and consistent way of conducting the observation and the decision.

Socrates:: Come, then, let us try to tell in what way a timocracy would arise out of an aristocracy. Or is this the simple and unvarying rule, that in every form of government revolution takes its start from the ruling class itself, when dissension arises in that, but so long as it is at one with itself, however small it be, innovation is impossible?

Glaucon:: Yes, that is so.

Socrates:: How, then, Glaucon, will disturbance arise in our city, and how will our helpers and rulers fall out and be at odds with one another and themselves? Shall we, like Homer, invoke the Muses to tell 'how faction first fell upon them,' and say that these goddesses playing with us and teasing us as if we were children address us in lofty, mock-serious tragic style?

Glaucon:: How?

Socrates:: Somewhat in this fashion. Hard in truth it is for a state thus constituted to be shaken and disturbed, but since for everything that has come into being destruction is appointed, not even such a fabric as this will abide for all time, but it shall surely be dissolved, and this is the manner of its dissolution. Not only for plants that grow from the earth but also for animals that live upon it there is a cycle of bearing and barrenness for soul and body as often as the revolutions of their orbs come full circle, in brief courses for the short-lived and oppositely for the opposite. But the laws of prosperous birth or infertility for your race, the men you have bred to be your rulers will not for all their wisdom ascertain by reasoning combined with sensation, but they will escape them, and there will be a time when they will beget children out of season. Now for divine begettings there is a period comprehended by a perfect number, and for mortal by the first in which augmentations dominating and dominated when they have attained to three distances and four limits of the assimilating and the dissimilating, the waxing and the waning, render all things conversable and commensurable with one another, whereof a basal four thirds wedded to the pempad yields two harmonies at the third augmentation, the one the product of equal factors taken one hundred times, the other of equal length one way but oblong—one dimension of a hundred numbers determined by the rational diameters of the pempad lacking one in each case, or of the irrational lacking two; the other dimension of a hundred cubes of the triad. And this entire geometric number is determinative of this thing, of better and inferior births. And when your guardians, missing this, bring together brides and bridegrooms unseasonably, the offspring will not be wellborn or fortunate. Of such offspring the previous generation will establish the best, to be sure, in office, but still these, being unworthy, and having entered in turn into the powers of their fathers, will first as guardians begin to neglect us, paying too little heed to music and then to gymnastics, so that our young men will deteriorate in their culture, and the rulers selected from them will not approve themselves very efficient guardians for testing Hesiod's and our races of gold, silver, bronze, and iron. And this intermixture of the iron with the silver and the bronze with the gold will engender unlikeness and an unharmonious unevenness, things that always beget war and enmity wherever they arise. 'Of this lineage, look you,' we must aver the dissension to be, wherever it occurs and always.

Glaucon:: 'And rightly too,' we shall affirm that the Muses answer.

Socrates:: They must needs, since they are Muses.

Glaucon:: Well, then, what do the Muses say next?

Socrates:: When strife arose, the two groups were pulling against each other, the iron and bronze toward money-making and the acquisition of land and houses and gold and silver, and the other two, the golden and silver, not being poor, but by nature rich in their souls, were trying to draw them back to virtue and their original constitution, and thus, striving and contending against one another, they compromised on the plan of distributing and taking for themselves the land and the houses, enslaving and subjecting as *perioeci* and serfs their former friends and supporters, of whose freedom they had been the guardians, and occupying themselves with war and keeping watch over these subjects.

Glaucon:: I think, that this is the starting point of the transformation.

Socrates:: Would not this polity, then, be in some sort intermediate between aristocracy and oligarchy?

Glaucon:: By all means.

Socrates:: By this change, then, it would arise. But after the change what will be its way of life? Is it not obvious that in some things it will imitate the preceding polity, in some the oligarchy, since it is intermediate, and that it will also have some qualities peculiar to itself?

Glaucon:: That is so.

Socrates:: Then in honoring its rulers and in the abstention of its warrior class from farming and handicraft and money-making in general, and in the provision of common public tables and the devotion to physical training and expertness in the game and contest of war—in these traits it will copy the preceding state?

Glaucon:: Yes.

Socrates:: But in its fear to admit clever men to office, since the men it has of this kind are no longer simple and strenuous but of mixed strain, and in its inclining rather to the more high-spirited and simple-minded type, who are better suited for war than for peace, and in honoring the stratagems and contrivances of war and occupying itself with war most of the time—in these respects for the most part its qualities will be peculiar to itself?

Glaucon:: Yes.

Socrates:: Such men, will be avid of wealth, like those in an oligarchy, and will cherish a fierce secret lust for gold and silver, owning storehouses and private treasuries where they may hide them away, and also the enclosures of their homes, literal private love nests in which they can lavish their wealth on their women and any others they please with great expenditure.

Glaucon:: Most true.

Socrates:: And will they not be stingy about money, since they prize it and are not allowed to possess it openly, prodigal of others' wealth because of their appetites, enjoying their pleasures stealthily, and running away from the law as boys from a father, since they have not been educated by persuasion but by force because of their neglect of the true Muse, the companion of discussion and philosophy, and because of their preference of gymnastics to music?

Glaucon:: You perfectly describe, a polity that is a mixture of good and evil.

Socrates:: Why, yes, the elements have been mixed, but the most conspicuous feature in it is one thing only, due to the predominance of the high-spirited element, namely contentiousness and covetousness of honor.

Glaucon:: Very much so.

Socrates:: Such, then, would be the origin and nature of this polity if we may merely outline the figure of a constitution in words and not elaborate it precisely, since even the sketch will suffice to show us the most just and the most unjust type of man, and it would be an impracticable task to set forth all forms of government without omitting any, and all customs and qualities of men.

Glaucon:: Quite right.

Socrates:: What, then, is the man that corresponds to this constitution? What is his origin and what his nature?

Adeimantus:: I fancy, that he comes rather close to Glaucon here in point of contentiousness.

Socrates:: Perhaps, in that, but I do not think their natures are alike in the following respects.

Adeimantus:: In what?

Socrates:: He will have to be somewhat self-willed and lacking in culture, yet a lover of music and fond of listening to talk and speeches, though by no means himself a rhetorician. And to slaves such a one would be harsh, not scorning them as the really educated do, but he would be gentle with the freeborn and very submissive to officials, a lover of office and of honor, not basing his claim to office on ability to speak or anything of that sort but on his exploits in war or preparation for war, and he would be a devotee of gymnastics and hunting.

Adeimantus:: Why, yes, that is the spirit of that polity.

Socrates:: And would not such a man be disdainful of wealth too in his youth, but the older he grew the more he would love it because of his participation in the covetous nature and because his virtue is not sincere and pure since it lacks the best guardian?

Adeimantus:: What guardian?

Socrates:: Reason, blended with culture, which is the only indwelling preserver of virtue throughout life in the soul that possesses it.

Adeimantus:: Well said.

Socrates:: This is the character, of the timocratic youth, resembling the city that bears his name.

Adeimantus:: By all means.

Socrates:: His origin is somewhat on this wise. Sometimes he is the young son of a good father who lives in a badly governed state and avoids honors and office and lawsuits and all such meddlesomeness and is willing to forbear something of his rights in order to escape trouble.

Adeimantus:: How does he originate?

Socrates:: Why, when, to begin with, he hears his mother complaining that her husband is not one of the rulers and for that reason she is slighted among the other women, and when she sees that her husband is not much concerned about money and does not fight and brawl in private lawsuits and in the public assembly, but takes all such matters lightly, and when she observes that he is self-absorbed in his thoughts and neither regards nor disregards her overmuch, and in consequence of all this laments and tells the boy that his father is too slack and no kind of a man, with all the other complaints with which women nag in such cases.

Adeimantus:: Many indeed, and after their kind.
